giac writers of this age; and is more loose and incorrect than either of the other. As Propertius followed too many masters. Ovid endeavoured to shine in too many different kinds of writing at the same time. Besides, he had a redundant genius; and almost always chose rather to include, than to give any restraint to it. If one was to give any opinion of the different merits of his several works, one should not perhaps be much beside the truth, in saying, that he excels most in his Fasti; then perhaps in his love-verses; next in his heroic epistles: and lastly in his Metamorphoses. As for the verses he wrote after his misfortunes, he has quite lost his spirit in them; and though you may discover some difference in his manner after his banishment came to sit a little lighter on him, his genius never shines out fairly after that fatal stroke. His very love of being witty had forsaken him; though before it seems to have grown upon him when it was least becoming, towards his old age: for his Metamorphoses (which was the last poem he wrote at Rome, and which indeed was not quite finished when he was sent into banishment) has more instances of false wit in it, than perhaps all his former writings put together. One of the things I have heard him most cried up for, in that piece, is his transitions from one story to another. The ancients thought differently of this point; and Quinctilian, where he is speaking of them, endeavours rather to excuse than to commend him on that head. We have a considerable loss in the latter half of this Fasti; and in his Medea, which is much commended. Dramatic poetry seems not to have flourished, in proportion to the other sorts of poetry, in the Augustan age. We scarce hear any thing of the comic poets of that time; and if tragedy had been much cultivated then, the Roman writers would certainly produce some names from it, to oppose to the Greeks, without going so far back as to those of Actius and Pacuvius. Indeed their own critics, in speaking of the dramatic writings of this age, boast rather of single pieces, than of authors: and the two particular tragedies, which they talk of in the highest strain, are the Medea of of Ovid, and Varius's Thyestes. However, if it was not the age for plays, it was certainly the age in which almost all the other kinds of poetry were in their greatest excellence at Rome. Spence.

51. Of PHÆDRUS.

Under this period of the best writing, I should be inclined to insert Phædrus. For though he published after the good manner of writing was in general on the decline, he flourished and formed his style under Augustus: and his book, though it did not appear until the reign of Tiberius, deserves on all accounts, to be reckoned among the works of the Augustan age, Fabulæ Æsopeæ, was probably the title which he gave his fables. He professedly follows Æsop in them: and declares, that he keeps to his manner, even where the subject is of his own invention. By this it appears, that Æsop's way of telling stories was very short and plain: for the distinguishing beauty of Phædrus's fables is, their conciseness and simplicity. The taste was so much fallen, at the time when he published them, that both these were objected to him as faults. He used those critics as they deserved. He tells a long, tedious story to those who objected against the conciseness of his style; and answers some others, who condemned the plainness of it, with a run of bombast verses, that have a great many noisy elevated words in them, without any sense at the bottom. Abid.

\$ 52. Of MANILIUS.

Manilius can scarce be allowed a place in this list of the Augustan poets; his poetry is inferior to a great many of the Latin poets, who have wrote in these lower ages, so long since Latin has ceased to be a living language. There is at least, I believe, no instance in any one poet of the flourishing ages, of such language, of such versification, as we meet with in Manilius; and there is not any one ancient writer that speaks one word of any such poet about those times. I doubt not there were bad poets enough in the Augustan age; but I question whether Manilius may deserve the honour of being reckoned even among the bad poets of that time." What must be said, then, to the many passages in the poem, which relate to the times in which the author lived, and which all have a regard to the Augustan age? If the whole be not a modern forgery, "I do not see how one can deny his being of that age; and if it be a modern forgery, it is very lucky that it should agree so exactly, in so many little particulars, with the ancient globe of the heavens, in the Farnese palace. Allowing Manilius's poem to pass for what it pretends to be, there is nothing remains to us of the poetical works of this Augustan age, besides what I have mentioned; except the garden poem of Columelia; the little hunting piece of Gratius; and, perhaps, an elegy or two of Gallu.

Spence.

6 53. Of the Poets whose Works have not come down to us.

These are but small remains for an age in which poetry was so well cultivated and followed by very great numbers, taking the good and the bad together. It is probable, most of the best have come down to us. As for the others, we only hear of the elegies of Capella and Montanus; that Proculus imitated Callimachus; and Rufus. Pindar: that Fontamis wrote a sort of piscatory eclogues: and Macer, a poem on the nature of birds, beasts, and plants. That the same Macer, and Rabirinus, and Marsus, and Ponticus, and Pedo Albinovanue, and several others, were epic writers in that time (which, by the way, seems to have signified little more, than that they wrote in hexameter verse): that Fundanius was the best comic poet then, and Melissus no bad one: that Varius was the most esteemed for epic poetry, before the Æneid appeared; and one of the most esteemed for tragedy always; that Pollio (besides his other excellentias at the bar, in the camp, and in affairs of state) is nucli commended for tragedy; and Varius, either for tragedy or cpic poetry; for it does not quite appear which of the two he wrote. These last are great names; but there remain some of still higher dignity, who are, or at least desired to be thought poets in that time. In the former part of Augustus's reigh, his first minister for home affairs, Maccenas; and in the latter part, his grandson Germanicus, were of this number. Germanicus in particular translated Aratus; and there are some (I do not well know on what grounds) who pretend to have met with a considerable part of his translation. The emperor himself seems to have been both a good critic, and a good author. He wrote chiefly in prose; but some things in verse too; and particularly good part of a tragedy, called Ajax.

It is no wonder, under such encouragements, and so great examples, that poetry should arise to a higher pitch than it had ever done among the Romans. They had been gradually improving it for above

two centuries; and in Augustus found a prince, whose own inclinations, the temper of whose reign, and whose very politics, led him to nurse all the arts; and poctry, in a more particular manner. The wonder is, when they had got so far toward perfection, that they should fall as it were all at once; and from their greatest purity and simplicity, should degenerate so immediately into a lower and more affected manner of writing, than had been ever known among them. Bid.

\$ 54. Of the Fall of Poetry among the Romans.

There are some who assert, that the great age of the Roman eloquence I have been speaking of, began to decline a little even in the latter part of Augustus's reign. It certainly fell very much under Tiberius; and grow every day weaker and weaker, till it was wholly changed under Caligula, Hence therefore we may date the third age, or the fall of the Roman poetry. Augustus, whatever his natural temper was, put on at least a mildness, that gave a calm to the state during his time: the succeeding emperors flung off the mask; and not only were, but openly appeared to be, rather monsters than men. We need not go to their historians for proofs of their prodigious vileness: it is enough to mention the bare names of Tiberius, Caligula, Nero. Under such heads, every thing that was good run to ruin. All discipline in war, all domestic virtues, the very love of liberty, and all the taste for sound eloquence and good poetry, sunk gradually; and faded away, as they had flourished, together. Instead of the sensible, chaste, and manly way of writing, that had been in use in the former age, there now rose up a desire of writing smartly, and an affectation of shining in every thing they said. A certain prettiness and glitter, and luxuriance of ornaments, was what distinguished their most applauded writers in prose; and their poetry was quite lest in high flights and obscurity. Seneca, the favourite prose writer of those times; and Petronius Arbiter, so great a favourite with many of our own; afford too many proofs of this. As to the prose in Nero's time: and as to the poets, it is enough to say, that they had then Lucan and Persius, instead of Virgil and Horace. Ibid.

\$ 55. Of LUCAN.

Persius and Lucan, who were the most celebrated poets under the reign of Nero, may very well serve for examples of the faults I just mentioned, one of the swelling, and the other of the obscure style, then in fashion. Lucan's manner in general runs too much into fustian and bombast. His muse was a kind of dropsy, and looks like the soldier described in his own Pharsalia, who in passing the desert sands of Africa, was bit by a serpent, and swelled to such an immoderate size, " that he was lost (as he expresses it) in the tumours of his own body" Some critics have been in too great haste to make Quinctilian say some good things of Lucan, which he never meant to do. What this poet has been admired for, and what he will ever deserve to be admired for, are the several philosophical passages that abound in his works; and his generous sentiments, particularly on the love of liberty and the contempt of death. In his calm hours, he is very wise; but he is often in his rants, and never more so than when he is got into a battle, or a storm at sea; but it is remarkable, that even on those occasions, it is not so much a violence of rage, as a madness of affectation, that appears most strongly in him. To give a few instances of it, out of many: In the very beginning of Lucan's storm, when Cæsar ventured to cross the sea in so small a vessel: " the fixt stars themselves seem to be put in motion." Then " the waves rise over the mountains, and carry away the tops of them." Their next step is to heaven; where they catch the rain " in the clouds:" I suppose, to increase their force. The sea opens in several places, and leaves its bottom dry land. All the foundations of the universe are shaken; and nature is afraid of a second chaos. His little skiff, in the mean time, sometimes cuts along the clouds with her sails; and sometimes seems in danger of being stranded on the sands at the bottom of the sea; and must inevitably have been lost, had not the storm (by good fortune) been so strong from every quarter, that she did not know on which side to bulge first.

When the two armies are going to join battle in the plains of Pharsalia, we are told, that all the soldiers were incapable of any fear for themselves, because they were wholly taken up with their concern for the danger which threatened Pompey and the commonwealth. On this great occasion, the hills about them, according to his account, seem to be more afraid than the men; for some of the mountains looked as if they would thrust their heads into the clouds; and others, as if they wanted to hide

themselves under the vallies at their feet. And these disturbances innature were universal: for that day, every single Roman, in whatever part of the world he was, felt a strange gloom spread all over his mind, on a sudden; and was ready to cry, though he did not know why or wherefore.

Spence.

\$ 56. His Description of the Sea-fight off Marseilles.

The sea-fight off Marseilles, is a thing that might divert one, full as well as Erasmus's Naufragium Joculare; and what is still stranger, the poet chuses to be most diverting in the wounds he gives the poor soldier. The first person killed in it is pierced at the same instant by two spears; one in his back, and the other in his breast; so nicely, that both their points meet together in the middle of his body. They each, I suppose, had a right to kill him; and his soul was for some time doubtful which it should obey. At last, it compounds the matter; drives out each of the spears before it, at the same instant; and whips out of his body, half at one wound, and half at the other .- A little after this, . there is an honest Greek, who has his right hand cut off, and fights on with his left. till he can leap into the sea to recover the former; but there (as misfortunes seldom come single) he has his left arm chopt off too: after which, like the hero in one of our ancient ballads, he fights on with the trunk of his body, and performs actions greater than any Witherington that ever was .- When the battle grows warmer, there are many who have the same misfortune with this Greek. In endeavouring to climb up the enemies ships, several have their arms struck off; fall into the sea; leave their hands behind them! Some of these swimming combatants encounter their enemies in the water; some supply their friends ships with arms; some, that had no arms, entangle themselves with their enemies; cling to them, and sink together to the bottom of the sea; others stick their bodies against the beaks of their enemies ships: and scarce a man of them flung away the use of his carcase, even when he should be dead.

But among all the contrivances of these posthumous warriors, the thing most lobe admired, is the sagacity of the great Tyrrhenus. Tyrrhenus was standing at the head of one of the vessels, when a ball of lead, flung by an artful slinger, struck

011

out both his eyes. The violent dash of the blow, and the deep darkness that was spread over him all at once, made him at first conclude that he was dead: but when he had recovered his senses a little, and found he could advance one foot before the other, he desired his fellow soldiers to plant him just as they plant their Ballistæ: he hopes he can still fight as well as a machine: and seems mightily pleased to think how he shall cheat the enemy, who will ling away darts at him, that might have killed people who were alive.

Such strange things as these, make me always wonder the more, how Lucan can be so wise as he is in some parts of his poem. Indeed his sentences are more solid than one could otherwise expect from so young a writer, had be wanted such an uncle as Seneca, and such a master as Cornutus. The swellings in the other parts of his poem may be partly accounted for, perhaps, from his being born in Spain, and in that part of it which was the farthest removed from Greece and Rome: may, of that very city, which is marked by Cicero as particularly overrun with a bad taste. After all, what I most dislike him for, is a blot in his moral character. He was at first pretty high in the favour of Nero. On the discovery of his being concerned in a plot against him, this philosopher (who had written so much, and so gallantly, about the pleasure of dying) behaved himself in the most despicable manner. He named his own mother as guilty of the conspiracy, in hopes of saving himself. After this, he added several of his friends to his former confession; and thus continued labouring for a pardon, by making sacrifices to the tyrant of such lives, as any one, much less of a philosopher than he seems to have been, ought to think dearer than their own. All this baseness was of no use to him: for in the end, Nero ordered him to execution too. His veins were opened; and the last words he spoke, were some verses of his own. Spence.

\$ 57. Of Perstus.

Persius is said to have been Lucan's school-fellow under Cornutus; and, like him, was bred up more a philosopher than a poet. He has the character of a good man; but scarce deserves that of a good writer, in any other than the moral sense of the word, for his writings are very virtuous; but not very poetical. His great

fault is obscurity. Several have endeavoured to excuse or palliate this fault in him, from the danger of the times he lived in; and the necessity a satirist then lay under, of writing so, for his own security. This may hold as to some passages in him; but to say the truth, he seems to have a tendency and love to obscurity in himself: for it is not only to be found where he may speak of the emperor or the state: but in the general course of his satires. So that in my conscience, I must give him up for an obscure writer; as I should Lucan for a tumid and swelling one.

Such was the Roman poetry under Nero. The three emperors after him were made in an hurry, and had short tumultuous reigns. Then the Flavian family came in. Vespasian, the first emperor of that line, endeavoured to recover something of the good taste that had formerly flourished in Rome; his son Titus, the delight of mankind, in his short reign, encouraged poetry by his example, as well as by his liberalities: and even Domitian loved to be thought a patron of the muses. After him, there was a succession of good emperors, from Nerva to the Antonines. And this extraordinary good fortune (for indeed, if one considers the general run of the Roman emperors, it would have been such, to have had any two good ones only together) gave a new spirit to the arts, that had long been in so languishing a condition, and made poetry revive, and raise up its head again, once more among them." Not that there were very good poets even now: but they were better, at least, than they had been under the reign of Nero.

Ibid.

\$ 58. Of SILIUS, STATIUS, and VA-

This period produced three epic poets, Whose works remain to us: Silius, Statius, and Valerius Flaccus. Silius, as if he had been frightened at the high flight of Lucan, keeps almost always on the ground, and scarce once attempts to soar throughout his whole work. It is plain, however, though it is low; and if he has but little of the spirit of poetry, he is free at least from the affectation, and obscurity, and bombast, which prevailed so much among his immediate predecessors. Silius was honoured with the consulate; and lived to see his son in the same high office. He was a great lover and collector of pictures and statues; some of which he worshipped; especially

especially one he had of Virgil. He used and as for Lucan, I cannot help looking to offer sacrifices too at his tomb near Napies. It is a pity that he could not get more of his spirit in his writings: for he had scarce enough to make his offerings or rather his story, is certainly less embaracceptable to the genius of that great poet. -Statius had more of spirit, with a less share of prudence: for his Thebaid is certainly ill-conducted, and scarcely well written. By the little we have of his Achilleid, that would probably have been a much better poem, at least as to the writing part, had he lived to finish it. As it is, his description of Achilles's behaviour at the feast which Lycomedes makes for the Grecian ambassadors, and some other parts of it, read more pleasingly to me than any part of the Thebaid. I cannot help thinking, that the passage quoted so often from Juvenal, as an encomium on Statius, was meant as a satire on him. Martial seems to strike at him too, under the borrowed name of Sabellus. As he did not finish his Achilleid, he may deserve more reputation perhaps as a miscellaneous than as an epic writer: for though the odes and the other copies of verses in his Sylvæ are not without their faults, they are not so faulty as his Thebaid. The chief faults of Statius, in his Sylvæ and Thebaid, are said to have proceeded from very different causes: the former, from their having been written incorrectly and in a great deal of haste; and the other, from its being over corrected and hard. Perhaps his greatest fault of all or rather the greatest sign of his bad judgment, is his admiring Lucan so extravagantly as he does. It is remarkable, that poetry run more lineally in Statius's family, than perhaps in any other. He received it from his father; who had been an eminent poet in his time, and lived to see his son obtain the laurel-crown at the Alban games: as he had formerly done himself.-Valerius Flaccus wrote a little before Statius. He died young, and left his poem unfinished. We have but seven books of his Argonautics, and part of the eighth, in which the Argonauts are left on the sea, in their return homewards. Several of the modern critics, who have been some way or other concerned in publishing Flaccus's works, make no scruple of placing him next to Virgil, of all the Roman epic poets; and I own I am a good deal inclined to be seriously of their opinion: for he seems to me to have more fire than Silius, and to be more correct than Statius;

upon him as quite out of the question. He imitates Virgil's language much better than Silius, or even Statius; and his plan, rassed and confused than the Thebaid. Some of the ancients themselves speak of Flaccus with a great deal of respect; and particularly Quinctilian; who says nothing at all of Silius or Statitus; unless the latter is to be included in that general expression of 'several others,' whom he leaves to be celebrated by posterity.

As to the dramatic writers of this time, we have not any one comedy, and only ten tragedies all published under the name of Lucius Annæus Seneca. They are probably the work of different hands; and might be a collection of favourite plays, put together by some bad grammarian; for either the Roman tragedies of this age were very indifferent, or these are not their best. They have been attributed to authors as far distant as the reigns of Augustus and Trajan. It is true, the person who is so positive that one of them in particular must be of the Augustan age, says this of a piece that he seems resolved to cry up at all rates: and I believe one should do no injury to any one of them, in supposing them all to have been written in this third age, under the decline of the Roman poetry.

Of all the other poets under this period there are none whose works remain to us, except Martial and Juvenal. The former Bourished under Domitian; and the latter under Nerva, Trajan, and Adrian. Spence.

6 59. Of MARTIAL.

Martial is a dealer only in a little kind of writing: for Epigram is certainly (what it is called by Dryden) the lowest step of poetry. He is at the very bottom of the hill; but he diverts himself there, in gathering flowers and playing with insects, prettily enough. If Martial made a newyear's gift, he was sure to send a distich with it: if a friend died, he made a few verses to put on his tomb-stone: if a statue was set up, they came to him for an inscription. These were the common offices of his muse. If he struck a fault in life, he marked it down in a few lines; and if he had a mind to please a friend, or to get the favour of the great, his style was turned to panegyric: and these were his highest employments. He was however, a good writer in his way; and there are instances even of his writing with some dignity on higher occasions. Spence.

\$ 60. Of JUVENAL.

Juvenal began to write after all I have mentioned; and, I do not know by what good fortune, writes with a greater spirit of poetry than any of them. He has scarce any thing of the gentility of Horace: yet he is not without humour, and exceeds all the satirists in severity. To say the truth, he flashes too much like an angry executioner; but the depravity of the times, and the vices then in fashion, may often excuse some degree of rage in him. It is said he did not write till he was elderly; and after he had been too much used to declaiming. However, his satires have a great deal of spirit in them; and shew a strong hatred of vice, with some very fine and high sentiments of virtue. They are indeed so animated, that I do not know any poem of this age, which one can read with near so much pleasure as his satires.

Juvenal may very well be called the last of the Roman poets. After his time, poetry, continued decaying more and more, quite down to the time of Constantine; when all the arts were so far lost and extinguished among the Romans, that from that time they themselves may very well be called by the name they used to give to all the world, except the Greeks; for the Romans then had scarce any thing to distinguish them from the Barbarians.

There are, therefore, but three ages of the Roman poetry, that can carry any weight with them in an enquiry of this nature. The first age, from the first Punic war to the time of Augustus, is more remarkable for strength, than any great degree of beauty in writing. The second age, or the Augustin, is the time when they wrote with a due mixture of beauty and strength. And the third, from the beginning of Nero's reign to the end of Adrian's, when they endeavoured after beauty more than strength; when they last much of their vigour, and run too much into affectation. Their poetry, in its youth, was strong and nervous; in its middle age, it was manly and polite; in its latter days, it grew tawdry and feeble; and endeavoured to hide the decays of its familier beauty and strength, in false ornaments of dress, and a borrowed flush on the face; which did not so much render it pleasing, as it showed that its natural complexion was faded and lost.

\$ 61. Of the Introduction, Improvement, and Fall of the Arts at Rome.

The city of Rome, as well as its inhabitants, was in the beginning rude and unadorned. Those old rough soldiers looked on the effects of the politer arts as things fit only for an effeminate people; as too apt to soften and unnerve men; and to take from that martial temper and ferocity, which they encouraged so much and so universally in the infancy of their state. Their houses were (what the name they gave them signified) only a covering for them, and a defence against bad weather. These sheds of theirs were more like the caves of wild beasts, than the habitations of men; and were rather flung together as chance led them, than formed into regular streets and openings: their walls were half mud, and their roofs, pieces of wood stuck together; nay, even this was an after improvement; for in Romulus's time, their houses were only covered with straw. If they had any thing that was finer than ordinary, that was chiefly taken up in setting off the temples of their gods; and when these began to be furnished with statues (for they had mone till long after Numa's time) they were probably more ht to give terror than delight; and seemed rather formed so as to be horrible enough to strike an awe into those who worshipped them, than handsome enough to invite any one to look upon them for pleasure. Their design, I suppose, was answerable to the materials they were made of; and if their gods were of earthen ware, they were reckoned better than ordinary; for many of them were chopt out of wood. One of the chief ornaments in those times, both of the temples and private houses, consisted in their ancient trophies: which were trunks of trees cleared of their branches, and so formed into a rough kind of posts. These were loaded with the arms they had taken in war, and you may easily perceive what sort of ornaments these posts must make, when half decayed by time, and hung about with old rusty arms, besmeared with the blood of their enemies. Rome was not then that beautiful Rome, whose very ruins at this day are sought after with so much pleasure; it was a town, which carried an air of terror in its appearance; and which made people shudder, whenever they first entered within its gates.

Motor.

\$ 62. The Condition of the Romans in the Second Punic War.

Such was the state of this imperial city. when its citizens had made so great a progress in arms as to have conquered the better part of Italy, and to be able to engage in a war with the Carthaginians; the strongest power then by land, and the absolute masters by sea. The Romans, in the first Punic war, added Sicily to their dominions. In the second, they greatly increased their strength, both by sea and land; and acquired a taste of the arts and elegancies of life, with which till then they had been totally unacquainted. For though before this they were masters of Sicily (which in the old Roman geography made a part of Greece) and of several cities in the eastern parts of Italy, which were inhabited by colonies from Greece, and were adorned with the pictures, and statues and other works, in which that nation delighted, and excelled the rest of the world so much; they had hitherto looked upon them with so careless an eye, that they had felt little or nothing of their beauty. This insensibility they preserved so long, either from the grossness of their minds, or perhaps from their superstition, and a dread of reverencing foreign deities as much as their own; or (which is the most likely of all) out of mere politics, and the desire of keeping up their martial spirit and natural roughness, which they thought the arts and elegancies of the Grecians would be but too apt to destroy. However that was, they generally preserved themselves from even the least suspicion of taste for the polite arts, pretty far into the second Punic war; as appears by the behaviour of Fabius Maximus in that war, even after the scales were turned on their side. When that general took Tarentum, he found it full of riches, and extremely adorned with pictures and statues. Among others, there were some very fine colossal figures of the gods, represented as fighting against the rebel giants. These were made by some of the most eminent masters in Greece; and the Jupiter, not improbably, by Lysippus. When Fabius was disposing of the spoil, he ordered the money and plate to be sent to the treasury at Rome, but the statues and pictures to be left behind. The secretary who attended him in his survey, was somewhat struck with the largeness and noble air of the figures just mentioned; and asked, Whether they too must be left

with the rest? "Yes," replied Fabius, "leave their angry gods to the Taren"tines; we will have nothing to do with them."

Spence.

\$ 63. MARGELLUS allacks SYNACUSE, and sends all its Pictures and Statues to Rome.

Marcellus had indeed behaved himself very differently in Sicily, a year or two before this happened. As he was to carry on the war in that province, he bent the whole force of it against Syracuse. There was at that time no one city which belonged to the Greeks, more elegant, or better adorned, than the city of Syracuse; it abounded in the works of the best masters. Marcellus, when he took the city, cleared it entirely, and sent all their statues and pictures to Rome. When I say all, I use the language of the people of Syracuse; who soon after laid a complaint against Marcellus before the Roman senate, in which they charged him with stripping all their houses and temples, and leaving nothing but hare walls throughout the city. Marcellus himself did not at all disown it, but fairly confessed what he had done; and used to declare, that he had done so, in order to adorn Rome, and to introduce a taste for the fine arts among his countrymen.

Such a difference of behaviour in their two greatest leaders, soon occasioned two different parties in Rome. The old people in general joined in crying up Fabius. -Fabius was not rapacious, as some others were; but temperate in his conquests. In what he had done, he had acted, not only with that moderation which becomes a Roman general, but with much prudence and forelight. " These fineries," they cried, " are a 44 pretty diversion for an idle effeminate peo-66 ple: let us leave them to the Greeks. "The Romans desire no other ornaments 46 of life, than a simplicity of manners at 44 home, and fortitude against our ene-" mies abroad. It is by these arts that we have raised our name so high, and 66 spread our dominions so far: and shall et we suffer them now to be exchanged for 46 a fine taste, and what they call elegance of living? No, great Jupiter, who pre-" sidest over the capitol! let the Greeks 61 keep their arts to themselves, and let the Romans learn only how to conquer 46 and to govern mankind."-Another set, and particularly the younger penple, who were extremely delighted with the noble works of the Grecian artists that had been set up for some time in the temples and porticos, and all the most public places of the city, and who used frequently to spend the greatest part of the day in contemplating the beauties of them, extolled Marcellus as much for the pleasure he had given them. " We shall now," said they, " no longer be reckoned among " the Barbarians. That rost, which we 66 have been so long contracting, will soon 66 he worn off. Other generals have con-44 quered our enemies, but Marcellus has 66 conquered our ignorance. We begin to 44 see with new eyes, and have a new 44 world of beauties opening before us. 44 Let the Romans be polite, as well as 46 victorious; and let us learn to excel the et nations in taste, as well as to conquer 64 them with our arms."

Whichever side was in the right, the party for Marcellus was the successful one; for, from this point of time we may date the introduction of the arts into Rome. The Romans by this means began to be fond of them; and the love of the arts is a passion, which grows very fast in any breast wherever it is once entertained.

. We may see how fast and how greatly it prevailed in Rome, by a speech which old Cato the censor made in the senate, not above seventeen years after the taking of Syracuse. He complains in it, that their people began to run into Greece and Asia: and to be infected with a desire of playing with their fine things: that as to such spoils, there was less honour in taking them, than there was danger of their being taken by them: that the gods brought from Syracuse, had revenged the cause of its citizens, in spreading this taste among the Romans: that he heard but too many daily crying up the ornaments of Corinth and Athens; and ridiculing the poor old Roman gods; who had hitherto been propitious to them: and who, he hoped, would still cominue so, if they would but let their statues remain in peace upon their periestals.

§ 63. The Roman Generals, in their sevetal Conquests, convey great Numbers of Traces and Statues to Rome.

It was in vain too that Cato spoke a const it; for the love of the arts presed every day more and more; and food hencelorward the Roman generals, it their several conquests, seem to have smore who should bring away the greatest

number of statues and pictures, to set of their triumphs, and to adorn the city of Rome. It is surprising what accessions of this kind were made in the compass of a little more than haif a century after Marcellus had set the example. The elder Scipio Africanus brought in a great number of wrought vases from Spain and Africa, toward the end of the second Punic war; and the very year after that was finished, the Romans entered into a war with Greece, the great school of all the arts, and the chief repository of most of the finest works that ever were produced by them. It would be endless to mention all their acquisitions from hence: I shall only put you in mind of some of the most considerable. Flaminius made a great shew both of statues and vases in his triumph over Philip king of Macedon; but he was much exceeded by Æmilius, who reduced that kingdom into a province. Æmilius's triumph lasted three days; the first of which was wholly taken up In bringing in the fine statues he had selected in his expedition: as the chief ornament of the second consisted of vases and sculptured vessels of all sorts, by the most eminent hands. These were all the most chosen things, culled from the collection of that successor of Alexander the Great: for as to the inferior spoils of no less than seventy Grecian cities, Æmilius had left them all to his soldiery, as not worthy to appear among the ornaments of his triumph. Not many years after this, the young Scipio Africamus (the person who is most celebrated for his polite taste of all the Romans hitherto, and who was scarce exceeded by any one of them in all the succeeding ages) destroyed Carthage, and transferred many of the chief ornaments of that city, which had so long bid fair for being the seat of empire, to Rome, which soon became undoubtedly so. This must have been a vist accession: though that great man, who was as just in his actions as he was elegant in his taste, did not bring all the finest of his spoils to Rome, but left a great part of them in Sicily, from whence they had formerly been taken by the Carthaginians. The very same year that Scipio freed Rome from its most dangerous rival, Carthage, Mummius (who was as remarkable for his rusticity, as Scipio was for elegance and taste) added Achaia to the Roman state; and sacked, among several others, the famous city of Corinth, which had been long looked upon as one of the principal

reservoirs of the finest works of art. He cleared it of all its beauties, without knowing any thing of them: even without knowing, that an old Grecian state was better than a new Roman one. He used, however, the surest method of not being mistaken; for he took all indifferently as they cause in his way: and brought them off in such quantities, that he alone is said to have filled Rotae with statues and pictures. Thus, partly from the taste, and partly from the vanity of their generals, in less than seventy years time (reckoning from Marcellus's taking of Syracuse to the year in which Carthage was destroyed) Italy was furnished with the noblest productions of the ancient artists, that before lay scattered all over Spain, Africa, Sicily, and the rest of Greece. Sylla, beside many others, added vastly to them afterwards; particularly by his taking of Athens, and by his conquests in Asia; where by his too great indulgence to his armies, he made taste and rapine a general thing, even among the common soldiers, as it had been for a long time, among their leaders.

In this manner, the first considerable acquisitions were made by their conquering armies; and they were carried on by the persons sent out to govern their provinces, when conquered. As the behaviour of these in their governments, in general, was one of the greatest blots on the Roman nation, we must not expect a full account of their transactions in the old historians, who treat particularly of the Roman affairs; for such of these that remain to us, are either Romans themselves, or else Greeks who were too much attached to the Roman interest, to speak out the whole truth in this affair, But what we cannot have fully from their own historians, may be pretty well supplied from other hands. A poet of their own, who seems to have been a very honest man, has set the rapaciousness of their governors in general in a very strong light; as Cicero hath set forth that of Verres in particular, as strongly. If we may judge of their general behaviour by that of this governor of Sicily, they were more like monsters and harpies, than men. For that public robber (as Cicero calls him, more than once) hunted over every corner of his island, with a couple of hinders (one a Greek painter, and the other a statuary of the same nation) to get together his collection; and was so curious and so rapacious in that search, that Cicero says, there was not a gem, or statue, or relievo, or picture,

in all Sicily, which he did not see: nor any one he liked, which he did not take away from its owner. What he thus got, he sent into Italy. Rome was the centre both of their spoils in war, and of their rapines in peace: and if many of their prætors and proconsuls acted but in half so abandoned a manner as this Verres appears to have done, it is very probable that Rome was more enriched in all these sort of things secretly by their governors, than it had been openly by their generals Spence.

65. The Methods made use of in drawing the Works of the best ancient Artists into ITALY.

There was another method of augmenting these treasures at Rome not so infamous as this, and not so glorious as the former. What I mean, was the custom of the Ædiles, when they exhibited their public games, of adorning the theatres and other places where they were performed, with great numbers of statues and pictures, which they bought up or borrowed, for that purpose, all over Greece, and sometimes even from Asia. Scaurus, in particular, in his ædileship, had no less than three thousand statues and relievos for the mere ornamenting of the stage, in a theatre built only for four or five days. This was the same Scaurus who (whilst he was in the same office too) brought to Rome all the pictures of Sicyon, which had been so long one of the most eminent schools in Greece for painting; in lieu of debts owing, or pretended to be owed, from that city to the Roman people.

From these public methods of drawing the works of the best ancient artists into Italy, it grew at length to be a part of private luxury, affected by almost every body that could afford it, to adorn their houses, their porticos, and their gardens, with the best statues and pictures they could procure out of Greece or Asia. None went earlier into this taste, than the family of the Luculli, and particularly Lucius Lucullus, who carried on the war against Mithridates. He was remarkable for his love of the arts and polite learning even from a child; and in the latter part of his life gave himself up so much to collections of this kind, that Pletarch reckons it among his lollies. 46 As I am speaking of his faults (says that historian in his life) I should not omit his vast baths, and piazzas for walking; or his gardens, which were much more magnificent than any in his time

Ee8

at Rome, and equal to any in the luxuri- streets with an addition of some of the ous ages that followed; nor his excessive fondness for statues and pictures, which he got from all parts, to adorn his works and gardens, at an immense expence; and with the vast riches he had heaped together in the Mithridatic war." There were several other families which fell about that time into the same sort of excess; and, among the rest, the Julian. The first emperor, who was of that family, was a great collector; and, in particular, was as fond of old gems, as his successor, Augustus, was of Corinthian vases.

This may be called the first age of the flourishing of the politer arts at Rome; or rather the age in which they were introduced there: for the people in this period were chiefly taken up in getting fine things, and bringing them together. There were perhaps some particular persons in it of a very good taste: but in general one may say, there was rather a love, than any great knowledge of their beauties, during this age, among the Romans. They were brought to Rome in the first part of it, in greater numbers than can be easily conceived; and in some time, every body began to look upon them with pleasure. The collection was continually augmenting afterwards, from the several methods I have mentioned; and I doubt not but a good taste would have been a general thing among them much earlier than it was, had it not been for the frequent convulsions in their state, and the perpetual struggles of some great man or other to get the reins of government into his hands. These continued quite from Svlla's time to the establishment of the state under Augustus. The peaceful times that then succeeded, and the encouragement which was given by that emperor to all the arts, afforded the Romans full leisure to contemplate the fine works that were got together at Rome in the age before, and to perfect their taste in all the elegancies of life. The artists, who were then much invited to Rome, worked in a style greatly superior to what of the thirty tyrants, were quite fallen, they had done even in Julius Casar's time: so as never to rise again under any future so that it is under Augustus that we may begin the second, and most perfect age of sculpture and painting, as well as of poetry. Augustus changed the whole appearance of Rome itsell: he found it ill built, and left it a city of marble. He adorned it with buildings, extremely finer than any it could boast before his time, and set off prepared, and a vast collection of fine all those buildings, and even the common works laid in, under the first period, or in

finest statues in the world.

\$ 66. On the Decline of the Arts, Elequence, and Poetry, upon the Death of Augustus.

On the death of Augustus, though the arts, and the taste for them, did not suffer so great a change, as appeared immediately in the taste of eloquence and poetry, yet they must have suffered a good deal. There is a secret union, a certain kind of sympathy between all the polite arts, which makes them languish and flourish together The same circumstances are either kind or unfriendly to all of them. The favour of Augustus, and the tranquillity of his reign, was as a gentle dew from heaven, in a favourable season, that made them bud forth and flourish: and the sour reign of Tiberius, was as a sudden frost that checked their growth, and at last killed all their beauties. The vanity, and tyranny, and disturbances of the times that followed, gave the finishing stroke to sculpture as well as eloquence, and to painting as well as poetry. The Greek artists at Rome were not so soon or so much infected by the bad taste of the court, as the Roman writers were; but it reached them too, though by slower and more imperceptible degrees. what else could be expected from such a run of monsters as Tiberius, Caligula, and Nero? For these were the emperors under whose reigns the arts began to languish; and they suffered so much from their baleful influence, that the Roman writers soon after them speak of all the arts as being brought to a very low ebb. They talk of their being extremely fallen in general; and as to painting, in particular, they represent it as in a most leeble and dying condition. The series of so many good emperors, which happened after Domitian, gave some spirit again to the arts; but soon after the Antonines, they all declined apace, and, by the time Roman emperor.

You may see by these two accounts I have given you of the Roman noetry, and of the other arts, that the great periods of their rise, their flourishing, and their decline, agree very well; and as it were, tally with one another. Their style was the times of the republic; in the second, or the Augustan age, their writers and artists were both in their highest perfection; and in the third, from Tiberius to the Antonines, they both began to languish; and then revived a little; and at last sunk totally together.

In comparing the descriptions of their poets with the works of art, I should therefore chuse to omit all the Roman poets after the Antonines. Among them all, there is perhaps no one whose omission need be regretted, except that of Claudian; and even as to him it may be considered, that he wrote when the true knowledge of the arts was no more; and when the true taste of poetry was strangely corrupted and lost; even if we were to judge of it by his own writings only, which are extremely better than any of the poets long before and long after him. It is therefore much better to confine one's self to the three great ages, than to run so far out of one's way for a single poet or two: whose authorities, after all, must be very disputable, and indeed scarce of any weight.

\$ 67. On DEMOSTHENES.

I shall not spend any time upon the circumstances of Demosthenes's life; they are weil known. The strong ambition which he discovered to excel in the art of speaking; the unsuccessfulness of his first attempts: his unwearied perseverance in surmounting all the disadvantages that arose from his person and address; his shutting himself up in a cave, that he might study with less distraction; his declaiming by the sea-shore, that he might accustom himself to the noise of a tumultuous assembly, and with pebbles in his mouth, that he might correct a defect in his speech; his practising at home with a naked sword hanging over his shoulder, that he might check an ungraceful motion, to which he was subject: all those circumstances, which we learn from Plutarch, are very encouraging to such as study Eloquence, as they show how far art and application may avail, for acquiring an excellence which nature seemed unwilling to grant us.

6 68. DEMOSTHENES imitated the manly Eloquence of Pericles.

Despising the affected and florid manner which the rhetoricians of that age followed, Demosthenes returned to the forcible and manly eloquence of Pericles; and strength and vehemence form the principal characteristics of his Style. Never had

orator a finer field than Demosthenes in his Olynthiaes and Philippies, which are his capital orations; and, no doubt, to the nobleness of the subject, and to that integrity and public spirit which eminently breathe in them, they are in lebted for much of their merit. The subject is, to rouze the indignation of his countrymen against Philip of Macedon, the public enemy of the liberties of Greece; and to guard them . against the insidious measures, by which that crafty prince endeavoured to lay them asteep to danger. In the prosecution of this end, we see him taking every proper method to animate a people, renowned for justice, humanity and valour, but in many instances become corrupt and degenerate. He boldly taxes them with their venality, their indolence, and indifference to the public cause: while at the same time, with all the art of an orator, he recalls the glory of their ancestors to their thoughts, shows them that they are still a flourishing and a powerful people, the natural protectors of the liberty of Greece, and who wanted only the inclina tion to exert them. selves, in order to make Philip tremble. With his cotemporary orators, who were in Philip's interest, and who persuaded the people to peace, he keeps no measures, but plainly reproaches them as the betrayers of their country. He not only prompts to vigorous conduct, but he lays down the plan of that conduct; he enters into particulars; and points out, with great exactness, the measures of execution. This is the strain of these orations. They are strongly animated; and full of the impetuosity and fire of public spirit.' They proceed in a continued strain of inductions, consequences, and demonstrations, founded on sound reason. The ligures which . he uses, are never sought after; but always rise from the subject. He employs them sparingly indeed; for splendour and ornament are not the distinctions of this orator's composition. It is an energy of thought, peculiar to himself, which forms his character, and sets him above all others. He appears to attend much more to things than to words. We forget the orator, and think of the business. He warms the mind, and impels to action. He has no parade and ostentation: no methods of insinuation; no laboured jutroductions; but is like a man full of his subject, who, after preparing his audience, by a sentence or two, for hearing plain truths, enters directly on business. Ibid.

69. Demostrenes contrasted with Æschines.

Demosthenes appears to great advantage, when contrasted with Æschines, in the celebrated oration " pro Corona." Æschines was his rival in business, and personal enemy; and one of the most distinguished orators of that age. But when we read the two orations. Eschines is feeble in comparison of Demosthenes, and makes much less impression on the mind. His reasonings concerning the law that was in question, are indeed very subtile: but his invective against Demosthenes is general, and ill supported. Whereas, Demosthenes is a torrent, that nothing can resist. He bears down his antagonist with violence; he draws his character in the strongest co'ours; and the particular merit of that oration is, that all the descriptions in it are highly picturesque. There runs through it a strain of magnanimity and high honour: the orator speaks with that strength and conscious dignity which great actions and public spirit alone inspire. Both orators use great liberties with one another; and, in general, that unrestrained licence which ancient manners permitted, even to the length of abusive names and downright scurrility, as appears both here and in Cicero's Philippics, hurts and offends a modern ear. What those ancient orators gained by such a manner in point of freedom and boldness, is more than compensated by want of dignity: which seems to give an advantage, in this respect, to the greater decency of modern speaking.

\$ 70. On the Style of DEMOSTHENES.

The Style of Demosthenes is strong and concise, though sometimes, it must not be dissembled, harsh and abrupt. His words are very expressive; his arrangement is firm and manly; and the' far from being unmusical, yet it seems difficult to find in him that studied, but concealed number, and rhythmus, which some of the ancient critics are fond of attributing to him. Negligent of those lesser graces, our would rather conceive him to have aimed at that sublime which lies in sentiment. His actions and pronunciation are recorded to have been uncommonly vehement and ardent; which, from the manner of his composition, we are naturally led to believe. The character which one forms of him, from reading his works, is of the

austere, rather than the gentle kind. He is, on every occasion, grave, serious, passionate; takes every thing on a high tone; never lets himself down, nor attempts any thing like pleasantry. If any fault can be found in his admirable eloquence, it is, that he sometimes borders on the hard and dry. He may be thought to want smoothness and grace; which Dionysius of Halicarnassus attributes to his imitating too closely the manner of Thucydides, who was his great model for Style, and whose history he is said to have written eight times over with his own hand. But these defects are far more than compensated, by that admirable and masterly force of masculine eloquence, which, as it overpowered all who heard it, cannot, at this day, be read without emotion.

After the days of Demosthenes, Greece lost her liberty, eloquence of course languished, and relapsed again into the feeble manner introduced by the Rhetoricans and Sophists. Demetrius Phalerius, who lived in the next age to Demosthenes, attained indeed some character, but he is represented to us as a flowery, rather than a persuasive speaker, who aimed at grace rather than substance. "Delectabat Athemones," says Gicero, "magis quam inflammabat." "He amused the Atheminans, rather than warmed them." And after this time, we hear of no more Grecian orators of any note.

471. On CICERO.

The object in this period most worthy to draw our attention, is Cicero himself; whose name alone suggests every thing that is splendid in oratory. With the history of his life, and with his character, as a man and a politician, we have not at present any direct concern. We consider him only as an eluquent speaker; and, in this view, it is our business to remark both his virtues, and his defects, if he has any. His virtues are, beyond controversy, eminently great. In all his orations there is high art. He begins, generally, with a regular exordium; and with much preparation and insinuation prepossesses the bearers, and studies to gain their affections. His method is clear, and his arguments are arranged with great propriety. His method is indeed more clear than that of Demosthenes; and this is one advantage which he has over him. We find every thing in its proper place; he never attempts to move till he has endeavoured to convince;

sions, he is very successful. No man, that ever wrote, knew the power and force of words better than Cicero. He rolls them along with the greatest beauty and pomp: and in the structure of his sentences, is curious and exact to the highest degree. He is always full and flowing, never abrupt. He is a great amplifier of every subject; magnificent, and in his sentiments highly moral. His manner is on the whole diffuse, yet it is often happily varied, and suited to the subject. In his four orations, for instance, against Catiline, the tone and style of each of them, particularly the first and last, is very different, and accommodated with a great deal of judgment to the occasion, and the situation in which they were spoken. When a great public object roused his mind, and demanded in dignation and force, he departs considerably from that loose and declamatory manner to which he inclines at other times, and becomes exceedingly cogent and vehement. This is the case in his orations against Anthony, and in those too against Verres and Catiline. Blair.

\$ 72. Defects of CICERO.

Together with those high qualities which Cicero possesses, he is not exempt from certain defects, of which it is necessary to take notice. For the Ciceronian Eloquence is a pattern so dazzling by its beauties, that, if not examined with accuracy and judgment, it is apt to betray the unwary into a faulty imitation; and I am of opinion, that it has sometimes produced this effect. In most of his orations, especially those composed in the earlier part of his life, there is too much art: even carried the length of ostentation. There is too visible a parade of eloquence. He seems often to aim at obtaining admiration, rather than at operating conviction, by what he says. Hence, on some occasions, he is showy, rather than wlid; and diffuse, where he ought to have been pressing. His sentences are, at all times, round and soporous; they cannot be accused of monotony, for they possess variety of cadence; but, from too great a study of magnificence, he is sometimes deficient in strength. On all occasions, where there is the least room for it, he is full of himself. His great actions, and the real services which he had performed to his country, apologize for this in part; ancient manners, too, imposed fewer re-

and in moving, especially the softer passions, he is very successful. No man, that even wrote, knew the power and force of words better than Gicero. He rolls them along with the greatest beauty and pomp; and in the structure of his sentences, is of a good man, but withal, of a vain man.

The defects which we have now taken notice of in Cicero's eloquence, were not unobserved by his own contemporaries. This we learn from Quinctilian, and from the author of the dialogue, " de Causis " Corruptae Eloquentiae." Brutus we are informed called him, " fractum et "elumbem," broken and enervated. 44 Suorum temporum homines," says Quinctilian, " incessere audebant eum et tumidiorem & Asianum, et redundan-" tem, et in repetitionibus nimium, et in 44 salibus aliquandò frigidum, & in com-11 positione fractum et exultantem, & pe-" nè viro molliorem *." These censures were undoubtedly carried too far; and sayour of malignity and personal enmity. They saw his defects, but they aggravated them; and the source of these aggravations can be traced to the difference which prevailed in Rome, in Cicero's days, between two great parties, with respect to eloquence, the "Attici," and the "Asi-" ani." The former, who called themselves the Attics, were the patrons of what they conceived to be the chaste, simple, and natural style of eloquence; from which they accused Cicero as baving departed, and as leaning to the florid Asiatic manner. In several of his rhetorical works, particularly in his "Orator ad Brutum," Cicero, in his turn, endeavours to expose this sect, as substituting a frigid and jejune manner in place of the true Attic eloquence; and contends, that his own composition was formed upon the real Attic Style. In the tenth Chapter of the last Book of Quinctilian's Institutions, a full account is given of the disputes between these two parties; and of the Rhodian, or middle manner between the Attics and the Asiatics. Quinctilian himself declares on Cicero's side; and, whether it be Attic or Asiatic, prefers the full, the copious, and the amplifying style. He concludes with this very just observation: " Plures 44 sunt eloquentiæ facies; sed stultissimum

4

[&]quot; His contemperaries ventured to reproach "him as swelling, redundant, and Asiate; too frequent in repetitions; in his attempts, to- wards wit sometimes cold; and, in the strain of his composition, feeble, desuitory, and more effensiants than because a man,"

- 41 est quærere, ad quam recturus se si tora-
- 44 tor: cum omnis species, quæ modò recta
- 44 est, fiabeat usum. Utetur enim, ut res
- 4' exiget, omnibus; nec pro causa modo,
 4' sed pro partibus causae.'' Bluir.

\$ 73. Comparison of Cicero and De-

On the subject of comparing Gicero and Demosthenes, much has been said by critical writers. The different manners of these two princes of eloquence, and the distinguishing characters of each, are so strongly marked in their writings, that the comparison is, in many respects, obvious and easy. The character of Demosthenes is vigour and austerity; that of Gicero is gentleness and insinuation. In the one, you find more manliness; in the other more ornament. The one is more harsh, but more spirited and cogent; the other more agreeable, but withal, looser and weaker.

To account for this difference, without any prejudice to Gicero, it has been said, that we must look to the nature of their different auditories : that the refined Athemians followed with ease the coucise and convincing eloquence of Demosthenes; but that a manner more popular, more flowery, and declamatory, was requisite in speaking to the Romans, a people less acute, and less acquainted with the arts of speech. But this is not satisfactory. For we must observe, that the Greek orator spoke much oftener before a mixed multitude, than the Roman. Almost all the public business of Athens was transacted in popular assemblies. The common people were his beavers, and his judges. Whereas Cicerogenerally addressed himself to the " Patres Couscripti," or, in criminal trials, to the Prator, and the Select Judges; and it cannot be imagined, that the persons of highest rank and best education in Rome, required a more diffuse manner of pleading than the common citizens of Athens; in order to make them understand the cause, or relish the speaker. Perhaps we shall come nearer the truth, by observing, that to unite toge-

"Eloquence admits of many different forms; and nothing can be more foolish than to enguire, by which of them an orator is to registiate his composition; since every form, which is in itself just, has its own place and use. The Orator, according as circumstances regaire, will employ them all; suiting them not only to the cause or subject of which be treats, but to the different parts of that subject."

ther all the qualities, without the least exception, that form a perfect orator, and to excel equally in each of those qualities, is not to be expected from the limited powers of human genius. The highest degree of strength is, I suspect, never found united with the linglest degree of smoothness and ornament: equal attentions to both are incompatible; and the genius that carries ornament to its utmost length, is not of such a kind, as can excel as much in vigour. For there plainly lies the characteristical difference between these two celebrated orators.

It is a disadvantage to Demosthenes, that, besides his conciseness, which sometimes produces obscurity, the language, in which he writes, is less familiar to most of us than the Latin, and that we are less acquainted with the Greek antiquities than . we are with the Roman. We read Cicero with more case, and of course with more pleasure. Independent of this circumstance too, he is no doubt, in himself, a more agreeable writer than the other. But notwithstanding this advantage, I am of opinion, that were the state in danger, or some great public interest at stake, which drew the serious attention of men, an oration in the spirit and strain of Demosthenes would have more weight, and produce greater offects, than one in the Ciceronian manner. Were Demosthenes's Philippics spoken in a British assembly, in a similar conjuncture of affairs, they would convince and persuade at this day. The rapid style, the vehement reasoning, the disdain, anger, boldness, freedom, which perpetually animate them, would render their success infallible over any modern assembly. I question whether the same can be said of Cicero's orations; whose eloquence, however beautiful, and however well suited to the Roman taste, yet borders oftener on declamation, and is more remote from the manner in which we now expect to hear real business and causes of importance

In comparing Demosthenes and Gicero, most of the French critics incline to give the preference to the latter. P. Rapin the Jesuit, in the parallels which he has drawn between some of the most eminent Greek

t In this judgment I concur with Mr. David Hume, in his Essay upon Eloquence. He gives it as his opinion, that of all human productions, the Orations of Demosthenes present to us the models which approach the nearest to perfection.

and Roman writers, uniformly decides in favour of the Roman. For the preference which he gives to Cicero, he assigns, and lays stress on one reason of a pretty extraordinary nature; viz. that Demosthenes could not possibly have so complete an insight as Cicero into the manners and passions of men; Why?-Because he had not the advantage of perusing Aristotle's treatise of Rhetoric, wherein, says our critic, he has fully laid open that mystery; and, to support this weighty argument, he enters into a controversy with A. Gellius, in order to prove that Aristotle's Rhetoric was not published till after Demosthenes had spoken at least, his most considerable orations. Nothing can be more childish. Such orators as Cicero and Demosthenes derived their knowledge of the human passions and their power of moving them, from higher sources than any treatise of rhesoric. One French critic has indeed departed from the common track; and, after bestowing on Cicero those just praises, to which the consent of so many ages shews him to be entitled, concludes, however, with giving the palm to Demosthenes. This is Fenelon, the famous archbishop of Cambray, and author of Telemachus; hiznself, surely, no enemy to all the graces and flowers of composition. It is in his Reffections on Rhetoric and Poetry, that he gives this judgment; a small tract, commonly published along with his Dialogues on Eloquence.* These dialogues and reflections are particularly worthy of perusal, as containing, I think,

* As his expressions are remarkably happy and beautiful, the passage here referred to deserves to be inserted. "Je ne crains pas dire, que Demosthene me paroit supérieur a Ciré-4 ron. Je proteste que personne n'admire plus 4 Cicéron que je fais. Il embellit tout ce qu'il 4 touche. Il fait honneur à la parole. 44 fait des mots ce qu'un autre n'en sauroit faire. " la je ne suis combien de sortes d'esprits. Il " est même court, & vehement, toutes les fois " qu'il veut l'estre ; contre Catiline, contre " Verres, contre Antoine. Mais on remarque " quelque parure dans fons discours. L'art y est merveilleux; mais ou l'entrevoit. L'ora-" teur en pensant an salut de la république, ne " s'oublie pus, et ne se laisse pas oublier. De-" mosthene paroit sortir de soi, et ne voir que la patrie. Il ne cherche point le beau; il le "fait, sans y pemer. Il est au-dessus de l'ad-"miration. Il se sert de la parole, comme un "homme modeste de son habit, pour se couvrir. " Il tonne; il foudroye. C'est un torrent qui " entraine tout. On ne peut le critiquer, parce-" qu'on est mini. On pense aux choses qu'il

the justest ideas on the subject, that are to be met with in any modern critical writer. Blair.

\$ 74. On the Means of improving in ELOQUENCE.

Next to moral qualifications, what, in the second place, is most necessary to an orator, is a fund of knowledge. Much is this inculcated by Cicero and Quinctilian: "Quod omnibus disciplinis et art" tibus debet esse instructus Orator." By which they mean, that he ought to have what we call a Liberal Education; and to be formed by a regular study of philosophy, and the polite arts. We must never forget that,

Scribendi recté, sapere est & principium & fons. Good sease and knowledge are the foundation of all good speaking. There is no art that can teach one to be eloquent, in any sphere, without a sufficient acquaintance with what belongs to that sphere; or if there were an art that made such pretensions, it would be mere quackery, like the pretensions of the sophists of old, to teach their disciples to speak for and against every subject: and would be deservedly exploded by all wise men. Attention to style, to composition, and all the arts of speech, can only assist an orator in setting off, to advantage, the stock of materials which he possesses; but the stock, the materials themselves, must be brought from other quarters than from rhetoric. He who is to plead at the bar, must make himself thoroughly master of the knowledge of the law; of all the learning and experience that can be useful in his profession, for supporting a cause, or convincing a judge. He who is to speak from the pulpit, must apply himself closely to the study of divinity, of practical religion, of morals, of human nature; that he may be rich in all the topics both of instruction and of persuasion. He who would fit himself for being a member of the supreme council of the nation, or of any public assembly, must be thoroughly acquainted with the business that belongs to such assembly; he-

[&]quot;dit, & non à ses paroles. On le perdde vue.

On n'est occupé que de Philipe qui envahit
tout. Je suis charmé de ces deux orateurs:

mais j'avoue que je suis moins touché de l'art
infini, & de la magnifique éloquence de Cicéron, que de la rapide simplicité de Demosthene."

must study the forms of court, the course of procedure; and must attend minutely to all the facts that may be the subject of question or deliberation.

Besides the knowledge that properly belongs to that profession to which he addicts himself, a public speaker, if ever he expects to be eminent, must make himself acquainted, as far as his necessary occupations allow, with the general circle of polite literature. The study of poetry may be useful to him on many occasions, for embellishing his style, for suggesting lively images, or agreeable allusions. The study of history may be still more useful to him; as the knowledge of facts, of eminent characters, and of the course of human affairs, finds place on many occasions. There are few great occasions of public speaking, in which one will not derive assistance from cultivated taste, and extensive knowledge. They will often yield him materials for proper ornament; sometimes, for argument and real use. A deficiency of knowledge, even in subjects that belong not directly to his own profession, will expose him to many disadvantages, and give better qualified rivals a great superiority over him.

§ 75. A Habit of Industry recommended to the intended Speaker.

Allow me to recommend, in the third place, not only the attainment of useful knowledge, but a habit of application and industry. Without this, it is impossible to excel in any thing. We must not imagine that it is by a sort of mushroom growth, that one can rise to be a distinguished pleader, or preacher, or speaker in any assembly. It is not by starts of application, or by a few years preparation of study afterwards discontinued, that eminence can be attained. No; it can be attained only by means of regular industry, grown up into a habit, and ready to be exerted on every occasion that calls for industry. This is the fixed law of our nature; and he must have a very high opinion of his own genius indeed, that can believe himself an exception to it. A very

wise law of our nature it is; for industry is in truth, the great " Condimentum," the seasoning of every pleasure; without which life is doomed to languish. Nothing is so great an enemy both to hopourable attainments, and to the real, to the brisk, and spirited enjoyment of life, as that relaxed state of mind which arises from indolence and dissipation. One that is destined to excel in any art, especially in the arts of speaking and writing, will be known by this more than by any other mark whatever, an enthusiasm for that art; an enthusiasm, which, firing his mind with the object he has in view, will dispose him to relish every labour which the means require. It was this that characterised the great men of antiquity; it is this, which must distinguish the moderns who would tread their steps. This honourable enthusiasm, it is highly necessary for such as are studying oratory to cultivate. If youth wants it, manhood will flag miser-

\$ 76. Attention to the best Models recommended to the Student in Eloquence.

Attention to the best models will contribute greatly towards improvement. Every one who speaks or writes should, indeed, endeavour to have somewhat that is his own, that is peculiar to himself, and that characterises his composition and style. Slavish imitation depresses genius, or rather betrays the want of it. But withal, there is no gentus so original, but may be profited and assisted by the aid of proper examples in style, composition, and delivery. They always open some new ideas; they serve to enlarge and correct our own. They quicken the current of thought, and excite emulation. Bid.

\$ 77. Caution necessary in choosing Models.

Much, indeed, will depend upon the right choice of models which we purpose to imitate; and supposing them rightly chosen, a farther care is requisite, of not being seduced by a blind universal admiration. For, "decipit examplar, vitits imitable." Even in the most finished models we can select, it must not be forgotten, that there are always some things improper for imitation. We should study to acquire a just conception of the peculiar characteristic beauties of any writer, or public speaker, and imitate these only. One ought

[&]quot; "Imprimis verà, abundare debet Orator exemploram copià, cum veterum, tum etiam novorum; adeò ut non modò qua conscripta sont
historiis, aut armonibus velut per manus tradita, quaque quotidie aguntur, debeat nosse;
veràm ne ea quidem quæ a clavioribas poètis
tunt ficta negligete." QUIKET. L. XII. Cap. 4.

enght never to attach himself too closely to any single model: for he who does so, is almost sure of being seduced into a faulty and affected imitation. His business should be, to draw from several the proper ideas of perfection.

Blair.

\$78. On the Style of BOLINGBROKE and SWIFT.

Some authors there are, whose manner of writing approaches nearer to the style of speaking than others; and who, therefore, can be imitated with more safety. In this class, among the English authors, are Dean Swift, and Lord Bolingbroke. The Dean, throughout all his writings, in the midst of much correctness, maintains the easy natural manner of an unaffected speaker: and this is one of his chief excellencies. Lord Bolingbroke's style is more splendid, and more declamatory than Dean Swift's; but still it is the style of one who speaks, or rather who harangues, Indeed, all his political writings (for it is to them only, and not to his philosophical ones, that this observation can be applied) carry much more the appearance of one declaiming with warmth in a great assembly, than of one writing in a closet, in order to be read by others. They have all the copiousness, the fervour, the inculcating method, that is allowable and graceful in an orator; perhaps too much of it for a writer: and it is to be regretted, as I have formerly observed, that the matter contained in them should have been so trivial or so false; for, from the manner and style, considerable advantage might be

§ 79. Frequent Exercise in composing and speaking, necessary for Improvement in Eloquence.

Besides attention to the best models, frequent exercise, both in composing and speaking, will be admitted to be a necessary mean of improvement. That sort of composition is, doubtless, most useful, which relates to the profession, or kind of public speaking, to which persons addict themselves. This they should keep ever in their eye, and be gradually inuring themselves to it. But let me also advise them, not to allow themselves in negligent composition of any kind. He who has it for his aim to write, or to speak correctly, should, in the most trivial kind of composition, in writing a letter, may even in

common discourse, study to acquit himself with propriety. I do not at all mean, that he is never to write, or to speak a word, but in elaborate and artificial language. This would form him to a stiffness and affectation, worse, by ten thousand degrees, than the greatest negligence. But it is to be observed, that there is, in every thing, a manner which is becoming, and has propriety: and opposite to it, there is a clumsy and faulty performance of the same thing. The becoming manner is very often the most light, and seemingly careless manner; but it requires taste and attention to seize the just idea of it. That idea, when acquired, we should keep in our eye, and form upon it whatever we write or say.

\$ 80. Of what Use the Study of critical and rhetorical Writers may be.

It now only remains to enquire, of what use may the study of critical and rhetorical writers be, for improving one in the practice of eloquence? These are certainly not to be neglected; and yet, I dare not say that much is to be expected from them. For professed writers on public speaking, we must look chiefly among the ancients. In modern times, for reasons which were before given, popular eloquence, as an art, has never been very much the object of study; it has not the same powerful effect among us that it had in more democratical states; and therefore has not been cultivated with the same care. Among the moderns, though there has been a great deal of good criticism on the different kinds of writing, yet much has not been attempted on the subject of eloquence, or public discourse; and what has been given us of that kind has been drawn mostly from the ancients. Such a writer as Joannes Gerardus Vossius, who has gathered into one heap of pondrous lumber, all the trifling, as well as the useful things, that are to be found in the Greek and Roman writers, is enough to disgust one with the study of eloquence. Among the French, there has been more attempted on this subject, than among the English. The Bishop of Cambray's writings on eloquence, I before mentioned with honour. Rollin, Batteux, Crevier, Gibert, and several other French critics, have also written on oratory; but though some of them may be useful, none of them are so considerable as to deserve particular recommendation. ø 81.

\$ 81. Recourse must chiefly be had to the original Writers.

It is to the original ancient writers that we must chiefly have recourse; and it is a reproach to any one, whose profession calls him to speak in public, to be unacquainted with them. In all the ancient rhetorical writers, there is, indeed, this defect, that they are too systematical, as I formerly shewed; they aim at doing too much; at reducing rhetoric to a complete and perfect art, which may even supply invention with materials on every subject; insomuch that one would imagine they expected to form an orator by rule, in as mechanical a manner as one would form a carpenter. Whereas, all that can in truth be done, is to give openings for assisting and enlightening taste, and for pointing out to genius the course it ought to hold.

Aristotle laid the foundation for all that was afterwards written on the subject. That amazing and comprehensive genius, which does honour to human nature, and which gave light into so many different sciences, has investigated the principles of rhetoric with great penetration. Aristotle appears to have been the first who took rhetoric out of the hands of the sophists, and introduced reasoning and good sense into the art. Some of the profoundest things which have been written on the passions and manners of men, are to be found in his Treatise on Rhetoric: though in this, as in all his writings, his great brevity often renders him obscure. Succeeding Greek rhetoricians, most of whom are now lost, improved on the foundation. which Aristotle had laid. Two of them still remain, Demetrius Phælerius, and Dionysius of Halicarnassus; both write on the construction of sentences, and deserve to be perused; especially Dionysius, who is a very accurate and judicious critic.

I need scarcely recommend the rhetorical writings of Cicero. Whatever, on the subject of eloquence, comes from so great an orator, must be worthy of attention. His most considerable work on this subject is that De Oratore, in three books. None of Cicero's writings are more highly finished than this treatise. The dialogue is polite; the characters are well supported, and the conduct of the whole is beautiful and agreeable. It is, indeed, full of digressions, and his rules and observations may be thought sometimes too vague and general. Useful things, however, may be

learned from it; and it is no small benefit to be made acquainted with Cicero's own idea of eloquence. The "Orator ad M. " Brutum," is also a considerable treatise; and, in general, throughout all Cicero's rhetorical works there run those high and sublime ideas of eloquence, which are fitted both for forming a just taste, and for creating that enthusiasm for the act, which is of the greatest consequence for excelling

But, of all the ancient writers on the subject of oratory, the most instructive, and most useful, is Quinctilian. I know few books which abound more with good sense, and discover a greater degree of just and accurate taste, than Quinctilian's Institutions. Almost all the principles of good criticism are to be found in them. has digested into excellent order all the ancient ideas concerning rhetoric, and is, at the same time, himself an eloquent veriter. Though some parts of his work contain too much of the technical and artificial system then in vogue, and for that reason may be thought dry and tedious, yet I would not advise the omitting to read any part of his Institutions. To pleaders at the bar, even these technical parts may prove of some use. Seldom has any person, of more sound and distinct judgment than Quinctilian, applied himself to the study of the art of oratory.

\$82. On the Necessity of a Classical Education.

The fairest diamonds are rough till they are polished, and the purest gold must be run and washed, and sifted in the ore. We are untaught by nature, and the finest qualities will grow wild and degenerate, if the mind is not formed by discipline, and cultivated with an early care. In some persons, who have run up to men without a liberal education, we may observe many great qualities darkened and eclipsed; their minds are crusted over like diamonds in the rock, they flash out sometimes into an irregular greatness of thought, and betray in their actions an unguided force, and unmanaged virtue; something very great and very noble may be discerned, but it looks cumbersome and aukward, and is alone of all things the worse for being natural. Nature is undoubtedly the best mistress and aptest scholar; but nature herself must be civilized, or she will look savage, as she appears in the Indian princes, who are yested with a native majesty, a sur-

prising greatness and generosity of soul, and discover what we always regret, fine parts, and excellent natural endowments, without improvement. In those countries, which we call barbarous, where art and politeness are not understood, nature hath the greater advantage in this, that simplicity of manners often secures the innocence of the mind; and as virtue is not, so neither is vice, civilized and refined: but in these politer parts of the world, where virtue excels by rules and discipline, vice also is more instructed, and with us good qualities will not spring up alone: many hurtful weeds will rise with them, and choak them in their growth, unless removed by some skilful hand: nor will the mind be brought to a just perfection without cherishing every hopeful seed, and repressing every superfluous humour: the mind is like the body in this regard, which cannot fall into a decent and easy carriage, unless it be fashioned in time: an untaught behaviour is like the people that use it, truly rustic, forced and uncouth, and art must be applied to make Felton. it natural.

\$ 83. On the Entrance to Knowledge.

Knowledge will not be won without pains and application: some parts of it are easier, some more difficult of access: we must proceed at once by sap and battery: and when the breach is practicable, you have nothing to do, but to press boldly on, and enter: it is troublesome and deep digging for pure waters, but when cace you come to the spring, they rise and meet you: the entrance into knowledge is oftentimes very narrow, dark and tiresome, but the rooms are spacious, and gloriously furnished: the country is admirable, and every prospect entertaining. You need not wonder that fine countries have strait avenues, when the regions of happiness, like those of knowledge, are impervious and shut to lazy travellers; and the way to heaven itself is narrow.

Common things are easily attained, and nobody values what lies in every body's way: what is excellent is placed out of ordinary reach, and you will easily be persuaded to put forth your hand to the utmost stretch, and reach whatever you aspire at.

4 84. Glassics recommended.

and deserve the steadiest application from

those who would excel, and be distinguished in them. Human learning in general; natural philosophy, mathematics, and the whole circle of science. But there is no necessity of leading you through these several fields of knowledge; it will be most commendable for you to gather some of the fairest fruit from them all, and to lay up a store of good sense, and sound reason, of great probity, and solid virtue. This is the true use of knowledge, to make it subservient to the great duties of our most boly religion, that as you are daily grounded in the true and saving knowledge of a Christian, you may use the helps of human learning, and direct them to their proper end. You will meet with great and wonderful examples of an irregular and mistaken virtue in the Greeks and Romans. with many instances of greatness of mind. of unshaken fidelity, contempt of human grandeur, a most passionate love of their country, prodigality of life, disdain of servitude, inviolable truth, and the most public disinterested souls, that ever threw off all regards in comparison with their country's good: you will discern the flaws and blemishes of their fairest actions, see the wrong apprehensions they had of virtue. and be able to point them right, and keep them within their proper bounds. Under this correction you may extract a generous and noble spirit from the writings and histories of the ancients. And I would in a particular manner recommend the classic authors to your favour, and they will recommend themselves to your approbation.

If you would resolve to master the Greek as well as the Latin tongue, you will find that the one is the source and original of all that is most excellent in the other: I do not mean so much for expression, as thought, though some of the most beautiful strokes of the Latin tongue are drawn from the lines of the Grecian orators and poets; but for thought and fancy, for the very foundation and embellishment of their works, you will see, the Latins have ransacked the Grecian store, and, as Horace advises all who would succeed in writing well, had their authors night and morning in their hands.

. And they have been such happy imitators, that the copies have proved more exact than the originals; and Rome has triumphed over Athens, as well in wit as arms; for though Greece may have Many are the subjects which will invite the honour of invention, yet it is easier to strike out a new course of thought

than to equal old originals: and therefore it is more honour to surpass, than to invent anew. Verrio is a great man from his own designs; but if he had attempted upon the Cartons, and outdone Raphael Urbin in life and colours, he had been acknowledged greater than that celebrated master, but now we must think him less. Felton.

§ 85. A Comparison of the Greek and Roman Writers.

If I may detain you with a short comparison of the Greek and Roman authors, I must own the last have the preference in my thoughts; and I am not singular in my opinion. It must be confessed, the Romans have left no tragedies behind them. that may compare with the majesty of the Grecian stage; the best comedies of Rome were written on the Grecian plan, but Menander is too far lost to be compared with Terence; only if we may judge by the method Terence used in forming two Greek plays into one, we shall naturally conclude, since his are perfect upon that model, that they are more perfect than Menander's were. I shall make no great difficulty in preferring Plautus to Aristophanes, for wit and humour, variety of characters, plot and contrivance in his plays, though Horace has censured him for low wit.

Virgil has been so often compared with Homer, and the merits of those poets so often canvassed, that I shall only say, that if the Roman shines not in the Grecian's same and fire, it is the coolness of his judgment, rather than the want of heat, You will generally find the force of a poet's genius, and the strength of his fancy, display themselves in the descriptions they give of battles, storms, prodigies, &c. and Homer's hie breaks out on these occasions in more dread and terror; but Virgil mixes compassion with his terror, and, by throwing water on the flame, makes it burn the brighter; so in the storm; so in his battles on the fall of Pallas and Camilla; and that scene of horror, which his hero opens in the second book; the burning of Troy; the ghost of Hector; the murder of the king; the massacre of the people; the sudden surprise, and the dead of night, are so relieved by the piety and pity that is every where intermixed, that we forget our fears, and join in the lamentation. All the world acknowledges the Aneid to be mor perfect in its kind; and considering the disadvantage of the language, and the severity of the Roman muse, the poem is still more wonderful, since, without the liberty of the Grecian poets, the diction is so great and noble, so clear, so forcible and expressive, so chaste and pure, that even all the strength and compass of the Greek tongue, joined to Homer's fire, cannot give us stronger and clearer ideas, than the great Virgil has set before our eyes; some few instances excepted, in which Homer, they the force of genius, has excelled.

I have argued hitherto for Virgil; and it will be no wonder that his poem should be more correct in the rules of writing, if that strange opinion prevails, that Homer writ without any view or design at all: that his poems are loose independent pieces tacked together, and were originally only so many songs or ballads upon the godsand heroes, and the siege of Troy. If this he true, they are the completest string of ballads I ever met with, and whoever collected them, and put them in the method we now read them in, whether it were Pisistratus, or any other, has placed them in such order, that the Iliad and the Odysseys seem to have been composed with one view and design, and scheme and intention, which are carried on from the beginning to the end, all along uniform and consistent with themselves. Some have argued, the world was made by a wise Being, and not jumbled together by chance, from the very absurdity of such a supposition; and they have illustrated their argument, from the impossibility that such a poem as Homer's and Virgil's should rise in such beautiful order out of millions of letters eternally shaken together: but this argument is half spoiled, if we allow, that the poems of Homer, in each of which appears one continued formed design from one end to the other, were written in loose scraps on no settled premeditated scheme. Horace, we are sure, was of another opinion, and so was Virgil too, who built his Æneid upon the model of the Iliad and the Odysseys-After all, Tully, whose relation of this passage has given some colour to this suggestion, says no more, than that Pisistratus (whom he commends for his learning, and condemns for his tyranny) observing the books of Homer to lie confused and out of order, placed them in the method the great author, no doubt, had first formed them in: but all this Tully gives us only as report. And it would be very strange, that Aristotle should form his rules on Homer's poems: that Horace should follow

his example, and propose Homer for the standard of epic writing, with this bright testimony, that he " never undertook any thing inconsiderately, nor ever made any foolish attempts;" if indeed this celebrated poet did not intend to form his poems in the order and design we see them in. If we look upon the fabric and construction of those great works, we shall find an admirable proportion in all the parts, a perpetual coincidence, and independence of one upon another: I will venture an appeal to any learned critic in this cause; and if it be a sufficient reason to alter the common readings in a letter, a word, or a phrase, from the consideration of the context, or propriety of the language, and call it the restoring of the text, is it not a demonstration that these poems were made in the same course of lines, and upon the same plan we read them in at present, from all the argument's that connexion, dependence, and regularity can give us? If those critics, who maintain this odd fancy of Homer's writings, had found them loose and undigested, and restored them to the order they stand in now, I believe they would have gloried in their art, and maintained it with more uncontested reasons, than they are able to bring for the discovery of a word or a syllable hitherto falsely printed in the text of any author. But, if any learned men of singular fancies and opinions will notallow those buildings to have been originally designed after the present model, let them at least allow us one poetical supposition on our side, That Homer's harp was as powerful to command his scattered incoherent pieces into the beautiful structure of a poem, as Amphion's was to summon the stones into a wall, or Orpheus's to lead the trees a dance. For certainly, however it happens, the parts are so justly disposed, that you cannot change any book into the place of another, without spoiling the proportion, and confounding the order of the whole.

The Georgics are above all controversy with Hesiod; but the Idylliums of Theorius have something so inimitably sweet in the verse and thoughts, such a native simplicity, and are so genuine, so natural a result of the rural life, that I must, in my poor judgment, allow him the honour of the pastoral.

In Lyrics the Grecians may seem to have excelled, as undoubtedly they are superior in the number of their poets, and and variety of their verse. Orpheus, Alcaeus, Sappho, Simonides, and Stesichorus are almost entirely lost. Here and there a fragment of some of them is remaining, which, like some broken parts of ancient statutes, preserve an imperfect monument of the delicacy, strength, and skill of the great master's hand.

Pindar is sublime, but obscure, impetuous in his course, and unfathomable in the depth and loftiness of his thoughts. Anacreon flows soft and easy, every where diffusing the joy and indolence of his mind through his verse, and tuning his harp to the smooth and pleasant temper of his soul. Horace alone may be compared to both; in whom are reconciled the loftiness and majesty of Pindar, and the gay, careless, jovial temper of Anacreon: and, I suppose, however Pindar may be admired for greatness, and Anacreon for delicateness of thought: Horace, who rivals one in his triumphs, and the other in his mirth and love, surpasses them both in justness, elegance, and happiness of expression. Anacreon has another follower among the choicest wits of Rome, and that is Catullus, whom, though his lines be rough, and his numbers inharmonious, I could recommend for the softness and delicacy, but must decline for the looseness of his thoughts, too immodest for chaste ears to

I will go no farther in the poets; only, for the honour of our country, let me observe to you, that while Rome has been contented to produce some single rivals to the Grecian poetry, England hath brought forth the wonderful Cowley's wit, who was beloved by every muse he courted, and has rivalled the Greek and Latin poets in every kind but tragedy.

I will not trouble you with the historians any further, than to inform you, that the contest lies chiefly between Thucydides and Sallust, Herodotus and Livy: though I think Thucydides and Livy may on many accounts more justly be compared: the critics have been very free in their censures, but I shall be glad to suspend any farther judgment, till you shall be able to read them, and give me your opinion.

Oratory and philosophy are the next disputed prizes; and whatever praises may be justly given to Aristotle, Plato, Zenophon and Demosthenes, I will venture to say, that the divine Tully is all the Grecian orators and philosophers in one. Felton.

§ 86. A short Commendation of the Latin Language.

And now, having possibly given you some prejudice in favour of the Romans, I must be gleave to assuse you, that if you have not leisure to master both, you will find your pains well rewarded in the Latin tongue, when once you enter into the elegancies and beauties of it. It is the peculiar felicity of that language to speak good sense in suitable expressions; to give the finest thoughts in the happiest words, and in an easy majesty of style, to write up to the subject. "And in this lies the great secret of writing well. It is that elegant simplicity, that ornamental plainness of

simplicity, that ornamental plainness of speech, which every common genius thinks so plain, that any body may reach it, and findeth so very degant, that all his sweat, and pains, and study, fail

"him in the attempt."

In reading the excellent authors of the Roman tongue, whether you converse with poets, orators, or historians, you will meet with all that is admirable in human composure. And though life and spirit, propriety and force of style, be common to them all, you will see that nevertheless every writer shines in his peculiar excellencies; and that wit, like beauty, is diversified into a thousand graces of feature and complexion.

I need not trouble you with a particular character of these celebrated writers. What I have said already, and what I shall say farther of them as I go along, renders it less necessary at present, and I would not pre-engage your opinion implicitly to my side. It will be a pleasant exercise of your judgment to distinguish them yourself, and when you and I shall be able to depart from the common received opinions of the crities and commentators, I may take some other occasion of laying them before you, and submitting what I shall then say of them to your approbation.

Fetton.

\$ 87. Directions in reading the Classics.

In the mean time, I shall only give you two or three cautions and directions for your reading them, which to some people will look a little odd, but with me they are of great moment, and very necessary to be observed.

The first is, that you would never be persuaded into what they call Commonplaces,; which is a way of taking an au-

thor to pieces, and ranging him under proper heads, that you may readily find what he has said upon any point, by consulting an alphabet. This practice is of no use but in circumstantials of time and place, custom and antiquity, and in such instances where facts are to be remembered, not where the brain is to be exercised. In these cases it is of great use: it helps the memory, and serves to keep those things in a sort of order and succession. But, common-placing the sense of an author is such a stupid undertaking, that if I may be indulged in saying it, they want common sense that practise it. What heaps of this rubbish have I seen! O the pains and labour to record what other people have said, that is taken by those who have nothing to say themselves! You may depend upon it, the writings of these men are never worth the reading; the fancy is cramped, the invention spoiled, their thoughts on every thing are prevented, if they think at all; but it is the peculiar happiness of these collectors of sense, that they can write without thinking.

I do most readily agree, that all the bright sparkling thoughts of the ancients, their finest expressions, and noblest sentiments, are to be met with in these transcribers; but how wretchedly are they brought in, how miserably put together! indeed, I can compare such productions to nothing but rich pieces of patch-work, sewed together with packthread.

When I see a beautiful building of exact order and proportion taken down, and the different materials laid togs her by themselves, it puts me in mind of these commouplace men. The materials are certainlyvery good, but they understand not the rules of architecture so well as to form them into just and masterly proportions any more and yet how beautiful would they stand in another model upon another plan!

For, we must confess the truth: We can say nothing new, at least we can say nothing better than has been said before; but we may nevertheless make what we say our own. And this is done when we do not trouble ourselves to remember in what page or what book we have read such a passage; but it falls in naturally with the course of our own thoughts, and takes its place in our writings with as much ease, and looks with as good a grace as it appeared in two thousand years ago.

This is the best way of remembering the ancient authors, when you relish their

W2

way of writing, enter into their thoughts, and imbibe their sense. There is no need of tying ourselves up to an imitation of any of them: much less to copy or transcribe them. For there is room for vast variety of thought and style; as nature is various in her works, and is nature still. Good authors, like the celebrated masters in the teveral schools of painting, are driginals in their way, and different in their manner. And when we can make the same use of the Romans as they did of the Grecians, and habituate ourselves to their way of thinking and writing, we may be equal in tank, though different from them all, and be esteemed as originals as well as they.

And this is what I would have you do. Mix and incorporate with those ancient streams; and though your own wit will be improved and heightened by such a strong infusion, yet the spirit, the thought, the fancy, the expression, which shall flow from your peri, will be entirely your own.

\$ 88. The Method of Schools vindicated.

It has been a long complaint in this polite and excellent age of learning, that we lose our time in words; that the memory of youth is charged and overloaded without improvement; and all they learn is mere cant and jargon for three or four years together. Now, the complaint is in some measure true, but not easily remedied; and perhaps, after all the exclamation of so much time lost in mere words and terms, the liopeful youths, whose loss of time is so much lamented, were capable of learning nothing but words at those years, I do not mind what some quacks in the art of teaching say; they pretend to work wonders, and to make young gentlemen masters of the languages, before they can be masters of countrion sense; but this to me is a demonstration, that we are capable of little else than words, till twelve or thirteen, if you will observe, that a boy shall he able to repeat his grammar over, two or three years before his understanding opens enough to let him into the reason and clear apprehension of the rules; and when this is done, sooner or later, it ceaseth to be cant and jargon: so that all this clamour is wrong founded, and the cause of complaint lies rather against the backwardness of our judgment, than the method of our schools. And therefore I am for the old way in schools still, and children will be furnished

there with a stock of words at least, when they come to know how to use them.

Ibid.

\$ 89. Commendation of Schools.

I am very far from having any mean thoughts of those great men who preside in our chiefest and most celebrated schools: it is my happiness to be known to the most eminent of them in a particular manner, and they will acquit me of any disrespect, where they know I have the greatest veneration; for with them the genius of classic learning dwells, and from them it is derived. And I think myself honoured in the acquaintance of some masters in the country, who are not less polite than they are jearned, and to the exact knowledge of the Greek and Roman tongues, have joined a true taste, and delicate relish of the classic authors. But should you ever light into some formal hands, though your sense is too fine to relish those pedantries I have been remonstrating against, when you come to understand them, yet for the present they may impose upon you with a grave appearance; and, as learning is conmonly managed by such persons, you may think them very learned, L cause they are very dull: and if you should receive the tincture while you are young, it may sink too deep for all the waters of Helicon to take out. You may be sensible of it, as we are of ill habits, which we regret, but cannot break, and so it may mix with your studies for ever, and give bad colours to every thing you design, whether in speech or writing.

For these meaner critics dress up their entertainments so very ili, that they will spoil your palate, and bring you to a victous taste. With them, as with distempered stomachs, the linest food and noblest jnices turn to nothing but crudities and indigestion. You will have no notion of delicacies, if you table with them; they are all for rank and foul feeding; and spoil the best provisions in the cooking; you must be content to be taught parsimony in sense, and for your most inoffensive food to live upon dry meat and insipid stuff, without any poignancy or relish.

So then these gentlemen will never be able to form your taste or your style; and those who cannot give you a true relish of the best writers in the world, can never instruct you to write like them.

Did

\$ 90. On forming a Style.

Give me leave to touch this subject, and draw out, for your use, some of the chief strokes, some of the principal lineaments, and fairest features of a just and beautiful style. There is no necessity of being methodical, and I will not entertain you with a dry system upon the matter, but with what you will read with more pleasure, and, I hope, with equal profit, some desultory thoughts in their native order, as they rise in my mind, without being reduced to rules, and marshalled according to art.

To assist you, therefore, as far as art may be an help to nature, I shall proceed to say something of what is required in a finished piece, to make it complete in all its parts,

and masterly in the whole.

I would not lay down any impracticable schemes, nor trouble you with a dry formal method: the rule of writing, like that of our duty, is perfect in its kind; but we must make allowances for the infirmities of nature; and since none is without his faults, the most that can be said is, That he is the best writer, against whom the fewest can be alledged.

46 A composition is then perfect, when 66 the matter rises out of the subject; 44 when the thoughts are agreeable to the 46 matter, and the expressions suitable to 44 the thoughts; where there is no incon-** sistency from the beginning to the end: 44 when the whole is perspicuous in the 44 beautiful order of its parts, and formed 64 in due symmetry and proportion."

\$ 91. Expression suited to the Thought.

In every sprightly genius, the expression will be ever lively as the thoughts. All the danger is, that a wit too fruitful should . to his work, and disperses through his run out into unnecessary branches; but when it is matured by age, and corrected by judgment the writer will prune the luxuriant boughs, and cut off the superfluous shoots of fancy, thereby giving both strength and beauty to his work.

Perhaps this piece of discipline is to young writers the greatest self-denial in the world: to confine the fancy, to stifle the birth, much more to throw away the beautiful offspring of the brain, is a trial, that none but the most delicate and lively wits can be put to. It is their praise, that they are obliged to retrench more wit than others have to lavish: the chippings and filings of these jewels could they be pre-

served, are of more value than the whole mass of ordinary authors; and it is a maxim with me, that he has not wit enough who has not a great deal to spare.

It is by no means necessary for me to run out into the several sorts of writing: we have general rules to judge of all, without being particular upon any, though the style of an orator be different from that of an historian, and a poet's from both.

\$ 99. On Embellishments of Style.

The design of expression is to convey our thoughts truly and clearly to the world, in such a manner as is most probable to attain the end we propose, in communicating what we have conceived to the public; and therefore men have not thought it enough to write plainly, unless they wrote agreeably, so as to engage the attention, and work upon the affections, as well as inform the understanding of their readers: for which reason, all arts have been invented to make their writings pleasing, as well as profitable; and those arts are very commendable and honest; they are no trick, no delusion, or imposition on the senses and understanding of mankind; for they are found in nature, and formed upon observing her operations in all the various passions and workings of our minds.

To this we owe all the beauties and embellishments of Style; all figures and schemes of speech, and those several decurations that are used in writings to enliven and adorn the work. The flourishes of fancy resemble the flourishes of the pen in mechanic writers; and the illuminators of manuscripts, and of the press, borrowed their title perhaps from the illumination which a bright genius every where gives composition.

The commendation of this art of enlightening and adorning a subject, lies in a right distribution of the shades and light. It is in writing, as in picture, in which the art is to observe where the lights will fall, to produce the most beautiful parts to the day, and cast in shades what we cannot hope will shine to advantage.

It were endless to pursue this subject through all the ornaments and illustrations of speech; and yet I would not dismiss it, without pointing at the general rules and necessary qualifications required in those who would attempt to shine in the productions of their pen. And therefore you

must pardon me if I seem to go back, for we cannot raise any regular and durable tile of building without laying a firm foundation.

193. On the first Requisite, a Mastery of Language.

The first thing requisite to a just style, is a perfect mastery in the language we write in; this is not so easily attained as is commonly imagined, and depends upon a competent knowledge of the force and propriety of words, a good natural taste of strength and delicacy, and all the beauties of expression. It is my own opinion, that all the rules and critical observations in the world will never bring a man to a just style, who has not of himself a natural easy way of writing; but they will improve a good genius, where nature leads the way, provided he is not too scrupulous, and does not make himself a slave to his rules : for that will introduce a stiffness and affectation, which are utterly abhorrent from all good writing.

By a perfect mastery in any language, I understand not only a ready command of words, upon every occasion, not only the force and propriety of words as to their sense and signification, but more especially the purity and idiom of the language; for in this a perfect mastery does consist. It is to know what is English, and what is Latin, what is French, Spanish, or Italian, to be able to mark the bounds of each language we write in, to point out the distinguishing characters, and the peculiar phrases of each tongue: what expressions or manner of expressing is common to any language besides our own, and what is properly and peculiarly our phrase, and way of speaking. For this is to speak or write English in pasrity and perfection, to let the streams run clear and umnixed, without taking in other languages in the course; in English, therefore, I would have all Gallicisms (for instance) avoided, that our tongue may be sincere, that we may keep to our own language, and not follow the French mode in our speech, as we do in our cloaths. It is convenient and profitable sometimes to import a foreign word, and naturalize the phrase of another nation, but this is very sparingly to be allowed; and every syllable of foreign growth ought immediately to be discarded, if its use and ornament to our language be not very evident.

\$ 94. On the Parity and Idiom of Lauguage.

While the Romans studied and used the Greek tongue, only to improve and adorn their own, the Latin flourished, and grew every year more copious, more elegant. and expressive: but in a few years after the ladies and beaux of Rome affected to speak Greek, and regarding nothing but the softness and effeminacy of that noble language, they weakened and corrupted their native tongue: and the monstrous affectation of our travelled ladies and gentlemen to speak in the French air, French tone, French terms, to dress, to cook, to write, to court in French, corrupted at once our language and our manners, and introduced an abominable gallimaufry of French and English mixed together, that made the innovators ridiculous to all men of sense. The French tongue hath undoubtedly its graces and beauties, and I am not against any real improvement of our own language from that or any other: but we are always so foolish, or unfortunate, as never to make any advantage of our neighbours. We affect nothing of theirs, but what is silly and ridiculous; and by neglecting the substantial use of their language, we only enervate and spoil our own.

Languages like our bodies, are in a perpetual flux, and stand in need of recruits to supply the place of those words that are continually falling off through disuse; and since it is so, I think 'tis better to raise them at home than abroad. We had better rely on our own troops than foreign forces, and I believe we have sufficientstrength and numbers within ourselves: there is a vast treasure, an inexhaustible fund in the old English, from whence authors may draw constant supplies, as our officers make their surest recruits from the coal-works, and the mines. The weight, the strength, and significancy of many antiquated words, should recommend them to use again. 'Tis only wiping off the rust they have contracted, and separating them from the dross they lie mingled with, and both in value and beauty they will rise above the standard, rather than fall

below it.

Ff2

Perhaps our tongue is not so musical to the ear; nor so abundant in multiplicity of words; but its strength is real, and its words are therefore the more expressive: the peculiar character of our language is, that it is close, compact, and full: and

. Ibid.

our we sings of recovery will excuse two Latine plannings and perspicuity of style, is an afthere's come nemest to what Tally means by his Proceedings. They are all weight and substance, good metaire pressed togerber, and running over in a redundance of sense, and not of words. And therefore the purity of our language consists in preserving this character, in writing with the I uglish strength and spirit; let us not envy others, that they are more soft, and dalfuse and rarified; be it our commendation to write as we pay, in time Sterling; if we want supplies, we had better revive old words, than create new ones. I look upon our language as good bullion, if we do not debase it with too much alloy; and let me leave this censure with you, That he who corrupteth the purity of the English tongue with the must specious foreign words and phrases, is just as wise as those modish ladies that change their plate for cluna: for which I think the landable trafhe of old cloaths is much the fairest barter.

195. On Plainness and Perspicuity.

After this regard to the purity of our language, the next quality of a just style, is its plainness and perspicuity. This is the greatest commendation we can give an author, and the hest argument that he is muster of the language he virtes in, and the subject he writes upon, when we upderstand him, and see into the scope and tendency of his thoughts, as we read him. All obscurity of expression, and darkness of sense, do arise from the confusing of the writer's thoughts, and his want of proper words. It a man hath not a clear perception of the matter he undertakes to treat of, be his style never so plane as to the words he uses, it never can be clear; and if his thoughts upon this subject be never so just and distinct, unless he has a ready command of words, and a faculty of easy writmer in plain obvious expressions, the words will peoplex the sense, and cloud the clearness of his thoughts.

It is the unhappiness of some, that they are not able to express themselves clearly: their heads are crowded with a multiplicar of undigested knowledge, which lies confused in the brain, without any order or distinction. It is the vice of others, to affect obscurity in their thoughts and langaage, to write in a difficult trabbed style, and perplex the reader with an intricate meaning in more intricate words.

The common way of ollending against

lectation of hard unusual words, and of close continuited periods: the faults of pedants and sententions writers; that are vainly estentations of their learning, or their wiscome Hard words and quaint expresseems are abouninable: wherever you meet such a writer, throw him aside for a coxcomb. Some authors of reputation have used a short and concise way of expression, I must own: and if they are not so clear as others, the fault is to be laid on the brevity they lahour after; for while we study to be concise, we can hardly avoid being obscore. We crowd our thoughts into too small a compass, and are so sparing of our words, that we will not afford enow to expressions meaning.

There is another extreme in obscure writers, not much taken notice of, which some empty conceited heads are apt to ron into out of a prodigality of words, and a want of sense. This is the extravagance of your copions writers, who lose their meaning in the multitude of words, and bury their sense under heaps of phrases. Their understanding is rather rarified than constensed, their meaning, we cannot say, is dark and thick: it is too light and subthe to be discerned; it is spread so thin, and diffused so wide, that it is hard to be collected. I wo lines would express all they say in two pages: 'tis nothing but whipt svilabub and froth, a little varnish and gilding, without any solidity or substance.

1 56. On the Decorations and Ornaments of Style.

The despest rivers have the plainest surface, and the purest waters are always clearest. Chrystal is not the less solid for being transparent: the value of a style rises like the value of precious stones. If it be dark and cloudy, it is in vain to polish it: it hears its worth in its native looks, and the same art which enhances its price when it is clear, only debases it if it be dull.

You see I have borrowed some metapliors to explain my thoughts; and it is, I believe, impossible to describe the plainness and clearness of style, without some expressions clearer than the terms I am otherwise bound up to use.

You must give me leave to go on with you to the decorations and ornaments of style: there is no inconsistency between the plainness and perspicuity, and the ornument of writing. A style resembleth beauty,

beauty, where the face is clear and plain in the world: if any thing is dark and obas to symmetry and proportion, but is capuble of wonderful improvements as to features and complexion. If I may transgress in too frequent allusions, because I would make every thing plain to you, I would pass on from painters to statuaries, whose excellence it is at first to form true and just proportions, and afterwards to give them that softwess, that expression, uthat strength and delicacy, which make them almost breathe and live.

The decorations of style are formed out of those several schemes and figures, which are contrived to express the passions and motions of our minds in our speech; to give life and ornament, grace and beauty, to our expressions. I shall not undertake the rhetorician's province, in giving you an account of all the figures they have invented, and those several ornaments of writing, whose grace and commendation lie in being used with judgment and propriety. It were endless to pursue this subject through all the schemes and illustrations of speech: but there are some common forms, which every writer upon every subject may use, to enliven and adoru his

These are metaphor and similitude; and those images and representations, that are drawn in the strongest and most lively colours, to imprint what the writer would have his readers conceive, more deeply on their princls. In the choice, and in the use of these, your ordinary writers are most apt to offend. Images are very sparingly to be introduced: their proper place is in poems and orations; and their use is to move pity or terror, admiration, compassion, anger, and resentment, by representing something very affectionate or very dreadful, very astonishing, very miserable, or very provoking, to our thoughts. They give a wonderful force and beauty to the subject, where they are painted by a masterly hand; but if they are either weakly drawn, or unskilfully placed, they raise no passion but indignation in the reader.

Felton.

6 97. On Metaphors and Similitudes.

The most common ornaments are Metaphor and Similitude. One is an allusion to words, the other to things; and both have their beauties, if properly applied.

Similitudes ought to be drawn from the most familiar and best known particulars

scure in them, the purpose of using them is defeated; and that which is not clear itself, can never give light to any thing that wants it. It is the idle fancy of some poor brains, to run out perpetually into a course of similitudes, confounding their subject by the multitude of likenesses; and making it like so many things, that it is like nothing at all. This triffing humour is good for nothing, but to convince us, that the author is in the dark himself; and while he is likening his subject to every thing, he knoweth not what it is like,

There is another tedious fault in some simile men; which is, drawing their comparisons into a great length and minute particulars, where it is of no importance whether the resemblance holds or not. But the true art of illustrating any subject by similitude, is, first to pitch on such a resemblance as all the world will agree in: and then, without being careful to have it run on all four, to touch it only in the strongest lines, and the nearest likeness. And this will secure us from all stiffness and formality in similitude, and deliver us from the nauseons repetition of as and so, which some so-o writers, if I may beg leave to call them so, are continually sounding in our eacs.

I have nothing to say to those gentlemen who bring similitudes and forget the resemblance. All the pleasure we can take when we meet these promising sparks, is in the disappointment, where we find their fancy is so like their subject, that it is not like at all.

\$ 98. On Metaphors.

Metaphors require great judgment and consideration in the use of them. They are a shorter similitude, where the likeness is rather implied than expressed. The signification of one word, in metaphors, is transferred to another, and we talk of one thing in the terms and propriety of another. But there must be a common resemblance, some original likeness in nature. some correspondence and easy transition. or metaphors are shocking and confused.

The beauty of them displays itself in their easiness and propriety, where they are naturally introduced; but where they are forced and crowded, too frequent and various, and do not rise out of the course of thought, but are constrained and pressed into the service, instead of making the dis-

F [3

CUUTSE

course more lively and cheerfully, they make it sullen, dull, and gloomy.

You must form your judgment upon the best models and the most celebrated pens, where you will find the metaphor in all its grace and strength, shedding a lustre and beauty on the work. For it ought never to be used but when it gives greater force to the sentence, an illustration to the thought, and insinuates a silent argument in the allusion. The use of metaphors is not only to convey the thought in a more pleasing manner, but to give it a stronger impression, and enforce it on the mind. Where this is not regarded, they are vain and trifling trash; and in a due observance of this, in a pure, chaste, natural expression, consist the justness, beauty, and delicacy of style.

\$ 99. On Epithels.

I have said nothing of Epithets. Their business is to express the nature of the things they are applied to; and the choice of them depends upon a good judgment, to distinguish what are the most proper titles to be given on all occasions, and a complete knowledge in the accidents, qualities, and affections of every thing in the world. They are of most ornament when they are of use: they are to determine the character of every person, and decide the merits of every cause; conscience and instice are to be regarded, and great skill and exactness are required in the use of them, For it is of great importance to call things by their right names: the points of satire, and strains of compliment depend upon it: otherwise we may make an ass of a Jion, commend a man in satire, and lampoon him in panegyric. Here also there is room for genius: common justice and judgment should direct us to say what is proper at least; but it is parts and fire that will prompt us to the most lively and most forcible epithets that can be applied: and 'tis in their energy and propriety their beauty lies, Ibid.

\$ 100. On Allegories.

Allegories I need not mention, because they are not so much any ornament of style, as an artful way of recommending truth to the world in a borrowed shape, and a dress more agreeable to the fancy, than naked truth herself can he. Truth is ever most beautiful and evident in her native dress: and the arts that are used to convey her to our minds, are no argu-

ment that she is delicient, but so many testimonies of the corruption of our nature, when truth, of all things the plainest and sincerest, is forced to gain admittance to us in disguise, and court us in masquerade.

Bid.

\$ 101. On the Sublime.

There is one ingredient more required to the perfection of style, which I have partly mentioned already, in speaking of the suitableness of the thoughts to the subject, and of the words to the thoughts but you will give me leave to consider it in another light, with regard to the majesty and dignity of the subject.

It is fit, as we have said already, that the thoughts and expressions should be suited to the matter on all occasions; but in nobler and greater subjects, especially where the theme is sacred and divine, it must be our care to think and write up to the dignity and majesty of the things we presume to treat of: nothing little, mean, or low, no childish thoughts, or boyish expressions, will be endured: all must be awful and grave, and great and solemn. The noblest sentiments must be conveyed in the weightiest words: all ornaments and illustrations must be borrowed from the richest parts of universal nature; and in divine subjects, especially when we attempt to speak of God, of his wisdom, goodness, and power, of his mercy and justice, of his dispensations and providence (by all which he is pleased to manifest himself to the sons of men) we must raise our thoughts, and enlarge our minds, and search all the treasures of knowledge for every thing that is great, wonderful, and magnificent: we can only express our thoughts of the Creator in the works of his creation; and the brightest of these can only give us some faint shadows of his greatness and his glory. The strongest figures are too weak, the most exalted language too low, to express his ineffable excellence. No hyperbole can be brought to heighten our thoughts; for in so sublime a theme, nothing can be hyperbolical.

The riches of imagination are poor, and all the rivers of eloquence are dry, in supplying thought on an infinite subject. How poor and mean, how base and groveling, are the Heathen conceptions of the Deity! something sublime and noble must needs be said on so great an occasion; but in this great article, the most celebrated of the Heathen pens seem to flag

and sink; they bear up in no proportion to the dignity of the theme, as if they were depressed by the weight, and dazzled with the splendour of the subject.

We have no instances to produce of any writers that rise at all to the majesty and dignity of the Divine Attributes except the sacred penmen. No less than Divine Inspiration could enable men to write worthily of God, and none but the Spirit of God knew how to express his greatness, and display his glory: in comparison of these divine writers, the greatest geniuses, the noblest wits of the Heathen world, are low and dull. The sublime majesty and royal magnificence of the scripture poems are above the reach and beyond the power of all moral wit. Take the best and liveliest poems of antiquity, and read them as we do the scriptures, in a prose translation, and they are flat and poor. Horace, and Virgil, and Homer, lose their spirits and their strength in the transfusion, to that degree, that we have hardly patience to read them. But the sacred writings, even in our translation, preserve their majesty and their glory, and very far surpass the brightest and noblest compositions of Greece and Rome. And this is not owing to the richness and solemnity of the eastern eloquence (for it holds in no other instance) but to the divine direction and assistance of the holy writers. For, let me only make this remark, that the most literal translation of the scriptures, in the most natural signification of the words, is generally the best; and the same punctualness, which debases other writings, preserves the spirit and majesty of the sacred text: it can suffer no improvement from human wit; and we may observe that those who have presumed to heighten the expressions by a poetical translation or paraphrase, have sunk in the attempt; and all the decorations of their verse, whether Greek or Latin, have, not been able to reach the dignity, the majesty, and solemnity of our prose: so that the prose of scripture cannot be improved by verse, and even the divine puetry is most like itself in prose. One observation more I would leave with you; Milton himself, as great a genius as he was, owes his superiority over Homer and Virgil, in majesty of thought and splendour of expression, to the scriptures : they are the fountain from which he derived his light; the sacred treasure that enriched his fancy, and furnished him with all the truth and wonders of God and his crea-

tion, of angels and men, which no mortal brain was able either to discover or conceive: and in him, of all human writers, you will meet all his sentiments and words raised and suited to the greatness and dignity of the subject.

I have detained you the longer on this majesty of style, being perhaps myself carried away with the greatness and pleasure of the contemplation. What I have dwelt so much on with respect to divine subjects, is more easily to be observed with reference to human: for in all things below divinity, we are rather able to exceed than fall short; and in adorning all other subjects, our words and sentiments may rise in a just proportion to them: nothing is above the reach of man, but heaven; and the same wit can raise a human subject, that only debases a divine. Fellon.

\$ 102. Rules of Order and Proportion.

After all these excellencies of style, in purity, in plainness and perspicuity, in ornament and majesty, are considered, a finished piece of what kind soever must shine in the order and proportion of the whole; for light rises out of order, and beauty from proportion. In architecture and painting, these fill and relieve the eye. A just disposition gives us a clear view of the whole at once; and the due symmetry and proportion of every part of itself, and of all together, leave no vacancy in our thoughts or eyes; nothing is wanting, every thing is complete, and we are satisfied in beholding.

But when I speak of order and proportion. I do not intend any stiff and formal method, but only a proper distribution of the parts in general, where they follow in a natural course, and are not confounded with one another. Laying down a scheme, and marking out the divisions and subdivisions of a discourse, are only necessary in systems, and some pieces of controversy and argumentation: you see, however, that I have ventured to write without any declared order; and this is allowable where the method opens as you read, and the order discovers itself in the progress of the subject; but certainly, of all pieces that were ever written in a professed and stated method, and distinguished by the number and succession of their part, our English sermons are the completest in order and proportion; the method is so easy and natural, the parts bear so just a proportion to one another, that among many

F f 4 others

others, this may pass for a peculiar commendation of them; for those divisions and particulars which obscure and perplex other writings, give a clearer light to ours. All that I would insinuate, therefore, is only this, that it is not necessary to lay the method we use before the reader, only to write and then he will read, in order.

But it requires a full command of the subject, a distinct view, to keep it always in sight, or else, without some method first designed, we should be in danger of losing 18, and wandering after it, till we have lost ourselves, and bewildered the reader.

A prescribed method is necessary for weaker heads, but the beauty of order is its freedom and unconstraint: it must be dispersed and shine in all the parts through the whole performance; but there is no necessity of writing in trammels, when we can move more at ease without them: neither is the proportion of writing to be measured out like the proportions of a horse, where every part must be drawn in the minutest respect to the size and bigness of the rest; but it is to be taken by the mind, and formed upon a general view and consideration of the whole. The statuary that carves Hercules in stone, or casts him in brass, may be obliged to take his dimensions from his foot; but the poet that describes him is not bound up to the geometer's rule; nor is an author under any obligation to write by the scale.

These hints will serve to give you some notion of order and proportion: and I must not dwell too long upon them, lest I transgress the rules I am laying down.

Felton.

103. A Recapitulation.

I shall make no formal recapitulation of what I have delivered. Out of all these rules together, rises a just style, and a perfect composition. All the latitude that can be admitted, is in the ornament of writing; we do not require every author to chine in gold and jewels; there is a moderation to be used in the pomp and trappings of a discourse: it is not necessary that every part should be embellished and adomed; but the decoration should be skilfully distributed through the whole: too full and glaring a light is offensive, and confounds the eyes: in heaven itself there are vacancies and spaces between the stars; and the day is not less beautiful for being interspersed with clouds; they only moderate the brightness of the sun, and, without di-

minishing from his splendour, gild and adorn themselves with his rays. But to descend from the skies: It is in writing as in dress; the richest habits are not always the completest, and a gentleman may make a better figure in a plain suit, than in an embroidered coat; the dress depends upon the imagination, but must be adjusted by the judgment, contrary to the opinion of the ladies, who value nothing but a good fancy in the choice of their cloaths. The first excellence is to write in purity, planly, and clearly; there is no dispensation from these: but afterwards you have your choice of colours, and may enliven, adom, and paint your subject as you please.

In writing, the rules have a relation and dependance on one another. They are held in one social bond, and joined, like the moral virtues and liberal arts, in a sort of harmony and concord. He that cannot write pure, plain English, must never pretend to write at all; it is in vain for him to dress and adorn his discourse; the finer he endeavours to make it, he makes it only the more ridiculous. And on the other side, let a man write in the exactest purity and propriety of language, if he his not life and fire, to give his work some force and spirit, it is nothing but a mere corpse, and a lumpish, unwieldy mass of matter. But every true genius, who is perfect master of the language he writes in, will let no fitting ornaments and decorations be wanting. His fancy flows in the richest vein, and gives his pieces such lively colours, and so beautiful a complexion, that you would almost say his own blood and spirits were transfused into the work. Ibid.

\$ 104. How to form a right Taste.

A perfect mastery and elegance of style is to be learned from the common rules, but must be improved by reading the orators, and poets, and the celebrated masters in every kind; this will give you a right taste, and a true relish; and when you can distinguish the beauties of every finished piece, you will write yourself with equal commendation.

I do not assert that every good writer must have a genius for poetry; I know Tully is an undeniable exception: but I will venture to affirm, that a soul that is not moved with poetry, and has no taste that way, is too dull and lumpish ever to write with any prospect of being read. It is a fatal mistake, and simple superstition,

to discourage youth from poetry, and endeavour to prejudice them against it; if they are of a poetical genius, there is no restraining them: Ovid, you know, was deaf to his father's frequent admonitions. But if they are not quite smitten and bewitched with love of verse, they should be trained to it, to make them masters of every kind of poetry, that by learning to imitate the originals, they may arrive at a right conception and a true taste of their authors: and being able to write in verse upon occasion, I can assure you, is no disadvantage to prose: for without relishing the one, a man must never pretend to any taste for the other.

Taste is a metaphor, borrowed from the palate, by which we approve or dislike what we eat and drink, from the agreeableness or disagreeableness of the relish in our mouth. Nature directs us in the common use, and every body can tell sweet from bitter, what is sharp, or sour, or vapid, or nauseous; but it requires senses more refined and exercised, to discover every taste that is more perfect in its kind; every palate is not to judge of that, and yet drinking is more used than reading. All that I pretend to know of the matter, is, that wine should be, like a style, clear, deep, bright, and strong, sincere and pure, sound and dry, (as our advertisements do well express it) which last is a commendable term, that contains the juice of the richest spirits, and only keeps out all cold and dampuess.

It is common to commend a man for an ear to music, and a taste of painting: which are nothing but a just discernment of what is excellent and most perfect in them. The first depends entirely on the ear; a man can never expect to be a master, that has not an ear tuned and set to music: and you can no more sing an ode without an ear, than without a genius you can write one. Painting, we should think, requires some understanding in the art, and exact knowledge of the best master's manner, to be a judge of it; but this faculty, like the rest, is founded in nature: knowledge in the art, and frequent conversation with the best originals, will certainly perfeet a man's judgment; but if there is not a natural sagacity and aptness, experience will be of no great service. A good taste is an argument of a great soul, as well as a lively wit. It is the infirmity of poor spirits to be taken with every appearance, and dazzled by every thing that sparkles:

but to pass by what the generality of the world admires, and to be detained with nothing but what is most perfect and cacellent in its kind, speaks a superior genute. and a true discernment; a new picture by some meaner hand, where the colours are fresh and lively, will engage the eye, but the pleasure goes off with looking, and what we ran to at first with eagerness, we presently leave with indifference: but the old pieces of Raphael, Michael Angelo, Tintoret, and Titian, though not so inviting at first, open to the eye by degrees: and the longer and oftener we look, we still discover new beauties, and find new pleasure. I am not a man of so much seyerity in my temper as to allow you to be pleased with nothing but what is in the last perfection; for then, possibly, so many are the infirmities of writing, beyond other arts, you could never be pleased. There is a wide difference in being nice to judge of every degree of perfection, and rigid in refusing whatever is delicient in any point. This would only be weakness of stomach. not any commendation of a good palate; a true taste judges of defects as well as perfections, and the best judges are always the persons of the greatest candout. They will find none but real faults, and whatever they commend, the praise is justly due.

I have intimated already, that a good taste is to be formed by reading the best authors; and when you shall be able to point out their beauties, to discern the brightest passages, the strength and elegance of their language, you will always write yourself, and read others by that standard, and must therefore necessarily excel.

Fellon.

\$ 105. Taste to be improved by Imitation.

In Rome there were some popular orutors, who, with a false eloquence and violent action, carried away the applause of the people; and with us we have some popular men, who are followed and admired for the loudness of their voice, and a false pathos both in utterance and writing. I have been sometimes in some confusion to hear such persons commended by those of superior sense, who could distinguish, one would think, between empty, pompous, specious harangues, and those pieces in which all the beauties of writing are combined. A natural taste must therefore be improved, like fine parts, and a great genius; it must be assisted by art, or

it will be easily vitiated and corrupted. False eloquence passes only where true is not understood; and nobody will commend bad writers, that is acquainted with good.

These are only some cursory thoughts on a subject that will not be reduced to rules. To treat of a true taste in a formal method, would be very insipid; it is best collected from the beauties and laws of writing, and must rise from every man's own apprehension and notion of what he hears and reads.

It may be therefore of farther use, and most advantage to you, as well as a relief and entertainment to refresh your spirits in the end of a tedious discourse, if besides mentioning the classic authors as they fall in my way, I lay before you some of the correctest writers of this age and the last, in several faculties, upon different subjects: Not that you should be drawn into a servile imitation of any of them: but that you may see into the spirit, force, and beauty of them all, and form your pen from those general notions of life and delicacy, of fine thoughts and happy words, which rise to your mind upon reading the great masters of style in their several ways, and manner of excelling.

I must beg leave, therefore, to defer a little the entertainment I promised, while I endeavour to lead you into the true way of imitation, if ever you shall propose any original for your copy; or, which is infinitely preferable, into a perfect mastery of the spiritand perfections of every celebrated writer, whether ancient or modern.

Fellon.

\$ 106. On the Historical Style.

History will not admit those decorations other subjects are capable of; the passions and affections are not to be moved with any thing, but the truth of the narration. All theforce and beauty must lie in the order and expression. To relate every event with clearness and perspicuity, in such words as best express the nature of the subject, is the chief commendation of an historian's style. History gives us a draught of facts and transactions in the world. The colours these are painted in: the strength and significancy of the several faces; the regular confusion of a battle; the destructions of tumult sensibly depicted: every object and every occurrence so presented to your view, that while you read, you seem indeed to see them; this is

the art and perfection of an historical style. And you will observe, that those who have excelled in history, have excelled in this especially; and what has made them the standards of that style, is the clearness, the life and vigour of their expression, every where properly varied, according to the variety of the subjects they write on: for history and narration are nothing but just and lively descriptions of remarkable events and accidents.

Bid.

\$ 107. Of HERODOTUS and THUCYDISES.

For this reason we praise Herodotus and Thucydides among the Greeks, for I will mention no more of them; and upon this account we commend Sallust and Livy among the Romans. For though they all differ in their style, yet they all agree in these common excellencies. Herodotus displays a natural oratory in the beauty and clearness of a numerous and solemn diction; he flows with a sedate and majestic pace, with an easy current, and a pleasant stream. Thucydides does sometimes write in a style so close, that almost every word is a sentence, and every sentence almost acquaints us with something new; so that from the multitude of causes, and variety of matter crowded together, we should suspect him to be obscure; but yet so happy, so admirable a master is he in the art of expression, so proper and so full, that we cannot say whether his diction does more illustrate the things he speaks of, or whether his words themselves are not illustrated by his matter, so mutual a light do his expressions and subject reflect on each other. His diction, though it be pressed and close, is nevertheless great and magnificent, equal to the dignity and importance of his subject. He first, after Herodotus, ventured to acorn the historian's style, to make the narration more pleasing, by leaving the flatness and nakedness of former ages. This is nost observable in his battles, where he closs not only relate the mere fight, but writes with a martial spirit, as if he stood in the hottest of the engagement; and what is most excellent as well as remarkable iuso close a style, is, that it is numerous and harmonious, that his words are not laboured nor forced, but fall into their places in a natural order, as into their most proper Bid . situation.

\$ 108. Of SALLUST and LIVY.
Sallust and Livy, you will read, I hope,

thorough and intimate acquaintance with them. Thucydides and Sailust are generally compared, as Livy is with Herodotus; and, since I am fallen upon their characters, I cannot help touching the comparisons. Sallust is represented as a concise, a strong, and nervous writer; and so far he agrees with Thucydides's manner: but he is also charged with being obscure, as concise writers very often are, without any reason. For, if I may judge by my own apprehensions, as I read him, no writer can he more clear, more obvious and intelligible. He has not, indeed, as far as can observe, one redundant expression; but his words are all weighed and chosen, so expressive and significant, that I will challenge any critic to take a sentence of his, and express it clearer or better; his contraction seems wrought and laboured. To me he appears as a man that considered and studied perspicuity and brevity to that degree, that he would not retrench a word which might help him to express his meaning, nor suffer one to stand, if his sense, was clear without it. Being more diffuse, would have weakened his language, and have made it obscurer rather than clearer: for a multitude of words only serve to cloud or dissipate the sense; and though a copious style in a master's hand is clear and beautiful, yet where conciseness and perspicuity are once reconciled, any attempt to enlarge the expressions, if it does not darken, does certainly make the light much feebler. Sallust is all life and spirit, yet grave and majestic in his diction: his use of old words is perfectly right: there is no affectation, but more weight and significancy in them: the boldness of his metaphors are among his greatest beauties: they are chosen with great judgment, and shew the force of his genius; the colouring is strong, and the Brokes are bold: and in my opinion he chase them for the sake of the brevity he strength and beauty. And no fault can the Roman writers.

Roman historians, if to the perfection of his style we join the compass of his sub-

with so much pleasure, as to make a whose history, however drawn out into length, is confined to the shortest period of any, except what remains of Sallust. No historian could be happier in the greatness and dignity of his subject, and none was better qualified to adorn it; for his genius was equal to the majesty of the Roman empire, and every way capable of the mighty undertaking. He is not so copious in words, as abundant in matter, rich in his expression, grave, majestic, and lively: and if I may have liberty to enlarge on the old commendation, I would say his style flows with milk and honey, in such abundance, such pleasure and sweetness, that when once you are proficient enough to read him readily, you will go on with unwearied delight, and never lay him out of your hands without impatience to resame him. We may resemble him to Herodotus, in the manner of his diction; but he is more like Thucydides in the grandeur and majesty of expression; and it we observe the multitude of clauses in the length of the periods, perhaps Thucydides himself is not more crowded; only the length of his periods is apt to deceive its; and great men among the ancients, as well as moderns, have been induced to think this writer was copious, because his sentences were long. Copions he is indeed, and foreible in his descriptions, not lavish in the number, but exuberant in the richness and significancy of his words. You will observe, for I speak upon my own observation, that Livy is not so easy and obvious to be understood as Sallust: the experiment is made every where in reading five or six pages of each author together. The shortness of Sallust's sentences, as long as they are clear, shews his sense and meaning all the way in an instant: the progress is quick and plain, and every three lines gives us a new and complete idea; we are carried from one thing to another with so swift a pace, that we run as we read, and yet cannot, if we read loved, to express more clearly and more distinctly, run faster than we understand forcibly, what otherwise he must have him. This is the brightest testimony that Written in looser characters with less can be given of a clear and obvious style. In Livy we cannot pass on so readily; we be objected to the justest and exactest of are forced to wait for his meaning till we come to the end of the sentence, and have Livy is the most considerable of the so many clauses to sort and refer to their proper places in the way, that I must own I cannot read him so readily at sight as I ject; in which he has the advantage over can Sallust; though with attention and all that wrote before him, in any nation consideration I understand him as well. but the Jewish, especially over Thucydides; He is not so easy, nor so well adapted to

young

young proficients, as the other: and is Ever plainest, when his sentences are shortest; which I think is a demonstration, Some, perhaps, will be apt to conclude, that in this I differ from Quinctilian; but I do not conceive so myself; for Quinctilian recommends Livy before Sallust, rather for his candour, and the larger compass of his history; for he owns a good proficiency is required to understand him; and I can only refer to the experience of young proficients, which of them is more open to their apprehension. Distinction of sentences, in few words, provided the words be plain and expressive, ever gives light to the author, and carries his meaning uppermost; but long periods, and a multiplicity of clauses, however they abound with the most obvious and significant words, do necessarily make the meaning more retired, less forward and obvious to the view: and in this Livy may seem as crowded as Thutydides, if not in the number of periods, certainly in the multitude of clauses, which, to disposed, do rather obscure than illumimate his writings. But in so rich, so majestic, so flowing a writer, we may wait with patience to the end of the sentence, for the pleasure still increases as we read, The elegance and purity, the greatness, the nobleness of his diction, his happiness in narration, and his wonderful eloquence, are above all commendation; and his atvle, if we were to decide, is certainly the standard of Roman history. For Sallust, I must own, is too impetuous in his course; he hurries his reader on too fast, and hardly ever allows him the pleasure of expectation, which in reading history, where it is justly raised on important events, is the greatest of all others. Felton.

109. Their Use in Style.

Reading these celebrated authors will give you a true taste of good writing, and form you to a just and correct style upon every occasion that shall demand your pen. I would not recommend any of them to a strict imitation; that is servile and mean; and you cannot propose an exact copy of a pattern without falling short of the origiwal : but if you once read them with a true relish and discernment of their beauties, you may lay them aside, and be secure of writing with all the graces of them all, without owing your perfection to any, Your style and manner will be your own, and even your letters upon the most or-

and elegance in the composition, which will equal them with the best originals, and set them far above the common standard.

Upon this occasion, I cannot pass by your favourite author, the grave and facetious Tatler, who has drawn mankind in every dress, and every disguise of nature, in a style ever varying with the humours, fancies, and follies he describes. He has shewed himself a master in every turn of his pen, whether his subject be light or serious, and has laid down the rules of common life with so much judgment, in such agreeable, such lively and elegant language, that from him you at once may form your manners and your style,

\$ 110. On Spenser and Shakespear.

I may add some poets of more ancient date: and though their style is out of the standard now, there are in them still some lines so extremely beautiful, that our modern language cannot reach them. Chapcer is too old, I fear; but Spenser, though he be antiquated too, hath still charms remaining to make you enamoured of him-His antique verse has music in it to ravish any ears, that can be sensible of the softest, swee'est numbers, that ever flowed from a poet's pen.

Shakespear is a wonderful genius, a single instance of the force of nature and the strength of wit. Nothing can be greater and more lively than his thoughts; nothing nobler and more forcible than his expression. The fire of his fancy breaks out into his words, and sets his reader on a flame: he makes the blood run cold or warm ; and is so admirable a master of the passions, that he raises your courage, your pity, and your fear, at his pleasure; but he delights most in terror.

6 111. On MILTON and PHILIPS.

Milton is the assertor of poetic liberty, and would have freed us from the bondage of rhyme, but, like sinners, and like lovers, we hug our chain, and are pleased in being slaves. Some indeed have made some faint attempts to break it, but their verse had all the softness and effeminacy of rhyme without the music; and Dryden himself, who sometimes struggled to get loose, always relapsed, and was faster bound than ever: but rhyme was his province, and he could make the tinkling of his chains harmonious. Mr. Philips has thinary subjects, will have a native beauty trod the nearest in his great master's steps, and has equalled him in his verse more than he falls below him in the compass and dignity of his subject. The Shilling is truly splendid in his lines, and his poems will live longer than the unfinished castle, as long as Blenheim is remembered, or Cyder drank in England. But I have digressed from Milton; and that I may return, and say all in a word; his style, his thoughts, his verse, are as superior to the generality of other poets, as his subject,

1112. Great Men have usually appeared at the same time.

It is a remarkable phænomenon, and one which has often employed the speculations of curious men, that writers and artists, most distinguished for their parts and genius, have generally appeared in considerable numbers at a time. Some ages have been remarkably barren in them; while, at other periods, Nature scems to have exerted herself with a more than ordinary effort, and to have poured them forth with a profuse fertility. Various reasons have been assigned for this. Some of the moral causes lie obvious; such as favourable circumstances of government and of manners; encouragement from great men: emulation excited among the men of genius, But as these have been thought inadequate to the whole effect, physical causes have been also assigned; and the Abbe du Bos, in his reflections on Poetry and Painting, has collected a great many observations on the influence which the air, the climate, and other such natural causes, may be supposed to have upon geis certain, that there have been certain periods or ages of the world much more dissinguished than others, for the extraordivary productions of genius.

\$ 113. Four of these Ages marked out by the Learned.

Learned men have marked out four of these happy ages. The first is the Grecian age, which commenced near the time of the Peloponnesian war, and extended till the time of Alexander the Great; within Which period, we have Herodotus, Thucydides, Xenophon, Socrates, Plato, Aristotle, Demosthenes, Æschynes, Lysias, Isocrates, Pindar, Æschylus, Euripides, Sophocles, Aristophanes, Menander, Anacreun, Theocritus, Lysippas, Apelles, Phidias, Praxiteles. The second is the Ro-

man age, included nearly within the days of Julius Casar and Augustus: affording us, Gatullus, Lucretius, Terence, Virgil, Horace, Tibullus, Propertius, Ovid, Phasdrus, Ciesar, Gigero, Livy, Sallust, Varno, and Vitravius. The third age is that of the restoration of learning, under the Popes Julius II. and Leo X.; when flourished Ariosto, Tasso, Samuzurius, Vida, Machiavel, Guicciardini, Davila, Erasimis, Paul Jovins, Michael Angelo, Ruphael, Titian, The fourth, comprehends the age of Louis XIV. and Oneen Anne: when flourished in France, Corneille, Racine, De Retz, Moliere, Boilean, Fontaine, Baptiste, Rousseau, Bossuet, Fenelon, Bourdalone, Pascall, Malebranche, Massillon, Bruvere, Bayle, Fontenelle, Vertot; and in England, Dryden, Pope, Addison, Prior, Swift, Parnell, Congreve, Otway, Young, Rowe, Atterbury, Shaftsbury, Bolingbroke, Tillotson, Temple, Boyle, Locke, Newton, Clarke.

6 114. The Reputation of the Ancients established too firmly to be shaken.

If any one, at this day, in the eighteently century, takes upon him to decry the ancient Classics; if he pretends to have discovered that Homer and Virgil are pages of inconsiderable merit, and that Demosthones and Cicero are not great Orators, me may boldly venture to tell such a man, that he is come too late with his discovery, The reputation of such writers is established upon a foundation too solid to be now shaken by any arguments whatever; for it is established upon the almost universal taste of mankind, proved and tried nius. But whatever the causes be, the fact throughout the succession of so many ages. Imperfections in their works he may indeed point out; passages that are faulty. he may shew; for where is the human work that is perfect? But if he attempts to discredit their works in general, or to prove that the reputation which they have gained is on the whole unjust, there is an argument against him, which is equal to full demonstration. He must be in the wrong: for human nature is against him, In matters of taste, such as poetry and oratory, to whom does the appeal lie? where is the standard? and where the authority of the last decision? where is it to be looked for, but as I formerly shewed, in those feelings and sentiments that are found, on the most extensive examination, to be the common sentiments and feelings of inea? These have been fully consulted on this

greater progress than a much superior one, to whom these materials are wanting.

Hence, in Natural Philosophy, Astronomy, Chemistry, and other sciences that depend on an extensive knowledge and observation of facts, modern philosophers have an unquestionable superiority over the ancient. I am inclined also to think, that in matters of pure reasoning, there is more precision among the moderns, than in some instances there was among the ancients; owing perhaps to a more extensive literary intercourse, which has improved and sharpened the faculties of men. In some studies too, that relate to taste and fine writing, which is our object, the progress of society must, in equity, be admitted to have given us some advantages. For instance, in history: there is certainly more political knowledge in several European nations at present, than there was in ancient Greece and Rome. We are better acquainted with the nature of government, because try, Horace stands quite unrivalled. The we have seen it under a greater variety of forms and revolutions. The world is more laid open than it was in former times; commerce is greatly enlarged; more countries are civilized; posts are every where established; intercourse is become more easy; and the knowledge of facts, by consequence, more attainable. All these are great advantages to historians; of which, in some measure, as I shall afterwards show, they have availed themselves. In the more complex kinds of poetry, likewise, we may have gained somewhat, perhaps, in point of regularity and accuracy. In dramatic performances, having the ad-_vantage of the ancient models, we may be allowed to have made some improvements in the variety of the characters, the conduct of the plot, attentions to probability, and to decorums.

\$ 117. We must look to the ancients for elegant Composition, and to the Modeins for accurate Philosophy.

From whatever cause it happens, so it is, that among some of the ancient writers. we must look for the highest models in most of the kinds of elegant composition. For accurate thinking and enlarged ideas, in several parts of philosophy, to the moderus we ought chiefly to have recourse, Of correct and finished writing in some works of taste, they may afford useful patterns; but for all that belongs to original genius, to spirited, masterly, and high execution, our best and most happy ideas

are, generally speaking, drawn from the ancients. In epic poetry, for instance, Homer and Virgil, to this day, stand not within many degrees of any rival. Orators, such as Cicero and Demosthenes, we have none. In history, notwithstanding some defects, which I am afterwards to mention in the ancient historical plans, it may be. safely asserted, that we have no such historical narration, so elegant, so picturesque, so animated, and interesting as that of Herodotus, Thucydides, Xenophon, Livy, Tacitus, and Sallust. Although the conduct of the drama may be admitted to have received some improvements, yet for poetry and sentiment, we have nothing to equal Sophocles and Euripides: nor any dialogue in comedy, that comes up to the correct, graceful, and elegant simplicity of Terence. We have no such love-elegies as those if Tibullus; no such pastorals as some of Theocritus's: and for lyric poename of Horace cannot be mentioned without a particular encomium. That " curiosa felicitas," which Petronius has remarked in his expression; the sweetness, elegance, and spirit of many of his odes, the thorough knowledge of the world, the excellent sentiments, and natural easy manner which distinguish his Satires and Epistles. all contribute to render him one of those very few authors whom one never tires of reading; and from whom alone, were every other monument destroyed, we should be led to form a very high idea of the taste and genius of the Augustan age.

\$ 118. The assiduous Study of the Greek and Roman Classics recommended.

To all such then, as wish to form their taste, and nourish their genius, let me warmly recommend the assiduous study of the ancient classics, both Greek and

Nocturua versate manu, versate diurna,*

Without a considerable acquaintance with them, no man can be reckoned a polite scholar; and he will want many assistances for writing and speaking well, which the knowledge of such authors would afford him. Any one has great reason to suspect his own taste, who receives little or no pleasure from the perusal of writings, which so many ages and nations have consented

* 't Read them by day and study them by night." FRANCIS.

In holding up as subjects of admiration. And I am persuaded, it will be found, that in proportion as the ancients are generally studied and admired, or are unknown and disregarded in any country, good taste and good composition will flourish, or decline. They are commonly none but the ignorant or superficial, who undervalue them.

119. The ancient Historians excel in picturesque Narration.

In all the virtues of narration, particularly in that of picturesque descriptive narration, several of the ancient historians eminently excel. Hence, the pleasure that is found in reading Herodotus, Thucydides, Nenophon, Livy, Sallust, and Tacitus. They are all conspicuous for the art of narration. Herodotus is, at all times, an agreeable writer, and relates every thing with that naivete and simplicity of manner, which never fails to interest the reader. Though the manner of Thucydides be more dry and larsh, yet, on great occusions, as when he is giving an account of the plague of Athens, the siege of Plattea, the sedition in Coreyra, the defeat of the Athenians in Sicily, he displays a very strong and masterly power of description. Xenophon's Gyropædia, and his Anabasis, or retreat of the ten thousand, are extremely beautiful. The circumstances are finely selected, and the narration is easy and ongaging; but his Hellenics, or continuation of the history of Thucydides, is a much inferior work. Sallust's art of historical painting in his Catilinarian, but, more especially, in his Jugurthine war, is well known: though his style is liable to censure, as too studied and affected.

Ibid.

§ 120. LANY remarkable for Historical Painting.

Livy is more unexceptionable in his manner; and is excelled by no historian whatever in the art of narration: several remarkable examples might be given from him. His account, for instance, of the famous defeat of the Roman army by the Samnites, at the Furcæ Caudinæ, in the beginning of the ninth book, affords one of the most beautiful exemplifications of historical painting, that is any where to be met with. We have first, an exact description of the narrow pass between two mountains, into which the enemy had decoved the Romans. When they find them-

selves caught, and no hope of escape left, we are made to see, first, their astonishment, next, their indignation, and then, their dejection; painted in the most lively manner, by such circumstances and actions as were natural to persons in their situa-The restless and unquiet manner in which they pass the night; the consultations of the Samuites: the various measures proposed to be taken: the messages between the two armies, all heighten the scene. At length, in the morning, the consuls return to the camp, and inform them that they could receive no other terms but that of surrendering their arms. and passing under the yoke, which was considered as the last mark of ignominy for a conquered army.

\$ 121. TACITUS remarkable for Historical Painting.

Tacitus is another author eminent for historical painting, though in a manner altogether different from that of Livy. Livy's descriptions are more full, more plain, and natural; those of Tacitus consist in a few bold strokes. He selects one or two remarkable circumstances, and sets them before us in a strong, and, generally, in a new and uncommon light. Such is the following picture of the situation of Rome, and of the Emperor Galba, when Otho was advancing against him: 48 Age-" batur hue illue Galba, vario turbe flue-" tantis impulsu, completis undique ha-66 silicis et templis, lugubri prospectu. " Neque populi aut plebis ulla vox; sed " attoniti vultus, et conversae ad omnia " aures. Non tumultus, non quies; sed " quale magni metus, et magnæ iræ, si-" lentium esta." No image, in any poet, is more strong and expressive than this last stroke of the description: " Non turnilus, " non quies, sed quale," &c. This is a conception of the sublime kind, and discovers high genius. Indeed, throughout all his work, Tacitus shews the hand of a master. As he is profound in reflection, so he is striking in description, and pathetic in sentiment. The philosopher, the poet, and

"Galba was driven to sind fro by the tide of the multitude, shoving him from place to place." The temples and public buildings were filled with crowds, of a dismal appearance. No clamous were heard, either from the citirens, or from the rabble. Their countenances were filled with consternation; their ears were employed in listening with anxiety. It was not a tunnelt; it was not quietness; it was the silence of terror; and of wrath."

the historian, all meet in him. Though I have recommended in epistolary correthe period of which he writes may be spondence, are not to be understood as imreckoned unfortunate for an historian, he porting entire carelessness. In writing to has made it afford us many interesting exhibitions of human nature. The relations which he gives of the deaths of seve- style, is requisite and becoming. It is no ral eminent personages, are as affecting as more than what we owe both to ourselves. the deepest tragedies. He paints with a glowing pencil; and possesses beyond all writers, the talent of painting, not to the imagination merely, but to the heart. With many of the most distinguished ters with too careless a hand, is apt to bebeauties, he is, at the same time, not a tray persons into imprudence in what they perfect model for history; and such as write. The first requisite, both in converhave formed themselves upon him, have sation and correspondence, is to attend to seldom been successful. He is to be ad- all the proper decorums which our own mired, rather than imitated. In his reflections he is too refined; in his style too An imprudent expression in conversation concise, sometimes quaint and affected, may be forgotten and pass away; but often abrupt and obscure. History seems when we take the pen into our hand, we to require a more natural, flowing, and popular manner. Blair.

d 122. On the Beauty of Epistolary Writing.

Its first and fundamental requisite is, to be natural and simple: for a stiff and-laboured manner is as bad in a letter as it is in conversation. This does not banish sprightliness and wit. These are graceful in letters, just as they are in conversation: when they flow easily, and without being studied: when employed so as to season, not to cloy. One who, either in conversation or in letters, affects to shine and to Sparkle always, will not please long. The style of letters should not be too highly polished. It ought to be neat and correct, but no more. All nicety about words, betrays study; and hence musical periods, and appearances of number and harmony in arrangement, should be carefully avoided in letters. The best letters are commonly such as the authors have written with most facility. What the heart or the imagination dictates, always flows readily; but where there is no subject to warm or interest these, constraint appears; and hence those letters of mere compliment, congratulation, or affected condolence, which have cost the authors most labour in composing, and which, for that reason, they perhaps consider as their master-pieces, never fail of being the most disagreeable and insipid to the readers.

1 123. Ease in writing Letters must not degenerate to carelessness.

It ought, at the same time, to be remem-Lered, that the ease and simplicity which

the most intimate friend, a certain degree of attention, both to the subject and the and to the friend with whom we correspond. A slovenly and negligent manner of writing, is a disobliging mark of want of respect. The liberty, besides, of writing letcharacter, and that of others, demand. must remember, that " Litera scripta manet."

d 124. On PLINY's Letters.

Pliny's letters are one of the most celebrated collections which the ancients have given us, in the epistolary way. They are elegant and polite: and exhibit a very pleasing and amiable view of the author. But, according to the vulgar phrase, they smell too much of the lamp. They are too elegant and fine; and it is not easy to avoid thinking, that the author is casting an eye towards the Public, when he is anpearing to write only for his friends. Nothing indeed is more difficult, than for an author, who publishes his own letters, to divest himself altogether of attention to the opinion of the world in what he says; by which means, he becomes much less agreeable than a man of parts would be, if, without any constraint of this sort, he were writing to his intimate friend. Ibid.

\$ 125. On Ciceno's Letters.

Cicero's Epistles, though not so showy as those of Pliny, are, on several accounts, a far more valuable collection; indeed, the most valuable collection of letters extant in any language. They are letters of real business, written to the wisest men of the age, composed with purity and elegance. but without the least affectation; and, what adds greatly to their merit, written without any intention of being published to the world. For it appears that Cicero never kept copies of his own letters; and we are wholly indebted to the care of his freedman Tyro, for the large collection that was made G g

made, after his death, of those which are now extant, amounting to near a thousand. They contain the most authentic materials of the history of that age; and are the last monuments which remain of Rome in its free state; the greatest part of them being written during that important cersis, when the republic was on the point of ruin; the most interesting situation, perhaps, which is to be found in the affairs of mankind. To his intimate friends, especially to Attieus, Cicero lays upen honself and his heart, with entire freedom. In the course of his correspondence with others, we are introduced into acquaintance with several of the principal personages of Rome; and it is remarkable that most of Cicero's correspondents, as well as himself, are elegant and point writers; which serves to heighten our idea of the taste and manners of that age.

1 126. On Port's and Switt's Letters.

The most distinguished collection of letters in the English language, is that of Mr. Pope, Dean Swift, and their friends; partly published in Mr. Pope's works, and parely in those of Dean Swift. This collection is, on the whole, an entertaining and agreeable one; and contains much wit and ingenuity. It is not, however, altogether free of the fault which I imputed to Pliny's Epistles, of too much study and refinement. In the variety of letters from different persons, contained in that collection, we find many that are written with ease, and a beautiful simplicity. Those of Dr. Arbuthnot, in particular, always deserve that praise. Dean Swift's also are unaffected; and as a proof of their being so, they exhibit his character fully, with all its defects; though it were to be wished, for the honour of his memory, that his epistolary correspondence had not been drained to the dregs, by so many successive publications, as have been given to the world. Several of Lord Bolingbroke's, and of Bishop Atterbury's Letters, are masterly. The censure of writing letters in too artificial a manner, falls heaviest on Mr. Pope himself. There is visibly more study and less of mature and the heart in his letters, than in times of some of his correspondents. He had formed himself on the manner of Voi-

See his Letter to Atticus, which was written a year or two before his death, in which he tells him, is answ r to some enquiries concerning his episters, that he had no collection of them, and that Tygo nail only about seventy of them. Ad ATT. 16. 5.

ture, and is too fond of writing like a wit. His letters to ladies are full of affectation. Even in writing to his friends, how forced an introduction is the following, of a letter to Mr. Addison: 45 I am more joyed at your return, than I should be at that of " the Sun, as much as I wish for him in this melancholy wet season; but it is his " fate too, like yours, to be displeasing to owls and obscene animals, who cannot " bear his lustre," How stiff a compliment is it, which he pays to Dishop Atterbury: 44 Though the noise and daily " bustle for the public be now over, I dare " say, you are still tendering its welfare; " as the Sun in winter, when seeming to " retire from the world, is preparing " warmth and benedictions for a better 14 season." This sentence might be tolerated in an harangue; but is very unsuitable to the style of one friend corresponding with another.

\$ 147. On the Letters of BALZAC, Volture, Seviene; and Lady MARY Wortley Montague.

The gaiety and vivacity of the French genius appear to much advantage in their letters, and have given birth to several agreeable publications. In the last age, Balzac and Voiture were the two most celebrated epistolary writers. Balzac's reputation indeed soon declined, on account of his swelling periods and pompous style. But Voiture continued long a favourite author. His composition is extremely sparkling; he shows a great deal of wit, and can trifle in the most entertaining manner. His only fault is, that he is too open and professed a wit, to be thoroughly agreeable as a letter writer. The letters of Madame de Sevignè are now esteemed the most accomplished model of a familiar correspondence. They turn indeed very much upon trifles, the incidents of the day, and the news of the town; and they are overloaded with extravagant compliments, and expressions of fondness, to her favourite daughter; but withal, they shew such perpetual sprightliness, they contain such easy and varied narration, and so many strokes of the most lively and beautiful painting, perfectly free from any affectation, that they are justly entitled to high praise. The Letters of Lady Mary Wortley Montague are not unworthy of being named after those of Mad. de Sevigne. They have much of the French ease and vivacity, and retain more the character of agreeable epistolary style, than perhaps any letters which have appeared in the English language. Blair.

\$ 128. Lyric Poetry. On PINDAR.

Pindar, the great father of lyric poetry, has been the occasion of leading his imitators into some defects. His genius was tublime; his expressions are beautiful and happy; his descriptions picturesque. But finding it a very barren subject to sing the praises of those who had gamed the prize in the public games, he is perpetually digressive, and fills up his poems with fables of the gods and heroes, that have little connection either with his subject, or with one another. The ancients admired him greatly; but, as many of the histories of particular families and cities, to which he alludes, are now unknown to us, he is so obscure, partly from his subjects, and partly from his rapid, abrupt manner of treating them, that, notwithstanding the beauty of his expression, our pleasure in reading him is much diminished. One would imagine, that many of his modern imitators thought the best way to catch his spirit, was to imitate his disorder and obscurity. In several of the choruses of Euripides and Sophocles, we have the same kind of lyric poetry as in Pindar, carried on with morclearness and connection, and at the same time with much sublimity.

\$ 129. On Honnes, as a Lyric Poet.

Of all the writers of odes, ancient or modern, there is none that, in point of correctness, harmony, and happy expression, can vie with Horace. He has descended from the Pindaric rapture to a more moderate degree of elevation; and joins connected thought, and good sense, with the highest beauties of poetry. He does not often aspire beyond that middle region, which I mentioned as belonging to the ode; and those odes, in which he attempts the sublime, are perhaps not always his best. The peculiar character, in which he excels, is grace and elegance; in which he excels, is grace and elegance;

There is no ode whatever of Horace's, without great beauties. But though I may be singular in my opinion. I cannot help thinking that in
some of those odes which have been such adrustred for sublimity (such as Ode iv. Lab. iv.

"Qualem ininistrum fulninis alitem, ser.")
there appears somewhat of a strained and forced
effort to be totty. The genius of this uniable
poet shews itself, according to my judgment, to
greater advantage, in themes of a more tumper
atte kind.

and in this style of composition, no poet has ever attained to a greater perfection than Horace. No poet supports a moral sentiment with more dignity, touches a gay one more happily, or possesses the art of trifling more agreeably, when he chuses to trifle. His language is so fortunate, that with a single word or epithet, he often conveys a whole description to the fancy. Hence he has ever been, and ever will continue to be, a favourite author with all persons of taste.

Bid.

f 130. On Casimin, and other modern

Among the Latin poets of later ages, there have been many initators of Horace. One of the most distinguished is Casimit, a Polish poet of the last century, who wrote four books of odes. In graceful ease of expression, he is far inferior to the Roman. He oftener affects the sublime; and in the attempt, like other lyric writers, frequently becomes harsh and unnatural. But, on several occasions, he discovers a considerable degree of original genius, and lyric compositions, is very elegant and classical.

Among the French, the odes of Jean Baptiste Rousseau have been much and justly celebrated. They possess great beauty, both of sentiment and expression. They are animated, without being rhapsodical; and are not inferior to any poetical productions in the French language.

In our own language, we have several lyric compositions of considerable merit. Dryden's Ode on St. Cecilia, is well Mr. Grey is distinguished in some of his orles, both for tenderness and sublimity; and in Dodsley's Miscellanies, several very heautiful lyric peems are to be found. As to professed Pindaric odes, they are, with a few exceptions, so incoherent, as seldous to be intelligible. Cowley, at all times harsh, is doubly so in his Pudaric compositions. In his Auacreontic odes, he is much happier. They are smooth and elegant; and, indeed, the most agreeable and the most perfect, in their kind, of all Mr. Cowley's poems, Ibid.

§ 131. On the different Kinds of Portical Composition in the Sacred Books; and of the distinguishing Characters of the chief Writers. 1st. Uf the Didactic.

The several kinds of poetical composition which we find in scripture, are chiefly \$\mathbb{C} \tau 2 \tag{ths}\$ the didactic, elegiac, pastoral, and lyric. Of the didactic species of poetry, the Book of Proverbs is the principal instance. The nine first chapters of that book are highly poetical, adorned with many distinguished graces, and figures of expression. At the 10th chapter, the style is sensibly altered, and descends into a lower strain, which is continued to the end; retaining however that sententious, pointed manner, and that artful construction of period, which distinguishes all the Hebrew poetry. The Book of Ecclesiastes comes likewise under this head; and some of the Psalms, as the 119th in particular. Blair.

\$ 132. Of the Elegiac and Pustoral Poetry of Scripture.

Of elegiac poetry, many very beautiful specimens occur in Scripture; such as the lamentation of David over his friend Jonathan; several passages in the prophetical books; and several of David's Psalms, composed on occasions of distress and mourning. The 42d Psalm, in particular, is, in the highest degree, tender and plaintive. But the most regular and perfect elegiac composition in the Scripture, perhaps in the whole world, is the book, entitled the Lamentations of Jeremials. As the prophet mourns in that book over the destruction of the Temple, and the Holy City, and the overthrow of the whole state, he assembles all the affecting images which a subject so melancholy could suggest. The composition is uncommonly artificial. By turns the prophet, and the city of Jerusalem, are introduced, as pouring forth their sorrows; and in the end, a chorus of the people send up the most earnest and plaintive supplications to God. The lines of the original too, as may, in part, appear from our translation, are longer than is usual in the other kinds of Hebrew poetry; and the melody is rendered thereby more flowing, and better adapted to the querimonious strain of elegy.

The Song of Solomon affords us a high exemplication of pastoral poetry. Considered with respect to its spiritual meaning, it is undoubtedly a mystical allegory in its form, it is a dramatic pastoral, or a perpetual dialogue between personages in the character of shepherds: and, suitably to that form, it is full of rural and pastoral images, from beginning to end. Ibid.

\$ 133. On the Lyric Poetry of Scripture,

Of lyric poetry, or that which is intend-

ed to be accompanied with music, the Old Testament is full. Besides a great number of hymns and songs, which we find scattered in the historical and prophetical books, such as the song of Moses, the song of Deborah, and many others of like nature, the whole book of Psalms B to be considered as a collection of sacred odes. In these, we find the ode exhibited in all the varieties of its form, and supported with the highest spirit of lyric poetry; sometimes sprightly, chearful, and triumphant; sometimes solemn and magnificent; sometimes tender and soft. From these instances, it clearly appears, that there are contained in the holy scriptures full exemplifications of several of the chief kinds of poetical writing.

§ 134. A Diversity of Style and Manner in the different Composers of the Sacred Books. On Jon, DAVID, and ISAIAN.

Among the different composers of the sacred books, there is an evident diversity of style and manner; and to trace their different characters in this view, will contribute not a little towards our reading their writings with greater advantage. The most eminent of the sacred poets are, the author of the Book of Job, David, and Isaiah. As the compositions of David are of the lyric kind, there is a greater variety of style and mauner in his works, than in those of the other two. The manuer in which, considered merely as a poet, David chiefly excels, is the pleasing, the soft, and the tender. In his Psalms, there are many lofty and sublime passages; but, in strength of description, he yields to Job: in sublimity, he yields to Isaiah. It is a sort of a temperate grandeur, for which David is chiefly distinguished; and to this he always soon returns, when, upon some occasions, he rises above it. The psalms in which he touches us most, are those in which he describes the happiness of the righteous, or the goodness of God; expresses the tender breathings of a devout mind, or sends up moving and affectionate supplications to heaven. Isaiah is, without exception, the most sublime of all poets. This is abundantly visible in our translation; and, what is a material circumstance, none of the books of scripture appear to have been more happily translated than the writings of this prophet. Majesty is his reigning character; a majesty more commanding, and more uniformly supported, than is to be found among the rest of

the Old Testament poets. He possesses, indeed, a dignity and grandeur, both in his conceptions and expressions, which are altogether unparalleled, and peculiar to himself. There is more clearness and order too, and a more visible distribution of parts, in his book, than in any other of the prophetical writings.

d 135. On TEREMIAH.

When we compare him with the rest of the poetical prophets, we immediately see in Jeremiah a very different genius. Isaiah employs himself generally on magnificent subjects. Jeremiah seldom discovers any disposition to be sublime, and inclines always to the tender and elegiac. Ezekiel, in poetical grace and elegance, is much inferior to them both; but he is distinguished by a character of uncommon force and ardour. To use the elegant expressions of Bishop Lowth, with regard to this Prophet: - " Est atrox, vehemens, tragi-66 cus; in sensibus, fervidus, acerbus, in-4 dignabundus; in imaginibus, fecundus, " traculentus, et nonnunquam ponè defor-" mis; in dictione, grandiloquus, gravis, " austerus, et interdum incultus; frequens 66 in repetitionibus, non decoris aut gratiæ " causa, sed ex indignatione et violentia. tt Onicquid susceperit tractandum, id se-" dulo persequitur; in eo unicè hæret de-" fixus; a proposito raro deflectens. In 4 cateris, a plerisque vatibus fortasse su-66 peratus; sed in eo genere, ad quod viil detur a natura unice comparatus, nimi-" rum, vi, pondere, impetu, granditate, " nemo unquam cum superavit." The same learned writer compares Isaiah to Homer, Jeremiah to Simonides, and Ezekiel to Aschylus. Most of the book of Isaiah is strictly poetical; of Jeremiah and Ezekiel, not above one half can be held in belong to poetry. Among the minor prophets, Hosea, Joel, Micah, Habakkuk, and especially Nahum, are distinguished for poetical spirit. In the prophecies of Daniel and Jonah, there is no poctry.

136. On the Book of Jon.

It only now remains to speak of the book of Job. It is known to be extremely ancient; generally reputed the most ancient of all the poetical books; the author uncertain. It is remarkable, that this book has no connection with the affairs or manners of the Jews, or Hebrews. The scene is laid in the land of Uz, or Idumaca,

which is a part of Arabia: and the imagery employed is generally of a different kind from what I before showed to be peculiar to the Hebrew poets. We meet with no allusions to the great events of sacred history, to the religious rites of the Jews, to Lebanon or to Carmel, or any of the peculiarities of the climate of Judza. We find few comparisons founded on rivers or torrents; these were not familiar objects in Arabia. But the longest comparison that occurs in the book, is to an object frequent and well known in that region, a brook that fails in the season of heat, and disappoints the expectation of the traveller.

The poetry, however, of the book of . Job, is not only equal to that of any other of the sacred writings, but is superior to them all, except those of Isaiah alone. As Isaiah is the most sublime, David the most pleasing and tender, so Job is the most descriptive, of all the inspired poets. A peculiar glow of fincy, and strength of description, characterise the author. No writer whatever abounds so much in metaphors. He may be said, not to describe. but to render visible, whatever he treats of. A variety of instances might be given. Let us remark only those strong and lively colours, with which, in the following passages, taken from the 18th and 20th chapters of his book, he paints the condition of the wicked: observe how rapidly his figures rise before us; and what a deep impression, at the same time, they leave on the imagination. "Knowest thou not this " of old, since man was placed upon the earth, that the triumphing of the wicked 46 is short, and the joy of the hypocrite, " but for a moment? Though his excel-" lency mount up to the heavens, and his 44 headreach the clouds, yet he shall perish " for ever. He shall fly away as a dream, " and shall not be found; yea, he shall be "chased away, as a vision of the night. "The eye also which saw him, shall see " him no more; they which have seen " him, shall say, where is he?-He shall such the poison of asps, the viper's " tougue shall slay him. In the fulness of 44 his sufficiency, he shall be in straits g " every hand shall come upon him. He shall see from the iron weapon, and " the bow of steel shall strike him through. " all darkness shall be hid in his secret 44 places. A fire not blown shall consume in him. The heaven shall reveal his ini-66 quity, and the earth shall rise up against " him. The increase of his house shall 44 depart .

Gg3

46 depart. His goods shall flow away in " the day of wrath. The light of the ** wicked shall be put out; the light shall es be dark in his tabernacle. The stops 44 of his strength shall be straitened, and 44 his own counsel shall cast him down. 14 For he is cast into a net, by his own 54 feet. He walketh upon a snare. Ter-16 rors shall make him alraid on every side; e and the robber shall prevail against him. Brimstone shall be scattered upon his 44 habitation. His remembrance shall peof rish from the earth, and he shall have 46 no name in the street. He shall be drier ven from light into darkness. They 44 that come after him shall be astonished H at his day. He shall drink of the wrath " of the Almighty." Blair.

\$ 137. On the Hand of Homen.

The subject of the Iliad must unquestionably be admitted to be, in the main, happily chosen. In the days of Homer, no object could be more splendid and dignified than the Trojan war. So great a confederacy of the Grecian states, under one leader, and the ten years siege which they carried on against Troy, must have spread far abroad the renown of many military exploits, and interested all Greece in the traditions concerning the heroes who had most eminently signalized them-Upon these traditions, Homer grounded his poem; and though he lived, as is generally believed, only two or three centuries after the Trojan war, yet, through the want of written records, tradition must, by his time, have fallen into the degree of obscurity most proper for poetry; and have left him at full liberty to mix as much Table as he pleased, with the remains of true history. He has not chosen, for his inbject, the whole Trojan war: but, with great judgment, he has selected one part of it, the quarrel betwixt Achilles and Agamemnon, and the events to which that quarrel gave rise; which, though they take up forty-seven days only, yet include the most interesting, and most critical period of the war. By this management, he has given greater unity to what would have otherwise been an unconnected history of battles. He has gained one hero, or principal character, Achilles, who reigns fluorghout the work; and he has shewn the permicious effect of discord among confederated princes. At the same time, I admit that Homer is less fortunate in his subject than Virgil. The plan of the

Eneid includes a greater compass and a more agreeable diversity of events: whereas the Hiad is almost entirely filled with battles.

The praise of high invention has in every age been given to Homer, with the greatest reason. The prodigious number of incidents, of speeches, of characters divine and human, with which he abounds; the surprising variety with which he has diversified his battles, in the wounds and deaths, and little history-pieces of almost all the persons slain, discover an invention pextlo boundless. But the praise of judgmentis, in my opinion, no less due to Homer, then that of invention. His story is all along conducted with great art. He rises upon us gradually; his heroes are brought out, one after another, to be objects of our attention. The distress thickens, as the poem advances; and every thing is so contrived as to aggrandize Achilles, and to render him, as the poet intended he should be, the capital figure.

But that wherein Homer excels all writers, is the characteristical part. Here he is without a rival. His lively and spirited exhibition of characters, is, in a great measure, owing to his being so dramatic a writer, abounding every where with dialogus and conversation. There is much more dialogue in Homer than in Virgil: or, indeed, than in any other poet.

Bid.

\$ 138. On the Odyssey of House.

My observations, hitherto, have been made upon the Iliad only. It is necessary to take some notice of the Odvssey also. Longinus's criticism upon it is not without foundation, that Homer may, in this poem, be compared to the setting sun, whose grandeur still remains, without the heat of his meridian beams. It wants the vigour and sublimity of the fliad; yet, at the same time, possesses so many beauties, as to be justly entitled to high praise. It is a very annising poem, and has much greater variety than the Hiad; it contains many interesting stories, and beautiful descriptions. We see every where the same descriptive and dramatic genius, and the same fertility of invention, that appears in the other work. It descends indeed from the dignity ol gods, and heroes, and warlike achievements; but in recompence, we have more pleasing pictures of ancient manners. Instead of that ferocity which reigns in the Iliad, the Odyssey presents us with the most aniable images of hospitality and humanity; entertains us with many a wonderful adventure, and many a landscape of nature; and instructs us by a constant vein of morality and virtue, which runs through the poem.

Blair.

\$ 139. On the Beauties of VIRGIL.

Virgil possesses beauties which have justly drawn the admiration of ages, and which, to this day, hold the balance in equilibrium between his fame and that of Homer. The principal and distinguishing excellency of Virgil, and which, in my opinion, he possesses beyond all poets, is tenderness. Nature had endowed him with exquisite sensibility; he felt every affecting circumstance in the scenes he describes; and by a single stroke, he knows how to reach the heart. This in an epic poem, is the merit next to sublimity; and puts it in an author's power to render his composition extremely interesting to all readers.

The chief beauty of this kind, in the Iliad, is the interview of Hector with Andromache. But, in the Æneid, there are many such. The second book is one of the greatest master-pieces that ever was executed by any hand; and Virgil seems to have out forth there the whole strength of his genius, as the subject afforded a variety of scenes, both of the awful and tender kind. The images of horror, presented by a city burned and sacked in the night, are finally mixed with pathetic and affecting incidents. Nothing, in any poet, is more beautifully described than the death of old Priam; and the family-pieces of Eneas, Anchises, and Creusa, are as tender as can be conceived. In many paseages of the Aneid, the same pathetic spirit shines, and they have been always the favourite passages in that work. fourth book, for instance, relating the unbappy passion and death of Dido, has been always most justly admired, and abounds with beauties of the highest kind. The interview of Eneas with Andromache and Helemus, in the third book; the episodes of Palius and Evander, of Nisus and Euryalus, of Lausus and Mezentius, in the Italian wars, are all striking instances of the poet's power of raising the tender emotions. For we must observe, that though the Æneid be an unequal poem, and, in some places, languid, yet there are beauties scattered through it all; and not a few, even in the last six books. The best

and most finished books, upon the whole, are the first, the second, the fourth, the sixth, the seventh, the eighth, and the twellth.

\$ 140. On the comparative Merit of Homen and Virgil.

Upon the whole, as to the comparative merit of those two great princes of epic poetry, Homer and Virgil: the former must undoubtedly be admitted to be the greater genius; the latter, to be the more correct writer. Homer was an original in his art, and discovers both the beauties and the defects, which are to be expected in an original author, compared with those who succeed him; more boldness, more nature and ease, more sublimity and force; but greater irregularities and negligences in composition. Virgil has, all along, kept his eye upon Homer; in many places he has not so much imitated, as he has literally translated him. The description of the storm, for instance, in the first Eneid. and Aneas's speech apon that occasion, are translations from the fifth book of the Odyssey: not to mention almost all the similes of Virgil, which are no other than copies of those of Homer. The pre-eminence in invention, therefore, must, beyond doubt, be ascribed to Homer. As to the pre-eminence in judgment, though many critics are disposed to give it to Virgil, yet, in my opinion, it hangsdoubtful. In Homer, we discern all the Greek vivacity; in Virgil, all the Roman stateliness. Homer's imagination is by much the most rich and copious; Virgil's the most chaste and correct. The strength of the former lies, in his power of warming the fancy; that of the latter, in his power of touching the heart. Homer's style is more simple and animated; Virgil's more elegant and uniform. The first has, on many occasions, a sublimity to which the latter never attains; but the latter, in return, never sinks below a certain degree of epic dignity, which cannot so clearly be pronounced of the former. Not, however, to detract from the admiration due to both these great poets, most of Homer's defects may reasonably be imputed, not to his genius, but to the manners of the age in which he lived; and for the feeble passages of the Eneid, this excuse ought to be admitted, that the Æneid was left an unhnished work,

Mid

To the admirers of polit slearning the Lectures of Dr. Blair, at larg spare strongly recommended

mended. The Extracts in this book are designed only as specimens of that elegant and useful work, and for the use of Schoolboys. It would be unjust, and indeed impracticable, the give any more Extracts, consistently with the necessary limits prescribed to this book.

f 141. On the ancient Writers; and on the Latour with which the Ancients composed.

The Ancients (of whom we speak) had good natural parts, and applied them right; they understood their own strength, and were masters of the subject they undertook; they had a rich genius carefully cultivated; in their writings you have nature without wildness, and art without ostentation. For it is vain to talk of nature and genius, without care and diligent application to refine and improve them. The finest paradise will run wild, and lose both its pleasure and usefulness, without a skilful hand constantly to tend and prune it. Though these generous spirits were inspired with the love of true praise, and had a modest assurance of their own abilities; yet they were not so self-sufficient, as to imagine their first thoughts were above their own review and correction, or their last above the judgment of their friends. They submitted their compositions to the censure of private persons and public assemblies. They reviewed, altered, and polished, till they had good hopes they could present the world with a finished piece. And so great and happy was their judgment, that they understood when they had done well, and knew the critical season of laying aside the file.

For, as those excellent masters, Pliny and Quinctilian, observe, there may be an intemperance in correction; when an ingenious man has such an excess of modesty and faulty distrust of himself, that he wears off some of the necessary and ornamental parts of his discourse, instead of polishing the rough, and taking off the superfluous,

These immortal wits did not preposterously resolve first to be authors, and then immediately fall to writing without study and experience; but took care to furnish themselves with knowledge by close thought, select conversation, and reading; and to gain all the information and light that was necessary to qualify them to do justice to their subject. Then, after they had begun to write, they did not hurry on their pen with speed and impatience to

appear in the view of the world; but they took time and pains to give every part of their discourse all possible strength and ornament, and to make the whole composition uniform and beautiful. They wisely considered, that productions which come before their due time into the world, are seldom perfect or long-lived; and that an author who designs to write for posterity, as well as the present generation, cannot study a work with too deep care and resolute industry.

Varus tells us of his incomparable friend Virgil, that he composed but very few verses in a day. That consummate philosopher, critic, and poet, regarded the value not number of his lines; and never thought too much pains could be bestowed on a poem, that he might reasonably expect would be the wonder of all ages, and last out the whole duration of time. Quinctilian assures us, that Sallust wrote with abundance of deliberation and prudent caution; and indeed that fully appears from his complete and exquisite writings. Demosthenes laboured night and day, outwatched the poor mechanic in Athens (that was forced to perpetual drudgery to support himself and his family) till he had acquired such a mastery in his noble prefession, such a rational and over-ruling vehemence, such a perfect habit of nervous and convincing eloquence, as enabled him to dely the strongest opposition, and to triumph over envy and time.

Plato, when he was eighty years old, was busily employed in the review and amendment of his divine dialogues: and some people are severe upon Cicero, that in imitation of Plato, he was so scrupulous whether he ought to write ad Piraa or in Piraa, Piraum, or in Piraum, that now in the civil wars, when he knew not how to dispose of his family, and scarce expected safety, he earnestly intreated his noble and learned friend Atticus to resolve that difficulty, and ease him of the perplexity which it created him. Whatever raillery or reflection some humoursome wits may make upon that great man's exactness and nicely in that respect, and at such a time; 'tis a plain proof of his wonderful care and diligence in his composition, and the strict regard he had to the purity and propriety of his language. The ancients so accurately understood, and so indefatigably studied their subject, that they scarce ever fail to finish and adorn every part with strong sense, and lively expression.

Bluckwall.

\$ 142. On HOMER.

'Tis to romantic commendation of Homer, to say, that no man understood pertons and things better than he; or had a deeper insight into the humours and passions of human nature. He represents great things with such sublimity, and little ones with such propriety, that he always makes the one admirable, and the other pleasant.

He is a perfect master of all the lofty graces of the figurative style, and all the purity and easiness of the plain. Strabo, the excellent geographer and historian, assures us, that Homer has described the places and countries of which he gives account, with that accuracy, that no man can imagine who has not seen them; and no man but must admire and be astonished who has. His poems may justly be compared with that shield of divine workmanship so inimitably represented in the eighteenth book of the Hiad. You have there exact images of all the actions of war, and employments of peace; and are entertained with the delightful view of the universe. Homer has all the beauties of every dialect and style scattered through his writings; he is scarce inferior to any other poet, in the poet's own way and excellency; but excels all others in force and comprehension of genius, elevation of fancy, and immense copiousness of invention. Such a sovereignty of genius reigns all over his works, that the ancients esteemed and admired him as the great High Priest of nature, who was admitted into her inmost choir, and acquainted with her most solemn mysteries.

The great men of former ages, with one voice, celebrate the praises of Homer; and old Zoilus has only a few followers in these later times, who detract from him either for want of Greek, or from a spirit of conceit and contradiction.

These gentlemen tell us, that the divine Plato himself banished him out of his commonwealth; which, say they, must be granted to be a biemish upon the poet's reputation. The reason why Plato would not let Homer's poems be in the hands of the subjects of that government, was because he did not esteem ordinary men capable readers of them. They would be apt to pervert his meaning, and have wrong

notions of God and religion, by taking his bold and beautiful allegories in too literal a sense. Plato frequently declares that he loves and admires him as the best, the most pleasant, and the divinest of all the poets; and studiously imitates his figurative and mystical way of writing. Though he forbad his works to be read in public, yet he would never be without them in his own closet. Though the philosopher pretends, that for reasons of state he must remove him out of his city; yet he declares he would treat him with all possible respect while he staid; and dismiss him laden with presents, and adorned with garlands (as the priests and supplicants of their gods used to be); by which marks of honour, all people wherever he came might be warned and induced to esteem his person sacred, and receive him with due veneration. Bid.

143. On THEOCRITUS.

If we mention Theocritus, he will he another bright instance of the happy abilities and various accomplishments of the ancients. He has writ in several sorts of poetry, and succeeded in all. It seems unnecessary to praise the native simplicity and easy freedom of his pastorals; when Virgil himself sometimes invokes the muse of Syracuse; when he imitates him through all his own poems of that kind, and in several passages translates him. Ouinctilian says of our Sicilian bard, that he is admirable in his kind; but when he adds, that his muse is not only shy of appearing at the bar, but in the city too, 'tis evident this remark must be confined to his pastorals. In several of his other poems, he shews such strength of reason and politeness, as would qualify him to plead among the orators, and make him acceptable in the courts of princes. In his smaller poems of Cupid stung, Adonis killed by the Boar, &c. you have the vigour and delicacy of Anacreon; in his Hylas, and Combat of Pollux and Amycus, he is much more pathetical, clear and pleasant, than Apollonius on the same, or any other subject. In his conversation of Alcmena and Tiresias, of Hercules and the old servant of Augeas, in Cynicea and Thyonichus, and the women going to the ceremonies of Adonis, there is all the easiness and engaging familiarity of humour and dialogue, which reign in the Odysseys; and in Hercules destroying the lion of Nemasa, the spirit and majesty of the Iliad. The panegyric upon king Ptolemy is justly esteemed

teemed an original and model of perfection in that way of writing. Both in that excellent poem, and the noble hymn upon Castor and Pollux, he has praised his gods and his here with that delicacy and dexterity of address, with those sublime and graceful expressions of devotion and respect, that in politeness, smoothness of turn, and a refued art of praising without offence, or appearance of flattery, he has equalted Callimachus: and in loftiness and flight of thought, scarce yields to Pindar or Homer.

Blackwall.

d 144. On HERODOTUS.

Herodotus had gained experience by travelling overall his own country, Thrace and Scythia; he travelled likewise to Arabia, Palestine, and Egypt; where he carefully viewed the chief curiosities and most remarkable places, and conversed with the Egyptian priests, who informed him of their ancient history, and acquainted him with their customs, sacred and civil. Indeed he speaks of their religious rites with such plainness and clearness in some cases, and such reserve and reverence in others, that I am apt to believe he was initiated into their ceremonies, and consecrated a priest of some of their orders.

Thus, being acquainted with the most famous countries, and valuable things, and knowing the most considerable persons of the age, he applied himself to write the history of the Greeks and Barbarians: and-performed the noble work with that judgment, faithfulness, and eloquence, that gained him the approbation and applause of the most august assembly in the world at that time, the flower of all Greece, met together at the Olympic games.

His history opens to the reader all the antiquities of Greece, and gives light to all her authors.

Bid.

145. On Livy.

We do not find that Livy had travelled much, or been employed in military aflairs; yet what he might want in experience, was happily supplied by wonderful parts and eloquence, by severe study, and information; so that he describes all the countries, towns, seas and ports, whither the Roman legions and navies came, with near the same accuracy and perfection (if

See Herodot, Gale's Edition, lib. ii. sect. 3.
 p. 21, sect. 65, p. 114, sect. 171, p. 156.

possible) which he could any place in Italy: lays a siege, draws up an army, with skill and conduct scarce inferior to Casar him-Was there as much charm in the conversation of this extraordinary man, as there is in his writings, the gentleman of Gales would not repent of his long journey. who came from thence only to see Livy, upon the fame of his incomparable eloquence, and other celebrated abilities: and we have reason to believe he received satisfaction, because, after he had seen Livy, and conversed with him, he had no curiosity to see Rome. to which he was so near; and which at that time was, for its magnificence and glories, one of the greatest wonders of the whole earth.

These two princes of Greek and Roman history tells story, and make up a description, with inexpressible grace; and so delicately mix the great and little circumstances, that there is both the utmost dignity and pleasure in it.

15 id.

§ 146. Much of their Beauty arises from Variety.

The reader is always entertained with an agreeable variety, both of matter and style, in Herodotus and Livy. And indeed every author that expects to please, must gratify the reader with variety: that is the universal charm, which takes with people of all tastes and complexions. 'Tis an appetite planted in us by the Author of our being; and is natural to an human soul, whose immense desires nothing but an infinite good, and unexhausted pleasure, can fully gratify. The most palatable dish becomes nauseous, if it be always set before a man: the most musical and harmonious notes, too often and unseasonably struck, grate the ear like the jarring of the most harsh and hateful discord.

These authors, and the rest of their spirit and elevation, were sensible of this; and therefore you find a continual change, and judicious variation, in their style and numbers.

One passage appears to be learned, and carefully laboured; an unstudied easiness, and becoming negligence, runs through the next. One sentence turns quick and short; and another, immediately following, runs into longer measures, and spreads itself with a sort of elegant and beautiful luxuriancy. They seldom use many periods together, consisting of the same number of members; nor are the members of their periods.

wiods of equal length, and exact measure, one with another.

The reflections that are made by these noble writers, upon the conduct and humours of mankind, the interests of courts, and the intrigues of parties, are so curious and instructive, so true in their substance, and so taking and lively in the manner of their expression, that they satisfy the soundest judgment, and please the most sprightly reagination. From these glorious authors we have instruction without the common formality and dryness of precept; and receive the most edilying advice an the pleasing way of insinuation and sur-Blackwall. prize.

\$ 147. Perspicuity a principal Beauty of the Classics.

Another excellency of the true classics is perspicuity, and clear style; which will excuse and cover several faults in an author; but the want of it is never to be atoned by, any pretence of loftiness, caution, or any consideration whatever.

And this is the effect of a clear head. and vigorous understanding; of close and regular thinking, and the diligence of select reading. A man should write with the same design as he speaks, to be understood with ease, and to communicate his mind with pleasure and instruction. If we select Xenophon out of the other Greek classics, whether he writes of the management of family affairs, or the more arduous matzers of state and policy: whether he gives an account of the wars of the Grecians, or the morals of Socrates; the style, though so far varied as to be suitable to every subject, yet is always clear and significant, aweet without lusciousness, and elegantly

In this genteel author we have all the politeness of a studied composition; and vet all the freedom and winning familiarity of elegant conversation.

Xenophon's Symposium, wherein he has given us an easy and beautiful description of a very lively and beautiful conversation. The pleasant and serious are there so happily mixed and tempered, that the discourse is neither too light for the grave, nor too solemn for the gay. There is mirth with diguity and decorum: and philosophy attended and enlivened by all the graces. Bid.

d 118. On Ciceno.

If among the Latin Classics we name Tully, upon every subject he equally shows the strength of his reason, and the brightness of his style. Whether he addresses his friend in the most graceful negligence of a familiar letter, or moves his auditors with laboured periods, and passimute strains of manly oratory; whether he proves the majesty of God, and immortality of human souls, in a more sublime and pompous eloquence; or lays down the rules of prodence and virtue, in a more calm and even way of writing; he always expresses good sense in pure and proper language : he is learned and easy, richly plain, and neat without affectation. He is always copious, but never runs intoa faulty huxuriance, nor tires his reader; and though he says almost every thing that can be said upon his subject, yet you will scarce ever think he says too much. Ibid.

\$ 149. On the Obscurities in the Glassics.

Those few obscurities which are in the best authors, do not proceed from haste and confusion of thought, or ambiguous expressions, from a long crowd of parenthesis, or perplexed periods; but either the places continue the same as they were in the original, and are not intelligible to us only by reason of our ignorance of some customs of those times and countries; or the passages are altered and spoiled by the presumption and busy impertinence of foolish transcribers and conceited critics. Which plainly appears from this, that since we have had more accurate accounts of the Greek and Roman antiquities, and old manuscripts have been searched and compared by able and diligent hands, innumerable errors have been rectified, and corruptions which have crept into the text, purged out: a various reading happily discovered, the removal of a verse, or a point of distinction out of the wrong into the Here I cannot but particularly mention right place, or the adding a small mark where it was left out, has given clear light to many passages, which for ages had lain overspread with an error, that had obscured the sense of the author, and quite confounded all the commentators. latter part of the thirty-second verse of the hymn of Callimachus on Apollo was in the first editions thus, Tie ar agen Doiler kilder: "who can sing of Pheebus in the mountains?" which was neither sense of itself, nor had any connection with what went before. But Stephens's amendment

of it set right both the sense and the connection, without altering a letter; Tis a de cia dollo Lider; " Phoebus is an unexhausted subject of praise;"-among all his glorious qualifications and exploits, what poet cau be so dull, what wit so barren, as to want materials for an hymn to his honour?-In the fourth verse of the eleventh epigram of Theocritus, there wanted a little point in the word buselities, which took off all the sprightliness and turn of the thought: which Daniel Heinfius luckily restored, by changing the nom. sing. vursify into the dat. plur. υμιοθέτα. " The friends of Eusthenes the poet, gave him, though a stranger, an honourable burial in a foreign country; and the poet was extremely beloved by 'em." How flat and insipid ! According to the amendment it runs thus: 44 The acquaintance of Eusthenes buried him honourably, though in a foreign country, and he was extremely beloved by his brother poets themselves." For a man to be mightily honoured by strangers, and extremely beloved by people of the same profession, who are apt to malign and envy one another, is a very high commendation of his candour, and excellent temper. That very valuable amendment in the sixth line of Horace's preface to his odes, has cleared a difficulty, which none of the crities could handsomely acquit themselves of before the admirable Dr. Bentley; and has rescued the poet, eminent for the clearness of his style, from the imputation of harshness and obscurity in the very beginning, and first address to his reader; where peculiar care and accuracy are expected. It would be endless to mention the numerous places in the ancients happily restored and illustrated by that great man; who is not only a sound and descerning critic, but a clean and vigorous writer, excellently skilled in all divine and human literature; to whom all scholars are obliged for his learned performances upon the classics; and all mankind for his noble and glorious live life. defence of religion. The learned Meursius was strangely puzzled with a passage in Minutius Felix*; and altered the text with such intolerable boldness, as, if allowed, would soon pervert and destroy all good authors; which the ingenious editor of that father has cleared, by putting the points of distinction in their proper places. Reges lantum regnisui, per officia ministrorum universa novere. Meursius had disguis-

* Min. Felix, Camb. edit. by Davis. § 38, p. 163, not, 7.

ed and deformed the passage thus: Reges statum regnisui per officia ministrorum diversa novere. Dr. Bentley has made a certain emendation in Horace's Art of Poetry, only by altering the places of two lines, making that which was the forty-fifth in his own beautiful editions.

Blackwall,

§ 150. On several Advantages which the Classics enjoyed.

It was among the advantages which the chief classics enjoyed, that most of them were placed in prosperous and plentiful circumstances of life, raised above anxious cares, want and abject dependance. They were persons of quality and fortune, courtiers and statesmen, great travellers, and generals of armies, possessed of the highest dignities and posts of peace and war. Their riches and plenty furnished them with leisure and means of study; and their employments improved them in knowledge and experience. How lively must they describe those countries, and remarkable places which they had attentively viewed with their own eyes! What faithful and emphatical relations were they enabled to make of those councils, in which they presided: of those actions in which they were present and commanded.

Herodotus, the father of history, besides the advantages of his travels and general knowledge, was so considerable in power and interest, that he bore a chief part in expelling the tyrant Lygdamis, who had usurped upon the liberties of his native country.

Thucydides and Xenophon were of distinguished eminence and abilities, both in civil and military affairs; were rich and noble; had atrong parts, and a careful education in their youth, completed by severe study in their advanced years: in short they had all the advantages and accomplishments both of the retired and ac-

Sophocles bore great offices in Athens; led their armies, and in strength of parts, and nobleness of thought and expression, was not unequal to his colleague Pericles; who, by his commanding wisdom and elequence, influenced all Greece, and was said to thunder and lighten in his harangues.

Euripides, famous for the purity of the Atticstyle, and his power in moving the passions, especially the softer ones of grief and pity, was invited to, and generously entertained in, the court of Archelaus

king of Macedon. The smoothness of his composition, his excellency in dramatic poetry, the soundness of his morals, conveyed in the sweetest numbers, were so universally admired, and his glory so far spread, that the Athenians, who were taken prisoners in the fatal overthrow under Nicias, were preserved from perpetual exile and ruin, by the astonishing respect that the Sicilians, enemies and strangers, paid to the wit and fame of their illustrious countryman. As many as could repeat any of Euripides's verses, were rewarded with their liberty, and generously sent home with marks of honour.

Plato, by his father's side, sprung from Codrus, the celebrated king of Athens; and by his mother's from Solon, their no less celebrated law-giver. To gain experience, and enlarge his knowledge, he travelled into Italy, Sicily, and Egypt. He was courted and honoured by the greatest men of the age wherein he lived; and will be studied and admired by men of taste and judgment in all succeeding ages. In his works, are inestimable treasures of the best learning. In short, as a learned gentleman says, he writ with all the strength of human reason, and all the charm of human eloquence.

Anacreon lived familiarly with Polycrates king of Samos: and his sprightly muse, saturally flowing with innumerable pleasures and graces, must improve in delicacy and sweetness by the gaiety and refined conversation of that flourishing court.

The bold and exalted genius of Pindar was encouraged and heightened by the honours he received from the champions and princes of his age; and his conversation with the heroes qualified him to sing their praises with more advantage. The conquerors at the Olympic games scarce valued their garlands of honour, and wreaths of victory, if they were not crowned with his never-fading laurels, and immortalized by his celestial song. The noble Hiero of Syracuse was his generous friend and patron; and the most powerful and polite state of all Greece esteemed a line of his in praise of their glorious city, worth public acknowledgments, and a statue. Most of the genuine and valuable Latin Classics had the same advantages of fortune, and improving conversation, the same encouragements with these and the other celebrated Grecians.

Terence gained such a wonderful insight into the characters and manners of man-

kind, such an elegant choice of words, and fluency of style, such judgment in the conduct of his plot, and such delicate and charming turns, chiefly by the conversation of Scipio and Lælius, the greatest men, and most refined wits, of their age. So much did this judicious writer, and clean scholar, improve by his diligent application to study, and their genteel and learned conversation, that it was charged upon him by those who envied his superior excellencies, that he published their compositions under his own name. His enemies had a mind that the world should believe those noblemen wrote his plays, but scarce believed it themselves; and the poet very prudently and genteelly slighted their malice, and made his great patrons the finest compliment in the world, by esteeming the accusation as an honour, rather than making any formal defence against it*.

Sallust, so famous for his neat expressive brevity and quick turns, for truth of fact and clearness of style, for the accuracy of his characters, and his piercing view into the mysteries of policy and motives of action, cultivated his rich abilities, and made his acquired learning so useful to the world, and so honourable to himself, by bearing the chief offices in the Roman government, and sharing in the important councils and debates of the senate.

Cæsar had a prodigious wit, and universal learning: was noble by birth, a consummate statesman, a brave and wise gene ral, and a most heroic prince. His prudence and modesty in speaking of himself, the truth and clearness of his descriptions, the inimitable purity and perspicuity of his style, distinguish him with advantage from all other writers. None bears a nearer resemblance to him in more instances than the admirable Xenophon. What useful and entertaining accounts might reasonably be expected from such a writer, who gives you the geography and history of those countries and nations, which he himself conquered, and the description of those military engines, bridges, and encampments, which he himself contrived and marked out!

The best authors in the reign of Augustus, as Horace, Virgil, Tibullus, Propertius, &c. enjoyed happy times, and plentiful circumstances. That was the golden age of learning. They flourished under the favours and bounty of the richest and most generous court in the world; and the

See Prologue to Adelpki, v. 15—22.
 beam

beams of majesty shone bright and propitious on them.

What could be too great to expect from such poets as Horace and Virgil, beloved and munificently encouraged by such patrons as Mæcænas and Augustus?

A chief reason why Tactus writes with such skill and authority, that he makes such deep searches into the nature of things, and designs of men, that he so exquisitely understands the secrets and intrigues of courts, was, that he himself was admitted into the highest places of trust, and employed in the most public and important affairs. The statesman brightens the scholar, and the consul improves and clevates the historian.

Bluckwall.

\$ 151. On the Care of the Ancients in selecting Numbers.

The Ancients are peculiarly to be admired for their care and happy exactness in selecting out the noblest and most valuable numbers, upon which the force and pleasantness of style principally depend. A discourse, consisting most of the strongest numbers, and best sort of feet, such as the Dactyl, Spondee, Anapest, Moloss, Cretic, &c. regularly compacted, stands firm and steady, and sounds magnificent and agreeable to a judicious ear. But a discourse made up of the weakest numbers, and the worst sort of feet, such as the Pyrrhichee, Choree, Trochee, &c. is loose and languid, and not capable with such advantage to express manly sense. It cannot be pronounced with ease, nor heard with patience. The periods of the classics are generally composed of the major part of the noblest numbers; and when they are forced to use weaker and worse-sounding feet and measures, they so carefully temper and strengthen them with firm and nervous syllables on both sides, that the imperfection is covered, and the dignity of the sentence preserved and supported.

Mid

\$ 152. On their making the Sound an Echo to the Sense.

Another excellency, nearly allied to this, in these glorious writers, is their suiting the contexture of their discourse, and the sound of their syllables, to the nature and character of their subjects. That is, they so contrive and work their composition, that the sound shall be a resemblance, or, as Longinus says, an echo of the sense, and words lively pictures of

things. In describing the loveliness of beauty, and the charms of joy and gaiety, they avoid disagreeable elisions; do not make the discourse harsh by joining mutes and coupling letters, that, being united, make a distasteful and grating sound. But by the choice of the best vowels, and the sweetest half-vowels, the whole composition is made smooth and delicate; and glides with easiness and pleasure through the ear.

In describing of a thing or person full of terror, ruggedness, or deformity, they use the worst-sounding vowels; and encumber the syllables with mites of the roughest and most difficult pronunciation. The rushing of land floods, the rouring of huge waters, and the dashing of waves against the shore; is imitated by words that make a vast and boisterous sound, and rudely clash together.

The great Plato, who had a genius for all manner of learning, was discouraged from poetry by reading that verse in Homer, which so wonderfully expresses the roaring of the billows:

Hibres Evineur igreyopting add; igui.

Haste and swiftness are figured by short syllables, by quick and rapid numbers; slowness, gravity, &c. by long syllables, and numbers strong and solemn. I shall produce some instances, and speak to them just as they come into my thoughts, without any nicety of method. Virgit, in his account of the sufferings of wicked sons in the regions of punishment, fills the reader with dread and amazement: every syllable sounds terror; awe and astonishment accompany his majestic numbers. In that passage4,

----- Tum seva sonare

Verbera, turn stridor ferri, tractaque extenz, the hissing letter repeated with broad saunding vowels immediately following the force and roughness of the canine letter so often used, and those atrong syllables in the second, third, and fourth places, emphatically express those dreadful sounds. A man of any ear will, upon the repetition of them, be apt to fancy he hears the crack of the furies whips, and the rattling and clank of infernal chains. Those horshelisions, and heavy robust syllables, in that description of the hideous Cyclops, Monsteam hor rendum, informe, ingens, naturally express the enormous bulk and brutish

hereeuess,

[•] Hind 17. v. 265.

[†] Eucid 6. v. 550, &c.

ferceness, of that mis-shapen and horrid

Our Spenser, one of the best poets this nation has bred, and whose faults are not to be imputed either to want of genius or care, but to the age he lived in, was very happy and judicious in the choice of his, nombers; of which take this example, not altogether foreign or unparallel to that of Virgil just mentioned.

Which through the wood loud-bellowing did rebound.

And then,

With stardy steps came stalking in his sight, An indeous giant, horrible and high.

Those verses in the first Georgic,

Ter sent conati imposere Pelio Ossam Scilicet, atque Ossa frondosum involvere Olympus t

are contrived with great art to represent the prodigious pains the giants took in heaping mountains upon mountains to scale heaven, and the slowness of their progress in that unwieldy work.

For a vowel open before a vowel, makes a chasm, and requires a strong and full breath, therefore a pause must follow, which naturally expresses difficulty and opposition.

But when swiftness and speed are to be described; see how the same wonderful man varies his numbers, and still suits his verse to his subject!

Quadrupedante putrem sonitu quatit ungula campam.

Here the rapid numbers, and short syllables, sustained with strong vowels, admirably represent both the vigour and speed of a horse at full stretch scouring over the plain.

When Horace sings of mirth, beauty, and other subjects that require delicacy and sweetness of composition, he smooths his lines with soft syllables, and flows in gay and melting numbers. Scarce any reader is so much a stoic, but good-humour steals upon him; and he reads with something of the temper which the author was in when he wrote. How inexpressibly sweet are those neat lines!

Urit me Glycere nitor, Splendentis Pario marmore purius: Urit grata protervitas, Et valtus nimidm labricus aspici.

* Fairy Queen.
† Georg. 1, v. 2:1.

Innumerable beauties of this nature are scattered through his lyric poetry. But when he undertakes lofty and noble subjects, he raises his style, and strengthens his expression. For example, when he proposes to do honour to Pindar, and sing the glories of Augustus, he reaches the Grecian's noblest flights, has all his magnificence of thought, his strength of fancy, and daring liberty of figures.

The Roman swan soars as high as the Theban: he equals that commanding spirit, those awful and vigorous beauties, which he generously pronounces inimitable; and praises both his immortal predecessor in lyric poetry, and his royal benefactor, with as much grandeur, and exalted eloquence, as ever Pindar praised any of his heroes.

It is a just observation of Longinus, that though Homer and Virgil are chiefly confined to the Dactyl and Spondee, and rarely use any equivalent feet, yet they temper them together with such astonishing skill and diligence, so carefully vary their syllables, and adapt their sounds to the nature of the thing described, that in their poems there is all the harmonious change and variety of numbers, which can be composed by all the possible turns, and different positions of all the feet in the languages.

Bluckwall.

§ 153. Translations cannot be sufficient Substitutes for such Originals.

A reader of such authors can scarce ever be weary; he has the advantage of a traveller for many miles round Damascus; be never removes out of Paradise, but is regaled with a constant succession of pleasures, and enjoys in a small compass the bounty and gaiety of universal nature. From hence may be seen the injustice and folly of those people, who would have translations of the classics; and then, to save the trouble of learning Greek and Latin, throw away the great originals to dust and oblivion. I would indeed have all the classics turned into our language by the most masterly hands, (as we alroady have some) among other reasons, for this, that ingenious and inquisitive people, who have the misfortune not to be well acquainted with the learned tongues, may have some taste of their excellencies. Ignorant persons, who know nothing of their language, would soon be persuaded to believe; and shallow pretenders, who know nothing of their beauties, would boldly pronounce,

pronounce, that some translations we have go beyond the originals; while scholars of clear and sound judgment are well satisfied, that it is impossible any version should come up to them. A translation of the noble classics out of their native tongue, so much in many respects inferior to them, always more or less flattens their sense, and tarnishes their beauties. It is something like transplanting a precious tree out of the warm and fruitful climes in which it was produced, into a cold and harren country; with much care and tenderness it may live, blossom and bear; but it can never so cheerfully flourish, as in its native soil; it will degenerate and lose much of its delicious flavour, and original richness. And besides the weakening of the sense (though that be by far the most important consideration) Greek and Latin have such a noble harmony of sound, such force and dignity of numbers, and such delicacy of turn in the periods, that cannot entirely be preserved in any language of the world. These two languages are so peculiarly susceptive of all the graces of wit and elecution, that they are read with more pleasure and lively gust, and consequently with more advantage, than the most perfect translation that the ablest genius can compose, or the strongest modern language can bear. The pleasure a man takes in reading, engages a close attention; raises and cheers the spirits; and impresses the authors sentiments and expressions deeper on the memory. A gentleman travels through the finest countries in the world, is in all respects qualified to make observations, and then writes a faithful and curious history of his travels. I can read his relations with pleasure and improvement, and will pay him the praise due to his merits: but must believe, that if I myself travelled through those countries, and attentively viewed and considered all those curiosities of art and nature which he describes, I should have a more satisfactory idea, and higher pleasure, than it is possible to receive from the exactest accounts. Authors of such distinguished parts and perfections, cannot be studied by a rational and discerning reader without very valuable advantages. Their strong sense and manly thought, cloathed in the most significant and beautiful language, will improve his reason and judgment; and enable him to acquire the art of genteel and sensible writing. For it is a most absurd objection, that the Classics do not improve

your reason, nor enlarge your knowledge of useful things, but only amuse and divert you with artificial turns of words, and flourishes of rhetoric. Let but a man of capacity read a few lines in Plato, Demosthenes, Tully, Sallust, Juvenal, &c. and he will immediately discover all such objections either to proceed from ignorance, a depraved taste, or intolerable conceit. The classics are intimately acquainted with those things they undertake to treat of; and explain and adorn their subject with sound reasoning, exact disposition, and beautiful propriety of language. No man in his right mind would have people to study them with neglect and exclusion of other parts of useful knowledge, and good learning. No; let a man furnish himself with all the arts and sciences, that he has either capacity or opportunity to learn; and he will still find, that readiness and skill in these correct and rational authors is not the least ornamental or serviceable part of his attainments. The neatness and delicacy of their compositions will be refreshment and music, after the toils of severer and harsher studies. The brightness of their sense, and the purity and elegance of their diction, will qualify most people, who duly admire and study their excellencies, to communicate their thoughts with energy and clearness. Some gentlemen, deeply read in old systems of philosophy, and the abstruser part of learning, for want of a sufficient acquaintance with these great masters of style and politeness have not been able so to express their notions, as to make their labours fully intelligible and useful to mankind. Irregular broken periods, long and frequent parentheses, and harsh tropes, have perplexed their notions; and much of their sense has lain buried under the confusion and rubbish of an obscure and horrid style. The brightest and most rational thoughts are obscured, and in a great measure spoiled, if they be encumbered with obsolete and coarse words unskilfully placed, and ungracefully turned. The matchless graces of some fine odes in Anacreon or Horace, do chiefly arise from the judicious choice of the beautiful words, and the delicacy and harmoniousness of the structure. Blackwall.

\$155. The peculiar Excellence of the Speeches of the Greeks and Romans.

Besides the other advantages of studying the classical historians, there is one, which

which gentlemen of birth and fortune, qualihed to manage public business, and sit as members in the most august assemblies, have a more considerable share in, than people of meaner condition. The speeches of the great men among the Greeks and Romans deserve their peculiar study and imitation, as being master-pieces of clear reasoning and genuine eloquence: the orators in the Classics fairly state their case, and strongly argue it : their remarks are surprising and perninent, their repartees quick, and their raillery clear and diverting. They are bold without rashness or insolence; and severe with good manners and decency. They do justice to their subject, and speak agreeably to the nature of things, and characters of persons. Their sentences are sprightly, and their morals sound. In short, no part of the compositions of the ancients is more linished, more instructive and pleasing, than their orations. Here they seem to exert their choicest abilities, and collect the utmost force of their genius. Their whole histories may be compared to anoble and delicious country, that lies under the favourable eye and perpetual smiles of the heavens, and is every where crowned with pleasure and plenty: but their choice descriptions and speeches seem like some peculiarly fertile and happy spots of ground in that country, on which Nature has poured out her riches with a more liberal hand, and Art has made the utmost improvements of her bounty. They have taken so much pains, and used such accuracy in the speeches, that the greater pleasure they have given the reader, the more they have exposed themselves to the censure of the critic. The orations are too sublime and elaborate; and those persons to whom they are ascribed, could not at those times compose or speak them. 'Tis allowed; that they might not deliver themselves in that exact number and collection of words, which the historians have so curiously laid together; but it scarce can be depied, but the great men in history had frequent occasions of speaking in public; and 'tis probable, that many times they did actually speak to the same purpose. Fabius Maximus and Scipio, Cæsar and Cato, were capable of making as good speeches as Livy or Sallust; and Pericles was an orator no ways inferior to Thucydides. When the reason of the thing will allow that there was time and room for premeditation, there is no question but

many of those admirable men in history spoke as well as they are represented by those able and eloquent writers. But then the historians putting the speeches into their own style, and giving us those harangues in form, which we cannot tell how they could come at, trespass against probability, and the strict rules of writing history. It has always been allowed to great wits sometimes to step out of the beaten road, and to soar out of the view of a heavy scholiast. To grant all that is in the objection: the greatest Classics were liable to human infirmities and errors; and whenever their forward censurers shall fall into such irregularities, and commit such faults joined to such excellencies, the learned world will not only pardon; but admire them. We may say of that celebrated speech of Marlus in Sallust, and others that are more attacked upon this foot, as the friends of Virgil do in excuse of his offending against chronology in the story of Æneas and Dido; that had there been no room for such little objections, the world had wanted some of the most charming and consummaté productions of human wit. Whoever made those noble speeches and debates: they so naturally arise from the posture of affairs, and circumstances of the times which the authors then describe, and are so rational, so pathetic, and becoming, that the pleasure and instruction of the reader is the same. A complete dissertation upon the uses and beauties of the chief speeches in the classical historians, would be a work of curiosity, that would require an able genius and fine pen. I shall just make some short strictures upon two; one out of Thucydides, and the other out of Ta-Blackwall.

\$ 155: On the Funeral Oration of Pericus.

The funeral oration made by Pericles upon his brave countrymen who died in battle, is full of prudence and manly elequence; of hearty seal for the honour of his country, and wise remarks. He does not lavish away his commendations, but renders the honours of the state truly desirable, by shewing they are always conferred with judgment and wariness. He praises the dead, in order to encourage the living to follow their example; to which he proposes the strongest inducements in the most moving and lively manner; from the consideration of the immortal honours paid to the memory of the deceased, and Hh

the generous provisious made by the government for the dear persons left behind by those who fell in their country's cause. He imputes the greatest share of the merits of those gallant men to the excellency of the Athenian constitution; which trained them up in such regular discipline, and secured to them and their descendants such invaluable privileges, that no man of sense and gratitude, of public spirit, and a lover of his children, would scruple to venture his life to preserve them inviolable, and transmit them to late posterity. The noble orator in his speech gives an admirable character of his countrymen the Athenians. He represents them as brave, with consideration and coolness; and polite and genteel, without effeminacy. They are, says he, easy to their fellow citizens, and kind and communicative to strangers; they cultivate and improve all the arts, and enjoy all the pleasures of peace; and yet are never surprised at the alarms, nor impatient of the toils and fatigues of war. They are generous to their friends, and terrible to their enemies. They use all the liberty that can be desired without insolence or licentiousness; and fear nothing but transgresting the laws. Blackwall.

\$ 156. On Mucian's Speech in Tacitus.

Mucian's speech in Tacitus+ contains many important matters in a small compass; and in a few clean and emphatical words goes through the principal topics of persuasion. He presses and conjures Vespasian to dispute the empire with Vitellius, by the duty he owes his bleeding country; by the love he has for his hopeful sons; by the fairest prospect of success that could be hoped for, if he once vigorously set upon that glorious business: but, if he neglected the present opportunity, by the dismal appearance of the worst evils that could be feared: he encourages him by the number and goodness of his forces; by the interest and steadiness of his friends; by the vices of his rival, and his own virtues. Yet all the while this great man compliments Vespasian, and pays him honour, he is cautious not in the least to diminish his own glory: if he readily allows him the first rank of merit, he briskly claims the second to himself. Never were liberty and complaisance

of speech more happily mixed; he conveys sound exhortation in praise; and at the same time says very bold and very obliging things. In short, he speaks with the bravery of a soldier, and the freedom of a friend; in his address there is the air and the gracefulness of an accomplished courtier: in his advice, the sagacity and caution of a consummate statesman.

Thid

§ 157. The Classics exhibit a beautiful System of Moruls.

Another great advantage of studying the Classies is, that from a few of the best of them may be drawn a good system and beautiful collection of sound morals. There the precepts of a virtuous and happy life are set off in the light and gracefulness of clear and moving expression; and eloquence is meritoriously employed in vindieating and adorning religion. makes deep impressions on the minds of young gentlemen, and charms them with the love of goodness so engagingly dressed, and so beautifully commended. Offices, Cato Major, Tusculan Questions, &c. of Tully, want not much of Epictetus and Antonine in morality, and are much superior in language. Pindar writes in an excellent strain of piety as well as poetry; he carefully wipes off all the aspersions that old fables had thrown upon the deities; and never speaks of things or persons sacred, but with the tenderest caution and reverence. He praises virtue and religion with a generous warmth; and speaks of its eternal rewards with a pious assurance. A notable critic has observed, to the perpetual scandal of this poet, that his chief, if not only excellency, lies in his moral sentênces. Indeed Pindar is a great master of this excellency, for which all men of sense will admire him; and at the same time be astonished at that man's honesty who slights such an excellency; and that man's understanding, who cannot discover many more excellencies in him. I remember, in one of his Olympic Odes, in a noble confidence of his own genius, and a just contempt of his vile and malicious adversaries, he compares himself to an eagle, and them to crows: and indeed he soars far above the reach and out of the view of noisy fluttering cavillers. The famous Greek professor, Duport, has made an entertaining and useful collection of Homer's divine and moral sayings, and has with great dexterity compared them with parallel passages

^{*} See Thueyd. Oxon. Ed. lib. 2. p. 105.

^{*} Tacit. Elzevir, Ed. 1634. Hist, 2. p. 581, 585.

tages out of the inspired writers. by which it appears, that there is no book in the world so like the style of the Holy Bible as Homer. The noble historians abound with moral reflections upon the conduct of human life; and powerfully instruct both by precepts and examples. They paint vice and villainy in horrid colours; and employ all their reason and eloquence to pay due honours to virtue, and render undissembled goodness amiable in the eye of mankind. They express a true reverence for the established religion, and a hearty concern for the prosperous state of their native country.

Blackwall.

\$ 158. On XENOPHON'S Memoirs of Socrates.

Xenophon's memorable things of Socrates, is a very instructive and refined system of morality: it goes through all points of duty to God and man, with great clearness of sense and sound notion, and with inexpressible simplicity and purity of language. The great Socrates there discourses in such a manner, as is most proper to engage and persuade all sorts of readers: he argues with the reason of a philosopher, directs with the authority of a lawgiver, and addresses with the familiarities and endearments of a friend.

He made as many improvements in true morality, as could be made by the unassisted strength of human reason; nay, he delivers himself in some places, as if he was enlightened by a ray from heaven. In one of Plato's divine dialogues+, Socrates utters a surprising prophecy of a divine person, a true friend and lover of human nature, who was to come into the world to instruct them in the most acceptable way of addressing their prayers to the majesty of God.

Bid.

\$ 159. On the Morality of JUVENAL.

I do not wonder when I hear that some prelates of the church have recommended the serious study of Juvenal's moral parts to their clergy. That manly and vigorous author, so perfect a master in the serious and sublime way of satire, is not unacquainted with any of the excellencies of good writing; but is especially to be admired and valued for his exalted morals. He dissuades from wickedness, and exhorts

Guomologia Homerica, Cantab. 1660.
 Dialog. Select. Cantab. 1683, ad Alcib. ad
 \$55.

to goodness, with vehemence of zeal that can scarce be dissembled, and strength of reason that cannot easily be resisted. He does not praise virtue and condemn vice, as one has a favourable, and the other a malignant aspect upon a man's fortune in this world only; but he establishes the unalterable distinctions of good and evil; and builds his doctrine upon the immoveable foundations of God and infinite Providence.

His morals are suited to the nature and dignity of an immortal soul: and, like it, derive their original from heaven.

How sound and serviceable is that wonderful notion in the thirteenth satires, That an inward inclination to do an ill thing is criminal: that a wicked thought stains the mind with guilt, and exposes the offender to the punishment of heaven, though it never ripen into action! A suitable practice would effectually crush the serpent's head, and banish a long and black train of mischiefs and miseries out of the world. What a scene of horror does he disclose, when in the same satirel, he opens to our view the wounds and gashes of a wicked conscience! The guilty reader is not only terrilied at dreadful cracks and flashes of the heavens, but looks pale and trembles at the thunder and lightning of the poet's awful verse. The notion of true fortitude cannot be better stated than it is in the eighth satire !, where be pressingly exhorts his reader always to prefer his conscience and principles before his life; and not be restrained from doing his duty, or be awed into a compliance with a villainous proposal, even by the presence and command of a barbarous tyrant, or the nearest prospect of death in all the circumstances of cruelty and terror. Must not a professor of Christianity be ashamed of himself for harbouring uncharitable and bloody resentments in his breast, when he reads and considers that invaluable passage against revenge in the above-mentioned thirteenth satired? where he argues against that herce and fatal passion, from the ignorance and littleness of that mind which is possessed with it; from the honour and generosity of passing by and forgiving injuries: from the example of those wise and mild men, of Chrysippus and Thales, and

[•] V. 208, &c.

[†] V. 192, &c. 210, &c.

[‡] V. 79—85. § V. 181, &c.

especially that of Socrates, that undaunted champion and martyr of natural religion; who was so great a proficient in the best philosophy, that he was assured his malicious prosecutors and murderers could do him no hurt; and had not himself the least inclination or rising wish to do them any; who discoursed with that cheerful gravity, and graceful composure, a few moments before he was going to die, as if he had heen going to take possession of a kingdom; and drank off the poisonous bowl, as a potion of Immortality. Blackwall.

\$ 160. The best Classics lay down excellent Rules for Conversation.

The best Classics lay down very valuable rules for the management of conversation, for graceful and proper address to those persons with whom we converse. They instruct their readers in the methods of engaging and preserving friends; and reveal to them the true secret of pleasing mankind. This is a large and agreeable held; but I shall confine myself to a small compass.

While Tully, under the person of Crassus, gives an account of the word ineptus, or impertinent, he insinuates excellent caution to prevent a man from rendering himself ridiculous and distasteful to company. These are his words: " He that either does not observe the proper time 46 of a thing, or speaks too much, or vain-44 gloriously sets himself off, or has not a 46 regard to the dignity or interest of those " he converses with, or, in a word, is in 44 any kind indecent or excessive, is called " impertinent." That is admirable advice in the third book of his Offices, for the prudent and graceful regulation of a man's discourse (which has so powerful an influence upon the misfortune or happiness of life) that we should always speak with that prudence, candour, and undissembled complaisance, that the persons we address may be persuaded that we both love and reverence them.

For this persuasion settled in their minds, will secure their friendship, and create us the pleasure of their mutual love and respect. Every judicious reader of Horace will allow the justness of Sir William Temple's character of him, That he was the greatest master of life, and of true sense in the conduct of it. Is it possible to comprise better advice in fewer lines, than those of his to his friend Lollius, which I shall give you in the original.

Arcanam neque tá acrutaberis ollius naquam: Commissumque teges, & vino tortus, & ira: Nec tua laudabis studia, aut aliena reprendes: Nec, cum venari volet ille, poemata panges.

Horace had an intimate friendship and interest with men of the chief quality and distinction in the empire; who then was fitter to lay down rules how to approach the great, and gain their countenance and

patronage?

This great man has a peculiar talent of handsomely expressing his gratitude to his noble benefactors: he just puts a due value upon every favour; and, in short, manages that nice subject of praise with a manly grace, and irreproachable decency. How clean is that address to Augustus absent from Rome; in the fifth ode of the fourth book!

Lucem redde tuæ, dux hone, patriæ; Instar veris enim, vultus ubi tuus Affulsit populo, gratior it dies, Et soles meliñs nitent.

Here are no forced figures or unnatural rants; 'tis all seasonable and beautiful, poetical and literally true. Bid.

\$ 161. Directions for reading the Classics.

Those excellencies of the Ancients, which I have accounted for, seem to be sufficient to recommend them to the esteem and study of all lovers of good and polite learning: and that the young scholar may study them with suitable success and improvement, a few directions may be proper to be observed; which I shall lay down in this chapter. 'Tis in my opinion a right method to begin with the best and most approved Glassics; and to read those authors first, which must often be read over. Besides, that the best authors are easiest to be understood, their noble sense and animated expression will make strong impressions upon the young scholar's mind, and train him up to the early love and imitation of their excellencies.

Plautus, Gatullus, Terence, Virgil, Herace, Ovid, Juvenal, Tibullus, Propertius, cannot be studied too much, or gone over too often. One reading may suffice for Lucan, Statius, Valerius Flaccus, Silius Italicus, Claudian; though there will be frequent occasions to consult some of their particular passages. The same may be said with respect to the Greek poets: Homer, Pindar, Anacreon, Aristophanes, Euripides, Sophocles, Theoritus, Callimachus, must never be entirely laid aside:

· Mor, Ep. 18. L. 1, v. 37.

and will recompence as many repetitions as a man's time and affairs will allow. Hesiod, Orpheus, Theogonis, Æschvlus, Lycophron, Apollonius Rhodius, Nicander Aratus, Oppian, Quintus Calaber, Dionysius, Periegetes, and Nonnus, will amply reward the labour of one careful perusal. Sallust, Livy, Cicero, Gæsar, and Tacitus, deserve to be read several times; and read them as oft as you please, they will always afford fresh pleasure and improvement. I cannot but place the two Plinys after these illustrious writers, who flourished, indeed, when the Roman lanby the vigour of a great genius, and wondrous industry, raised themselves in a great measure above the discouragements and disadvantages of the age they lived in. In quality and learning, in experience of the world, and employments of importance in the government, they were equal to the greatest of the Latin writers, though excelled by some of them in language.

The elder Pliny's natural history is a work learned and copious, that entertains you with all the variety of nature itself. and is one of the greatest monuments of universal knowledge, and unwearied application, now extant in the world. His geography, and description of herbs, trees and animals, are of great use to the understanding of all the authors of Rome and Greece.

Pliny the younger is one of the fluest wits that Italy has produced; he is correct and elegant, has a florid and gay fancy, tempered with maturity and soundness of judgment. Every thing in him is exquisitely studied; and yet, in general speaking. every thing is natural and easy. In his incomparable oration in honour of Trajan, he has frequent and surprising turns of true wit, without playing and tinkling upon sounds. He has exhausted the subject of panegyric, using every topic, and every delicacy of praise. Herodotus, Thucydides, Xenophon, Plato, Demosthenes, are of the same merit among the Greeks: to which, I think, I may add Polybius, Lucian, and Polybius was nobly born, a Plutarch. man of deep thought, and perfect master of his subject: he discovers all the mysteries of policy, and presents to your view the inmost springs of those actions which he describes: his remarks and maxims have been regarded, by the greatest men both in civil and military affairs, as oracles of predence: Scipio was his friend and admirer; Cicero, Strabo, and Plutarch, have honoured him

with high commendations; Constantine the Great was his diligent reader; and Brutus abridged him for his own constant use. Lucian is an universal scholar; and a prodigious wit: he is Attic and neat in his style, clear in his narration, and wonderfully facetions in his repartees: he furnishes you with almost all the poetical history in such a diverting manner, that you will not easily forget it; and supplies the most dry and barren wit with a rich plenty of materials. Plutarch is an author of deep sense and vast learning; though he does not reach his illustrious predecessors in the guage was a little upon the declension: but graces of his language, his morals are sound and noble, illustrated with a perpetual variety of beautiful metaphors and comparisons, and enforced with very remarkable stories, and pertinent examples: in his Lives there is a complete account of all the Roman and Grecian antiquities, or their customs, and affairs of peace and war: those writings will furnish a capable and in? quisitive reader with a curious variety of characters, with a very valuable store of wise remarks and sound politics. The surface is a little rough, but under lie vast quantities of precious ore. Blackwall.

162. The subordinate Classics not to be neglected.

Every repetition of these authors will bring the reader fresh profit and satisfac-The rest of the Classics unist by no means be neglected; but ought once to be carefully read over, and may ever after be occasionally consulted with much advantage. The Grecian Classics next in value to those we have named, are, Diodorus Siculus, Dionysius Halicarnassensis, Strabo, Alian, Arrian's Expedition of Alexander the Great, Polyænus, Herodian; the Latin are, Hirtius, Justin, Quintus Curtius, Florus, Nepos, and Suetonius. We may, with a little allowance, admit that observation to be just, that he who would completely understand one Classic must diligently read all. When a young gentleman is entered upon a course of these studies, I would not have him to be discouraged at the checks and difficulties he will sometimes meet with: if upon close and due consideration he cannot entirely master any passage, let him proceed by constant and regular reading, he will either find in that author he is upon, or some other on the same subject, a parallel place that will clear the doubt.

The Greek authors wonderfully explain Hh 3

and illustrate the Roman. Learning came late to Rome, and all the Latin writers follow the plans that were laid out before them by the great masters of Greece.

They every where imitate the Greeks, and in many places translate 'em. Compare 'em together, and they will be a comment to one another; you will by this means be enabled to pass a more certain judgment upon the humour and idiom of both languages; and both the pleasure and advantage of your reading will be double. Blackwall.

\$ 163. The Greek and Latin Writers to be compared.

By a careful comparison of the Greek and Latin writers, you will see how judiciously the latter imitated the former; and will yourself be qualified, with greater pleasure and success, to read and imitate both. By observing what advantages Virgil has made of Homer in his Æneid, and of Theocritus in his Pastorals; how cleanly Horace has applied several places, out of Anacreon and other lyrics, to his own purpose; you will learn to collect precious stores out of the Ancients; to transluse their spirits into your language with as little loss as possible; and to borrow with so much modesty and discretion, as to make their riches your own, without the scandal of unfair dealing. It will be convenient and pleasant to compare authors together, that were countrymen and fellow-citizens; as Euripides, Thucydides, and Xenophon: that were contemporaries; as Theocritus and Callimachus: that writ in the same dialect; as Anacreon and Herodotus, in the Ionic; Theocritus, Pindar, and Callimachus, upon Ceres and the Bath of Pallas, in the Doric: that writ upon the same subject; as Apollonius, Valerius Flaccus, and Theocritus, on the combat of Pollux and Amycus, and the death of Hylas. Sallust's polite and curious history of Catiline's conspiracy, and Tully's four glorious orations upon the same subject, are the brightest commentaries upon each other. The historian and the orator scarce disagree in one particular; and Sallust has left behind him an everlasting monument of his candour and impartiality, by owning and commending the consul's vigilance, and meritorious services; though these two great men had the misfortune to be violent enemies. He that praises and honours an adversary, thews his own generosity and justice, by proclaiming his adversary's eminent merits. By comparing authors after this method,

what seems difficult in one will be easy in another; what one expresses short, another will enlarge upon; and if some of them do not furnish us with all the variety of the dialect and idioms of the language, the rest will supply those defects. It will likewise be necessary for the young scholar diligently to remark and commit to memory the religious and civil customs of the Ancients: an accurate knowledge of them will make him capable to discern and relish the propriety of an author's words, and the elegance and graces of his allusions. When St. Paul speaks of his speedy approaching martyrdom, he uses this expression, 'Eyu yag non omerdopan"; which is an allusion to that universal custom of the world, of pouring wine or oil on the head of the victim immediately before it was slain. The apostle's emphatical word signifies-wine is just now pouring on my head, I am just going to be sacrificed to Pagan rage and superstition. That passage of St. Paul, " For I think that God hath set forth us the apostles last, as it were " appointed to death; for we are made a se spectacle unto the world, and to angels, " and to men +;" is all expressed in Agonistical terms, and cannot be understood, without taking the allusion that it manifestly bears to the Roman gladiators, which came last upon the stage at noon, and were marked out for certain slaughter and destruction; being naked, with a sword in one hand, and tearing one another in pieces with the other; whereas, those who fought the wild beasts in the morning were allowed weapons offensive and defensive, and had a chance to come off with life. The most ancient way, of giving sentence among the Greeks, and particularly the Athenians, was by black and white pebbles, called Dipos. Those judges who put the black ones into an urn, passed sentence of condemnation upon the person tried, and those who put in the white, acquitted and saved. Hence we may learn the significancy and beauty of our Saviour's words in St. John, et to him that overcometh I will give a "white stone !." I, who am the only judge of the whole world, will pass the sentence of absolution upon my faithful servants, and the champions of my cross; and crown them with the inestimable rewards of immortality and glory. There are innumerable places, both in the Sacred Classics and the others, which are not to

º 2 Tim. iv. 6. † 1 Cor. iv. 9,

² Rev. ii.

be understood without a competent know- Jude. -- 1 St. John 1. 3, -- Revel. 1. ledge of antiquities. I call the writers of the New Testament the Sacred Classics: and shall, in a proper place, endeavour fully to prove, that they deserve the highest character for the purity of their language, as well as the vigour of their sense, against the ignorance of some, and the insolence of others, who have fallen very rudely upon them with respect to their style. Every Scholar, and every Christian, is obliged to the utmost of his abilities, to defend those venerable authors against all exceptions, that may in any respect tend to diminish their value. I cannot but be of the opinion of those gentlemen, who think there is propriety in the expression, as well as sublimity in the sentiments of the New Testament; and esteem that man as bad a critic, who undervalues its language, as he is a Christian, who denies its doctrines.

Blackwall.

\$ 164. On the Study of the New Testament.

The classic scholar must by no means be so much wanting to his own duty, pleasure and improvement, as to neglect the study of the New Testament, but must be perpetually conversant in those inestimable writings which have all the treasures of divine wisdom, and the words of eternal life in them. The best way will be to make them the first and last of all your studies, to open and close the day with that sacred book, wherein you have a faithful and most entertaining history of that blessed and miraculous work of the redemption of the world; and sure directions how to qualify and entitle yourself for the great salvation purchased by Jesus.

This exercise will compose your thoughts into the sweetest serenity and cheerfulness; and happily consecrate all your time and studies to God. After you have read the Greek Testament once over with care and deliberation, I humbly recommend to your frequent and attentive perusal, these fol-

lowing chapters:

St. Matthew 5. 6. 7. 25. 26. 27. 28 .-St. Mark 1. 13. St. Luke 2. 9. 15. 16. 23.24. St. John 1. 11, 14, 15, 16, 17. 19.20. -- Acts 26.27. -- Romans 2.8. 12.--- 1 Cor. 3. 9. 13. 15.--- 2 Cor. 4. 6. 11. Ephes. 4. 5. 6. Philipp. 1. 2. 3. Coloss. 1. 3. 1 Thess. 2. 5. -1 Tim. 1. 6.——2 Tim. 2. 3.—— Philemon. --- Heb. 1. 4. 6. 11. 12. ---1 St. Peter all. 2 St. Peter all. St.

18, 19, 20,

In this collection you will find the Book of God, written by the evangelists, and apostles, comprised in a most admirable and comprehensive epitome. A true critic will discover numerous instances of every style in perfection; every grace and ornament of speech more chaste and beautiful than the most admired and shining passages of the secular writers.

In particular, the description of God, and the future state of heavenly glory, in St. Paul, and St. Peter, St. James and St. John, as far transcend the descriptions of Jupiter and Olympus, which Homer, and Pindar, and Virgil, give us, as the thunder and lightning of the heavens do the rattling and flashes of a Salmoneus; or the eternal Jehovah is superior to the Pagan deities. In all the New Testament, especially these select passages, God delivers to mankind laws of mercy, mysteries of wisdom, and rules of happiness, which fools and madmen stupidly neglect, or impiously scorn; while all the best and brightest beings in the universe regard them with sacred attention, and contemplate them with wonder and transporting delight. These studies, with a suitable Christian practice (which they so loudly call for, and so pathetically press) will raise you above all vexatious fears, and deluding hopes; and keep you from putting an undue value upon either the cloquence or enjoyments of this world. Ibid.

4 165. The old Critics to be studied.

That we may still qualify ourselves the better to read and relish the Classics, we must seriously study the old Greek and Latin critics. Of the first are Aristotle, Dionysius Longinus, and Dionysius of Halicarnassus: of the latter are Tully, Horace, and Quinctilian. These are excellent authors, which lead their leaders to the fountain-head of true sense and sublimity; teach them the first and infallible principles of convincing and moving eloquence: and reveal all the mystery and delicacy of good writing. While they judiciously discover the excellencies of other authors, they successfully shew their own; and are glorious examples of that sublime they praise. They take off the general distastefulness of precepts; and rules, by their dexterous management, have beauty as well as usefulness. They were, what every true critic must be, persons of great reading Hh 4

and happy memory, of a piercing sagacity and elegant taste. They praise without flattery or partial favour; and censure Without pride prenvy. We shall still have a completer notion of the perfections and beauties of the aucients, if we read the choicest authors in our own tongue, and some of the best writers of our neighbour nations, who always have the Ancients in view, and write with their spirit and judgpient. We have a glorious set of poets, of whom I shall only mention a few, which are the chief; Spenser, Shakespeare, Milton, Waller, Denham, Cowley, Dryden, Prior, Addison, Pope: who are inspired with the true spirit of their predecessors of Greece and Rome: and by whose immortal works the reputation of the English poetry is raised much above that of any language in Europe. Then we have prose writers of all professions and degrees, and upon a great variety of subjects, true admirers and great masters of the old Classics and Critics: who observe their rules, and write after their models. We have Raleigh, Clarendon, Temple, Taylor, Tillotson, Sharp, Sprat, South-with a great many others, both dead and living; that I have hot time to name, though I esteem them not inferior to the illustrious few I have mentioned; who are in high esteem with all readers of taste and distinction, and will be long quoted as bright examples of good sense and fine writing. Horace and Aristotle will be read with greater delight and improvement, if we join with them, the Duke of Buckingham's Essay on Poetry, Roscommon's Translation of Horace's Art of Poetry, and Essay on Translated Verse, Mr. Pope's Essay on Criticism, and Discourses before Homer, Dryden's Critical Prefaces and Discourses, all the Spectators that treat upon Classical Learning, particularly the justly admired and celebrated critique upon Milton's Paradise Lost, Dacier upon Aristotle's Poetics, Bof-Ju on Epic Poetry, Boileau's Art of Poetry, and Reflections on Longinus, Dr. Folton's Dissertation on the Glassics, and Mr. Trapp's Poetical Prelections. These gentlemen make a true judgment and use of the Ancients! they esteem it a reputation to own they admire them, and borrow from them; and make a grateful return, by doing honour to sheir memories, and defending them against the attacks of some over-forward with who furiously cary their fame, and infinitely fall short of Blackwall. their merit.

\$ 166. The best Authors to be read several Times over.

I cannot but here repeat what I said before, of the advantage of reading the best authors several times over. There must needs be pleasure and improvement in a repetition of such writers as have fresh beauties in every section, and new wonders

arising in every new page.

One superficial reading exhausts the small stores of a superficial writer, but the genuine ancients, and those who write with their spirit and after their pattern, are deep and full. An ill written loose book is like a formal common-place for, who has a set of phrases and stories, which in a conversation or two are all run over; the man quickly impoverishes himself, and in a less hours becomes perfectly dry and insipid. But the old Classics, and their genuine followers among the moderns, are like a rich natural genius, who has an unfailing supply of good sense on all occasions; and gratifies his company with a perpetual and charming variety.

§ 167. The Rise and Progress of Philosophical Criticism.

Ibid.

Ancient Greece, in its happy days, was the seat of Liberty, of Sciences, and of Arts. In this fair region, fertile of wit, the Epic writers came first; then the Lyric; then the Tragic; and, lastly, the Historians, the Comic Writers, and the Orators; each in their turns delighting whole multitudes, and commanding the attention and admiration of all. Now, when wise and thinking men, the subtil investigators of principles and causes, observed the wonderful effect of these works upon the human mind, they were prompted to enquire whence this should proceed; for that it should happen merely from Chance, they could not well believe.

Here therefore we have the rise and origin of Criticism, which in its beginning was "a deep and philosophical search" into the primary laws and elements of good writing, as far as they could be collected from the most approved performances."

In this contemplation of authors, the first critics not only attended to the powers and different species of words; the force of numerous composition, whether in proce or verse; the aptitude of its various kinds to different subjects; but they farther considered

aidered that, which is the basis of all, that is to say, in other words, the meaning of This led them at once into the most curious of subjects; the nature of man in general, the different characters of men, as they differ in rank or age; their reason and their passions; how the one was to be persuaded, the others to be raised or calmed; the places or repositories to which we may recur, when we want proper matter for any of these purposes. Besides all this, they studied sentiments and manners; what constitutes a work; what, a whole and parts; what, the essence of probable, and even of natural fiction, as contributing to constitute a just dramatic fable. Harris.

168. PLATO, ARISTOTLE, THEO-PHRASTUS, and other GREEK Authors of Philosophical Criticism.

Much of this kind may be found in different parts of Plato. But Aristotle, his disciple, who may be called the systematizer of his master's doctrines, has, in his two treatises of poetry and rhetoric, with such wonderful penetration developed every part of the subject, that he may be justly called the Father of Criticism, both from the age when he lived, and from his truly transcendent genius. The criticism which this capital writer taught, has so intimate a correspondence and alliance with philosophy, that we can call it by no other name, than that of Philosophical Criticism.

To Aristotle succeeded his disciple Theophrastus, who followed his master's example in the study of criticism, as may be
seen in the catalogue of his writings, preserved by Diogenes Laertius. But all the
critical works of Theophrastus, as well as
of many others, are now lost. The principal authors of the kind now remaining
in Greek, are Demetrius of Phalera, Dionysius of Halicarnassus, Dionysius Longinus, together with Hermogenes, Aphthonins, and a few others.

Of these the most masterly seems to be Demetrius, who was the earliest, and who appears to follow the precepts, and even the text of Aristotle, with far greater attention than any of the rest. His examples, it must be confessed, are sometimes obscure, but this we rather impute to the destructive hand of time, which has prevented us from seeing many of the original authors.

Dienysius of Halicarnassus, the next in prder, may be said to have written with judgment upon the force of numerous composition, not to mention other tracts on the subject of oratory, and those also critical as well as historical. Longinus, who was in time far later than these, seems principally to have had in view the passions and the imagination, in the treating of which he has acquired a just applause, and expressed himself with a dignity suitable to the subject. The rest of the Greek critics, though they have said many useful things, have yet so minutely multiplied the rules of art, and so much confined themselves to the oratory of the tribunal. that they appear of no great service, as to good writing in general.

\$ 169. Philosophical Critics among the Romans.

Among the Romans, the first critic of note was Cicero; who, though far below Aristotle in depth of philosophy, may be said, like him, to have exceeded all his countrymen. As his celebrated treatise concerning the Orator is written in dialogue, where the speakers introduced are the greatest men of his nation, we have incidentally an elegant sample of those manners, and that politeness, which were peculiar to the leading characters during There we the Roman commonwealth. may see the behaviour of free and accomplished men, before a baser address had set that standard, which has been too often taken for good breeding ever since.

Next to Cicero came Horace; who often, in other parts of his writings, acts the critic and scholar, but whose Art of Poetry is a standard of its kind, and too well known to need any encomium. After Horace arose Quinctilian, Cicero's admirer and follower, who appears, by his works, not only learned and ingenious, but, what is still more, an honest and a worthy man, He likewise dwells too much upon the oratory of the tribunal, a fact no way surprising, when we consider the age in which he lived: an age when tyrannic government being the fashion of the times, that nobler species of eloquence, I mean the popular and deliberative, was, with all things truly liberal, degenerated and sunk. The later Latin rhetoricians there is no need to mention, as they little help to illustrate the subject in hand. I would only repeat that the species of criticism here mentioned,

mentioned, as far at least as handled by liasts, were no longer studied; and an age the more able masters, is that which we succeeded of legends and crusades. have denominated Criticism Philosophical.

\$ 170. Goncerning the Progress of Criticism in its second Species, the Historical-GREEK and ROMAN Gritics, by whom this Species of Griticism was cultivated.

As to the Criticism already treated, we find it not confined to any one particular and for, but containing general rules of art, either for judging or writing, confirmed by the example not of one author, but of many. But we know from experience, that, in process of time, languages, customs, manners, laws, governments, and religions, insensibly change. The Macedonian tyranny, after the fatal battle of Charonea, wrought much of this kind in Greece: and the Roman tyranny, after the fatal battles of Pharsalia and Philippi, carried it throughout the known world. Hence, therefore, of things obsolete the names became absolete also; and authors, who in their own age were intelligible and easy, in after days grew difficult and obscure. Here then we behold the rise of a second race of critics, the tribe of scholiasts, commentators, and explainers.

These naturally attached themselves to particular authors. Aristarchus, Didymus, Eustathius, and many others, bestowed their labours upon Homer; Proclus and Tzetzes upon Hesiod; the same Proclus and Olympiodorus upon Plato; Simplicius, Ammonius, and Philoponus, upon Aristotle; Ulpian upon Demosthenes; Macrobius and Asconius upon Cicero; Calliergus upon Theocritus; Donatus upon Terence; Servius upon Virgil; Acro and Porphyrio upon Horace; and so with respect to others, as well philosophers as To these scholiasts poets and orators. may be added the several composers of Lexicons; such as Hesychius, Philoxenus, Suidas, &c. also the writers upon Grammar, such as Apollonius, Priscian, Sosipater, Charisius, &c. Now all these painstaking men, considered together, may be said to have completed another species of criticism, a species which, in distinction to the former, we call Criticism Historical.

And thus things continued, though in a declining way, till, after many a severe and unsuccessful plunge, the Roman empire sunk through the west of Europe. Latin then soon lost its purity; Greek they

Bid.

\$ 171. Moderns eminent in the two Species of Criticism before mentioned, the Philosophical and the Historical-the last Sort of Critics more numerous-those, mentioned in this Section, confined to the GREEK and LATIN Languages.

At length, after a long and barbarous period, when the shades of monkery began to retire, and the light of humanity once again to dawn, the arts also of criticism insensibly revived. 'Tis true, indeed, the authors of the philosophical sort (I mean that which respects the causes and principles of good writing in general) were not many in number. However, of this rank, among the Italians, were Vida, and the elder Scaliger; among the French were Rapin, Bouhours, Boileau, together with Bossu, the most methodic and accurate of them all. In our own country, our nobility may be said to have distinguished themselves; Lord Roscommon, in his Essay upon Translated Verse; the Duke of Buckingham, in his Essay on Poetry; and Lord Shaftsbury, in his treatise called Advice to an Author: to whom may be added, our late admired genius, Pope, in his truly elegant poem, the Essay upon Criticism.

The Discourses of Sir Joshua Reynolds upon painting have, after a philosophical manner, investigated the principles of an art, which no one in practice has better verified than himself.

We have mentioned these discourses, not only from their merit, but as they incidentally teach us, that to write well upon a liberal art, we must write philosophically --- that all the liberal arts in their princtples are congenial-and that these principles, when traced to their common source, are found all to terminate in the first philosophy.

But to pursue our subject-However small among moderns may be the number of these Philosophical Critics, the writers of historical or explanatory criticism have been in a manner innumerable. To name, out of many, only a few-of Italy were Beroaldus, Ficinus, Victorius, and Robertellus; of the Higher and Lower Germany were Erasmus, Sylburgius, Le Clerc, and Fabricius; of France were Lambin, Du-Vall, Harduin, Capperonerius; of Enghardly knew; Classics, and their Scho- land were Stanley (editor of Æschylus), Gataker,

Gataker, Davies, Clark (editor of Homer), sogether with multitudes more from every region and quarter,

> Thick as autumnal leaves that strow the brooks In Vallombroen.

But I fear I have given a strange catalogue, where we seek in vain for such illustrious personages as Sesostris, Cyrus, Alexander, Cæsar, Attila, Tortila, Tamerlane, &c. The heroes of this work fif I may be pardoued for calling them so) have only aimed in retirement to present us with knowledge. Knowledge only was their object, not havock, nor destruction.

\$ 172. Compilers of Lexicons and Dictionaries, and Authors upon Grammars.

After Commentators and Editors, we must not forget the compilers of Lexicons and Dictionaries, such as Charles and Henry Stevens, Favorinus, Constantine, Budæus, Cooper, Faber, Vossius and others. To these also we may add the authors upon Grammar; in which subject the learned Greeks, when they quitted the East, led the way, Moschopulus, Chrysoloras, Lascaris, Theodore Gaza; then in Italy, Laurentius Valla; in England, Grocin and Linacer; in Spain, Sanctius; in the Low Countries, Vossius; in France, Cæsar Scaliger by his residence, though by birth an Italian, together with those able writers Mess. de Port Roial. Nor ought we to omit the writers of Philological Epistles, such as Emanuel Martin; nor the writers of Literary Gatalogues (in French called Catalogues Raisonnees, such as the account of the manuscripts in the imperial library at Vienna, by Lambecius; or of the Arabic manuscripts in the Escurial library, by Michael Casiri.

\$ 173. Modern Critics of the Explanatory Kind, commenting modern Writers-Lexicographers -- Grammarians -- Translators.

Though much historical explanation has been bestowed on the ancient Classics, yet have the authors of our own country by no means been forgotten, having exercised many critics of learning and inge-

Mr. Thomas Warton (besides his fine edition of Theocritus) has given a curious history of English Poetry during the middle centuries; Mr. Tyrwhit, much accurate and diversified crudition upon Chau-

cer, Mr. Upton, a learned Comment on the Fairy Queen of Spenser; Mr. Addison, many polite and elegant Spectators on the Conduct and Beauties of the Paradise Lost; Dr. Warton, an Essay on the Genins and Writings of Pope, a work filled with speculations, in a taste perfectly pure, The lovers of literature would not forgive me, were I to omit that ornament of her sex and country, the critic and patroness of our illustrious Shakespeare, Mrs. Montague. For the honour of criticism, not only the divines already mentioned, but others also, of rank still superior, have bestowed their labours upon our capital poets (Shakespeare, Milton, Cowley, Pope) suspending for a while their severer studies, to relax in these regions of genius and imagination.

The Dictionaries of Minshew, Skinner, Spelman, Sumner, Junius, and Johnson, are all well known, and justly esteemed. Such is the merit of the last, that our language does not possess a more copious, learned, and valuable work. For grammatical knowledge we ought to mention with distinction the learned prelate, Dr. Lowth, bishop of London; whose admirable tract on the Grammar of the English language, every lover of that language ought to study and understand, if he would write, or even speak it, with purity and

precision.

Let my countrymen too reflect, that in studying a work upon this subject, they are not only studying a language in which it becomes them to be knowing, but a language which can boast of as many good books as any among the living or modern languages of Europe. The writers, born and educated in a free country, have been left for years to their native freedom. Their pages have been never defiled with an index expurgatorius, nor their genius ever shackled with the terrors of an inquisition.

May this invaluable privilege never be impaired either by the hand of power, or by licentious abuse! Bid.

\$ 174. On Translators.

Perhaps, with the critics just described, I ought to arrange Translators, if it be true that translation is a species of explanation, which differs no otherwise from explanatory comments, than that these attend to parts, while translation goes to the whole.

Now as translators are infinite, and many of them (to borrow a phrase from sportamen) sporstmen) unqualified persons, I shall enumerate only a few, and those such as for their merits have been deservedly esteemed.

Of this number I may very truly reckon Meric Casaubon, the translator of Marcus Antoninus; Mrs. Garter, the translator of Epictetus; and Mr. Sydenham, the translator of many of Plato's Dialogues. All these seem to have accurately understood the original language from which they translated. But that is not all. The authors translated being philosophers, the translators appear to have studied the style of their philosophy, well knowing that in ancient Greece every sect of philosophy, like every science and art, had a language of its own.

To these may be added the respectable names of Melmoth and of Hampton, of Franklin and of Potter; nor should I omit a few others, whose labours have been similar, did I not recollect the trite, though elegant admonition:

Singula dum capti circumvectamur amore. Vin.

Harris.

\$ 175. Rise of the third Species of Criticism, the Gorrective—practised by the Ancients, but much more by the Moderns; and why.

But we are now to enquire after another species of Criticism. All ancient books, having been preserved by transcription, were liable, through ignorance, negligence, or fraud, to be corrupted in three different ways, that is to say, by retrenchings, by additions, and by alterations.

To remedy these evils, a third sort of criticism arose, and that was Criticism Corrective. The business of this at first was painfully to coilate all the various copies of authority, and then, from amidst the variety of readings thus collected, to establish, by good reasons, either the true, or the most probable. In this sense we may call such criticism not only corrective but authoritative.

As the number of these corruptions must needs have increased by length of time, hence it has happened that corrective criticism has become much more necessary in these later ages, than it was in others more ancient. Not but that even in ancient days various readings have been noted. Of this kind there are a multitude in the text of

* See Hermes, p. 269, 270.

Homer; a fact not singular, when we consider his great antiquity. In the Comments of Ammonius and Philoponus upon Aristotle, there is mention made of several in the text of that philosopher, which these his commentators compare and examine.

We find the same in Aulus Gellius, as to the Roman authors; where it is withal remarkable, that, even in that early period, much stress is laid upon the authority of ancient manuscripts, a reading in Cicero being justified from a copy made by his learned freed-man, Tiro: and a reading in Virgil's Georgies, from a book which had once belonged to Virgil's family.

But since the revival of literature, to correct has been a business of much more latitude, having continually employed, for two centuries and a half, both the pains of the most laborious, and the wits of the most acute. Many of the learned men before enumerated were not only famous as historical critics, but as corrective also. Such were the two Scaligers (of whom one has been already mentioned, \$ 171.) the two Casaubons, Salmosius, the Heinsii, Grazvius, the Gronovii, Burman, Kuster, Wasse, Bentley, Pearce, and Markland. In the same class, and in a rank highly eminent, I place Mr. Toupe, of Cornwall, who, in his Emendations upon Suidas, and his edition of Longinus, has shewn a critical acumen, and a compass of learning, that may justly arrange him with the most distinguished scholars. Nor must I forget Dr. Taylor, residentiary of St. Paul's, nor Mr. Upton, prebendary of Rochester. The former, by his edition of Demosthenes, (as far as he lived to carry it) by his Lysias, by his Comment on the Marmor Sandvicense, and other critical pieces; the latter, by his correct and elegant edition, in Greek and Latin, of Arrian's Epictetus (the first of the kind that had any pretensions to be called complete) have rendered themselves, as Scholars, lasting ornaments of their country. These two valuable men were the friends of my youth; the companions of my social, as well as my literary hours. I admired them for their erudition; I loved them for their virtues; they are now no more-

His saltem accumulem donis, et fungar inani Munere————————Ving.

Ibid.

d 176.

§ 176. Criticism may have been abused—yet defended, as or the last Importance to the Cause of Literature.

But here was the misfortune of this last species of criticism. The best of things may pass into abuse. There were numerous corruptions in many of the finest authors, which neither ancient editions, nor manuscripts, could heal. What then was to be done?--- Were forms so fair to remain disfigured, and be seen for ever under such apparent blemishes? - "No (says a critic,) 6 Conjecture can cure all-Conjecture, " whose performances are for the most " part more certain than any thing that "we can exhibit from the authority of "manuscripts."-We will not ask, upon this wonderful assertion, how, if so certain, can it be called conjecture?--'Tis enough to observe (be it called as it may) that this spirit of conjecture has too often passed into an intemperate excess; and then, whatever it may have boasted, has done more mischief by far than good. Authors have been taken in hand, like anatomical subjects, only to display the skill and abilities of the artist: so that the end of many an edition seems often to have been no more than to exhibit the great sagacity and erudition of an editor. The joy of the task was the honour of mending, while corruptions were sought with a more than commen attention, as each of them afforded a sestimony to the editor and his art.

And here I beg leave, by way of digression, to relate a short story concerning a noted empiric. "Being once in a ball-"room crowded with company, he was "sked by a gentleman, what he thought of such a lady? was it not pity that she dector, "I wish every lady in the room squinted; there is not a man in Europe can cure squinting but myself."—

But to return to our subject—well indeed would it be for the cause of letters, were this bold conjectural spirit confined to works of second rate, where, let it change, expunge, or add, as happens, it may be tolerably sure to leave matters as they were; or if not much better, at least not much worse: but when the divine geniuses of higher rank, whom we not only appland, but in a manner revere, when these come to be attempted by petulant correctors, and to be made the subject of their wanton caprice, how can we but exclaim, with a kind of religious abhorrence—

--- procul! O! procul este profani!

These sentiments may be applied even to the celebrated Bentley. It would have become that able writer, though in literature and natural abilities among the first of his age, had he been more temperate in his criticism upon the Paradise Lost; had he not so repeatedly and injutiously offered violence to its author, from an affected superiority, to which he had no pretence. But the rage of conjecture seems to have seized him, as that of jealousy did Medea: a rage which she confest herself unable to resist, although she knew the mischiefs it would prompt her to perpetrate.

And now to obviate an unmerited censure, (as if I were an enemy to the thing, from being an enemy to its abuse) I would have it remembered, it is not either with criticism or critics that I presume to find fault. The arts, and its professors, while they practice it with temper, I truly honour; and think, that were it not for their acute and learned labours, we should be in danger of degenerating into an age of dunces.

Indeed critics (if I may be allowed the metaphor) are a sort of masters of the ceremony in the court of letters, through whose assistance we are introduced into some of the first and best company. Should we ever, therefore, by idle prejudices against pedantry, verbal accuracies, and we know not what, come to slight their art. and reject them from our favour, it is well if we do not slight also those Classics with whom criticism converses, becoming content to read them in translations, or (what is still worse) in translations of translations, or (what is worse even than that) not to read them at all. And I will be bold to assert, if that should ever happen, we shall speedily return into those days of darkness, out of which we happily emerged upon the revival of ancient literature.

\$ 177. The Epic Writers come first.

It appears, that not only in Greece, but in other countries more barbarous, the first writings were in metre, and of an epic cast, recording wars, battles, heroes, ghosts; the marvellous always, and often the incredible. Men seemed to have thought, that the higher they soared the more important they should appear; and that the common life, which they then lived, was a thing too contemptible to merit imitation.

Hence it followed, that it was not till this common life was rendered respectable by more refined and polished manners, that

men

men thought it might be copied, so as to

gain them applause.

Even in Greece itself, tragedy had attained its maturity many years before comedy, as may be seen by comparing the age of Sophocles and Euripides with that of Philemon and Menander.

For ourselves, we shall find most of our first poets prone to a turgid bombast, and most of our first prosaic writers to a pedantic stiffness; which rude styles gradually improved, but reached not a classical purity sooner than Tillotson, Dryden, Addison, Shaftsbury, Prior, Pope, Atterbury, &c. &c.

Harris.

§ 178. Nothing excellent in literary Performances happens from Chance.

As to what is asserted soon after upon the efficacy of causes in works of ingenuity and art, we think, in general, that the effect must always be proportioned to its cause. It is hard for him, who reasons attentively, to refer to chance any superlative production.

Effects indeed strike us, when we are not thinking about the cause; yet may we be assured, if we reflect, that a cause there is, and that too a cause intelligent and rational. Nothing would perhaps more contribute to give us a taste truly critical, than on every occasion to investigate this cause, and to ask ourselves, upon feeling any uncommon effect, why we are thus delighted; why thus affected; why melted into pity; why made to shudder with horror?

Till this why is well answered, all is darkness; and our admiration, like that of the vulgar, founded upon ignorance. Ibid.

179. The Causes or Reasons of such Excellence.

To explain, by a few examples, that are known to all, and for that reason here alledged, because they are known.

I am struck with the night scene in Virgil's fourth Æneid—" The universal "silence throughout the globe—the sweet rest of its various inhabitants, soothing their cares and forgetting their labours —the unhappy Dido alone restless; restless, agitated with impetuous passious."—Æn. iv. 522.

I am affected with the story of Regulus, as painted by West—" The crowd of auxious friends, persuading him not to return—his wife fainting through sensi-

" bility and fear-persons the least con-

" nected appearing to feel for him, yet himself unmoved, inexorable, and stern."

Horat, Carm. I., iii, Od. 5.

Without referring to these deeply tragic scenes, what charms has music, when a masterly band pass tinexpectedly from loud to soft, or from soft to loud!—When the system changes from the greater third to the less; or reciprocally, when it changes from this last to the former.

All these effects have a similar and well known cause, the amazing force which contraries acquire, either by juxta-position, or by quick succession. *Ibid.*

\$ 180. Why Contraries have this Effect.

But we ask still farther, why have contraries this force?—We answer, because, of all things which differ, none differ so widely. Sound differs from darkness, but not so much as from silence; darkness differs from sound, but not so much as from light. In the same intense manner differ repose and restlessness; felicity and misery; dubious solicitude and firm resolution: the epic and the comic; the sublime and the ludicrous.

And why differ contraries thus widely?

Because while attributes, simply different, may co-exist in the same subject, contraries cannot co-exist, but always destroy one another. Thus the same marble may be both white and hard: but the same marble cannot be both white and black. And hence it follows, that as their difference is more intense, so is our recognition of them more vivid, and our impressions more permanent.

This effect of contraties is evident even in objects of sense, where imagination and intellect are not in the least concerned. When we pass (for example) from a hothouse, we feel the common air more intensely cool; when we pass from a dark cavern, we feel the common light of the day more intensely glaring.

But to proceed to instances of another and a very different kind,

Few scenes are more affecting than the taking of Troy, as described in the second Eneid—" The apparition of Hector to " Eneas, when asleep, announcing to him " the commencement of that direful event "—the distant lamentations, heard by

Eneas as he awakes—his ascending the
 house-top, and viewing the city in flames
 —his friend Pentheus, escaped from de-

" struction, and relating to him their
" wretched and deplorable condition—
" Epezs,

" Eneas, with a few friends, rushing in-" to the thickest danger—their various suc-"cess till they all perish, but himself and " two more-the affecting scenes of horror " and pity, and Priam's palace-2 son " slain at his father's feet; and the imme-"diate massacre of the old monarch him-" self-Eneas, on seeing this, inspired " with the memory of his own father-his " resolving to return home, having now 61 lost all his companions—his seeing Helen " in the way, and his design to dispatch so " wicked a woman - Venus interposing, 44 and shewing him (by removing the film 44 from his eyes) the most sublime, though 44 most direful, of all sights; the Gods 41 themselves busied in Troy's destruction; " Neptune at one employ, Juno at another, " Pallas at a third -- It is not Helen (says 45 Venus) but the gods, that are the au-46 thors of your country's ruin-it is their " inclemency," &c.

Not less solemn and awful, though less leading to pity, is the commencement of the sixth Eneid—" The Sibyl's cavern—" her frantic gestures, and prophecy—the request of Eneas to descend to the shades the request of solenes to descend to the shades her answer, and information about the loss of one of his friends—the fate of poor Misenus—his funeral—the golden bough discovered, a preparatory circumstance for the descent—the sacrifice the ground beliowing under their feet —the woods in motion—the dogs of the Herate howling—the actual descent, in all its particulars of the marvellous, and the terrible."

If we pass from an ancient author to a modern, what scene more striking than the first scene in Hamlet?—"The solemnity "of the time, a severe and pinching night —the solemnity of the place, a platform for a guard—the guards themselves; and "their apposite discourse—yonder star in such a position; the bell then beating one —when description is exhausted, the thing itself appears, the Ghost enters."

From Shakespeare the transition to Milton is natural. What pieces have ever met a more just, as well as universal applause, than his L'Allegro and Il Peuseroso?—The first, a combination of every incident that is lively and cheerful; the second, of every incident that is melancholy and serious: the materials of each collected, according to their character, from rural life, from city life, from music, from poetry; in a word, from every part of nature, and every part of art.

To pass from poetry to painting—the Crucifixion of Polycrates by Salvator Rosa, is "a most affecting representation of vanification in modes of horror and pity, as they confidence in modes of horror and pity, as they confidence in the crucification above mentioned." The Aurora of Guido, on the other side, is "one of those joyous exhibitions, where nothing is seen but youth and beauty, in every attitude of elegance and grace." The former picture in poetry would have been a deep Penseroso; the latter, a most pleasing and animated Allegro.

And to what cause are we to refer these last enumerations of striking effects?

To a very different one from the former—not to an opposition of contrary incidents, but to a concatenation or accumulation of many that are similar and congenial.

And why have contatenation and accumulation such a force?—From these most simple and obvious truths, that many things similar, when added together will be more in quantity than any of them taken singly;—consequently, that the more things are thus added, the greater will be their effect.

We have mentioned, at the same time, both accumulation and concatenation; because in painting, the objects, by existing at once, are accumulated; in poetry, as they exist by succession, they are not accumulated but concatenated. Yet, through memory and imagination, even these also derive an accumulative force, being preserved from passing away by those admirable faculties, till, like many pieces of metal melted together, they collectively form one common magnitude.

It must be farther remembered, there is an accumulation of things analagous, even when those things are the objects of different faculties. For example—As are passionate gestures to the eye, so are passionate ideas to the imagination. To feel the amazing force of an accumulation like this, we must see some capital actor, acting the drama of some capital poet, where all the powers of both are assembled at the same instant.

And thus have we endeavoured, by a few obvious and easy examples, to explain what we mean by the words, "seeking the cause" or reason, as often as we feel works of art and ingenuity to affect us."—See § 167, 178.

of 181. Advice to a Beginner in the Art of Criticism.

If I might advise a beginner in this elegant pursuit, it should be, as far as possi-ble, to recur for principles to the most plain and simple truths, and to extend every theorem, as he advances, to its atmost latitude, so as to make it suit, and include, the greatest number of possible cases.

I would advise him farther, to avoid subtle and far-fetcht refinement, which as it is for the most part adverse to perspicuity and truth, may serve to make an able So-

phist, but never an able Critic.

A word more-I would advise a young Critic, in his contemplations, to turn his eye rather to the praise-worthy than the blameable; that is, to investigate the cause of praise, rather than the causes of blame. For though an uninformed beginner may, in a single instance, happen to blame properly, it is more than probable, that in the next he may fail, and incur the censure passed upon the criticising cobler, Ac sutor Harris. ultra crepidam.

\$ 182. On numerous Composition.

As numerous Composition arises from a just arrangement of words, so is that arrangement just, when formed upon their

verbal quantity.

Now if we seek for this verbal quantity in Greek and Latin, we shall find that, while those two languages were in purity, their verbal quantity was in purity also. Every syllable had a measure of time, either long or short, defined with precision either by its constituent vowel, or by the relation of that vowel to other letters adjoining. Syllables thus characterized, when combined, made a foot; and feet thus characterized, when combined, made a verse : so that while a particular harmony existed in every part, a general harmony was diffused through the whole.

Pronunciation at this period being, like other things, perfect, accent and quantity were accurately distinguished; of which distinction, familiar then, though now obscure, we venture to suggest the following explanation. We compare quantity to musical tones differing in long and short, as upon whatever line they stand, a semibrief differs from a minim. We compare accent to musical tones differing in high and low, as D upon the third line differs from G upon the first, be its length the same,

or be it longer or shorter.

And thus things continued for a success sion of centuries, from Homer and Hesind to Virgil and Horace, during which interval, if we add a triffe to its end, all the truly classical poets, both Greek and Latin, flourished.

Nor was prose at the same time neglected. Penetrating wits discovering this also to be capable of m merous composition, and founded their ideas upon the following

reasonings:

Though they allowed that prose should not be strictly metrical [for then it would be no longer prose, but poetry); yet at the same time they asserted, if it had no Rhythm at all, such a vague effusion would of course fatigue, and the reader would seek in vain for those returning pauses, so helpful to his reading, and so grateful to his ear.

\$ 183. On other Decorations of Prose besides Prosaic Feet; as Alliteration.

Besides the decoration of Prosaic Feet, there are other decorations, admissible into English composition, such as Alliteration, and Sentences, especially the Period.

First therefore for the first: I mean

Alliteration.

Among the classics of old, there is no finer illustration of this figure, than Lucretius's description of those blest abodes, where his gods, detached from providential cares, ever lived in the fruition of divine serenity;

Apparet divum numen, sedesqué quietre, Quas neque concutiunt venti, neque unbils nim

Aspergunt, neque nix acri concreta praink Cana cadens violat, semperque innubitus wther Integit, et large diffuso lumine ridet. Lucret, III. 18.

The sublime and accurate Virgil did not contemn this decoration, though he used it with such pure, unaffected simplicity, that we often feel its force without contemplating the cause. Take one instance out of infinite, with which his works abound:

Aurora interea miseris mortalibas almam Extulerat lucem, referens opera atque labores-An. XI. v. 163.

To Virgil we may add the superior authority of Homer:

HTDI O KRETTER OF TO ANTION OLOS ANTTE, "Οι θυμοι κατεδεί απάτοι Αθεύπει Αλεείνειο 1λ. ζ. 201.

Hermogenes, the rhetorician, when he quotes these lines, quotes them as an example of the figure here mentioned, but calls it by a Greek name, ΠΑΡΗΧΗΣΙΣ.

Cicero has translated the above verses elegantly, and given us too Alliteration, though not under the same letters:

Qui miser in campis errabat solus Abris, Ipse summ cor edens, hominum vestigia vitans.

Aristotle knew this figure, and called it ΠΑΡΟΜΟΙΩΣΙΣ, a name perhaps not so precise as the other, because it rather expresses resemblance in general, than that whice arises from sound in particular, this example is—APPON γάς λάσω, APPON κας αὐτῶ.

The Latin rhetoricians styled it Annominatio, and give us examples of similar character.

But the most singular fact is, that so early in our own history, as the reign of Henry the second, this decoration was esteemed and cultivated both by the English and the Welsh. So we are informed by Giraldus Cambrensis, a contemporary writer, who, having first given the Welsh instance, subjoins the English in the following verse....

God is together Gamman and Wisedome.

-that is, God is at once both joy and wisdom.

He calls the figure by the Latin name Annominatio, and adds, "that the two nations were so attached to this verbal manner in every high-finished composition, that nothing was by them esteemed elegantly delivered, no diction considered but as rude and rustic, if it were not first amply refined with the polishing art of this figure."

'Tis perhaps from this national taste of ours, that we derive many proverbial similes, which, if we except the sound, seem to have no other merit—Fine as five-pence—Round as a Robin—&c.

Even Spenser and Shakespeare adopted the practice, but then it was in a manner suitable to such geniuses.

Spenser says-

For not to have been dipt in Lethe lake Could save the son of Their from to die; But that blind bard did him immortal make With verses dipt in dew of Castilie.

Shakespeare says-

Had my sweet Harry had but half their numbers, This day might I, hanging on Hotspur's neck, Have talked, &cc.—Hen. IVth, Part 2d, Act 2d. Milton followed them.

For eloquence, the 'ul; song charms the sense, P. L. II. 556.

and again,

Behemoth, biggest born of earth, upheav'd His vasmess—P. L. VII. 471.

From Dryden we select one example out of many, for no one appears to have employed this figure more frequently, or, like Virgil, with greater simplicity and strength.

Better to hunt in fiel-is for health unbought, Than fee the doctor for a nauseous draught. The wise for cure on exercise depend; God never made his work for man to mend.

Dayo, Fables.

Pope sings in his Dunciad ----

Twas chatt'ring, grinning, monthing, jabb'ring all;

And noise, and Norton; brangling and Brevall; Dennis, and dissonance—

Which lines, though truly poetical and humorous, may be suspected by some to shew their art too conspicuously, and too nearly to resemble that verse of old Ennies.—

O! tite, tute, tati, tibi, tanta, tyranne, tulisti. Script. ad Herenn. l. iv. s. 18.

Gray begins a sublime Ode,

Ruin seize thee, rathless king, &c.

We might quote also Alliterations from prose writers, but those we have alledged we think sufficient.

Harris.

184. On the Period.

Nor is elegance only to be found in single words, or in single feet; it may be found, when we put them together, in our peculiar mode of putting them. 'Tis out of words and feet thus compounded, that we form sentences, and among sentences none so striking, none so pleasing as the Period. The reason is, that, while other sentences are indefinite, and (like a geometrical right line) may be produced indefinitely, the Period (like a circular line) is always circumscribed, returns, and terminates at a given point. In other words. while other sentences, by the help of common copulatives, have a sort of boundless effusion; the constituent parts of a Period have a sort of reflex union, in which union the sentence is so far complete, as neither to require, nor even to admit, a farther extension. Readers find a pleasure in this J i grateful ably to an acquisition of knowledge.

The author, if he may be permitted. would refer, by way of illustration, to the beginnings of his Hermes, and his philosophical arrangements, where some attempts have been made in this periodical style. He would refer also, for much more illustrious examples, to the opening of Gicero's Offices; to that of the capital Oration of Demosthenes concerning the Crown, and to that of the celebrated Panegyric, made (if he may be so called) by the father of Periods, Isocrates.

Again-every compound sentence is compounded of other sentences more simple, which, compared to one another, have a certain proportion of length. Now it is in general a good rule, that among these constituent sentences, the last (if possible) should be equal to the first; or oil not equal, then rather longer than shorter. The reason is, that without a special cause, abrupt conclusions are offensive, and the reader, like a traveller quietly pursuing his journey, finds an unexpected precipice, where he is disagreeably stopt.

6 185. On Monosyllables.

Harris.

It has been called a fault in our language, that it abounds in Monosyllables. As these, in too lengthened a suite, disgrace a composition, Lord Shaftesbury, (who studied purity of style with great attention) limited their number to nine; and was careful in his Characteristics, to conform to his Even in Latin too many of own law. them were condemned by Quinctilian.

Above all, care should be had, that a sentence end not with a crowd of them, those especially of the vulgar, untunable sort, such as, "to set it up," to " get by and by at it," &c. for these disgrace a sentence that may be otherwise laudable, and are like the rabble at the close of some Ibid. pompous cavalcade.

\$ 186. Authorities alledged.

'Twas by these and other arts of similar sort, that authors in distant ages have cultivated their style. Looking upon knowledge (if I may be allowed the allusion) to pass into the mansions of the mind through language, they were careful (if I may pursue the metaphor) not to offend in the vestibule. They did not esteem it pardonable to despise the public ear, when

grateful circuit, which leads them so agree- they saw the love of numbers so universally diffused.

Nor were they discouraged, as if they thought their labour would be lost. In these more refined but yet popular arts, they knew the amazing difference between the power to execute, and the power to judge:-that to execute was the joint effort of genius and of habit; a painful acquisition, only attainable by the few :-- to judge, the simple effort of that plain but common sense, imparted by Providence in some degree to every one.

6 187. Objectors answered.

But here methinks an objector demands -" And are authors then to compose, and " form their treatises by rule?-Are they to balance periods?-To scan parans " and cretics?-To affect alliterations?-" To enumerate monosyllables?" &c.

If, in answer to this objector, it should be said, They ought; the permission should at least be tempered with much caution. These arts are to be so blended with a pure but common style, that the reader, as he proceeds, may only feel their latent force. If ever they become glaring, they degenerate into affectation; an extreme more disgusting, because less natural, than even the vulgar language of an unpolished clown. 'Tis in writing, as in acting-The best writers are like our late admired Garrick-And how did that able genius employ his art?-Not by a vain ostentation of any one of his powers, but by a latent use of them all in such an exhibition of nature, that while we were present in a theatre, and only beholding an actor, we could not kelp thinking ourselves in Denmark with Hamlet, or in Bosworth field with Richard.

\$ 188. When the Habit is once gained, nothing so easy as Practice.

There is another objection still .- These speculations may be called minutine; things partaking at best more of the elegant than of the solid; and attended with difficulties beyond the value of the labour.

To answer this, it may be observed, that when habit is once gained, nothing so easy as practice. When the ear is once habituated to these verbal rhythms, it forms them spontaneously, without attention of labour. If we call for instances, what more easy to every smith, to every carpenter, to every common mechanic, than

the several energies of their proper arts? How little do even the rigid laws of verse obstruct a genius truly poetic? How little did they cramp a Milton, a Dryden, or a Pope? Cicero writes that Antipater the Sidonian could pour forth Hexameters extempore, and that, whenever he chose to versily, words followed him of course. We may add to Antipater the ancient Rhapsodists of the Greeks, and the modern Improvisatori of the Italians. If this then be practicable in verse, how much more so in prose? In prose, the laws of which so far differ from those of poetry, that we can at any time relax them as we find expedient? Nay more, where to relax them is not only expedient, but even necessary, because, though numerous composition may be a requisite, yet regularly returning thythm is a thing we should avoid.

Harris.

\$ 189. In every Whole, the constituent Parts, and the facility of their Coincidence, merit our Regard.

In every whole, whether natural or artificial, the constituent parts well merit our regard, and in nothing more than in the facility of their coincidence. If we view a landskip, how pleasing the harmony between hills and woods, between rivers and lawns! If we select from this landskip a tree, how well does the trunk correspond with its branches, and the whole of its form with its beautiful verdure! If we take an animal, for example a fine horse, what a union in his colour, his figure, and his motions! If one of human race, what more pleasingly congenial, than when virtue and genius appear to animate a graceful figure?

-- pulchro veniens e corpore virtus?

The charm increases, if to a graceful figure we add a graceful elocution. Elocution too is heightened still, if it convey elegant sentiments; and these again are heightened, if cloathed with graceful diction, that is, with words which are pure, precise, and well arranged.

Ibid.

\$ 190. Verbal Decorations not to be called.

Minutia.

We must not call these verbal decorations, minutiae. They are essential to the heatty, nay, to the completion of the whole. Without them the composition, though its mentiments may be just, is like a picture with good drawing, but with bad and delective colouring. These we are assured were the sentiments of Cicero, whom we must allow to have been a master in his art, and who has amply and accurately treated verbal decoration and numerous composition, in no less than two capital treatises, (his Orator, and his De Oratore) strengthening withal his own authority with that of Aristotle and Theophrastus; to whom, if more were wanting, we might add the names of Demetrius Phalereus, Dionysius of Halicarnassus, Dionysius Longinus, and Quinctilian.

\$ 191. Advice to Readers.

Whoever reads a perfect or firtished composition, whatever be the language, whatever the subject, should read it, even if alone, both audibly and distinctly.

In a composition of this character, not only precise words are admitted, but words metaphorical and ornamental. And farther—as every sentence contains a latent harmony, so is that harmony derived from the rhythm of its constituent parts.

A composition then like this, should (as I said before) be read both distinctly and audibly; with due regard to stops and pauses; with occasional elevations and depressions of the voice, and whatever else constitutes just and accurate pronunciation. He who, despising or neglecting, or knowing nothing of all this, reads a work of such character as he would read a sessionspaper, will not only miss many beauties of the style, but will probably miss (which is worse) a large proportion of the sense.

\$ 192. Every Whole should have a Beginning, a Middle, and an End. The Theory exemplified in the Georgics of Virgil.

Let us take for an example the most highly finished performance among the Romans, and that in their most polished period, I mean the Georgics of Virgil.

Quid faciat lutas segetes, quo sidere terram Vertere, Maccenas, (11) ulmisque adjuugere vites Conveniat; (111) qua cura boun, qui cultus habendo

Sit pecori; (1v) apibus quanta experientia parcis Hine canere incipiam, &c. Vino. Georg. 1. In these lines, and so on (if we consult the original) for forty-two lines inclusive, we have the beginning; which beginning includes two things, the plan, and the invo-

In the four first verses we have the plan, which plan gradually opens and becomes

the whole work, as an acorn, when developed, become a perfect oak. After this comes the invocation, which extends to the last of the forty-two verses above mentioned. The two together give us the true character of a beginning, which, as above described, nothing can precede, and which it is necessary that something should follow.

The remaining part of the first book, together with the three books following, to verse the 458th of book the fourth, make the middle, which also has its true character, that of succeeding the beginning, where we expect something farther; and that of preceding the end, where we

expect nothing more.

The eight last verses of the poein make the end, which, like the beginning, is short, and which preserves its real character, by satisfying the reader that all is complete, and that nothing is to follow. The performance is even dated. It finishes like an epistle, giving us the place and time of writing; but then giving them in such a manner, as they ought to come from Virgil.

But to open our thoughts into a farther

As the poem, from its very name respects various matters relative to land, (Georgica) and which are either immediately or mediately connected with it; among the variety of these matters the poem begins from the lowest, and thence advances gradually from higher to higher, till, having reached the highest, it there properly stops.

The first book begins from the simple culture of the earth, and from its humblest progeny, corn, legumes, flowers, &c.

It is a nobler species of vegetables which employs the second book, where we are taught the culture of trees, and, among others, of that important pair, the olive and the vine. Yet it must be remembered, that all this is nothing more than the culture of mere vegetable and inanimate nature.

It is in the third book that the poet rises to nature sensitive and animated, when he gives us precepts about cattle,

horses, sheep, &c.

At length in the fourth book, when matters draw to a conclusion, then it is he treats his subject in a moral and political way. He no longer pursues the culture of the mere brute nature; he then describes, as he tells us

for such is the character of his bees, those truly social and political animals. It is here he first mentions arts, and memory, and laws, and families. It is here (their great sagacity considered) he supposes a portion imparted of a sublimer principle. It is here that every thing vegetable or merely brutal seems forgotten, while all appears at least human, and sometimes, even divine:

His quidam signis, atque hare exempla secuti, Esse apibus partem divinar mentis, et bassus Ætherios dixere; deum namque ire per omnes Terrasque tractusque maris, &c.

Georg. IV, 219.

When the subject will not permit him to proceed farther, he suddenly conveys his reader, by the fable of Aristaus, among nymphs, heroes, demi-gods, and gods, and thus leaves him in company supposed more than mortal.

This is not only a sublime conclusion as the fourth book, but naturally leads to the conclusion of the whole work; for he does no more after this than shortly recapitulate, and elegantly blend his recapitulating with a compliment to Augustus.

But even this is not all.

The dry, didactic character of the Goorgics, made it necessary they should be enlivened by episodes and digressions. It has been the art of the poet, that these episodes and digressions should be homogeneous: that is, should so connect with the subject, as to become, as it were, parts of it. On these principles every book has for its end, what I call an epilogue; for its beginning, an invocation; and for its middle, the several precepts relative to its subject, I mean husbandry. Having a beginning, a middle, and an end, every part itself becomes a smaller whole, though with respect to the general plan, it is nothing more than a part. Thus the human arm, with a view to its elbow, its hands, its fingers, &c. is as clearly a whole, as it is simply but a part with a view to the entire body.

The smaller wholes of this divine poem may merit some attention; by these I

mean each particular book.

Each book has an invocation. The first invokes the sun, the moon, the various rural deities, and lastly Augustus; the second invokes Bacchus; the third, Pales and Apollo; the fourth his patron Maccanas. I do not dwell on these invocations, much less on the parts which follow, for this in fact would be writing a comment upon the poem. But the Epilogues, besides

their own intrinsic beauty, are too much to our purpose to be passed in silence.

In the arrangement of them the poet seems to have pursued such an order, as that alternate affections should be alternately excited; and this he has done, well knowing the importance of that generally acknowledged truth, " the force derived to contraries by their juxta-position or successions." The first book ends with those portents and prodigies, both upon earth and in the heavens, which preceded the death of the dictator Cæsar. To these direful scenes the epilogue of the second book opposes the tranquillity and felicity of the rural life, which (as he informs us) faction and civil discord do not usually impair-

Non res Romanæ, perituraque regna-

In the ending of the third book we read of a pestilence, and of nature in devastation; in the fourth, of nature restored, and, by help of the gods, replenished.

As this correluding epilogue (I mean the lable of Aristæus) occupies the most important place; so is it decorated accordingly with language, events, places, and personages.

No language was ever more polished and harmonious. The descent of Aristrous to his mother, and of Orpheus to the shades, are events; the watery palace of the Nereides, the cavern of Proteus, and the scene of the infernal regions, are places; Aristras, Old Proteus, Orpheus, Eurydice, Cyllene, and her nymphs, are personages; all great, all striking, all sublime.

Let us view these epilogues in the poet's order.

I. Civil Horrors.

II. Rural Tranquillity.

III. Nature laid waste. IV. Nature restored.

Here, as we have said already, different passions are, by the subjects being alternate, alternately excited; and yet withal excited so judiciously, that when the poem concludes, and all is at an end, the reader leaves off with tranquillity and joy.

Harris.

\$ 193. Exemplified again in the Menexenus of PLATO.

From the Georgies of Virgil we proceed to the Meuexenus of Plato; the first being the most finished form of a'didactic

• See before, § 179.

poem, the latter the most consummate model of a panegyric oration.

The Menexenus is a funeral oration in praise of those brave Athenians, who had fallen in battle by generously asserting the cause of their country. Like the Georgics, and every other just composition, this oration has a beginning, a middle, and an end.

The beginning is a solemn account of the deceased having received all the legitimate rights of burial, and of the propriety of doing them honour not only by deeds but by words; that is, not only by funeral ceremonies, but by a speech, to perpetuate the memory of their magnanimity, and to recommend it to their posterity, as an object of imitation.

As the deceased were brave and gallant men, we are shewn by what means they came to possess their character, and what noble exploits they perform in consequence.

Hence the middle of the oration contains first their origin; next their education and form of government; and last of all, the consequence of such an origin and education; their heroic atchievements from the earliest days to the time then

The middle part being thus complete, we come to the conclusion, which is perhaps the most sublime piece of eratory, both for the plan and execution, which is extant, of any age, or in any lan-

By an awful prosopopeia, the deceased are called up to address the living; and fathers slain in battle, to exhort their living children; the children slain in battle, to console their living fathers; and this with every idea of manly consolation, with every generous incentive to a contempt of death, and a love of their country, that the powers of nature or of art could suggest.

'Tis here this oration concludes, being (as we have shewn) a perfect whole, executed with all the strength of a sublinea language, under the management of a great and a subline genius.

If these speculations appear too dry, they may be rendered more pleasing, if the reader would peruse the two pieces criticised. His labour, he might be assured, would not be lost, as he would peruse two of the finest pieces which the two finest ages of antiquity produced.

Bud.

194. The Theory of Whole and Purts concerns small Works as well as great.

We cannot however quit this theory concerning whole and parts, withoutobserving that it regards alike both small works and great; and that it descends even to an essay, to a sonnet, to an ode. These minuter efforts of genius, unless they possess (if I may be pardoned the expression) a certain character of Totality, lose a capital pleasure derived from their union; from a union which, collected in a few pertinent ideas, combines them all happily under one amicable form. Without this union the production is no better than a sort of vague effusion, where sentences follow sentences, and stanzas follow stanzas, with no apparent reason why they should be two rather than twenty, or twenty rather than two.

If we want another argument for this minuter Totality, we may refer to nature, which art is said to imitate. Not only this universe is one stupendous whole, but such also is a tree, a shrub, a flower; such those beings which, without the aid of glasses, even escape our perception. And so much for Totality (I venture to familiarize the term) that common and essential character to every legitimate composition.

Harris.

osmon.

\$ 195. On Accuracy.

There is another character left, which though foreign to the present purpose, I venture to mention; and that is the character of Accuracy. Every work ought to be as accurate as possible. And yet, though this apply to works of every kind, there is a difference whether the work be great or small. In greater works (such as histories, epic poems, and the like) their very magnitude excuses incidental defects; and their authors, according to Horace, may be allowed to slumber. It is otherwise in smaller works, for the very reason that they are smaller. Such, through every part, both in sentiment and diction, should be perspicuous, pure, simple, and

106. On Diction.

As every sentiment must be exprest by words; the theory of sentiment naturally leads to that of Diction. Indeed, the connection between them is so intimate, that the same sentiment, where the diction differs, is as different in appearance, as the

same person, drest like a peasant, or drest like a gentleman. And hence we see how much diction merits a serious attention.

But this perhaps will be better understood by an example. Take then the following—"Don't let a lucky hit slip; if you do, be like you mayn't any more get at it." The sentiment (we must confess) is exprest clearly, but the diction surely is rather vulgar and low. Take it another way—"Opportune moments are few and fleeting; seize them with avidity, or your progression will be impeded." Here the diction, though not low, is rather obscure, the words are unusual, pedantic, and affected.—But what says Shakespeare?—

There is a tide in the affairs of men, Which, taken at the slood, leads on to fortune; Omitted, all the voyage of their life Is bound in shallows——

Here the diction is elegant, without being vulgar or affected; the words, though common, being taken under a metaphor, are so far estranged by this metaphorical use, that they acquire, through the change, a competent dignity, and yet, without becoming vulgar, remain intelligible and clear.

Bid.

\$ 197. On the Metaphor.

Knowing the stress laid by the ancient critics on the Metaphor, and viewing its admirable effects in the decorating of Diction, we think it may merit a farther

There is not perhaps any figure of speech so pleasing as the Metaphor. It is at times the language of every individual, but above all, is peculiar to the man of genius. His sagacity discerns not only common analogies, but those others more remote, which escape the vulgar, and which, though they seldom invent, they seldom fail to recognize, when they hear them from persons more ingenious than themselves.

It has been ingeniously observed, that the Metaphor took its rise from the poverty of language. Men, not finding upon every occasion words ready made for their ideas, were compelled to have recourse to words analogous, and transfer them from their original meaning to the meaning then required. But though the Metaphor began in poverty, it did not end there. When the analogy was just (and this often happened) there was something peculiarly pleasing in what was both new, and yet familiar; so that the Metaphor was then cultivated, not out of necessity, but for ornament.

Digitized by Google

nament. It is thus that clothes were first assumed to defend us against the cold, but, came alterwards to be worn for distinction and decoration.

It must be observed there is a force in theunited words, new and familiar. What is new, but not familiar, is often unintelligible; what is familiar, but not new, is no better than common-place. It is in the union of the two, that the obscure and the vulgar are happily removed; and it is in this union, that we view the character of a just Metaphor.

But after we have so praised the Metaphor, it is fit at length we should explain what it is; and this we shall attempt, as well by a description, as by examples.

"A Metaphor is the transferring of a "word from its usual meaning to an ana"logous meaning, and then the employ"ing it agreeably to such transfer." For example, the usual meaning of evening is the conclusion of the day. But age too is a conclusion; the conclusion of human life. Now there being an analogy in all conclusions, we arrange in order the two we have alledged, and say, that as evening is to the day, so is age to human life. Hence, by an easy permutation, (which furnishes at once two metaphors) we say alternately, that evening is the age of the day; and that age is the evening of life.

There are other metaphors equally pleasing, but which we only mention, as their analogy cannot be mistaken. It is thus that old men have been called stubble; and the stage, or theatre, the mirror

of human life.
In language of this sort there is a double satisfaction: it is strikingly clear; and yet raised, though clear, above the low and vulgar idiom. It is a praise too of such metaphors, to be quickly comprehended. The similitude and the thing illustrated are commonly dispatched in a single word, and comprehended by an immediate and instantaneous intuition.

Thus a person of wit, being dangerously ill, was told by his friends, two more physicians were called in. So many! says he —do they fire then in platoons?——

\$ 198. What Metaphors the best.

These instances may assist us to discover what metaphors may be called the best.

They ought not, in an elegant and polite style (the style of which we are speaking) to be derived from meanings too sublime;

for then the diction would be turgid and bombast. Such was the language of that poet who, describing the footman's flambeaux at the end of an opera, sung or said,

Now blaz'd a thousand flaming suns, and bade Grim night retire—

Nor ought a metaphor to be far-fetched, for then it becomes an enigma. It was thus a gentleman once puzzled his country friend, in telling him, by way of compliment, that he was become a perfect centaur. His honest friend knew nothing of centaurs, but being fond of riding, was hardly ever off his horse.

Another extreme remains, the reverse of the too sublime, and that is, the transferring from subjects too contemptible. Such was the case of that poet quoted by Horace, who to describe winter, wrote-

Jupiter hyberms canh nive conspuit Alpes,
(Hor. L. II. Sat. 5.)
O'er the cold Alps Jove spits his boary snow.

Nor was that modern poet more fortunate, whom Dryden quotes, and who, trying his genius upon the same subject, supposed winter—

To periwig with snow the baldpare woods.

With the same class of wits we may arrange that pleasant fellow, who, speaking of an old lady whom he had affronted, gave us in one short sentence no less than three choice metaphors. I perceive (said he) her back is up;—I must curry favour—or the fat will be in the fire.

Nor can we omit that the same word when transferred to the same subjects, produces metaphors very different, as to propriety or impropriety.

It is with propriety that we transfer the words to embrace, from human beings to things purely ideal. The metaphor appears just, when we say, to embrace a proposition; to embrace an offer; to embrace an opportunity. Its application perhaps was not quite so elegant, when the old steward wrote to his lord, upon the subject of his farm, that, " if he met any oxen, he " would not fail to embrace them."

If then we are to avoid the turgid, the enigmatic, and the base or ridiculous, no other metaphors are left, but such as may be described by negatives: such as are neither turgid, nor enigmatic, nor base and ridiculous.

Such is the character of many metaphors already alledged; among others that of Shakespeare's, where tides are transt ferred to speedy and determined conduct

114

Nor does his Wolsey with less propriety moralize upon his fall, in the following beautiful metaphor, taken from vegetable nature:

In such metaphors (besides their intrinsic elegance) we may say the reader is flattered; I mean flattered by being left to discover something for himself.

There is one observation, which will at the same time shew both the extent of this figure, and how natural it is to all men.

There are metaphors so obvious, and of course so naturalized, that, ceasing to be metaphors, they become (as it were) the proper words. It is after this manner we say, a sharp fellow; a great orator; the foot of a mountain; the eye of a needle; the bed of a river: to ruminate, to pouder, to edify, &c. &c.

These we by no means reject, and yet the metaphors we require we wish to be something more, that is, to be formed under the respectable conditions here estabished.

We observe too, that a singular use may be made of metaphors either to exalt or to depreciate, according to the sources from which we derive them. In ancient story, Orestes was by some called the murtherer of his mother: by others the avenger of his father. The reasons will appear, by referring to the fact. The poet Simonides was offered money to celebrate certain mules, that had won a race. The sum being pitiful, he said, with disdain, he should not write upon demi-asses—A more competent sum was offered, he then began,

Hail! Daughters of the generous borse, That skims, like wind, along the course.

There are times, when, in order to exalt, we may call beggars, petitioners; and pick-pockets, collectors; other times, when, in order to depreciate, we may call petitioners, beggars; and collectors, pick-pockets.—But enough of this.

We say no more of metaphors, but that it is a general caution with regard to every species, not to mix them, and that more particularly, if taken from subjects which

Such was the ease of that orator, who once asserted in his oration, that--" If cold "water were thrown upon a certain measure, it would kindle a flame, that would obscure the lustre," &c. &c. Harris.

\$ 199. On Enigmas and Puns.

A word remains upon Enigmas and Puns. It shall indeed be short, because, though they resemble the metaphor, it is as brass and copper resemble gold.

A pun seldom regards meaning, being chiefly confined to sound.

Horace gives a sad example of this spurious wit, where (as Dryden humorously translates it! he makes Persius the buffon exhort the patriot Brutus to kill Mr. King, that is, Rupilius Rex, because Brutus, when he slew Cæsar, had been accustomed to king-killing:

Hunc Regem occide; operum hoc mihi crede tuorum est, Horat. Sat. Lab. I. VII.

We have a worse attempt in Homer, where Ulysses makes Polypheme believe his name was OTTIE, and where the dull Cyclops, after he had lost his eye, upon being asked by his brethren, who had done him so much mischief, replies it was done by OTTIE, that is, by nobody.

Enigmas are of a more complicated nature, being involved either in pun, or metaphor, or sometimes in both:

"Artfilde wegt yadule in' deigi noddiwaren.

I raw a man, who, unprovok'd with ire. Struck brass upon another's back by fire.

This enigma is ingenious, and means the operation of cupping, performed in ancient days by a machine of brass.

In such fancies, contrary to the principles of good metaphor and good writing, a perplexity is caused, not by accident but by design, and the pleasure lies in the being able to resolve it.

Bid.

\$ 200. Rules defended.

Having mentioned Rules, and indeed this whole theory having been little more than rules developed, we cannot but remark upon a common opinion, which seems to have arisen either from prejudice or mistake.

"Do not rules," say they, "cramp genius? Do they not abridge it of cer-

66 tain privileges?"

Tis answered, If the obeying of rules were to induce a tyranny like this; to defend them would be absurd, and against the liberty of genius. But the truth is rules, supposing them good, like good government, take away no privileges.

They

They do no more, than save genius from error, by shewing it, that a right to err is no privilege at all.

Tis surely no privilege to violate in grammar the rules of syntax; in poetry, those of metre; in music, those of harmony; in logic, those of syllogism; in painting, those of perspective; in dramatic poetry, those of probable imitation.

Harris.

§ 201. The flattering Doctrine that Genius will suffice, fallacious.

It must be confessed, 'tis a flattering doctrine, to tell a young beginner, that he has nothing more to do than to trust his own genius, and to contemn all rules, as the tyranny of pedants. The painful toils of accuracy by this expedient are eluded, for geniuses, like Milton's Harps, (Par. Lost, Book III. v. 365, 366.) are supposed to be ever tuned.

But the misfortune is, that genius is tomething rare; nor can he who possesses it, even then, by neglecting rules, produce what is accurate. Those, on the contrary, who, though they want genius, think rules worthy their attention, if they cannot become good authors, may still make tolerable critics; may be able to shew the difference between the creeping and the simple; the pert and the pleasing; the turgid and the sublime; in short, to sharpern, like the whetstone, that genius in others, which nature in her frugality has not given to themselves.

1bid.

§ 202. No Genius ever acted without Rules.

Indeed I have never known, during a life of many years, and some small attention paid to letters, and literary men, that genius in any art had been ever crampt by rules. On the contrary, I have seen great geniusses, miserably err by transgressing them, and, like vigorous travellers, who lose their way, only wander the wider on account of their own strength.

And yet 'tis somewhat singular in literary compositions, and perhaps more so in poetry than elsewhere, that many things have been done in the best and purest taste, long before rules were established and systematized in form. This we are certain was true with respect to Homer, Sophocles, Euripides, and other Greeks. In modern times it appears as true of our admired Shakespeare; for who can believe

that Shakespeare studied rules, or was ever versed in critical systems? Bid.

\$ 203. There never was a time when Rules did not exist.

A specious objection then occurs. "If these great writers were so excellent before rules were established, or at least were known to them, what had they to direct their genius, when rules (to

14 them at least) did not exist?"

To this question 'tis hoped the answer will not be deemed too hardy, should we assert, that there never was a time when rules did not exist; that they always made a part of that immutable truth, the natural object of every penetrating genius; and that if, at that early Greek period, systems of rules were not established, those great and sublime authors were a rule to themselves. They may be said indeed to have excelled, not by art, but by nature; yet by a nature which gave birth to the perfection of art.

The case is nearly the same with respect to our Shakespeare. There is hardly any thing we applaud, among his innumerable beauties, which will not be found strictly conformable to the rules of sound and ancient criticism.

That this is true with respect to his characters and his sentiment, is evident, hence, that in explaining these rules, we have so often recurred to him for illustrations.

Besides quotations already alledged, we subjoin the following as to character.

When Falstaff and his suit are so ignominiously routed, and the scuffle is by Falstaff so humorously exaggerated; what can be more natural than such a narrative to such a character, distinguished for his humour, and withal for his want of veracity and courage?

The sagacity of common poets might not perhaps have suggested so good a narrative, but it certainly would have suggested something of the kind, and 'tis in this we view the essence of dramatic character, which is, when we conjecture what any one will do or say, from what he has done or said already.

If we pass from characters (that is to say manners) to sentiment, we have already given instances, and yet we shall still give another.

When Rosincrosse and Guildernstern wait upon Hamlet, he offers them a re-

corder or pipe, and desires them to play—they reply, they cannot—He repeats his request—they answer, they have never learnt—He assures them nothing was so easy—they still decline—'Tis then he tells them, with disdain, "There is much mustime in this little organ; and yet you cannot make it speak—Do you think I am "easier to be played on than a pipe?" Hamlet, Act III.

This I call an elegant sample of sentiment, taken under its comprehensive sense. But we stop not here—We consider it as a complete instance of Socratic reasoning, though 'tis probable the author knew nothing how Socrates used to argue.

To explain-Xenophon makes Socrates reason as follows with an ambitious youth,

by name Enthydemus.

Edit. Svlb.

"Tis strange (says he) that those who desire to play upon the harp, or upon the flute, or to ride the managed horse, should not think themselves worth not tice, without having practised under the best masters—while there are those who aspire to the governing of a state, and can think themselves completely qualified,

"hour." Xenoph. Mem. IV. c. 2. s. 6.
Aristotle's Illustration is similiar, in his reasoning against men chosen by lot for magistrates. "Tis (says he) as if wrestlers were to be appointed by lot, and those that are able to wrestle; or, as if from among sailors we were to chuse a pilot by lot, and that the man so elected was to navigate, and not the man who knew the business." Rhetor. L. II. c. 20. p. 94.

"though it be without preparation or la-

Nothing can be more ingenious than this mode of reasoning. The premises are obvious and undeniable; the conclusion cogent and yet unexpected. It is a species of that argumentation, called in dialectic Emmyryn, or induction.

Aristotle in his Rhetoric (asabove quoted) calls such reasonings τὰ Σωκρατικὰ, the Socratics; in the beginning of his Poetics, he calls them the Σωκρατικὸ λόγου, the Socratic discourses; and Horace, in his Art of Poetry, calls them the Socraticae chartes.

§ 194. The Connection between Rules and Genius.

If unth be always the same, no wonder securises should coincide, and that too in participality, as well as in criticism.

We venture to add, returning to rules, that if there he any things in Shakespeare objectionable (and who is hardy enough to deny it?) the very objectious, as well as the beauties, are to be tried by the same rules; as the same plummet alike shews both what is out of the perpendicular, and in it; the same rules alike prove both what is crooked and what is straight.

We cannot admit that geniuses, though prior to systems, were prior also to rules, because rules from the beginning existed in their own minds, and were a part of that immutable truth, which is eternal and every where. Aristotle, we know, did not form Homer, Sophocles, and Euripdes; 'twas Homer, Sophocles, and Euripides, that formed Aristotle.

And this surely should teach us to pay attention to rules, in as much as they and genius are so reciprocally connected, that 'tis genius which discovers rules; and then rules which govern genius.

'Tis by this amicable concurrence, and by this alone, that every work of art justly merits admiration, and is rendered 23 highly perfect, as, by human power, it can be made.

205. We ought not to be content with knowing what we like, but what is really worth liking.

'Tis not however improbable, that some intrepid spirit may demand again, What avail these subtleties?—Without so much trouble, I can be full enough pleased—I know what I like.—We answer, and so does the carrion-crow, that feeds upon a carcase. The difficulty lies not in knowing what we like, but in knowing how to like, and what is worth liking. Till these ends are obtained, we may admire Durley before Milton; a smoking boor of Hemskirk, before an apostle of Raphael.

Now as to the knowing how to like, and then what is worth liking; the first of these, being the object of critical disquisition, has been attempted to be shewn through the course of these inquiries.

As to the second, what is worth our liking, this is best known by studying the best authors, beginning from the Greeks; then passing to the Latins; nor on any account excluding those who have excelled among the moderns.

And here, if, while we pursue some author of high rank, we perceive we don't instantly relish him, let us not be dishearened—let us even feign a relish, till we find a relish come. A morsel perhaps pleases us—let us cherish it—Another morsel strikes us—let us cherish this also.
—Let us thus proceed, and steadily persevere, till we find we can relish, not morsels, but wholes; and feel, that what began in fiction terminates in reality. The film being in this manner removed, we shall discover beauties which we never imagined; and contemn for puerilities, what we once foolishly admired.

One thing however in this process is indispensably required: we are on no account to expect that fine things should descend to us: our taste, if possible, must be made to ascend to them,

This is the labour, this the work; there is pleasure in the success, and praise even in the attempt.

This speculation applies not to literature only: it applies to music, to painting, and, as they are all congenial, to all the liberal arts. We should in each of them endeatour to investigate what is best, and there (if I may express myself) fix our abode.

By only seeking and perusing what is truly excellent, and by contemplating always this and this alone, the mind insensibly becomes accustomed to it, and finds that in this alone it can acquiesce with cortent. It happens indeed here, as in a subject far more important, I mean in a moral and a virtuous conduct; if we chuse the best life, use will make it pleasant.

Harris.

206. Character of the English, the Oriental, the Latin, and the Greek Languages.

We Britons in our time have been remarkable borrowers, as our multiform language may sufficiently shew. Our terms in polite literature prove, that this came from Greece; our terms in music and painting, that these came from Italy; our phrases in cookery and war, that we learnt these from the French; and our phrases in navigation, that we were taught by the Flemings and Low Dutch. These many and very different sources of our language may be the cause why it is so deficient in regularity and analogy. Yet we have this advantage to compensate the defect, that what we want in elegance, we gain in copiousness, in which last respect few languages will be found superior to our own.

Let us pass from ourselves to the nations of the East. The Eastern world, from the earliest days, has been at all times the seat of enormous monarchy* on its natives fair liberty never shed its genial influence. If at any time civil discords arose among them, (and arise there did innumerable) the contest was never about the form of their government (for this was an object of which the combatants had no conception:) it was all from the poor motive of, "who should be their master; whether a Cyrus or an Artaxerxes, a Mahomet or a Mustapha.

Such was their condition; and what was the consequence?-Their ideas became consonant to ther servile state, and their words became consonant to their servile ideas. The great distinction for ever in their sight, was that of tyrant and slave: the most unnatural one conceivable, and the most susceptible of pourp and empty exaggeration. Hence they talked of kings as gods; and of themselves as the meanest and most abject reptiles. Nothing was either great or little in moderation, but every sentiment was heightened by incredible hyperbole. Thus, though they sometimes ascended into the great and magnificent.+ they as frequently degenerated into the tumid and bombast. The Greeks too of Asia became infected by their neighbours who were often, at times, not only their neighbours, but their masters; and hence that luxuriance of the Asiatic style, truknown to the chaste eloquence and purity of Athens. But of the Greeks we forbear to speak now, as we shall speak of them more fully, when we have first considered the nature or genius of the

And what sort of people may we pronounce the Romans?—A nation engaged in wars and commotions, some foreign, some domestic, which for seven hundred years wholly engrossed their thoughts. Hence therefore their language became, like their ideas, copious in all terms expressive of things political, and well adapted to the purposes both of history and popular eloquence. But what was their philosophy?—As a nation it was none, if we may credit their ablest writers. And hence

• For the Barbariam, by being more slavish in their manners than the Greeks, and those of Asia than those of Europe, submit to despotic government without marmuring or discontent. Arist. Polit. III. 4.

† The truest sublime of the East may be found in the scriptures, of which perhaps the principal cause is the intrinsic greatness of the subject there treated; the creation of the mixerse, the dispensations of divine Providence, &c.

the unfitness of their language to this subject; a defect which even Cicero is compelled to confess, and more fully makes appear, when he writes philosophy himself, from the number of terms which he is obliged to invent*. Virgil seems to have judged the most truly of his countrymen, when, admitting their inferiority in the more elegant arts, he concludes at last with his usual majesty:

Tu regere imperio populos, Romane, memento, (Hæ tibi erunt artes) pacisque imponere morem, Parcere subjectis, et debellare superbos.

From considering the Romans, let us pass to the Greeks. The Grecian commonwealths, while they maintained their

* See Cic. de Fin. I. C. 1, 2, 3, III. C. 1, 2, 4, &c. but in particular Tusc. Disp. 1, 3, where he says, " Philosophia jacuit usque ad hanc wratem, nec ullum habuit fumen literarum Latinarum: quie illustranda & excitanda nobis est; ut si," & c. See also Tusc, Disp. IV, 3, and Acad. 1, 2, where it appears, that until Cicero applied himself to the writing of philosophy, the Romans had nothing of the kind in their language, except some mean performances of Amatanius the Epicarean, and others of the same sect. How far the Romans were indebted to Cicero for philosophy, and with what industry, as well as eloquence, he cultivated the subject, may be seen not only from the titles of those works that are now lost, but much more from the very noble ones still fortunately preserved.

The Epicurean poet Lucretius, who flourished nearly at the same time, seems by his silence to have overlooked the Latin writers of his own seet; deriving all his philosophy, as well as Cicero, from Grecian sources; and, like him, acknowledging the difficulty of writing philosophy in Latin, both from the poverty of the tongue, and from the novelty of the subject.

Nec me atimi fallit, Graiorum obecura reperta Difficile iulustrare Latinis versibus esse, (Multa novis rebus præsertim quum sit agen-

In the same age, Varro, among his numerous works, wrote some in the way of philosophy; as did the patriot Brutus a treatise concerning virtne, much applauded by Cicero; but these works are now lost.

Soon after the writers abovementioned, came Horace, some of whose satires and epistles may be justly ranked among the most valuable pieces of Latin philosophy, whether we consider the purity of their style, or the great address with which they treat the arbiject.

After Horace, though with as long an interval as from the days of Augustus to those of Nero, came the satirist Persius, the friend and disciple of the stoic Cormutus; to whose precepts, as he did honour by his virtnous life, so his works, though small, shew an early proficiency in the science of morals. Of him it may be said, that he is almost the single difficult writer among the Latin classics, whose meaning has aufficient merit to make it worth while to labour through his obscurities.

In the same degenerate and tyraunic period lived also Seneca; whose character, both as a man and a writer, is discussed with great accuracy by the noble author of the Characteristics, to whom we refer.

Under a milder dominion, that of Hadrian and the Antonines. lived Aulus Gellius, or (as some calt him) Agellius, an entertaining writer in the miscellaneous way, well skilled in criticism and antiquity; who, though he can hardly be entitled to the name of a philosopher, yet deserves not to pass unmentioned here, from the curious fragments of philosophy interspersed in his works.

With Aulus Gelius we range Macrobius, not because a contemporary for he is supposed to have deed under Honorius and Theodosius) but from his near resemblance, in the character of a writer. His works, like the other's, are miscellaneous; filled with mythology and ancient laterature, some philosophy being intermixed. His Commentary upon the Sunnium Scipionis of Cicero may be considered as wholly of the philosophical kind.

In the same age with Aulus Gellius, flourished Apuleius of Madura in Africa, a Platonic writer, whose matter in general far exceeds his perplexed and affected style, too conformable to the false rhetoric of the age when he lived.

Of the same country, but of a later age, and a harsher style, was Martianua Capella, if indeed he deserve not the name rather of a philosogis, than of a philosopher.

After Capella we may rank Chalcidius the Platonic, though both his age, and country, and religion, are doubtful. His manner of writing is rather more agreeable than that of the two preceding, nor does be appear to be their inferior in the knowledge of philosophy, his work heing a landable commentary upon the Timmo of Plato.

The last Latin philosopher was Boëthins, who was descended from some of the noblest of the Roman families, and was consul in the beginning of the sixth century. He wrote many philosophical works, the greater part in the logical way. But his ethic piece, "On the Compolation of Philosophy," and which is partly prose and partly verse, deserves great encomiums both for the matter and for the style; in which last he spproaches the purity of a far better age than he own, and is in all respects preferable to those crabbed Africans already mentioned. By command of Theodoric, king of the Goths, it was the hard fate of this worthy man to suffer death, with whom the Latin tongue, and the last remains of Roman dignity, may be said to have sunk in the western world.

There were other Romans, who left philonophical writings; such as Mutonius Rufus, and the two emperors, Marcus Autoniuus and Julias; but as these preferred the use of the Greek torigue to their own, they can hardly be considered among the number of Latin writers.

And so much (by way of sketch) for the Latin authors of philosophy; a small number for 10 wast an empire, if we comider them as all the product of near six successive centuries.

liberty,

liberty, were the most heroic confederacy that ever existed. They were the politest, the bravest, and the wisest of men. In the short space of little more than a century they became such statesmen, warriors, orators, historians, physicians, poets, critics, painters, sculptors, architects, and (last of all) philosophers, that one can hardly belp considering that golden period, as a providential event in honour of human nature, to shew to what perfection, the species might ascend.

Now the language of these Greeks was truly like themselves; it was conformable to their transcendant and universal genius. Where matter so abounded, words followed of course, and those exquisite in every kind, as the ideas for which they stood. And hence it followed, there was not a subject to be found which could not with pro-

priety be expressed in Greek.

Here were words and numbers for the

humour of an Aristophanes; for the active elegance of a Philemon or Menander; for the amorous strains of a Minnermus or Sappho; for the rural lays of a Theoretius or Bion; and for the sublime conceptions of a Sophocles or Homer. The same in prose. Here Isocrates was enabled to display his art, in all the accuracy of periods and the nice counterpoise of diction. Here Demosthenes found materials for that neryous composition, that manly force of unaffected eloquence, which rushed like a torrent, too impetuous to be withstood,

Who were more different in exhibiting their philosophy, than Xenophon, Plato, and his disciple Aristotle? Different, I say, in their character of composition; for as to their philosophy itself, it was in reality the same. Aristotle, strict, methodic, and orderly; subtle in thought; sparing in ornament; with little address to the passions or imagination; but exhibiting the

* If we except Homer, Hesiod, and the Lyric pacts, we bear of few Grecian writers before the expedition of X erxes. After that monarch had been defeated, and the dread of the Persian power was at an end, the effulgence of Grecian genius (if I may use the expression) broke forth, and thone till the time of Alexander the Macedonian, after whom it disappeared, and never rose again. This is that golden period, spoken of above. I do not mean that Greece had not many writers of great merit subsequent to that period, and especially of the philosophic kind; but the great, the striking, the sublime (call it as you please) attained at that time to a height, to which it never could ascend in any after age.

The same kind of fortune befel the people of Rome. When the Punic wars were ended, and Carthage, their dreaded rival was no more, then, as Horace informs us, they began to cultivate the politerarts. It was soon after their great orators, and historians, and poets arose, and Rome, like Greece, had ber golden period, which lasted to the death of Octavius Casar.

I call these two periods, from the two greatest geniuses that flourished in each, one the Socratic

period, the other the Ciceronian.

There are still farther analogies subsisting between them. Neither period commenced, as long so solicitude for the common welfare engaged men's attentions, and such wars impended as threatened their destruction by foreigners and barbarians. But when once these fears were over, a general security soon ensued, and instead of attending to the arts of defence and self-preservatien, they began to cultivate those of clegance and pleasure. Now, as these naturally produced a kind of wanten insolence, not unlike the vicious temper of high fed animals; so by this the bands of union were insensibly dissolved. Hence then among the Greeks, that fatal Peloponnesian war which, together with other wars, its immediate consequence, broke the confederacy of their commonwealths; wasted their strength; made them

jealous of each other; and thus paved a way for the contemptible kingdom of Macedon to enslave them all, and ascend in a few years to universal monarchy.

Alikeluxuriance of prosperity sowed discord among the Romans; raised those unhappy contests between the senate and the Gracchi; between Sylla and Marius; between Pompey and Casar; till at length, after the last struggle for liberty by those brave patriots, Brutus and Cassius at Philippi, and the subsequent defeat of Antony at Actium, the Romans became subject to the do-

minion of a fellow citizen.

It must indeed be confessed, that after Alexander and Octavius had established their monarchies, there were many bright geniuses, who were eminent under their government. Aristotle maintained a friendship and epistolary correspondence with Alexander. In the time of the same monarch lived Theophrastus, and the cynic Diogenes. Then also Demosthenes and Æschines spoke their two celebrated orations. So likewise, in the time of Octavius, Virgil wrote his Encid, and with Horace, Varius, and many other fine writers, partook of his protection and royal munificence. But then it must be remembered, that these men were bred and educated in the principles of a free government. It was hence they derived that high and manly spirit which made them the admiration of after ages. The successors and forms of government left by Alexander and Octavius, soon stopt the growth of any thing farther in the kind, So true is that noble saying of Longinus. िर्दार्थका रह प्रबेर दिवाले पते व्हारेशमास परेंग μιγαλοφείτων ή ΕΛΕΤΘΕΡΙΛ, η έπελπισαις ε άμα διαθείν το πρόθυμον της αιρός άλληλις, leides, a res meet the meaning pilotimias. It is liberty that is formed to nurse the sentiments of great geniuses; to inspire them with hope; to push forward the propensity of contest one with another, and the generous emulation of being the first in rank." De Sobl. Sect. 44. whole

whole with such a pregnant brevity, that French and English press; upon that funin every sentence we seem to read a page. How exquisitely is this all performed in Greek! Let those, who imagine it may be done as well in another language, satisfy themselves, either by attempting to translate him, or by perusing his translations already made by men of learning. On the contrary, when we read either Xenophon or Plato, nothing of this method and strict order appears. The formal and didactic is wholly dropt. Whatever they may teach, it is without professing to be teachers; a train of dialogue and truly polite address, in which, as in a mirror, we behold human life adorned in all its colours of sentiment and manners.

And yet though these differ in this manner from the Stagyrite, how different are they likewise in character from each other! -Plato, copious, figurative, and majestic; intermixing at times the facetious and satiric; enriching his works with tales and fables, and the mystic theology of ancient times. Xenophon, the pattern of perfect simplicity; every where smooth, harmonious, and pure; declining the figurative, the marvellous, and the mystic; ascending but rarely into the sublime; nor then so much trusting to the colours of style as to the intrinsic dignity of the sentiment it-

The language, in the mean time in which he and Plato wrote, appears to suit so accurately with the style of both, that when we read either of the two, we cannot help thinking, that it is he alone who has hit its character, and that it could not have appeared so elegant in any other manner.

And thus is the Greek tongue, from its propriety and universality, made for all that is great and all that is beautiful, in every subject and under every form of writing:

Graiis ingenium, Graiis dedit ore rotundo Musa loqui,

It were to be wished, that those amongst us, who either write or read with a view to employ their liberal leisure, (for as to such as do either from views more sordid, we leave them, like slaves, to their destined drudgery) it were to be wished, I say, that the liberal (if they have a relish for letters) would inspect the finished models of Grecian literature; that they would not waste those hours, which they cannot recal, upon the meaner productions of the

gous growth of novels and of pamphlets, where it is to be feared, they rarely find any rational pleasure, and more rarely still any solid improvement.

To be completely skilled in ancient learning is by no means a work of such insuperable pains. The very progress itself is attended with delight, and resembles a journey through some pleasant country where every mile we advance, new charms arise. It is certainly as easy to be a scholar, as a gamester, or many other characters equally illiberal and low. The same application, the same quantity of habit, will fit us for one as completely as for the other. And as to those who tell us, with an air of seeming wisdom, that it is men, and not books, we must study to become knowing; this I have always remarked, from repeated experience, to be the common consolation and language of dunces. They shelter their ignorance under a few bright examples, whose transcendent abilities, without the common helps, have been sufficient of themselves to great and important ends. But alas!

Decipit exemplar vitiis imitabile-

In truth, each man's understanding, when ripened and mature, is a composite of natural capacity, and of superinduced habit. Hence the greatest men will be necessarily those who possess the best capacities, cultivated with the best habits. Hence also moderate capacities, when adorned with valuable science, will far transcend others the most acute by nature, when either neglected, or applied to low and base purposes. And thus, for the honour of culture and good learning, they are able to render a man, if he will take the pains, intrinsically more excellent than his natural superiors.

\$ 207. History of the Limits and Extent of the Middle Age.

When the magnitude of the Roman empire grew enormous, and there were two imperial cities, Rome and Constantinople, then that happened which was natural; out of one empire it became two, distinguished by the different names of the Western, and the Eastern.

The Western cupire soon sunk. So early as in the filth century, Rome, once the mistress of nations, beheld herself at the feet of a Gothic sovereign. The Eastern empire lasted many centuries long-

longer, and, though often impaired by external enemies, and weakened as often by internal factions, yet still it retained traces of its ancient splendor, resembling, in the language of Virgil, some fair but faded flower:

Cui neque fulgor adhue, needum, sua forma recessit.

At length, after various plunges and various escapes, it was totally annihilated in the fifteenth century by the victorious

arms of Mahomet the Great.

The interval between the fall of these two empires (the Western or Latin in the bith century, the Eastern or Grecian in the fifteenth) making a space of near a thousand years, constitutes what we call the Middle Age.

Dominion passed during this interval into the hands of rude, illiterate men: men who conquered more by multitude than by military skill; and who, having little or no taste either for sciences or arts, naturally despised those things from which

they had reaped no advantage.

This was the age of Monkery and Legends; of Leonine verses, (that is, of bad Latin put into rhime; of projects, to decide truth by ploughshares and battoons; of crusades, to conquer infidels, and extirpate heretics; of princes deposed, not as Crossus was by Cyrus, but one who had no armies, and who did not even wear a tword.

Different portions of this age have been distinguished by different descriptions: such as Saculum, Monotheleticum, Saculum Eiconoclasticum, Sæculum Obscurum, Sæculum Ferreum, Sæculum Hildibrandiuum, &c.; strange names it must be confest, some more obvious, others less so, yet none tending to furnish us with any high or promising ideas.

And yet we must acknowledge, for the honour of humanity and of its great and divine Author, who never forsakes it, that some sparks of intellect were at all times visible, through the whole of this dark and dreary period. It is here we must look for the taste and literature of the times.

The few who were enlightened, when arts and sciences were thus obscured, may be said to have happily maintained the continuity of knowledge; to have been (if I may use the expression) like the twilight of a summer's night; that auspicious gleam between the sitting and the rising sun, which, though it cannot retain the lustre

of the day, helps at least to save us from the totality of darkness.

\$ 208. An Account of the Destruction of the Alexandrian Library.

" When Alexandria was taken by the 66 Mahometans, Amrus, their commander, 46 found there Philoponus, whose conver-44 sation highly pleased him, as Amrus was is a lover of letters, and Philoponus a " learned man. On a certain day Philoponus said to him: 'You have visited 44 all the repositories or public warehouses 66 in Alexandria, and you have sealed up things of every sort that are found there. As to those things that may be useful to you, I presume to say nothing; but as to things of no service to you, some of them perhaps may be more suitable to " me.' Amrus said to him: ' And what is it you want?' 'The philosophical books (replied he) preserved in the royal " libraries." This (said Amrus) is a re-46 quest upon which I cannot decide. You desire a thing where I can issue no or-66 ders till I have leave from Omar, the 46 commander of the faithful.'-Letters 46 were accordingly written to Omar, in-66 forming him of what Philoponus had said; and an answer was returned by 44 Omar, to the following purport: 4 As 46 to the books of which you have made 44 mention, if there be contained in them 46 what accords with the book of God (meaning the Alcoran) there is without " them, in the book of God, all that is sufficient. But if there be any thing in them repugnant to that book, we in no respect want them. Order them therefore to be all destroyed.' Amrus upon this ordered them to be dispersed through the baths of Alexandria, and to be there 44 burnt in making the baths warm. After 44 this manner, in the space of six months, " they were all consumed."

The historian, having related the story, adds from his own feelings, "Hear what 44 was done, and wonder!

Thus ended this noble library: and thus began, if it did not begin sooner, the age of barbarity and ignorance.

\$ 209. A short Historical Account of ATHENS, from the Time of her PER-SIAN Triumphs to that of her becoming subject to the Tunks .- Sketch, during this long Interval, of her Political and Literary State; of her Philosopher's; of her Gym nusia ; of her good and bad fortune, be. bc .- Manners of the present Inhabitants .- Olives and Honey.

When the Athenians had delivered themselves from the tyranny of Pisistratus, and after this had defeated the vast efforts of the Persians, and that against two successive invaders, Darius and Xerxes, they may be considered as at the summit of their national glory. For more than half a century afterwards they maintained, without controll, the sovereignty of Greece*.

As their taste was naturally good, arts of every kind soon rose among them, and flourished. Valour had given them reputation; reputation gave them an ascendant; and that ascendant produced a security, which left their minds at ease, and gave them leisure to cultivate every thing

liberal or elegant.

It was then that Pericles adorned the city with temples, theatres, and other beautiful public buildings. Phidias, the great sculptor, was employed as his architect; who, when he had crected edifices, adorned them himself, and added statues and bassorelievos, the admiration of every beholder. It was then than Polygnotus and Myro painted; that Sophocles and Euripides wrote; and, not long after, that they saw the divine Socrates.

Human affairs are by nature prone to change; and states, as well as individuals, are born to decay. Jealousy and ambition insensibly fomented wars; and success in these wars, as in others, was often various. The military strength of the Athenians was first impaired by the Lacedaemonians; after that, it was again humiliated, under Epaminondas, by the Thebans; and, last of all, it was wholly crushed by the Macedonian Philip.

But though their political sovereignty was lost, yet, happily for mankind, their love of literature and arts did not sink

along with it.

Just at the close of their golden days of empire, flourished Xenophon and Plato, the disciples of Socrates; and from Plato descended that race of philosophers called the Old Academy.

Aristotle, who was Plato's disciple, may be said not to have invented a new philosophy, but rather to have tempered the sublime and rapturous mysteries of his master with method, order, and a stricter mode of reasoning.

Zeno, who was himself also educated in the principles of Platonism, only differed from Plato in the comparative estimate of things, allowing nothing to be intrinsically good but virtue, nothing intrinsically bad but vice, and considering all other things to be in themselves indifferent.

He too, and Aristotle, accurately cultivated logic, but in different ways: for Aristotle chiefly dwelt upon the simple syllogism; Zeno upon that which is derived out of it, the compound or hypothetics Both too, as well as other philosophus, cultivated rhetoric along with logic; holding a knowledge in both to be requisite for those who think of addressing mankind with all the efficacy of persuasion. Zeno elegantly illustrated the force of these two powers by a similie, taken from the hand; the close power of logic he compared in the fist, or hand comprest; the diffuse power of logic, to the palm, or hand open.

I shall mention but two sects more, the New Academy, and the Epicurean.

The New Academy, so called from the Old Academy (the name given to the school of Plato) was founded by Arcesilas, and ably maintained by Carneades. From a mistaken imitation of the great parent of philosophy, Socrates, (particularly as he appears in the dialogues of Plato) because Socrates doubted some things, therefore Arcesilas and Carneades doubted all.

Epicurus drew from another source: Democritus had taught him atoms and a void-By the fortuitous concourse of atoms be fancied he could form a world, while by a feigned veneration he complimented away his gods, and totally denied their providential care, lest the trouble of it should impair their uninterrupted state of bliss. Virtue he recommended, though not for the sake of virtue, but pleasure: pleasure, according to him, being our chief and sovereign good. It must be confest, however, that though his principles were erroneous, and even bad, never was a man more temperate and humane; never was a man more beloved by his friends, or more cordially attached to them in affectionate esteem.

We have already mentioned the alliance between philosophy and rhetorick. This cannot be thought wonderful, if rhetorick be the art by which men are persuaded, and if men cannot be persuaded without a knowledge of human nature; for what

For these historical facts, consult the ancient and modern authors of Grecian history.

but philosophy can procure us this knowledge?

It was for this reason the ablest Greek philosophers not only taught (as we hinted before) but wrote also treatises upon rhetoric. They had a further inducement, and that was the intrinsic beauty of their language, as it was then spoken among the learned and polite. They would have been ashamed to have delivered philosophy, as it has been too often delivered since, in compositions as clumsy as the common dialect of the mere vulgar.

The same love of elegance, which made them attend to their style, made them attend even to the places where their philo-

tophy was taught.

Plato delivered his lectures in a place shaded with groves; on the banks of the river llissus; and which, as it once belonged to a person called Academus, was called after his name, the Academy, Aristotle chose another spot of a similar character, where there were trees and shade; a spot called the Lyczeum. Zeno taught is a portico or colonnade, distinguished from other buildings of that sort (of which the Athenians had many) by the name of the Variegated Portico, the walls being decorated with various paintings of Polygnotus and Myro, two capital masters of that transcendent period. Epicurus addressed his hearers in those well-known gardens called, after his own name, the gardens of Epicurus.

Some of these places gave names to the doctrines which were taught there. Plato's philosophy took its name of Academic, from the Academy; that of Zeno was called the Stoic, from a Greek word

signifying a portico.

The system indeed of Aristotle was not denominated from the place, but was called Peripatetic, from the manner in which he taught; from his walking about at the time when he disserted. The term Epicurean philosophy needs no explanation.

Open air, shade, water, and pleasant walka, seem above all things to favour that exercise the best suited to contemplation, I mean gentle walking without inducing fatigue. The many agreeable walks in and about Oxford may teach my own countrymen the truth of this assertion, and best explain how Horace lived, while the student at Athens, employed (as he tells us)

- inter silvas Academi querere verum.

These places of public institution were

called among the Greeks by the name of Gymnasia, in which, whatever that word might have originally meant, were taught all those exercises, and all those arts, which tended to cultivate not only the body but the mind. As man was a being consisting of both, the Greeks could not consider that education as complete in which both were not regarded, and both properly formed. Hence their Gymnasia, with reference to this double end, were adorned with two statues, those of Mercury and of Hercules: the corporeal accomplishments being patronised (as they supposed) by the God of strength, the mental accomplishments by the God of ingenuity.

It is to be feared, that many places, now called Academies, scarce deserve the name upon this extensive plan, if the professors teach no more than how to dance, fence,

and ride upon horses.

It was for the cultivation of every liberal accomplishment that Athens was celebrated (as we have said) during many centuries, long after her political influence was lost, and at an end.

When Alexander the Great died, many tyrauts, like many hydras, immediately sprung up. Athens then, though she still maintained the form of her ancient government, was perpetually checked and humiliated by their insolence. Antipater destroyed her orators: and she was sacked by Demetrius. At length she became subject to the all-powerful Romans, and found the cruel Sylla her severest enemy.

His face (which perhaps indicated his manner,) was of a purple red, intermixed with white. This circumstance could not escape the witty Athenians: they described him in a verse, and ridiculously said,

Sylla's face is a mulberry, sprinkled with meal.

The devastations and carnage which he caused soon after, gave them too much

reason to repent their sarcasm.

The civil war between Cæsar and Pompey soon followed, and their natural love of liberty made them side with Pompey. Here again they were unfortunate, for Cæsar conquered. But Cæsar did not treat them like Sylla. With that clemency, which made so amiable a part of his character, he dismissed them, by a fine allusion to their illustrious ancestors, saying, 'that he spared the living for the sake of the dead.'

Another storm followed soon after this, the wars of Brutus and Cassius with Augustus and Antony. Their partiality for liberty did not here forsake them; they took part in the contest with the two patriot Romans, and erected their statues near their own ancient deliverers, Harmodius, and Aristogitan, who had slain Hipparchus. But they were still unhappy, for their enemies triumphed.

ment to this city and country, had attained such a perfection in its arts and language, that he acquired to himself the additional name of Atticus. This great man may be said to have lived during times of the worst and cruellest factions. His youth was spent under Sylla and Marius; the middle of his

They made their peace however with Augustus: and, having met afterwards with different treatment under different emperors, sometimes favourable, sometimes harsh, and never more severe than under Vespasian, their oppressions were at length relieved by the virtuous Nerva and Trajan.

Mankind, during the interval which began from Nerva, and which extended to the death of that best of emperors, Marcus Antoniaus, felt a respite from those evils which they had so severely felt before, and which they felt so severely revived under Commodus and his wreteled successors.

Athens, during the above golden period, enjoyed more than all others the general felicity, for she found in Adrian so generous a benefactor, that her citizens could hardly help esteeming him a second founder. He restored their old privileges, gave them new; repaired their ancient buildings, and added others of his own. Marcus Antoninus, although he did not do so much, still continued to shew them his benevolent attention.

If from this period we turn our eyes back, we shall find, for centuries before, that Athens was the place of education, not only for Greeks, but for Romans. 'Twas hither that Horace was sent by his father: 'twas here that Cicero put his son Marcus under Cratippus, one of the ablest philosophers then belonging to that city.

The sects of philosophers which we have already described, were still existing when St. Paul came thither. We cannot enough admire the superior eloquence of that apostle, in his manner of addressing so intelligent an audience. We cannot enough admire the sublimity of his exordium: the propriety of his mentioning an altar which he had found there; and his quotation from Aratus, one of their well known poets. Acts xvii. 22.

Nor was Athens only celebrated for the residence of philosophers, and the institution of youth: Men of rank and fortune found pleasure in a retreat which contributed so much to their liberal enjoyment.

The friend and correspondent of Cicero, T. Pomponius, from his long attach-

such a perfection in its arts and language, that he acquired to himself the additional name of Atticus. This great man may be said to have lived during times of the worst and cruellest factions. His youth was spent under Sylla and Marius; the middle of his life during all the sanguinary scenes that forlowed; and when he was old he saw the proscriptions of Antony and Octavius. Yet though Cicero and a multitude more of the best men perished, he had the good fortune to survive every danger. Nor did he seek a safety for himself alone: his virtue so recommended him to the leaders of every side, that he was able to save not himself alone, but the lives and fortunes of many of his friends.

When we look to this amiable character, we may well suppose, that it was not merely for amusement that he chose to live at Athens; but rather that, by residing there, he might so far realize philosophy, as to employ it for the conclust of life, and not merely for ostentation.

Another person, during a better period (that I mean between Nerva and Marcus Antoninus) was equally celebrated for his affection to this city. By this person I mean Herodes Atticus, who acquired the last name from the same reasons for which it had formerly been given to Pomponius.

We have remarked already, that vicisitudes befal both men and cities, and changes too often happen from prosperous to adverse. Such was the state of Athens, under the successors of Alexander, and so of from Sylla down to the time of Augustus. It shared the same hard fate with the Roman empire in general, upon the accession of Commodus.

At length, after a certain period, the Barbarians of the North began to pour into the South. Rome was taken by Alaric, and Athens was besieged by the same. Yet here we are informed (at least we learn so from history) that it was miraculously saved by Minerva and Achilles. The goddess, it seems, and the hero, both of them appeared, compelling the invader to raise the siege.

Harris.

\$ 210. The Account given by Synesius of Athens, and its subsequent History.

Synesius, who lived in the fifth century, visited Athens, and gives, in his epistles, an account of his visit. Its lustre appears at that time to have been greatly diminished.

that the celebrated portico or colonnade, the Greek name of which gave name to the sect of Stoics, had, by an oppressive procossul, been despoiled of its fine pictures; and that, on this devastation, it had been forsaken by those philosophers.

company approached Athens: "We began now to think ourselves in a more civilized country than we had yet past: for not a shepherd that we met, but bid us welcome, and wished us a good journey."

p. 335. Speaking of the Athenians, he adds, "This must with great truth be said

In the thirteenth century, when the Grecian empire was cruelly oppressed by the crusaders, and all things in confusion, Athens was besteged by one Segurus Leo, who was unable to take it; and, after that, by a Marquis of Montserrat, to whom it surrendered.

Its fortune after this was various; and it was sometimes under the Venetians, sometimes under the Catalonians, till Mahomet the Great made himself master of Constantinople. This fatal catastrophe (which happened near two thousand years after the time of Pisistratus) brought Athens, and with it all Greece, into the hands of the Turks, under whose despotic yoke it has continued ever since.

The city from this time has been occasignally visited, and descriptions of it published by different travellers. Wheeler was there along with Spon, in the time of our Charles the Second, and both of them have published curious and valuable parratives. Others, as well natives of this island as foreigners, have been there since, and some have given (as Monsr. Le Roy) specious publications of what we are to suppose they saw. None however have equalled the truth, the accuracy, and the elegance of Mr. Stuart, who, after having resided there between three and four years, has given such plans and elevations of the capital buildings now standing, together with learned comments to elucidate every part, that he seems, as far as was possible for the power of description, to have restored the city to its ancient splendour.

He has not only given us the greater outlines and their measures, but separate measures and drawings of the minuter decorations; so that a British artist may (if he please) follow Phidias, and build in Britain as Phidias dld at Athens.

Spon speaking of Attica, says, 'that the road near Athens was pleasing, and the very peasants polished.' Speaking of the Athenians in general, he says of them—"ils ont une politesse d'esprit naturelle, & beaucoup d'adresse dans toutes les affaires, qu'ils entreprennent."

Wheeler, who was Spon's fellow-traveller, says as follows, when he and his

gan now to think ourselves in a more civilized country than we had yet past: for not a shepherd that we met, but bid us welcome, and wished us a good journey." p. 335. Speaking of the Athenians, he adds, " This must with great truth be said of them, their bad fortune hath not been able to take from them what they have by nature, that is, much subtlety or wit." p. 347. And again. "The Athenians, notwithstanding the long possession that barbarism bath had of this place, seem to be much more polished, in point of manners and conversation, than any other in these parts; being civil, and of respectful behaviour to all, and highly complimental in their discourse." p. 356.

Stuart says of the present Athenians, what Spon and Wheeler said of their fore-fathers;—" he found in them the same address, the same natural acuteness, though severely curbed by their despotic masters."

One custom I cannot omit. He tells me, that frequently at their convivial meetings, one of the company takes what they now call a lyre, though it is rather a species of guitar, and after a short prelude on the instrument, as if he were waiting for inspiration, accompanies his instrumental music with his voice, suddenly chanting some extempore verses, which seldom exceed two or three distichs; that he then delivers the lyre to his neighbour, who, after he has done the same, delivers it to another; and that so the lyre circulates, till it has past round the table.

Nor can I forget his informing me, that, notwithstanding the various fortunes of Athens, as a city, Attica was still famous for olives, and Mount Hymettus for honey. Human institutions perish, but Nature is permanent.

Harris.

\$ 211. Anecdote of the Modern GREEKS.

I shall quit the Greeks, after I have related a short narrative; a narrative, so far curious, as it helps to prove, that even among the present Greeks, in the day of servitude, the remembrance of their amcient glory is not totally extinct.

When the late Mr. Anson (Lord Anson's brother) was upon his travels in the East, he hired a vessel to visit the isle of Tenedos. His pilot, an old Greek, as they were sailing along, said with some satisfaction, "There 'twas our fleet lav." Mr. Anson demanded, "What fleer?" "What fleet!" replied the old man (a little piqued

K k 2

at

at the question) " why our Grecian fleet at the siege of Troy." Harris.

\$ 212. On the different Modes of History.

The modes indeed of history appear to be different. There is a mode which we may call historical declamation: a mode, where the author, dwelling little upon facts, indulges himself in various and copious reflections.

Whatever good (if any) may be derived from this method, it is not likely to give

us much knowledge of facts.

Another mode is, that which I call general or rather public history; a mode abundant in facts, where treaties and alliances, battles and sieges, marches and rereats, are accurately detailed; together with dates, descriptions, tables, plans, and all the collateral helps both of chronology and geography.

In this, no doubt, there is utility; yet the sameness of the events resembles not a little the sameness of human bodies. One head, two shoulders, two legs, &c. seem equally to characterise an European and an African; a native of old Rome, and a na-

tive of modern.

A third species of history still behind, is that which gives a sample of sentiments and manners.

If the account of these last be faithful, it cannot fail being instructive, since we view through these the interior of human nature. 'Tisby these we perceive what sort of animal man is: so that while not only Europeans are distinguished from Asiatics, but English from French, French from Italians, and (what is still more) every individual from his neighbour; we view at the same time one nature, which is common to them all.

Horace informs us that a drawn, where the sentiments and manners are well preserved, will please the andience more than a pompous fable where they are wanting. Perhaps what is true in dramatic composition, is no less true in historical.

Plutarch, among the Greek historians, appears in a peculiar manuer to have incrited this praise.

Nor ought I to omit (as I shall soon refer to them) some of our best Monkish historians, though prone upon occasion to degenerate into the incredible. As they often lived during the times which they

This story was told the author, Mr. Harris, by Mr. Auson himself.

described, 'twas natural they should paint the life and the manners which they saw.

\$ 213. Concerning natural beauty; its Idea the same in all times—Thessalian Temple—Taste of Virgil, and Horace—of Milton, in describing Paradise—exhibited of late Years first in Pectures—theno transferred to English Gardens—not wanting to the enlightened Few of the middle Age—proved in Lelann, Petrarch, and Sann azarius—Comparison between the Younger Cyrus, and Philip Le Bru of France.

Let us pass for a moment from the elegant works of Art, to the more elegant works of Nature. The two subjects are so nearly allied, that the same taste usually relishes them both.

Now there is nothing more certain, than that the face of inanimate nature has been at all times captivating. The vulgar, indeed, look no farther than to scenes of culture, because all their views merely terminate in utility. They only remark, that 'tis fine barley; that 'tis rich clover; as an ox or han ass, if they could speak, would inform us. But the liberal have nobler views; and though they give a culture its due praise, they can be delighted with natural beauties, where culture was never known.

Ages ago they have celebrated with enthusiastic rapture, "a deep retired vale "with a river rushing through it; a vale having its sides formed by two immense and opposite mountains, and those sides 'd diversified by woods, precipies, rocks, and romantic caverns." Such was the scene produced by the river Peneus, as it ran between the mountains Olympus and Ossa, in that well known vale the Thessalian Tempe.

Virgil and Horace, the first for taste among the Romans, appears to have been enamoured with the beauties of this character. Horace prayed for a villa, where there was a garden, a rivulet, and above these a little grove:

Hortus uhi et tecto vicinus jugis aque font, Et paulum sylvæ super-his foret.

Virgil wished to enjoy rivers and woods, and to be hid under immense shade in the cool valleys of mount Hæmus—

-O! qui me gelidis in vallibus Hami Sistat, et ingenti ramorum protegut unibri? Georg. IL 406The great elements of this species of beauty, according to these principles, were water, wood, and uneven ground: to which may be added a fourth, that is to say, lawn. 'Tis the happy mixture of these four that produces every scene of natural beauty, as 'tis a more mysterious mixture of other elements (perhaps as simple, and not more in number) that produces a world or universe.

Virgil and Horace having been quoted, we may quote, with equal truth, our great countryman, Milton. Speaking of the flowers of Paradise, he calls them flowers,

which not nice Art
In beds and curious knots, but Nature boon
Poursforth profuse on hill, and date, and plain.
P. L. IV. 245.

Soon after this he subjoins-

A happy rural seat of various view.

He explains this variety, by recounting the lawns, the flocks, the hidocks, the valleys, the grots, the waterfalls, the lakes, &c. &c. And in another book describing the approach of Raphael, he informs us, that this divine emessenger past

And flow'ring odours, cassis, used, and balm, A wilderness of sweets; for nature here Wanton'd as in her prime, and play'd at will Her virgin funcies, pouring forth more sweet, Wild above rule or art, enormous bliss!

IV. 292.

The painters in the preceding century seem to have felt the power of these elements, and to have transferred them into their landscapes with such amazing force, that they appear not so much to have followed as to have emulated nature. Claude de Lorraine, the Poussins, Salvator Rosa, and a few more, may be called superior artists in this exquisite taste.

Our gardens in the mean time were tasteless and insipid. Those who made them, thought the farther they wandered from nature, the nearer they approached the sublime. Unfortunately, where they travelled, no sublime was to be found; and the farther they went, the farther they left it behind.

But perfection, alas! was not the work of a day. Many prejudices were to be removed; many gradual ascents to be made; ascents from bad to good, and from good to better, before the delicious amenities of a Claude or a Poussin could be rivalled in a Stourhead, a Hagley, or a Stow; or the tremendous charms of a Salvator Rosa

be equalled in the scenes of a Piercefield, or a Mount Edgecumb.

Not however to forget the subject of our inquiry.—Though it was not before the present century, that we established a chaster taste; though our neighbours at this instant are but learning it from us; and though to the vulgar every where it is totally incomprehensible (be they vulgar in rank, or vulgar in capacity): yet, even in the darkest periods we have been treating of, periods when taste is often thought to have been lost, we shall still discover an enlightened few, who were by no means insensible to the power of these beauties.

How warmly does Leland describe Guy's Cliff; Sannazarius, his villa of Mergillina; and Petrarch, his favourite Vaucluse!

Take Guy's Cliff from Leland in his own old English, mixt with Latin—"It is a place meet for the Muses: there is syllence; a praty wood; antra in vivo saxo (grottos in the living rock); the river rolling over the stones with a praty noyse." His Latin is more elegant—
Nemusculum ibidem opacum, fontes liuquidi et gemmei, prata, florida, antra muscosa, rivi levis et per saxa decursus, nec non solitudo et quies Musis amicisuma."—Vol. iv. p. 00.

Mergillina, the villa of Sannazarius, near Naples, is thus sketched in different parts of his poems:

Exciso in scopulo, fluctus unde aurea canes Despiciens, celso se culmine Mergilline Attollit, nautisque procul venientibus offert. Sannaz. De partu Virgin. I. 25.

Ejusd. Epigv. I. 2.

quarque in primis mihi grata ministrat Otia, Musarumque cavas per saxa latebras, Mergillina; novos fundunt ubi citria flores. Citria, Medorum sacros referentis lucos. Fjusd. De partu Virgin. III. sub fin.

De Foute Mergillino.
Est mihi rivo vitrens perenni
Fons, arenosum prope littus, unde
Sæpe descendens sibi mauta rores.
Haurit amicos, &c.

Eined, Epigr. II. S6.

It would be difficult to translate these elegant morsels. It is sufficient to express K k 3 what

what they mean collectively—" that the "villa of Mergillina had solitary woods; "had groves of laurel and citron; had "grottos in the pock, with rivulets and "springs; and that from its lofty situation it looked down upon the sea, and "commanded an extensive prospect."

It is no wonder that such a villa should enamour such an owner. So strong was his affection for it, that when, during the subsequent wars in Italy, it was demolished by the imperial troops, this unfortunate event was supposed to have hastened his end.

Vaucluse (Vallis Clausa) the favourite retreat of Petrarch, was a romantic scene,

" It is a valley, having on each hand,

not far from Avignon.

st as you enter, intmense cliffs, but closed to up at one of its ends by a semicircular ridge of them; from which incident it derives its name, one of the most stusted pendous of these cliffs stands in the front of the semicircle, and has at its foot an opening into an immense cavern. Within the most retired and gloomy part of this cavern is a large oval bason, the production of nature, filled with pelluticid and unfathomable water; and from

"magnitude, dividing, as it runs, the meadows beneath, and winding through the precipices that impend from above."

This is an imperfect sketch of that spot,

" this reservoir issues a river of respectable

where Petrarch spent his time with so much delight, as to say that this alone was life to him, the rest but a state of punishment. In the two preceding narratives I seem

to see an anticipation of that taste for natural beauty, which now appears to flourish through Great Britain in such perfection. It is not to be doubted that the owner of Mergillina would have been charmed with Mount Edgecumb: and the owner of Vaucluse have been delighted with Piercefield.

When we read in Xenophon, that the younger Cyrus had with his own hand planted trees for beauty, we are not surprised, though pleased with the story, as the age was polished, and Cyrus an accomplished prince. But when we read, that in the beginning of the 14th century, a king of France (Philip le Bel) should make it penal to cut down a tree, qui a este gardà pour sa beautà, ' which had been preserved for its beauty:' though we praise the law, we cannot help being surprised, that the prince should at such a period have been so lar enlightened.

Hurris.

1. 214. Superior Literature and Knowledge both of the Greek and Latin Clergy,
whence—Barbarity and Ignorance of the
Laity, whence—Samples of Lay Manners, in a Story from Anna Commena's
History—Church Authority ingenuously
employed to check Barbarity—the same
Authority employed for other good Purposes—to save the poor Jews—to slop
Trials by battle.—More suggested concerning Lay Manners.—Ferocity of the
Northern Laymen, whence—different
Gauses assigned.—Inventions during the
dark Ages great, though the inventors
often unknown.—Inference arising from
these Inventions.

Before I quit the Latins, I shall subjoin two or three observations on the Europeans in general.

The superior characters for literature here enumerated, whether in the Western or Eastern Christendom (for it is of Christendom only we are now speaking) were by far the greatest part of them ecclesiasties.

In this number we have selected from among the Greeks the patriarch of Constantinople, Photius; Michael Psellast Eustathius and Eustratius, both of episcopal dignity; Planudes; Cardinal Bassario—from among the Latins, venerable Bode; Gerbertus; afterwards Pope Silvester the Second: Ingulphus, abbot of Croyland; Hilderbert, Archbishop of Tours; Peter Abelard; John of Salisbury, Bishop Chartres; Roger Bacon; Francis Petrarch; many Monkish historians; Æneas Sylvas, afterwards Pope Pius the Second, &c.

Something has been already said concerning each of these, and other ecclesiastics. At present we shall only remark, that it was necessary, from their very profession, that they should read and write: accomplishments at that time usually confined to themselves.

Those of the Western Church were obliged to acquire some knowledge of latin; and for Greek, to those of the Eastern Church it was still (with a few corruptions) their native language.

If we add to these Preparations their mode of life, which, being attended mostly with a decent competence, gave them intensee leisure; it was not wonderful that, among such a multitude, the more meritorious should emerge and soar, by dint of genius, above the common herd. Similar effects proceed from similar causes. The learning of Egypt was possest by their

Digitized by Google

priests: who were likewise lest from their institution to a life of leisure.

From the laity, on the other side, who, from their mean education, wanted all these requisites, they were in fact no better than what Dryden calls them, a tribe of Issachar; a race, from their cradle bred in barbarity and ignorance.

A sample of these illustrious laymen may be found in Anna Commena's history of her father Alexius, who was Grecian emperor in the eleventh century, when the first Grusade arrived at Constantinople. So promiscuous a rout of rude adventurers could not fail of giving umbrage to the Byzantine court, which was stately and ceremonious, and conscious withal of its internal debility.

After some altercation, the court permitted them to pass into Asia through the Imperial territories, upon their leaders taking an eath of fealty to the emperor.

What happened at the performance of this ceremonial, is thus related by the fair historian above-mentioned.

"All the commanders being assembled, and Godfrey of Bulloign himself among the rest, as soon as the oath was finished, one of the counts had the audacionsmost of the counts had the audacionsmost of upon his throne. Earl Buldwin, one of their own people, approaching, took the count by the hand, made him rise from the throne, and rebuked him for his insolute.

"The count rose, but made no reply, "except it was in his own unknown in jargon, to mutter abuse upon the em-

When all things were dispatched, the " emperor sent for this man, and demand-" ed who he was, whence he came, and of " what lineage?-His answer was as fol-" lows-I am a genuine Frank, and in the " number of their nobility. One thing I ti know, which is, that in a certain part " of the country I came from, and in a " place where three ways nicet, there stands 41 an ancient church, where every one who to has a desire to engage in single com-" bat, having put himself in fighting order, tomes, and there implores the assistance " of the Deity, and then waits in expec-" tation of some one that will dare attack ti him. On this spot I myself waited a "long time, expecting and seeking some 44 one that would arrive and fight me. But 41 the man that would dare this, was no " where to be found.

"The emperor, having heard this strange narrative, replied pleasantly—"If at the time when you sought war, you could not find it, a season is now coming in which you will find wars coming. I therefore give you this addivice; not to place yourself either in the rear of the army, or in the front, but to keep among those who support the centre; for I have long had know-" ledge of the Turkish method in their wars."

This was one of those counts, or barons, the petty tyrants of Western Europe; men, who, when they were not engaged in general wars (such as the ravaging of a neighbouring kingdom, the massacring of infidels, heretics, &c.) had no other method of filling up their leisure, than, through help of their vassals, by waging war upon one another.

And here the humanity and wisdom of the church cannot be enough admired, when by her authority (which was then mighty) she endeavoured to shorten that scene of bloodshed, which she could not totally prohibit. The truce of God (a name given it purposely to render the measure more solemn) enjoined these ferocious beings, under the terrors of excommunication, not to fight from Wednesday evening to Monday morning, out of reverence to the mysteries accomplished on the other four days; the ascension on Thursday; the crucifixion on Friday; the descent to hell on Saturday; and the resurrection on Sunday.

I hope a father observation will be pardoned, when I add, that the same humanity prevailed during the fourteenth century, and that the terrors of church power were then held forth with an intentequally landable. A dreadful plague at that period desolated all Europe. The Germans, with no better reason than their own senseless superstition, imputed this calamity to the fews. who then lived among them in great opulence and splendoor. Many thousands of these unhappy people were inhumanly massacred, till the pope benevolently interfered, and prohibited, by the severest bulls, so mad and sanguinary a proceeding.

I could not omit two such salutary exertions of church power, as they both occur within the period of this inquiry. I might add a third, I mean the opposing and endeavouring to check that absurdest of all practices, the trial by battle, which Spel-

K k 4

man expressly tells us, that the church in other cause. I mean their profound igall ages condemued.

It must be confessed, that the fact just related, concerning the unmannered count, at the court of Constantinople, is rather against the order of Chronology, for it happened during the first crusades. It is, that when they had acquired countries serves, however, to shew the manners of the Latin or Western laity, in the beginning of that holy war. They did not in a succession of years, grow better, but worse.

It was a century after, that another emsade, in their march against infidels, sacked this very city; deposed the then emperor; and committed devastations, which no one would have committed but the most iguarant, as well as cruel barbarians.

But a question here occurs, easier to propose than to answer-" To what are we " to attribute this character of ferocity, "which seems to have then prevailed " through the laity of Europe?"

Shall we say it was climate, and the nature of the country ?- These, we must confess, have, in some instances, great influence.

The Indians, seen a few years since by Mr. Byron in the southern parts of South America, were brutal and savage to an enormous excess. One of them, for a trivial offence, murdered his own child (an infant) by dashing it against the rocks .-The Cyclopes, as described by Homer, were much of the same sort; each of them gave law to his own family, without regard for one another fand besides this, they were Atheists and Men-enters.

May we not suppose that a stormy sea, together with a frozen, barren, and inhospitable shore, might work on the imagination of these Indians, so as, by banishing all pleasing and benign ideas, to fill them with habitual gloom, and a propensity to be cruel?-Or might not the tremendous scenes of Æina have had a like effect upon the Cyclopes, who lived amid smoke, thunderings, eruptions of fire, and earthquakes? If we may believe Fazelius, who wrote upon Sicily about two hundred years a to, the inhabitants near Ætna were in his time a similar race.

If therefore these limited regions had such an effect upon their natives, may not a similar effect be presumed from the vast regions of the North? may not its cold, barren, uncomfortable climate, have made its numerous tribes equally rude and sa-

If this be not enough, we may add an-

norance. Nothing mends the mind more than culture; to which these emigrants had no desire, either from example or education, to lend a patient ear.

We may add a farther cause still, which better than their own, they settled under the same military form through which they had conquered; and were in fact, when settled, a sort of army after a campaign, quartered upon the wretched remains of the ancient inhabitants, by whom they were attended under the different names of seris, vassals, villains, &c.

It was not likely the ferocity of these conquerors should abate with regard to their vassals, whom, as strangers, they were more likely to suspect than to love.

It was not likely it should abate with regard to one another, when the neighbourhood of their eastles, and the contiguity of their territories, must have given occasions (as we learn from history) for endless altercation. But this we leave to the learned in feudal tenures.

We shall add to the preceding remarks, one more, somewhat similar, and yet perfectly different; which is, that though the darkness in Western Europe, during the period here mentioned, was (in Scripture language) "a darkness that might be felt," yet it is surprising, that during a period 50, obscure, many admirable inventious found their way into the world; I mean such 25 clocks, telescopes, paper, gunpowder, the mariner's needle, printing, and a number licre omitted.

It is surprising too, if we consider the importance of these arts, and their extensiventility, that it should be either unknown, or at least doubtful, by whom they were invented.

A lively fancy might almost imagine, that every art, as it was wanted, had suddenly started forth, addressing those that sought it, as Aneas did his companions-

-Coram, quem queritis, adsum. VIRG.

And yet, fancy apart, of this we may be assured, that though the particular inventors may unfortunately be forgotten, the inventions themselves are clearly referable in man: to that subtle and active principle, human wit, or ingenuity.

Let me then submit the following que-

If the human mind be as truly of divine

origin as every other part of the universe; and if every other part of the universe bear testimony to its author; do not the inventions above-mentioned give us reason to assert, that God, in the operations of man, never leaves himself without a witness?

Harris.

§ 215. Opinions on Past Ages and the Present.—Conclusion arising from the Discussion of these Opinions.—Conclusion

Æn, vi. 648.

of the Whole.

And now having done with the Middle Age, we venture to say a word upon the Present.

Every past age has in its turn been a present age. This indeed is obvious, but this is not all; for every past age, when present, has been the object of abuse. Men have been represented by their contemporaries not only as had, but degenerate; as inferior to their predecessors both in morals and bodily powers.

This is an opinion so generally received, that Virgil (in conformity to it) when he would express former times, calls them simply better, as if the term, better, im-

plied former of course.

Hic genus antiquum Teucri, pulcherrima proles, Magnanimi heroes, nati melioribus annis.

The same opinion is ascribed by Homer to old Nestor, when that venerable chief speaks of those heroes whom he had known in his youth. He relates some of their names. Perithous, Dryas Cæneus, Theseus and some also of their exploits; as how they had extirpated the savage Centaurs—He then subjoins,

πίνοισι δ' ἄν Ετις, Τῶν οί νῦν βροτοῦ είστιν ἐστιχθόνιοι, μαχίσιτο. Ιλ. Α. 271.

Of earthly race, so men are now, could fight.

As these heroes were supposed to exceed in strength those of the Trojan war, so

m strength those of the Trojan war, so were the heroes of that period to exceed those that came after. Hence, from the time of the Trojan war to that of Homer, we learn that human strength was decreased by a complete half.

Thus the same Homer,

δί χιεμάδιον λάθο χειεί Τυδείδης, μέτα έργον, διάδύος ανδρι φέροιες, Οΐοι νῦν βροποί είσ διδέ μεν μια απάλλι αξοδος. Ιλ. Ε. 302.

Then grasp'd Tydides in his hand a stone, A built immense, which not two men could hear, As men are now, but he alone with ease Hurl'd at————

Virgil goes farther, and tells us, that not twelve men of his time (and those too chosen ones) could even carry the stone which Turnus flung:

Vix illud locfi bissex cervice subirent, Qualia nunc hominum producit corpora tellus; Ille manu raptum trepidà torquelsai in hostem. Æn. xii. 899.

Thus human strength, which in Homer's time was lessened to half, in Virgil's time was lessened to a twelfth. If strength and bulk (as commonly happens) be proportioned, what pigmies in stature must the men of Virgil's time have been, when their atrength, as he informs us, was so far diminished! A man only eight times as strong (and not, according to the poet, twelve times) must at least have been hetween five and six feet higher than they were.

But we all know the privilege claimed by

poets and painters.

It is in virtue of this privilege that Horace, when he mentions the moral degeneracies of his contemporaries, asserts that "their fathers were worse than their grand-"fathers; that they were worse than their "fathers; and that their children would be "s worse than they were;" describing no fewer, after the grandfather, than three successions of degeneracy;

Ætas parentum, pejor avis, tulit Nos nequiores, mox daturos Progenium vitiosiorum.

Hor. Od. L. iii. 6.

We need only ask, were this a fact, what would the Romans have been, had they degenerated in this proportion for five or six generations more?

Yet Juvenal, subsequent to all this, supposes a similar progression; a progression in vice and infamy, which was not complete till his own times.

Then truly we learn, it could go no

farther:

Nil erit alterius, nostris quod moribus addat Posteritas, &c.

Omne in pracipiti vitium stetit, &c.

Sat. i. 147, &c,

But even Juvenal, it seems, was mistaken, bad as we must allow his times to have been. Several centuries after, without regard to Juvenal, the same doctrine was inculcated with greater zeal than ever.

When the western empire began to decline, and Europe and Africa were ravaged by barbarians, the calamities then happening (and formidable they were) naturally 3cd men, who felt them, to esteem their own age the worst.

The enemies of Christianity (for Paganism was not then extinct) absurdly turned these calamities to the discredit of the Christian religion, and said, the times were so unhappy, because the gods were dishonoured, and the ancient worship heglected. Orosius, a Christian, did not deny the melancholy facts, but, to obviate an objection so dishonourable to the true religion, he endeavours to prove from historiaus, both sacred and profane, that calamities of every sort had existed in every age, as many and as great as those that existed then.

If Orosius has reasoned right (and his work is an elaborate one) it follows, that the lamentations made then, and inade ever since, are no more than natural declamations incidental to man; declamations naturally arising (let him live at any period) from the superior efficacy of present events upon present sensations.

There is a praise belonging to the past, congenial with this censure; a praise formed from negatives, and best illustrated by

Thus a declaimer might assert (supposing he had a wish, by exalting the eleventh century, to debase the present) that "in "the time of the Norman conqueror we thad no routs, no ridottos, no Newmarkets, "no candidates to bribe, no voters to be to bribed, &c." and string on negatives as long as he thought proper.

What then are we to do, when we hear such panegyric?—Are we to deny the facts?
—That cannot be—Are we to admit the conclusion?—That appears not quite agreeable.—No method is left, but to compare evils to evils; the evils of 1066 with those of 1780; and see whether the former age had not evils of its own, such as the present never experienced, because they do not now exist.

We may allow the evils of the present day to be real—we may even allow that a much larger number might have been added —but then we may alledge evils, by way of return, felt in those days severely, but now not feit at all.

We may assert, "we have not now as "happened then, seen our country conquered by foreign invaders, nor our protiperty taken from us, and distributed
among the conquerors; nor ourselves,
thom freemen, debased into slaves; nor
our rights submitted to unknown laws,

"imported, without our consent, from

Should the same reasoning be urged in favour of times nearly as remote, and other imputations of evil be brought, which, though well known now, did not then exist, we may still retort that—" we are no "longer now," as they were then, subject to feudal oppression; nor dragged to war, as they were then, by the petitytyran of a neighbouring castle; nor involved in scenes of blood, as they were then, and that for many years, during the uniform interesting disputes between a Stephen

"And a Maud."

Should the same declaimer pass to a later period, and praise, after the same manner, the reign of Henry the Second, we have then to retort, "that we have now no "Beckets." Should he proceed to Richard the first, "that we have now no holy wars"—to John Lackland, and his son Henry, "that we have now no barons wars"—and with regard to both of them, "that, though we enjoy at this instant all the benefits of Magna Charta, we have not been compelled to purchase them at the "price of our blood."

A series of convulsions bring us, in 2 few years more, to the wars between the houses of York and Laucaster-thence from the fall of the Lancaster family to the calamities of the York family, and its final destruction in Richard the third-thence to the oppressive period of his avaricious successor; and from him to the formidable reign of his relentless son, when neither the coronet, nor the mitre, nor even the crown, could protect their wearers; and when (to the amazement of posterity) those, by whom church authority was denied, and those, by whom it was maintained, were dragged together to Smithfield, and burnt at one and the same stake.

The reign of his successor was short and turpid, and soon followed by the gloomy one of a bigotted woman.

We stop here, thinking we have instances enough. Those, who hear any portion of these past times praised for the invidious purpose above-mentioned, may answer by thus retorting the calamities and crimes which existed at the time praised, but which to we exist no more. A true estimate can never be formed, but in consequence of such a comparison; for if we drop-the laudable, and alledge only the bad, or drop the bad, and alledge only thelaudable, there is no age, whatever its real character, but

a good one or a bad one.

If I may be permitted in this place to add an observation, it shall be an observation founded upon many years experience. I have often heard declamations against the them, as if they were the worst of animals; treacherous, false, selfish, envious, oppresand have heard the sentiment delivered been nothing more) "I prove my asser- concerning this." Eccl. vii. 10. "tion by an example where I cannot err; " been just describing."

dangerous to ask him, even in a gentle whisper-" You have been talking, with much confidence, about certain profligate are not one of the number ?"

I hope I may be pardoned for the fol-

relating it, to make myself a party. "Sitting once in my library with a 61 friend, a worthy but melancholy man, "I read him out of a book, the follow-" ing passage-

41 truly than of old, that virtue is gone; the 61 church is under foot; the clergy is in error; the devil reigneth, &c. &c. My 66 friend interrupted me with a sigh, and " said, Alas! how true! How just a picto emotion! can you suppose any other but to the present? were any before ever so "bad, so corrupt, so, &c .- Forgive me they return." Ecc. i. 9. 11. 16. 41 (said I) for stopping you-the times I 13 four hundred years ago; its author Sir "John Mandeville, who died in 1371."

As man is by nature a social animal, good-humour seems an ingredient highly necessary to his character. It is the salt universe, which gives a seasoning to the feast of life; and which, if it be wanting, surely renders the feast incomplete. Many causes contribad opinions go farther, and are applied "all new."

may be made to pass at pleasure either for to the universe, then they lead to something worse, for they lead to Atheism. The melancholy and morose character being thus insensibly formed, morals and piety sink of course; for what equals have we to love, or what superior have we to revere, present race of men; declamations against when we have no other objects left than those of hatred or of terror?

It should seem then expedient, if we vasive, tyrannical, &c. &c. This (I say) I lue our better principles, nay, if we value have often heard from grave declaimers, our own happiness, to withstand such dreary sentiments. It was the advice of a with a kind of oracular pomp.—Yet I wise man-16 Say not thou, what is the never heard any such declaimer say (what cause that the former days were better than would have been sincere at least, if it had these? For thou dost not inquire wisely

Things present make impressions amaz-"I assert myself to be the wretch I have ingly superior to things remote; so that, in objects of every kind, we are easily mis-So far from this, it would be perhaps taken as to their comparative magnitude. Upon the canvass of the same picture a near sparrow occupies the space of a distant eagle; a near mole-hill, that of a disbeings-Are you certain, that you yourself tant mountain. In the perpetration of crimes there are few persons, I believe, who would not be more shocked at actulowing anecdote, although compelled, in ally seeing a single man assassinated (even taking away the idea of personal danger) than they would be shocked in reading the massacre of Paris.

The wise man, just quoted, wishes to save us from these errors. He has already in-" In our time it may be spoken more formed us-" The thing that hath been, is that which shall be; and there is no new thing under the sun. Is there any thing whereof it may be said, See, this is new? It hath been already of old time, which was before us." He then subjoins the " ture of the times !- l asked him, of what cause of this apparent novelty-" Things " times ?-Of what times ! replied he with past, when they return, appear new, if they are forgotten; and things present will appear so, should they too be forgotten, when

This forgetfulness of what is similar in " am reading of are older than you ima- events which return (for in every returnthe gine; the sentiment was delivered about ling event such similarity exists) is the forgetfulness of a mind uninstructed and weak; a mind ignorant of that great, that providential circulation which never ceases for a moment through every part of the

It is not like that forgetfulness which I once remember in a man of letters; who when, at the conclusion of a long life, bute to impair this amiable quality, and he found his memory began to fail, said nothing perhaps more than bad opinions cheerfully-" Now I shall have a pleaof mankind. Bad opinions of mankind 44 sure I could not have before; that of naturally lead us to Misanthropy. If these 45 reading my old books, and finding them There was in this consolation something philosophical and pleasing. And yet perhaps it is a higher philosophy (could we attain it) not to forget the past, but in contemplation of the past to view the future; so that we may say, on the worst prospects, with a becoming resignation, what Aneas said of old to the Gamean Prophetess,

Virgin, no scenes of ill
To me, or new, or mexpected rise;
I've seen 'em all; have seen, and long before
Within myself revolv'd 'em in my mind.
AED. VI. 103, 104, 105.

In such a conduct, if well founded, there is not only fortitude, but piety: Fortitude, which never sinks, from a conscious integrity: and Piety, which never resists, by referring all to the Divine Will.

Harris.

§ 216. The Character of the Man of Business often united with, and adorned by, that of the Scholar and Philosopher.

Philosophy, taking its name from the love of wisdom, and having for its end the investigation of truth, has an equal regard both to practice and speculation, in as much as truth of every kind is similar and congenial. Hence we find that some of the most illustrious actors upon the great theatre of the world have been engaged at times in philosophical speculation. Pericles, who governed Athens, was the disciple of Anaxagoras; Epaminondas spent his youth in the Pythagorean school; Alexander the Great had Aristotle for his preceptor; and Scipio made Polybius his companion and friend. Why need I mention Cicero, or Cato, or Brutus? The orations, the epistles, and the philosophical works of the first, shew him sufficiently conversant both in action and contemplation. So eager was Cato for knowledge, even when surrounded with business, that he used to read philosophy in the senatehouse, while the senate was assembling: and as for the patriot Brutus, though his life was a continual scene of the most important actions, he found time not only to study, but to compose a Treatise upon Virtue.

When these were gone, and the worst of times succeeded, Thrasea Pætus, and Helvidius Priscus, were at the same period both senators and philosophers; and appear to have supported the severest trials of

tyrannic oppression, by the manly system of the Stoic moral. The best emperor whom the Romans, or perhaps any nation, ever knew, Marcus Antoninus, was involved during his whole life in business of the last consequence; sometimes conspiracies forming, which he was obliged to dissipate; formidable wars arising at other times, when he was obliged to take the field. Yet during none of these periods did he forsake philosophy, but still persisted in meditation, and in committing his thoughts to writing, during moments gained by stealth from the hurry of courts and campaigns.

If we descend to later ages, and search our own country, we shall find Sir Thomas More, Sir Philip Sidney, Sir Walter Raleigh, Lord Herbert of Cherbury, Milton, Algernon Sidney, Sir Walter Tenple, and many others, to have been all of them eminent in public life, and yet at the same time conspicuous for their speculations and literature. If we look abroad, examples of like characters will occur in other countries. Grotius, the poet, the critic, the philosopher, and the divine, was employed by the court of Sweden as ambassador to France; and De Witt, that acute but unfortunate statesman, that pattern of parsimony and political accomplishments, was an able mathematician, wrote upon the Elements of Curves, and applied his algebra with accuracy to the trade and commerce of his country.

And so much in defence of Philosophy. against those who may possibly undervalue her, because they have succeeded without her; those I mean (and it must be confest they are many) who, having spent their whole lives in what Milton calls the " busy hum of men," have acquired to themselves habits of amazing efficacy, unassisted by the helps of science and erudition. To such the retired student may appear an awkward being, because they want a just standard to measure his merit. But let them recur to the bright examples before alledged; let them remember that these were eminent in their own way; were men of action and business; men of the world; and yet did they not disdain to cultivate philosophy, nay, were many of them perhaps indebted to her for the splendor of their active character.

This reasoning has a farther end. It justifies me in the address of these philosophical arrangements, as your Lordthin ship* has been distinguished in either character, I mean in your public one, as well as in your private. Those who know the history of our foreign transactions, know the reputation that you acquired in Germany, by negotiations of the last importance: and those who are honoured with your nearer friendship, know that you can speculate as well as act, and can employ your pen both with elegance and instruction.

It may not perhaps be unentertaining to your Lordship to see in what manner the 'Preceptor of Alexander the Great arranged his pupil's ideas, so that they might not cause confusion, for want of accurate disposition.' It may be thought also a fact worthy your notice, that he became acquainted with this method from the venerable Pythagoras, who, unless he drew it from remoter sources, to us unknown, was, perhaps, himself its inventor and original teacher.

Harris.

§ 217. The Progressions of Art disgustful, the Completion beautiful.

Fables relate that Venus was wedded to Vulcan, the goddess of beauty to the god of deformity. The tale, as some explain it, gives a double representation of art; Vulcan shewing us the progressions of art; and Venus the completions. The progressions, such as the hewing of stone, the grinding of colours, the fusion of metals, these all of them are laborious, and many times disgustful; the completions, such as the temple, the palace, the picture, the statue, these all of them are beauties, and justly call for admiration.

Now if logic be one of those arts, which help to improve human reason, it must necessarily be an art of the progressive character; an art which, not ending with itself, has a view to something farther. If then, in the speculations upon it, it should appear dry rather than elegant, severe rather than pleasing, let it plead, by way of defence, that, though its importance may be great, it partakes from its very nature (which cannot be changed) more of the deformed god, than of the beautiful goddess.

Bid.

\$ 218. Thoughts on Elegance.

Having answered the objections usually brought against a permanent sense of

Addressed to the right honourable Thomas Lord Hyde, chancellor of the Duchy of Lancaster, &c. beauty, let us now proceed to single out the particular species or kinds of beauty; and begin with elegance of person, that so wonderfully elevates the human character.

Elegance, the most undoubted offspring and visible image of fine taste, the moment it appears, is universally admired: men disagree about the other constituent parts of beauty, but they all unite without hesitation to acknowledge the power of elegance.

The general opinion is, that this most conspicuous part of beauty, that is perceived and acknowledged by every body, is yet utterly inexplicable, and retires from our search when we would discover what it is. Where shall I find the secret retreat of the graces, to explain to me the elegance they dictate, and to paint in visible colours, the fugitive and varying enchantment that hovers round a graceful person, yet leaves us for ever in agreeable suspence and confusion? I need not seek for them, madain; the graces are but emblems of the human mind, in its loveliest appearances; and while I write for you, it is impossible not to feel their in-

Personal elegance, for that is the object of our present enquiry, may be defined the image and reflection of the grandeur and beauty of the invisible soul. Grandeur and beauty in the soul itself are not objects of seuse; colours cannot paint them, but they are united to sentiments that appear visible: they bestow a noble meaning and importance of attitude, and diffuse inexpressible loveliness over the person.

When two or more passions or sentiments unite, they are not so readily distinguished, as if they had appeared separate; however, it is easy to observe, that the complacency and admiration we feel in the presence of elegant persons, is made up of respect and affection; and that we are disappointed when we see such persons act a base or indecent part. These symptoms plainly show, that personal elegance appears to us to be the image and reflection of an elevated and beautiful mind. In some characters, the grandeur of soul is predominant; in whom beauty is majestic and awful. In this style is Miss F ... In other characters, a soft and attracting grace is more conspicuous: this latter kind is more pleasing, for an obvious reason. But elegance CADDO

cannot exist in either alone, without a mixture of the other; for majesty without the beautiful, would be haughty and disgusting; and easy accessible beauty would lose the idea of elegance, and be-

come an object of contempt.

The grandeur and beauty of the soul charm us universally, who have all of us implanted in our bosoms, even in the midst of misery, passions of high descent, immense ambition, and romantic hopes, You may conceive an imprisoned bird, whose wild notes, prompted by the approach of spring, gave her a confused notion of joy, although she has no distinct idea of airy flights and summer groves; so when man emerging from wretchedness assumes a nobler character, and the elevation of the human genius appears openly, we view, with secret joy and delightful amazement, the sure evidence and pledge of our dignity: the mind catches fire by a train that lies within itself, and expands with conscious pride and merit, like a generous youth over the images of his country's heroes. Of the softened and engaging part of elegance, I shall have occasion to speak at large hereafter.

Personal elegance or grace is a fugitive lustre, that never settles in any part of the body, you see it glance and disappear in the features and motions of a graceful person; it strikes your view; it shines like an exhalation: but the moment you follow it, the wandering flame vanishes, and immediately lights up in something else; you may as well think of fixing the pleasing delusion of your dreams, or the colours of a dissolving rainbow.

You have arisen early at times, in the summer season, to take the advantage of the cool of the morning, to ride abroad, Let us suppose you have mistaken an hour or two, and just got out a few minutes before the rising of the sun. You see the fields and woods that lay the night before in obscurity, attiring themselves in beauty and verdure; you see a profusion of brilliants shining in the dew; you see the stream gradually admitting the light into its pure bosom; and you hear the birds, which are awakened by a rapture, that comes upon them from the morning. If the eastern sky be clear, you see it glow with the promise of a flame that has not yet appeared; and if it be overcast with clouds, you see those clouds stained by a bright red, bordered with gold or silver, that by the changes appear volatile, and ready to vanish. How various and beautiful are those appearances, which are not the sun, but the distant effects of it over different objects! In like manner the soul flings inexpressible charms over the human person and actions; but then the cause is less known, because the soul for ever shines behind a cloud, and is always retired from our senses.

You conceive why elegance is of a fugitive nature, and exists chiefly in motion: as it is communicated by the principle of action that governs the whole person, it is found over the whole body, and is fixed no where. The curious eye with eagerness pursues the wandering beauty, which it sees with surprize at every turn, but is never able to overtake. It is a waving flame, that, like the reflection of the sun from water, never settles; it glances on you in every motion and disposition of the body: its different powers, through attitude and motion seem to be collected in dancing, wherein it plays over the arms, the legs, the breast, the neck, and in short the whole frame: but if grace has any fixed throne, it is in the face, the residence of the soul, where you think a thousand times it is just issuing

Elegance assumes to itself an empire equal to that of the soul; it rules and inspires every part of the body, and makes use of all the human powers; but it particularly takes the passions under its charge and direction, and turns them into a kind of artillery, with which it does infinite execution.

The passions that are favourites with the graces are modesty, good nature, particularly wheff it is heightened by a small colouring of affection into sweetness, and that fine languor which seems to be formed of a mixture of still joy and hope. Surprize, shame, and even grief and anger, have appeared pleasing under proper restrictions; for it must be observed, that all excess is shocking and disagreeable, and that even the most pleasing passions appear to most advantage when the tincture they cast over the countenance The passions is enfeebled and gentle. that are enemies to the graces are, impudence, affectation, strong and harsh degrees of pride, malice and austerity.

There

There is an union of the fine passions, but so delicate that you cannot conceive any one of them separate from the rest, called sensibility, which is requisite in an elegant deportment; it chiefly resides in the eve, which is indeed the seat of the passions.

I have spoken of the passions only as they are subservient to grace, which is the object of our present attention. The face is the mother-country, if I may call it so, or the habitation of grace; and it visits the other parts of the body only as distant provinces, with some little partiafity to the neck, and the fine basis that supports it: but the countenance is the very palace in which it takes up its restdince; it is there it revels through its various apartments: you see it wrapped in clouded majesty upon the brow; you discover it about the lips hardly rising to a smile, and vanishing in a moment, when it is rather perceived than seen; and then by the most engaging vicissitudes, it enlivens, flames, and dissolves in the

You have, I suppose, all along observed, that I am not treating of beauty, which depends on different principles, but of that elegance which is the effect of a delicate and awakened taste, and in every kind of form is the enchantment that attracts and pleases universally, even without the assistance of any other charms whereas without it no degree of beauty is charming. You have undoubtedly seen women lovely without much beauty, and handsome without being lovely; it is gracefulness causes this variation, and throws a lustre over disagreeable features, 25 the sun paints a showery cloud with the colours of the rainbow.

i before remarked, that the grace of every elegant person is varied agreeable to the character and disposition of the person it beautifies; I am sensible you readily conceive the reason. Elegance is the natural habit and image of the soul beaming forth in action; it must therefore be expressed by the peculiar features, air, and disposition of the person; it must arise from nature, and flow with ease and a propriety that distinguishes it. The imitation of any particular person, however graceful, is dangerous, lest the affectation appear; but the unstudied elegance of nature is acquired by the example and conversation of several elegant persons of different characters, which peo-

ple adapt to the import of their own gestures, without knowing how.

It is also because elegance is the reflection of the soul appearing in action, that good statues, and pictures drawn from life, are laid before the eye in mo-If you look at the old Gothic churches built in barbarous ages, you will see the statues reared up dead and inani-

mate against the walls.

I said, at the beginning of this little discourse, that the beauty of dress results from mode or fashion, and it certainly does so in a great measure; but I must limit that assertion by the following observation. that there is also a real beauty in attiro that does not depend on the mode: those robes which leave the whole person at liberty in its motions, and that give to the imagination the natural proportions and symmetry of the body, are always more becoming than such as restrain any part of the body, or in which it is lost or disfigured. You may easily imagine how a pair of stays, faced tightly about the Minerva we admired, would oppress the sublime beauty of her comportment and figure. Since persons of rank cannot chuse their own dress, but must run along with the present fashion, the secret of dressing gracefully must consist in the slender variations that cannot be observed to desert the fashion, and yet approach nigher to the complexion and import of the countenance, and that at the same time allows to the whole body the greatest possible freedom, ease, and imagery: by imagery I mean, that as a good painter will shew the effect of the muscles that do not appear to the eye, so a person skilful in dress will display the elegance of the form. though it be covered and out of view. As the taste of dress approaches to perfection all art disappears, and it seems the effect of negligence and instinctive inattention; for this reason its beauties wrise from the manner and general air rather than from richness, which last, when it becomes too gross and oppressive, destroys the elegance. A brilliancy and parade in dress is therefore the infallible sign of bad taste, that in this contraband manner endeavours to make amends for want of true elegance, and bears a relation to the heaps of ornament that encumbered the Gothic buildings. Apelles observing an Helen painted by one of his scholars, that was overcharged with a rich dress, " I had, young man," said

Digitized by Google

he, " not being able to paint her beautiful, you have made her fine."

Harsh and violent motions are always unbecoming. Milton attributes the same kind of motion to his angels that the Heathens did to their deities, soft, sliding, without step. It is impossible to preserve the attractions in a country dance that attend on a minuet; as the step quickens, the most delicate of the graces retire. The rule holds universally through all action, whether quick or slow: it should always partake of the same polished and softened motion, particularly in the transitions of the person seems to hover and reside.

The degrees run very high upon the scale of elegance, and probably few have arrived near the highest pitch; but it is certain, that the idea of surprising beauty, that was familiar in Greece, has been hardly conceived by the moderns; many of their statues remain the objects of our admiration, but wholly superior to imitation; their pictures, that have sunk in the wreck of time, appear in the descriptions made of them to have equal imagination with the statues; and their poetry abounds with the same celestial imagery. what puts this matter out of doubt is, that their celebrated beauties were the models of their artists, and it is known that the elegancies of Thais and Phryne were copied by the famous painters of Greece, and consigned to canvas and marble to astonish and charm distant ages.

Personal elegance, in which taste assumes the most conspicuous and noble appearance, confuses us in our enquiries after it, by the quickness and variety of its changes, as well as by a complication that is not easily unravelled. I defined it to be the image and reffection of a great and beautiful soul; let us separate the distinct parts of this variety; when they appear asunder you will find them perfectly familiar and intelligible.

The first, and most respectable part, that enters into the composition of elegance, is the lofty consciousness of worth or virtue, which sustains an habitual decen-

cy, and becoming pride.

The second, and most pleasing part, is a display of good-nature approaching to affection, of gentle affability, and, in reneral, of the pleasing passions. It seems difficult to reconcile these two parts, and in fact it is so; but when they unite, then they appear like a reserved, and virgin

kindness, that is at once noble and soft, that may be won, but must be courted with delicacy.

The third part of elegance is the appearance of a polished and tranquil habit of mind, that softens the actions and emotions, and gives a covert prospect of innocence and undisturbed repose. I will treat of these separate, and first of dignity

of soul.

I observed, near the beginning of this discourse, in answer to an objection you made, that the mind has always a taste for truth, for gratitude, for generosity, and greatness of soul: these, which are peculiarly called sentiments, stamp upon the human spirit a dignity and worth not to be found in any other animated being. However great and surprising the most glorious objects in nature be, the heaving ocean, the moon that guides it, and casts a softened lustre over the night, the starry firmament, or the sun itself; yet their beauty and grandeur instantly appear of an inferior kind, beyond all comparison, to this of the soul of man. These sentiments are united under the general name of virtue; and such are the embellishments they diffuse over the mind, that Piato, a very polite philosopher, says finely, " If Virtue was to appear in a visible shape, all men would be enamoured of her."

Virtue and truth are inseparable, and take their flight together. A mind devoid of truth is a frightful wreck; it is like a great city in ruins, whose mouldering towers, just bring to the imagination the mirth and life that once were there, and is now no more. Truth is the genius, of taste, and enters into the essence of simple beauty, in wit, in writing, and throughout the fine arts.

Generosity covers almost all other defects, and raises a blaze around them in which they disappear and are lost; like sovereign beauty, it makes a short cut to our affections; it wins our hearts without resistance or delay, and unites all the world to favour and support its designs.

Grandeur of soul, fortitude, and a resolution that haughtily struggles with despair and will neither yield to, nor make terms with misfortunes; which through every situation, reposes a noble confidence in itself, and has an immoveable view to future glory and honour, astonishes the world with admiration and delight. We, as it were, lean forward with surprise and trembling joy to behold the human soul collecting its

strength

strength, and asserting a right to superior fates. When you leave man out of your account, and view the whole visible creation beside, you indeed see several traces of grandeur and unspeakable power, and the intermixture of a rich scenery of beauty; yet still the whole appears to be but a solemn absurdity, and to have a littleness and insignificancy. But when you restore man to prospect, and put him at the head of it, endued with genius and an immortal soul; when you give him a passion for truth, boundless views that spread along through elemity, and a fortitude that struggles with fate, and vields not to misfortunes, then the skies, the ocean, and the earth, take the stamp of worth and dignity from the noble inhabitant whose purposes they serve.

A mind fraught with the virtues is the natural soil of elegance. Unaffected truth, generosity, and grandeur of soul, for ever please and charm: even when they break from the common forms, and appear wild and unmethodized by education, they are still beautiful. On the contrary, as soon as we discover that outward elegance, which is formed by the mode, to want truth, generosity, or grandeur of soul, it instantly sinks in our esteem like counterfeit coin, and we are sensible of a reluctant disappointment, like that of the lover in the epigram, who became enamoured with the lady's voice, and the softness of her hand in the dark, but was cured of his passion as soon as he had light to view her.

Let us now pass on to the most pleasing part of elegance, an habitual display of the kind and gentle passions.

We are naturally inclined to love those who bear an affection to us; and we are charmed with the homage that is paid to our merit: by these weaknesses politeness attacks us. The well-bred gentleman always in his behaviour insinuates a regard to others, tempered with respect. His attention to please confesses plainly his kindness to you, and the high esteem he holds you in. The assidnous prevention of our wishes, and that yielding sweetness complaisance puts on for our sake, are irresistible; and although we know this kind of flattery to be prostitute and liabitual, yet it is not indefferent to us : we receive it in a manner that shows how much it gratifies us.

The desire of being agreeable finds out the art of being so without study or labour. Rustics who fall in love, grow unusually polite and engaging. This new charm, that

has altered their natures, and suddenly endued them with the powers of pleasing, is nothing more than an enlivened attention to please, that has taken possession of their minds, and tinctured their actions. We ought not to wonder that love is thus enchanting: its tendes assiduity is but the natural address of the passion; politeness borrows the flattering form of affection, and becomes agreeable by the appearance of kindness.

What pleases us generally appears beautiful. Complaisance, that is so engaging, gives an agreeableness to the whole person, and creates a beauty that nature gave not to the features; it submits, it promises, it applauds in the countenance; the heart lays itself in smiles at your feet, and a voice that is indulgent and tender, is always heard with pleasure.

The last constituent part of elegance is the picture of a tranquil soul, that appears in softening the actions and emotions, and exhibits a retired prospect of happiness and innocence.

A calm of mind that is seen in graceful easy action, and in the enfeeblement of our passions, gives us an idea of the golden age, when human nature, adorned with innocence, and the peace that attends it, reposed in the arms of content. This serene prospect of human nature always pleases us; and although the content, whose image it is, be visionary in this world, and we cannot arrive at it, yet it is the point in imagination we have finally in view, in all the pursuits of life, and the native home for which we do not cease to languish.

The sentiment of tranquillity particularly beautifies pastoral poetry. The images of calm and happy quiet that appear in shaded groves, in silent vales, and slumbers by falling streams, invite the post to indulge his genius in rural scenes. The music that fulls and composes the mind, at the same time enchants it. The hoe of this beauteous ease, cast over the human actions and emotions, forms a very delightful part of elegance, and gove to other constituent parts an appearance of nature and truth: for in a tranged state of mind, undisturbed by wants or tears, the views of men are generous and elevated. From the combination of these due parts, grandeur of soul, complacency, and ease, arise the enchantments of elegance; but the appearance of the two last are oftener found together, and then they form politeness.

When we take a view of the separate

parts that constitute personal elegance, we immediately know the seeds that are proper to be cherished in the infant mind, to bring forth the beauteous production. The virtues should be cultivated early with sacred Good-nature, modesty, affability, and a kind concern for others, should be carefully inculcated: and an easy unconatrained dominion acquired by habit over the passions. A mind thus finely prepared, is capable of the highest lustre of elegance; which is afterwards attained with as little labour as our first language, by only associating with graceful people of different characters, from whom an habitual gracefulness will be acquired, that will bear the natural unaffected stamp of our own minds: in short, it will be our own character and genius stripped of its native rudeness, and enriched with beauty and attraction.

Nature, that bestows her favours without respect of persons, often denies to the
great the capacity of distinguished elegance, and flings it away in obscure villages. You sometimes see it at a country
fair spread an amiableness over a sun-burnt
girl, like the light of the moon through a
mist; but such, madam, is the necessity of
habitual elegance acquired by education
and converse, that if even you were born
in that low class, you could be no more
than the fairest damsel at the may-pole,
and the object of the hope and jealousy of
a few rustics.

People are rendered totally incapable of elegance by the want of good-nature, and the other gentle passions; by the want of modesty and sensibility; and by a want of that noble pride, which arises from a consciousness of lofty and generous sentiments. The absence of these native charms is generally supplied by a brisk stupidity, an impudence unconscious of defect, a cast of malice, and an uncommon tendency to ridicule; as if nature had given these her step-children an instinctive intelligence, that they can rise out of contempt only by the depression of others. For the same reason it is, that persons of true and finished taste seldom affect ridicule, because they are conscious of their own superior merit. Pride is the cause of ridicule in the one, as it is of candour in the other; but the effects differ as the studied parade of poverty does from the negligent grandeur of riches. You will see nothing more common in the world, than for people, who by stupidity and insensibility are incapable of the graces, to commence wits on the strength of the *petite* talents of mimicry, and the brisk tartness that ill-nature never fails to supply.

From what I have said it appears, that a sense of elegance is a sense of dignity, of virtue, and innocence, united. Is it not natural then to expect, that in the course of a liberal education, men should cultivate the generous qualities they approve and assume? But instead of them, men only aim at the appearances, which require no selfdenial; and thus, without acquiring the virtues, they sacrifice their honesty and sincerity: whence it comes to pass, that there is often the least virtue, where there is the greatest appearance of it; and that the polished part of mankind only arrive at the subtile corruption, of uniting vice with the dress and complexion of virtue.

I have dwelt on personal elegance, because the ideas and principles in this part of good taste are more familiar to you. We may then take them for a foundation, in our future observations, since the same principles of easy grace and simple grandeur will animate our ideas with an unstudied propriety, and enlighten our judgments in beauty, in literature, in sculpture, painting, and the other departments of fine taste.

Usher.

4 219. On Personal Beauty.

I shall but slightly touch on our taste of personal beauty, because it requires no directions to be known. To ask what is beauty, says a philosopher, is the question of a blind man. I shall therefore only make a few reflections on this head, that to what I have to say, it is necessary to make some observations on physiognomy.

There is an obvious relation between the ruind and the turn of the features, so well known by instinct, that every one is more or less expert at reading the countenance. We look as well as speak our minds; and amongst people of little experience, the look is generally most sincere. This is so well understood, that it becomes a part of education to learn to disguise the countenance, which yet requires a habit from early youth, and the continual practice of hypocrisy, to deceive an intelligent eye. The natural virtues and vices not only have their places in the aspect, even acquired habits that much affect the mind settle there; contemplation, in length of time, gives a cast of thought on the countenance.

Now to come back to our subject. The

them. The mind has a sensibility, and clear knowledge, in many instances without reflection, or even the power of reasoning upon its own perceptions. We can no more account for the relation between the passions of the mind and a set of features, than we can account for the relation between the sounds of music and the passions ; the eye is judge of the one without principles or rules, as the ear is of the other. It is impossible you should not take notice of the remarkable difference of beauty in the same face, in a good and in ill humour: and if the gentle passions, in an indifferent face, do not change it to perfect beauty, it is because nature did not originally model the features to the just and familiar expression of those passions, and the genuine expressions of nature can never be wholly obliterated. But it is necessary to observe, that the engaging import that forms beauty, is often the symbol of passions that, although pleasing, are dangerous to virtue; and that a firmness of mind, whose cast of feature is much less pleasing, is more favourable to virtue. From the affinity between beauty and the passions it must follow, that beauty is relative, that is, a sense of human beauty is conlined to our species; and also, as far as we have power over the passions, we are able to improve the face, and transplant charms into it; both of which observations have been often made. From the various principles of beauty, and the agreeable combinations, of which the face gives intelligence, springs that Variety found in the style of beauty.

Complexion is a kind of beauty that is only pleasing by association. The brown, the fair, the black, are not any of them original beauty; but when the complexion is united in one picture on the imagination, with the assemblage that forms the image of the tender passions, with gentle smiles, and kind endearments, it is then inseparable from our idea of beauty, and forms a part of it. From the same cause, a national set of features appear amiable to the inhabitants, who have been accustomed to see the amiable dispositions through them. This observation resolves a difficulty, that often occurs in the reflections of men on our present subject. We all speak of beauty as if it were acknowledged and settled by a public standard; yet we find, in fact, that people, in placing their affections, often have little tion on the tender passion in our species.

assemblage called beauty, is the image of regard to the common notions of beauty. moble sentiments and amiable passions in The truth is, complexion and form being the face; but so blended and confused that the charms that are visible and conspicuous, we are not able to separate and distinguish the common standard of beauty is generally restrained to those general attractions; but since personal grace and the engaging passions, although they cannot be delineated, have a more universal and uniform power, it is no wonder people, in resigning their hearts so often contradict the common received standard. Accordingly, as the engaging passions and the address are discovered in conversation, the tender attackments of people are generally fixed by an intercourse of sentiment, and seldom by a transient view, except in romances and novels. It is further to be observed, that when once the affections are fixed, a new face with a higher degree of beauty will not always have a higher degree of power to remove them, because our affections arise from a source within ourselves, as well as from external beauty; and when the teader passion is attached by a particular object, the imagination surrounds that object with a thousand ideal embellishments that exist only in the mind of the lover.

The history of the short life of beauty may be collected from what I have said. In youth that borders on infancy, the passions are in a state of vegetation, they only appear in full bloom in maturity; for which reason the beauty of youth is no more than the dawn and promise of future beauty. The features, as we grow into years, gradually form along with the mind: different sensibilities gather into the countenance, and become beauty there, as colours mount in a tulip, and enrich it. When the eloquent force and delicacy of sentiment has continued some little time, age begins to stiffen the features, and destroy the engaging variety and vivacity of the countenance, the eye gradually loses its fire, and is no longer the mirror of the agreeable passions. Finally, old age furrows the face with wrinkles, as a barbarous conqueror overturns a city from the foundation, and transitory beauty is extinguished.

Beauty and elegance are nearly related, their difference consists in this, that elegance is the image of the mind displayed in motion and deportment; beauty is an image of the mind in the countenance and form; consequently beauty is of a more fixed nature, and owes less to art and

When I speak of beauty, it is not wholly out of my way to make a singular observa-L12 Innocent

Ignocent and virtuous love casts a beauteous hue over human nature: it quickens and strengthens our admiration of virtue, and our detestation of vice; it opens our eyes to our imperfections, and gives us a pride in excelling; it inspires us with heroic sentiments, generosity, a contempt of life, a boldness for enterprise, chastity, and purity of sentiment. It takes a similitude to devotion, and almost deilies the object of passion. People whose breasts are dulled with vice, or stopified by nature, call this passion romantic love; but when it was the mode, it was the diagnostic of a virtuous age. These symptoms of heroism spring from an obscure principle, that in a noble mind unites itself with every passionate view in life: this nameless principle is distinguished by endowing people with extraordinary powers and enthusiasm in the pursuit of their favourite wishes, and by disgust and disappointment when we arrive at the point where our wishes seem to be completed. It has made great conquerors despise dangers and death in their way to victory, and sigh afterwards when they had no more to conquer. Usher.

\$ 220. On Conversation.

From external beauty we come to the charms of conversation and writing. Words, by representing ideas, become the picture of our thoughts, and communicate them with the greatest fidelity. But they are not only the signs of sensible ideas, they exhibit the very image and distinguishing likeness of the mind that uses them.

Conversation does not require the same merit to please that writing does. The human soul is endued with a kind of natural expression, which it does not acquire. The expression I speak of consists in the significant modulations and tones of voice, accompanied, in unaffected people, by a propriety of gesture. This native language was not intended by nature to represent the transitory ideas that come by the senses to the imagination, but the passions of the mind and its emotions only; therefore modulation and gesture give life and passion to words; their mighty force in armory is very conspicuous: but although their effects be milder in conversation, yet they are very sensible; they agirate the soul by a variety of gentle sensations, and help to form that sweet charm that makes the most trifling subjects engaging. This fine expression, which is

not learned, is not so much taken notice of as it-deserves, because it is much superseded by the use of artificial and acquired language. The modern system of philosophy has also concurred to shut it out from our reflections.

It is in conversation people put on all their graces, and appear in the lustre of good-breeding. It is certain, good-breeding, that sets so great a distinction between individuals of the same species, creates nothing new, (I mean a good education) but only draws forth into prospect, with skill and address, the agreeable dispositions and sentiments that lay latent in the mind. You may call good-breeding artificial; but it is like the art of a gardener, under whose hand a barren tree puts forth its own bloom, and is enriched with its specific fruit. It is scarce possible to conceive any scene so truly agreeable, as an assembly of people elaborately educated, who assume a character superior to ordinary life, and support it with ease and familiarity.

The heart is won in conversation by its own passions. Its pride, its grandeur, its affections, lay it open to the enchantment of an insinuating address. Flattery is a gross charm, but who is proof against a gentle and yielding disposition, that infers your superiority with a delicacy so fine, that you cannot see the lines of which it is composed? Generosity, disinterestedness, a noble love of truth that will not deceive, a feeling of the distresses of others, and greatness of soul, inspires us with admiration along with love, and take our affections as it were by storm; but, above all, we are seduced by a view of the tender and affectionate passions: they carry a soft infection, and the heart is betrayed to them by its own forces. If we are to judge from symptoms, the soul that engages us so powerfully by its reflected glances, is an object of infinite beauty. Tobserved before, that the modulations of the human voice that express the soul, move us powerfully; and indeed we are affected by the natural emotions of the mind expressed in the simplest language: in short, the happy art, that, in conversation and the intercourse of life, lays hold upon our affections, is but a just address to the engaging passions in the human breast. But this syren power, like beauty, is the gift of nature.

Soft pleasing speech and graceful outward show, No arts can gain them, but the gods bestow. Pows Hom. From the various combinations of the several endearing passions and lofty sentiments, arise the variety of pleasing characters that beautify human society.

There is a different source of pleasure in conversation from what I have spoken of, called wit; which diverts the world so much, that I cannot venture to omit it, although delicacy and a refined taste hesitate a little, and will not allow its value to be equal to its currency. Wit deals largely in allusion and whimsical similitudes; its countenance is always double, and it unites the true and the funtastic by a nice gradation of colouring that cannot be perceived. You observe that I am only speaking of the ready wit of conversation.

Wit is properly called in to support a conversation where the heart or affections are not concerned; and its proper business is to relieve the mind from solitary inattention, where there is no room to move it by passion; the mind's eye, when disengaged, is diverted by being fixed upon a vapour, that dances, as it were, on the surface of the imagination, and continually alters its aspect: the motley image, whose comic side we had only time to survey, is too unimportant to be attentively considered, and luckily vanishes before we can view it on every side, Shallow folks expect that these who diverted them in conversation, and made happy bon mots, ought to write well; and imagine that they themselves were made to laugh by the force of genius: but they are generally disappointed when they see the admired character descend upon paper. The truth is, the frivolous turn and habit of a comic companion, is almost diametrically opposite to true genius, whose natural exercise is deep and slow-paced reflection. You may as well expect that a man should, like Caesar, form consistent schemes for subduing the world, and employ the principal part of his time in catching flies. I have often heard people express a surprise, that Swift and Addison, the two greatest masters of humour of the last age, were easily put out of countenance, as if pun, mimicry, or repartee, were the offspring of genius.

Whatever similitude may be between humour in writing, and humour in conversation, they are generally found to require different talents. Humour in writing is the offspring of reflection, and is by nice touches and labour brought to wear

the negligent air of nature: whereas, wit in conversation is an enemy to reflection, and glows brightest when the imagination flings off the thought the moment it arises, in its genuine new-born dress. Men a little elevated by liquor, seem to have a peculiar facility at striking out the capricious and fantastic images that raise our mirth; in fact, what we generally admire in sallies of wit, is the nicety with which they touch upon the verge of folly, indiscretion, or malice, while at the same time they preserve thought, subtlery, and good humour; and what we laugh at is the motley appearance, whose whimsical consistency we cannot account for.

People are pleased at wit for the same reason that they are fond of diversion of any kind, not for the worth of the thing, but because the mind is not able to bear an intense train of thinking; and yet the ceasing of thought is insufferable, or rather impossible. In such an une sy deleuma, the unsteady excursions of wit give the mind its natural action, without fatigue, and relieve it delightfully, by employing the imagination without requiring any reflection. Those who have an eternal appetite for wit, like those who are ever in quest of diversion, betray a frivolous minute genius, incapable of thinking.

Usher.

\$ 221. On Masic.

There are few who have not felt the charms of music, and acknowledged its expressions to be in elligible to the heart. It is a language of delightful sensations, that is far more eloquent than words: it breathes to the ear the clearest intimations; but how it was learned, to what origin we owe it, or what is the meaning of some of its most affecting strains, we know not.

We feel plainly that music touches and gently agitates the agreeable and sublime passions; that it wraps us in melaucholy, and elevates in joy; that it dissolves and inflames; that it melts us in tenderness, and rouses to rage; but its strokes are so fine and delicate, that, like a tragedy, even the passions that are wounded please; its sorrows are charming, and its rage heroic and delightful; as people feel the particular passions with different degrees of force, their taste of harmony must proportionably vary. Music then is a language directed to the passions; but the rudest passions put on a new nature and become become pleasing in harmony: let me add, also, that it awakens some passions which we perceive not in ordinary life. Particularly the most elevated sensation of music arises from a confused perception of ideal or visionary heauty and rapture, which is sufficiently perceivable to fire the imagination, but not clear enough to become an object of knowledge. This shadowy beauty the mind attempts, with a languishing curiosity, to collect into a distinct object of view and comprehension: but it sinks and escapes, like the dissolving ideas of a delightful dream, that are neither within the reach of the memory, nor yet totally fled. The noblest charm of music then, though real and affecting, seems too confused and fluid to be collected into a distinct idea. Harmony is always understood by the crowd, and almost always mistaken by musicians; who are, with hardly any exception, servile followers of the taste of mode, and who, having expended much time and pains on the mechange and practical part, lay a stress on the dextericies of hand, which yet have no real value, but as they serve to produce those collections of sound that move the passions. The present Italian taste for music is exactly correspondent to the taste of tragi-comedy, that about a century ago gained ground upon the stage. The musicians of the present day are charmed at the union they form between the grave and the fantastic, and at the surprising transitions they make between extremes, while every hearer who has the least remainder of the taste of nature left, is shocked at the strange jargon. If the same taste should prevail in painting, we must soon expect to see the woman's hearl, a horse's body, and a fish's tail, unued by soft gradations, greatly admired at our public exhibitions. Musical conflemen should take particular care to preserve in its full vigour and sensibility their original natural taste, which alone feels and discovers the true beauty of music.

If Milton, Shakespeare, or Dryden, had been born with the same genius and inspiration for music as for poetry, and had passed through the practical part without corrupting the natural taste, or blending with it prepossession in favour of the slights and dexterities of hand, then would their notes be tuned to passions and to sentiments as natural and expressive as the tones and modulations of the voice in discourse. The music and the thought

would not make different expressions: the hearers would only think impetuously; and the effect of the music would be to give the ideas a tumultuous violence and divine impulse upon the mind. Any person conversant with the classic poets, sees instantly that the passionate power of music I speak of, was perfectly understood and practised by the ancients; that the muses of the Greeks always sung, and their song was the echo of the subject, which swelled their pactry into enthusiasm and rapture. An impriry into the nature and merits of the ancient music, and a comparison thereof with modern composition, by a person of poetic genius and an admirer of harmony, who is free from shackles of practice, and the prejudices of the mode, aided by the countenance of a few men of rank, of elevated and true taste, would probably lay the present half Gothic mode of music in ruins, like those towers of whose little laboured ornaments it is an exact picture, and restore the Grecian taste of passionate harmony once more, to the delight and wonder of mankind. But as from the disposition of things, and the force of fashion, we cannot hope in our time to rescue the sacred lyre, and see it put into the hands of men of genius, I can only recal you to your own natural feeling of harmony, and observe to you, that its emotions are not found in the lahoused, lantastic, and surprising compositions that form the modern style of music: but you meet them in some few pieces that are the growth of wild, unvitiated taste: you discover them in the swelling sounds that wrap us in imaginary grandeur; in those plaintive notes that make us in love with woe; in the tones that utter the lover's sighs, and fluctuate the breast with gentle pain; in the noble stukes that coil up the courage and fury of the soul, or that full it in confused visions of joy: in short, in those affecting strains that find their way to the inward recesses of the heart:

Untwisting all the chains that the The hidden soul of harmony.

MILTON.

\$ 222. On Sculpture and Painting.

Sculpture and painting have their standard in nature; and their principles differ only according to the different materials made use of in these arts. The variety of his colours, and the flat surface on which the painter is at liberty to raise his magic objects.

objects, give him a vast scope for ornament, variety, harmony of parts, and opposition, to please the mind, and divert it from too strict an examination. The sculptor being so much confined, has nothing to move with but beauty, passion, and force of attitude; sculpture therefore admits of no mediocrity; its works are either intolerable, or very fine. In Greece, the finishing of a single statue was often the work of many years.

Sculpture and painting take their merit from the same spirit that poetry does; a justness, a grandeur, and force of expression; and their principal objects are, the sublime, the beautiful, and the passionate. Painting, on account of its great latitude, approaches also very near to the variety of poetry; in general their principles vary only according to the different mate-

rials of each.

Poetry is capable of taking a series of successive facts, which comprehend a whole action from the beginning. It puts the passions in motion gradually, and winds them up by successive efforts, that all conduce to the intended effect; the mind could never be agitated so violently, if the storm had not come on by degrees; besides, language, by its capacity of representing thoughts, of forming the communication of mind with mind, and describing emotions, takes in several great, awful, and passionate ideas that colours cannot represent; but the painter is confined to objects of vision, or to one point or instant of time: and is not to bring into view any events which did not, or at least might not happen, at one and the same The chief art of the historypainter, is to hit upon a point of time, that unites the whole successive action in one view, and strikes out the emotion you are desirous of raising. Some painters have had the power of preserving the traces of a recerling passion, or the mixed disturbed emotions of the mind, without impairing the principal passion. Medea of Timomachus was a miracle of this kind; her wild love, her rage, and her maternal pity, were all poured forth to the eye, in one portrait. From this mixture of passions, which is in nature, the murderess appeared dreadfully affect-

It is very necessary, for the union of design in painting, that one principal figure appear eminently in view, and that all the rest be subordinate to it: that is,

the passion or attention of that principal object should give a cast to the whole piece: for instance, if it be a wrestler, or a courser in the race, the whole scene should not only be active, but the attentions and passions of the rest of the figures should all be directed by that object. If it be a fisherman over the stream, the whole scene must be silent and meditative: if ruins, a bridge, or waterfall, even the living persons must be subordinate, and the traveller should gaze and look back with wonder. This strict union and concord is rather more necessary in painting than in poetry: the reason is, painting is almost palpably a deception, and requires the utmost skill in selecting a vicinity of probable ideas, to give it the air of reality and nature. For this reason also nothing strange, wonderful, or shocking to credulity, ought to be admitted in paintings that are designed after real life.

The principal art of the landscapepainter lies in selecting those objects of view that are beautiful or great, provided there be a propriety and a just neighbourhood preserved in the assemblage, along with a careless distribution that solicits your eye to the principal object where it rests; in giving such a glance or confused view of those that retire out of prospect, as to raise curiosity, and create in the imagination affecting ideas that do not appear; and in bestowing as much life and action as possible, without overcharging the piece. A landscape is enlivened by putting the animated figures into action; by flinging over it the chearful aspect which the sun bestows, either by a proper disposition of shade, or by the appearances that beautify his rising or setting; and by a judicious prospect of water, which always conveys the ideas of motion: a few dishevelled clouds have the same effect, but with somewhat less vivacity.

The excellence of portrait-painting and sculpture springs from the same principles that affect us in life; they are not the persons who perform at a comedy or a tragedy we go to see with so much pleasure, but the passions and emotions they display: in like manner, the value of statues and pictures rises in proportion to the strength and clearness of the expression of the passions, and to the peculiar and distinguishing air of character. Great painters almost always chuse a fine face to exhibit the passions in. If you recollect what I said on beauty, you will easily conceive the reason

L 1 4

why the agreeable passions are most lively in a beautiful face; beauty is the natural vehicle of the agreeable passions. For the same reason the tempestnous passions appear strongest in a line face; it suffers the most violent derangement by them. To which me may add, upon the same principle, that dignity or courage cannot be mixed in a very ill-favoured countenance; and that the painter after exerting his whole skill, finds in their stead pride and terror. These observations, which have been often made, serve to illustrate our thoughts on beauty. Besides the strict propriety of nature, sculpture and figurepainting is a kind of description, which, like poetry, is under the direction of genius; that, while it preserves nature, sometimes, in a fine flight of fancy, throws an ideal splendor over the figures that never existed in real life. Such is the sublime and celestial character that breathes over the Apollo Belvedere, and the inexpressible beauties that dwell upon the Venus of Medici, and seem to shed an illumination around her. This superior beauty must be varied with propriety, as well as the passions; the elegance of Juno, must be decent, lofty, and elated; of Minerva, masculine, confident, and chaste; and of Venus, winning, soft, and conscious of pleasing. These sisterarts, painting and statuary, as well as poetry, put it out of all doubt, that the imagination carries the ideas of the beautiful and the sublime far beyond visible nature; since no mortal ever possessed the blaze of divine charms that surrounds the Apollo Belvedere, or the Venus of Medici, I have just mentioned.

A variety and flush of colouring is generally the refuge of painters, who are not able to animate their designs. We may call a lustre of colouring, the rant and fustian of painting, under which are hid the want of strength and nature. None but a painter of real genius can be severe and modest in his colouring, and please at the same time. It must be observed, that the glow and variety of colours give a pleasure of a very different kind from the obpeer of painting. When foreign ornaments, gilding, and carving, come to be considered as necessary to the beauty of pictures, they are a plain diagnostic of a decay in taste and power.

\$ 223. On Architecture.

A free and easy proportion, united with applicity, seem to constitute the elegance

of form in building. A subordination of parts to one evident design forms simplicity; when the members thus evidently related are great, the union is always very great. In the proportions of a noble edifice, you see the image of a creating mind result from the whole. The evident uniformity of the rotunda, and its unparalleled simplicity, are probably the sources of its superior beauty. When we look up at a vanited roof, that seems to rest upon our horizon, we are astonished at the magnificence, more than at the visible extent.

When I am taking a review of the objects of beauty and grandeur, can I pass by unnoticed the source of colours and visible beauty? When the light is withdrawn all nature retires from view, visible bodies are annihilated, and the soul mourns the universal absence in solitude; when it returns, it bring, along with it the creation, and restores joy as well as beauty.

\$ 224. Thoughts on Colours and Lights.

If I should distinguish the perceptions of the senses from each other, according to the strength of the traces left on the imagination, I should call those of hearing, feeling, smelling, and tasting, notions, which impress the memory but weakly; while those of colours I should call ideas, to denote their strength and peculiar clearness upon the imagination. This distinction deserves particular notice. . The author of nature has drawn an impenetrable veil over the fixed material world that surrounds us; solid matter refuses our acquaintance, and will be known to us only by resisting the touch; but how obscure are the informations of feeling? light comes like an intimate acquaintance to relieve us: it inproduces all nature to us, the helds, the trees, the flowers, the crystal streams, and azure sky. But all this beauteous diversity is no more than an agreeable enchantment formed by the light that spreads itself to view; the fixed parts of nature are eternally entombed beneath the light, and vie see nothing in fact but a creation of colours. Schoolmen, with their usual arrogance, will tell you their ideas are transcripts of nature, and assure you that the veracity of God requires they should be so, because we cannot well avoid thinking so: but nothing is an object of vision but light; the picture we see is not annexed to the earth, but comes with angelic celerity to meet our eyes. That which is called body or substance,

591

stance, that reflects the various colours of the light, and lies hid beneath the appearance, is wrapt in impenetrable obscurity; it is faithfully shut out from our eyes and imagination, and only causes in us the ideas of feeling, tasting, or smelling, which yet are not resemblances of any part of matter. I do not know if I appear too strong when I call colours the expression of the Divinity. Light strikes with such vivacity and force, that we can hardly call it inanimate or unintelligent. Usher.

\$ 225. On Uniformity.

Shall we admit uniformity into our list of beauty, or first examine its real merits? When we look into the works of nature, we cannot avoid observing that uniformity is but the beauty of minute objects. The opposite sides of a leaf divided in the middle, and the leaves of the same species of vegetables, retain a striking uniformity; but the branch, the tree, and forest, desert this familiarity, and take a noble irregularity with vast advantage. Cut a tree into a regular form, and you change its lofty port for a minute prettiness. What forms the beauty of country scenes, but the want of uniformity? No two hills, vales, rivers, or prospects, are alike; and you are charmed by the variety. Let us now suppose a country made up of the most beautiful hills and descents imaginable, but every hill and every vale alike, and at an equal distance; they soon tire you, and you find the delight vanishes with Dic novelty,

There are, I own, certain assemblages that form a powerful beauty-by their union, of which a fine face is incontestible evidence. But the charm does not seem by any means to reside in the uniformity. which in the human countenance is not very exact. The human countenance may be planned out much more regularly, but I fancy without adding to the beauty, for which we must seek another source. In truth, the finest eye in the world without meaning, and the finest mouth without a amile, are insipid. An agreeable countenance includes in the idea thereof an agreeable and gentle disposition. How the countenance, and an arrangement of colours and features, can express the idea of an unseen mind, we know not; but so the fact is, and to this fine intelligent picture, whether it be false or true, certain I am, that the beauty of the human countenance is owing, more than to uniformity. Shall we then

say, that the greatest uniformity, along with the greatest variety, forms beauty? But this is a repetition of words without distinct ideas, and explicates a well-known effect by an obscure cause. Uniformity, as far as it extends, excludes variety; and variety, as far as it reaches, excludes uniformity. Variety is by far more pleasing than uniformity, but it does not constitute beauty; for it is impossible that can be called beauty. which, when well known, ceases to please: whereas a fine piece of music shall charm after being heard a hundred times; and a lovely countenance makes a stronger impression on the mind by being often seen. because there beauty is real. I think we may, upon the whole, conclude, that if uniformity be a beauty, it is but the beauty of minute objects; and that it pleases only by the visible design, and the evident footsteps of intelligence it discovers. Ibid_

4 226. On Novelty.

I must say something of the evanescent charms of novelty. When our curiosity is excited at the opening of new scenes, our ideas are affecting and beyond life, and we see objects in a brighter hue than they after appear in. For when curiosity is sated, the objects grow dull, and our ideas fall to their diminutive natural size. What I have said may account for the raptured prospect of our youth we see backward; novelty always recommends, because expectations of the unknown are ever high; and in youth we have an eternal novelty; unexperienced crudulous youth gilds our young ideas, and ever meets a fresh lustre that is not yet allayed by doubts. In age, experience corrects our hopes, and the imagination cools; for this reason, wisdom and high pleasure do not reside together.

I have observed through this discourse, that the delight we receive from the visible objects of nature, or from the fine arts, may be divided into the conceptions of the sublime, and conceptions of the beautiful. Of the origin of the sublime I spoke hypothetically, and with diffidence; all we certainly know on this head is, that the sensations of the sublime we receive from external objects, are attended with obscure ideas of power and immensity; the origin of our sensations of beauty are still more unintelligible; however, I think there is some foundation for classing the objects of beauty under different heads, by a correspondence or similarity, that may be observed between several particulars. Ibid.

\$ 227.

\$ 227. On the Origin of our general Ideas of Beauty.

A full and consistent evidence of design, especially if the design be attended with an important effect, gives the idea of beauty; thus a ship under sail, a greyhound, a well-shaped horse, are beautiful, because they display with ease a great design. Birds and beasts of prey, completely armed for destruction, are for the same reason beautiful,

although objects of terror.

Where different designs at a single view, appear to concur to one effect, the beauty accumulates: as in the Grecian architecture: where different designs, leading to different effects, unite in the same whole, they cause confusion, and diminish the idea of beauty, as in the Gothic buildings. Upon the same principle, confusion and disorder are ugly or frightful; the figures made by spilled liquors are always ugly. Regular figures are handsome; and the circular, the most regular, is the most beautiful. This regulation holds only where the sublime does not enter; for in that case the irregularity and carelessness add to the ideas of power, and raise in proportion our admiration. The confusion in which we see the stars scattered over the heavens, and the rude arrangement of mountains, add to their grandeur.

A mixture of the sublime aids exceedingly the idea of beauty, and heightens the horrors of disorder and ugliness. Personal beauty is vastly raised by a noble air; on the contrary, the dissolution and ruins of a large city, distress the mind proportionally: but while we mourn over great ruins, at the destruction of our species, we are also soothed by the generous commiseration we feel in our own breasts, and therefore ruins gives us the same kind of grateful melancholy we feel at a tragedy. Of all the objects of discord and confusion, no other is so shocking as the human soul in madness. When we see the principle of thought and beauty disordered, the horror is too high, like that of a massacre committed before our eyes, to suffer the mind to make any reflex act on the god-like. traces of pity that distinguish our species; and we feel no sensations but those of dis-

may and terror.

Regular motion and life shewn in inanimate objects, give us also the secret pleasure we call beauty. Thus waves spent, and successively breaking upon the shore, and waving fields of corn and grass in con-

tinued motion, are ever beautiful. The beauty of colours may perhaps be arranged under this head; colours, like notes of music, affect the passions; red incites anger, black to melancholy; white brings a gentle joy to the mind; the softer colours refresh or relax it. The mixtures and gradations of colours have an effect correspondent to the transitions and combinations of sounds; but the strokes are too transient and feeble to become the objects of expression.

Beauty also results from every disposition of nature that plainly discovers her favour and indulgence to us. Thus the spring season, when the weather becomes mild, the verdant fields, trees loaded with fruit or covered with shade, clear springs, but particularly the human face, where the gentle passions are delineated, are beyond expression beautiful. On the same principle, inclement wintry skies, trees stripped of their verdure, desert barren lands, and, above all, death, are frightful and shocking. I must, however, observe, that I do not by any means suppose, that the sentiment of beauty arises from a reflex considerate act of the mind, upon the observation of the designs of nature or of art: the sentiment of beauty is instantaneous, and depends upon no prior reflections. All I mean is, that design and beauty are in an arbitrary manner united together; so that where we see the one, whether we reflect on it or no, we perceive the other. I must further add, that there may be other divisions of beauty easily discoverable, which I have not taken notice of.

The general sense of beauty, as well as of grandeur, seems peculiar to man in the creation. The herd in common with hiss enjoy the gentle breath of spring; they lie down to repose on the flowery bank, and hear the peaceful humming of the bee; they enjoy the green fields and pastures: but we have reason to think, that it is man only who sees the image of beauty over the happy prospect, and rejoices at it; that it is hid from the brute creation, and depends not upon sense, but on the intelligent mind.

We have just taken a transient view of the principal departments of taste; let us now, madam, make a few general reflections upon our subject. Usher.

\$ 220. Sense, Taste, and Genius distin-

The human genius, with the best assistance, and the finest examples, breaks forth

simple conceptions of beauty. At an immature age, the sense of beauty is weak and confused, and requires an excess of prefers extravagance and rant to justness, nature, and the shewy, rich, and glaring, to the fine and amiable. This is the childassisted by a happy education, the sense of universal beauty awakes; it begins to be disgusted with the false and mishapen deceptions that pleased before, and rests with delight on elegant simplicity, on pictures of easy beauty and unaffected grandeur.

The progress of the fine arts in the linman mind may be fixed at three remarkable degrees, from their foundation to the loftiest height. The basis is a sense of beauty and of the sublime, the second step we may call taste, and the last genius.

A sense of the beautiful and of the great is universal, which appears from the uniformity thereof in the most distant ages and nations. What was engaging and sublime in ancient Greece and Rome, are so at this day: and, as I observed before, there is not the least necessity of improvement or science, to discover the charms of a graceful or noble deportment. There hend obvious truths, glance themselves the mind is bright and useless. In utter far behind. barbarity, our prospect of it is still less just raised her orient beams to mariners above the waves, and is now descried, and now lost, through the swelling billows.

enquiry, which consists in a distinct, unconfused knowledge of the great and beautiful. Although you see not many possessmankind are capable of it. The very po-

but slowly; and the greatest men have but taste by habit and fine example, so that a gradually acquired a just taste, and chaste delicacy of judgment seemed natural to all who breathed the air of that elegant city: we find a manly and elevated sense distinguish the common people of Rome and colouring to catch its attention. It then of all the cities of Greece, while the level of mankind was preserved in those cities; 2 gross false wit to the engaging light of while the Plebeians had a share in the government, and an utter separation was not mude between them and the nobles, by hood of taste; but as the human genius wealth and luxury. But when once the strengthens and grows to maturity, if it be common people are rent asunder wholly from the great and opulent, and made subservient to the luxury of the latter; then the taste of nature infallibly takes her flight from both parties. The poor by a sordid habit, and an attention wholly confined to mean views, and the rich by an attention to the changeable modes of fancy, and a vitiated preference for the rich and costly, lose view of simple beauty and grandeur. It may seem a paradox. and yet I am firmly persuaded, that it would be easier at this day to give a good taste to the young savages of America, than to the noble youth of Europe.

Genius, the pride of man, as man is of the creation, has been possessed but by few, even in the brightest ages. Men of superior genius, while they see the rest of mankind painfully struggling to compreis a fine but an ineffectual light in the through the most remote consequences, breast of man. After nightfall we have like lightning through a path that cannot admired the planet Venus; the beauty and be traced. They see the beauties of navivacity of her lustre, the immense distance ture with life and warmth, and paint them from which we judged her beams issued, forcibly without effort, as the morning and the silence of the night, all concurred sun does the scenes he rises upon; and in to strike us with an agreeable amazement, several instances, communicate to objects But she shone in distinguished beauty, with- a morning freshness and unaccountable out giving sufficient light to direct our lustre, that is not seen in the creation of steps, or shew us the objects around us. nature. The poet, the statuary, the paint-Thus in unimproved nature, the light of er, have produced images that left nature

The constellations of extraordinary perfixed; it appears, and then again seems sonages who appeared in Greece and Rome, wholly to vanish in the savage breast, like at or near the same period of time, after the same planet Venus, when she has but ages of darkness to which we know no beginning; and the long barrenness of those countries after in great men, prove that genius owes much of its lustre to a person-The next step is taste, the subject of our al contest of glory, and the strong rivalship of great examples within actual view and knowledge; and that great parts alone are not able to lift a person out of barbaed of a good taste, yet the generality of rity. It is further to be observed, that when the inspiring spirit of the hae arts pulace of Athens had acquired a good retired, and left inanimate and cold the

breasts

breasts of poets, painters, and statuaries, men of taste still remained, who distinguished and admired the beauteous monuments of genius; but the power of execution was lost; and aithough monarciss loved and courted the arts, yet they refused to return. From whence it is evident, that neither taste, nor natural parts, form the creating genius that inspired the great masters of antiquity, and that they owed their extraordinary powers to something different from both.

If we consider the numbers of men who wrote well, and excelled in every department of the liberal arts, in the ages of gemius, and the simplicity that always attends beauty; we must be led to think, that although few perhaps can reach to the supreme beauty of imagination displayed by the first-rate poets, orators, and philosophers; yet most men are capable of just thinking and agreeable writing. Nature lies very near our reflection, and will appear, if we be not misled and prejudiced before the sense of beauty grows to maturity. The populace of Athens and Rome prove strongly, that uncommon parts or great learning are not necessary to make men think justly.

\$ 229. Thoughts on the Human Capacity.

We know not the bounds of taste, because we are unacquainted with the extent and boundaries of the human genius, The mind in ignorance is like a sleeping giant; it has immense capacities without the power of using them. By listening to the lectures of Socrates, men grew heroes, philosophers, and legislators; for he of all mankind scemed to have discovered the short and lightsome path to the faculties of the mind. To give you an instance of the human capacity, that comes more immediately within your notice, what graces, what sentiments, have been transplanted into the motion of a minuet, of which a savage has no conception! We know not to what degree of rapture harmony is capable of being carried, nor what hidden powers may be in yet unexperienced beauties of the imagination, whose objects are in scenes and in worlds we are straugers to. Children who die young, have no conception of the sentiment of personal beauty. Are we certain that we are not yet children in respect to several species of beauties? We are ignorant whether there be not passions in the soul, that have

hitherto remained unawaked and undiscovered for want of objects to rouse them; we feel plainly that some such are gently agitated and moved by certain notes of music. In reality, we know not but the taste and capacity of beauty and grandeur in the soul, may extend as far beyond all we actually perceive, as this whole world exceeds the sphere of a cockle or an oyster.

Identification

**Identificatio

\$ 230. Taste how depraved and lost.

Let us now consider by what means taste is usually depraved and lost in a nation, that is neither conquered by barbarians, nor has lost the improvements in agriculture, husbandry, and defence, that allow men leisure for reflection and embellishment. I observed before that this natural light is not so clear in the greatest men, but it may lie oppressed by barbarity. When people of mean parts, and of pride without genius, get into elevated stations, they want a taste for simple grandeur, and mistake for it what is uncommonly glaring and extraordinary; whence proceeds false wit of every kind, a gaudy richness in dress, an oppressive load of ornament in building, and a grandeur overstrained and puerile universally. I must observe, that people of bad taste and little genius almost always lay a great stress on trivial matters, and are ostentatious and exact in singularities, or in a decorum in trifles. When people of mean parts appear in high stations, and at the head of the fashionable world, they cannot fail to introduce a false embroidered habit of mind: people of nearly the same genius, who make up the crowd, will admire and follow them; and at length solitary taste, adorned only by noble simplicity, will be lost in the general example.

Also when a nation is much corrupted; when avarice and a love of gain have seixed upon the hearts of men; when the nobles ignominiously bend their necks to corruption and bribery, or enter into the base mysteries of gaming; then decency, elevated principles, and greatness of soul, expire; and all that remains is a comedy or puppet-shew of elegance, in which the dancing-master and peer are upon a level, and the mind is understood to have no part in the drama of politeness, or else to act under a mean disguise of virtues which it is not possessed of.

₫ 231.

\$ 231. Some Reflections on the Human Mind.

Upon putting together the whole of our reflections you see two different natures laying claim to the human race, and dragging it different ways. You see a necessity, that arises from our situation and circumstances, bending us down into unwerthy misery and sordid baseness; and you see, when we can escape from the insulting tyranny of our fate, and acquire case and freedom, a generous nature, that lay stupified and oppressed, begin to awake and charm us with prospects of beauty and giory. This awaking genius gazes in rapture at the beauteons and elevating acenes of nature. The beauties of nature are familiar, and charm it like a mother's bosom; and the objects which have the plain marks of immense power and grandeur, raise in it a still, an inquisitive, and trembling delight: but genius often throws over the objects of its conceptions colours finer than those of nature, and opens a paradise that exists no where but in its own creations. The bright and peaceful acenes of Arcadia, and the lovely descriptions of pastoral poetry, never existed on earth, no more than Pope's shepherds or the river gods of Windsor forest; it is all but a charming illusion, which the mind first paints with celestial colours and then languishes for. Knight-errantry is another kind of delusion, which, though it be fictitious in fact, yet is true in sentiment. I believe there are few people who in their youth, before they be corrupted by the commerce of the world, are not knighterrants and princesses in their hearts. The soul, in a beauteous ecstasy, communicates a flame to words which they had not; and poetry, by its quick transitions, bold figures, lively images, and the variety of efforts to paint the latent rapture, bears witness, that the confused ideas of the mind are still infinitely superior, and beyoud the reach of all description. It is this divine spirit that, when roused from its lethargy, breathes in noble sentiments, that charms in elegance, that stamps upon marble or canyass the figures of gods and beroes, that inspires them with an air above humanity, and leads the soul through the enchanting meanders of music in a waking vision, through which it cannot break, to discover the near objects that charm it.

How shall we venture to trace the object of this surprizing beauty peculiar to

genius, which evidently does not come to the mind from the senses? It is not conveyed in sound, for we feel the sounds of music charm us by gently agitating and swelling the passions, and setting some passions affoat, for which we have no name. and knew not until they were awaked in the mind by harmony. This beauty does not arrive at the mind by the ideas of vision, though it be moved by them; for it evidently bestows on the mimic representations and images the mind makes of the objects of sense, an enchanting loveliness that never existed in those objects. Where shall the soul find this amazing beauty. whose very shadow, glimmering upon the imagination, opens unspeakable raptures in it, and distracts it with languishing pleasure? What are those stranger sentiments that lie in wait in the soul, until music calls them forth? What is the obscure but unavoidable value or merit of virtue? or who is the law-maker in the mind who gives it a worth and dignity beyond all estimation, and punishes the breach of it with conscious terror and despair? What is it in objects of immeasurable power and grandeur, that we look for with still amazement and awful delight?-But I find, madam, we have been insensibly led into subjects too obstruse and severe; I must not put the graces with whom we have been conversing to flight, and draw the serious air of meditation over that countenance where the smiles naturally dwell.

I have, in consequence of your permission, put together such thoughts as occurred to me on good taste. I told you, if I had leisure hereafter, I would dispose of them with more regularity, and add any new observations that I may make. Before I finish, I must in justice make my acknowledgments of the assistance I received. I took notice, at the beginning, that Rollin's Observations on Taste gave occasion to this discourse. Sir Harry Beaumont's polished dialogue on beauty, called Crito, was of service to me; and I have availed myself of the writings and sentiments of the ancients, particularly of the poets and statuaries of Greece, which was the native and original country of the graces and fine arts. But I should be very unjust if I did not make my chief acknowledgments where they are more peculiarly due. If your modesty will not suffer me to draw that picture from which I borrowed my ideas of elegance, I am bound at least, in honesty, to disclaim every merit but that of copying from a bright original. Usher.

\$ 232. General Reflections upon what is called Good Taste. From ROLLIN'S Belles Lettres.

Taste as it now falls under our cousideration, that is, with reference to the reading of authors and composition, is a clear, lively, and distinct discerning of all the beauty, truth, and justness of the thoughts and expressions, which compose a discourse. It distinguishes what is con-· formable to eloquence and propriety in every character, and suitable in different circumstances. And whilst, with a delicate, and exquisite sagacity, it notes the graces, turns, manners, and expressions, most likely to please, it perceives also all the defects which produce the contrary effect, and distinguishes precisely wherein those defects consist, and how far they are removed from the strict rules of art, and the real beauties of nature.

This happy faculty, which it is more easy to conceive than define, is less the effect of genius than judgment, and a kind of natural reason wrought up to perfection by study. It serves in composition to guide and direct the understanding. It makes use of the imagination, but without submitting to it, and keeps it always in subjection. It consults nature universally, follows it step by step, and is a faithful image of it. Reserved and sparing in the midst of abundance and riches, it dispenses the beauties and graces of discourse with temper and wisdom. It never suffers itself to be dazzled with the false, how glittering a figure soever it may make. 'Tis equally offended with too much and too little. It knows precisely where it must stop, and cuts off, without regret or mercy, whatever exceeds the beautiful and perfect. 'Tis the want of this quality which occasions the various species of bad style; as bombast, conceit, and witticism; in which, as Ouinctilian says, the genius is void of judgment, and suffers itself to be carried away with an appearance of beauty, quoties ingenium judicio caret, & specie boni fatlitur.

Taste, simple and uniform in its principle, is varied and multiplied an infinite number of ways, yet so as under a thousand different forms, in prose or verse, in a declamatory or concise, sublime or simple, jocose or serious style, 'tis always the

same, and carries with it a certain character of the true and natural, immediately perceived by all persons of judgment. We cannot say the style of Terence, Phædrus, Sallust, Cæsar, Tully, Livy, Virgil, and Horace, is the same. And yet they have all, if I may be allowed the expression, a certain tincture of a common spirit, which in that diversity of genius and style makes an affinity between them, and the sensible difference also betwixt them and the other writers, who have not the stamp of the best age of antiquity upon them.

I have already said, that this distinguishing faculty was a kind of natural reason wrought up to perfection by study. In reality all men bring the first principles of taste with them into the world, as well as those of rhetoric and logic. As a proof of this, we may urge, that every good orator is almost always infallibly approved of by the people, and that there is no difference of taste and sentiment upon this point, as Tully observes, between the ignorant and the learned.

The case is the same with music and painting. A concert, that has all its parts well composed and well executed, both as to instruments and voices, pleases universally. But if any discord arises, any ill tone of voice be intermixed, it shall displease even those who are absolutely ignorant of music. They know not what it is that offends them, but they find somewhat grating in it to their ears. And this proceeds from the taste and sense of harmony implanted in them by nature. In like manner a fine picture charms and transports a spectator, who has no idea of painting. Ask him what pleases him, and why it pleases him, and he cannot easily give an account, or specify the real reasons; but natural sentiment works almost the same effect in him as art and use in con-

The like observations will hold good as to the taste we are here speaking of. Most men have the first principles of it in themselves, though in the greater part of them they lie dormant in a manner, for want of instruction or reflection; as they are often stifled or corrupted by vicious education, bad customs, or reigning prejudices of the age and country.

But how depraved soever the taste may be, it is never absolutely lost. There are certain fixed remains of it, deeply rooted in the understanding, wherein all men agree. Where these secret seeds are cultivated givated with care, they may be carried to a far greater height of perfection. And if it so happens that any fresh light awakens these first notions, and renders the mind attentive to the immutable rules of truth and beauty, so as to discover the natural and necessary consequences of them, and serves at the same time for a model to facilitate the application of them; we generally see, that men of the best sense gladly cast off their ancient errors, correct the mistakes of their former judgments, and return to the justness, and delicacy, which are the effects of a refined taste, and by degrees draw others after them into the same way of thinking.

To be convinced of this, we need only look upon the success of certain great orators and celebrated authors, who, by their natural talents, have recalled these primitive ideas, and given fresh life to these seeds, which lie concealed in the mind of every man. In a little time they united the voices of those who made the best use of their reason, in their favour; and soon after gained the applause of every age and condition, both ignorant and learned. It would be easy to point out amongst us the date of the good taste, which now reigns in all arts and sciences; by tracing each up to its original, we should see that a small number of men of genius have acquired the nation this glory and advan-

Even those who live in the politer ages, without any application to learning or study, do not fail to gain some tincture of the prevailing good taste, which has a share without their perceiving it themselves, in their conversation, letters, and behaviour. There are few of our soldiers at present, who would not write more correctly and elegantly than Ville-Hardonin, and the other officers who lived in a ruder and more barbarous age.

From what I have said, we may conclude, that rules and precepts may be laid down for the improvement of this discerning faculty; and I cannot perceive why Quinctilian, who justly set such a value upon it, should say that it is no more to be obtained by art, than the taste or smell; Non magis arte traditur, quam gustus aut odor; unless he meant, that some persons are so stupid, and have so little use of their judgment, as might tempt one to believe that it was in reality the gift of nature alone.

Neither do I think that Quinctilian is

produces, at least with respect to taste. We need only imagine what passes in certain nations, in which long custom has introduced a fondness for certain odd and extravagant dishes. They readily commend good liquors, elegant food, and good cookery. They soon learn to discern the delicacy of the seasoning, when a skilful master in that way has pointed it out to them. and to prefer it to the grossness of their former diet. When I talk thus, I would not be understood to think those nations had great cause to complain, for the want of knowledge and ability in what is become so fatal to us. But we may judge from hence the resemblance there is between the taste of the body and mind, and how proper the first is to describe the character of the second.

The good taste we speak of, which is that of literature, is not limited to what we call the sciences, but extends itself imperceptibly to other arts, such as architecture, painting, sculpture, and music. the same discerning faculty which introduces universally the same elegance, the same symmetry, and the same order in the disposition of the parts; which inclines us to noble simplicity, to natural beauties, and a judicious choice of ornaments. On the other hand, the depravation of taste in arts has been always a mark and consequence of the depravation of taste in literature. The heavy, confused, and gross ornaments of the old Gothic buildings, placed usually without elegance, contrary to all good rules, and out of all true proportions, were the image of the writings of the authors of the same

The good taste of literature reaches also to public customs and the manner of living. An habit of consulting the best rules upon one subject, naturally leads to the doing it also upon others. Paulus Æmilius, whose genius was so universally extensive, having made a great feast for the entertainment of all Greece upon the conquest of Macedon, and observing that his guests looked upon it as conducted with more elgance and art than might be expected from a soldier, told them they were much in the wrong to be surprised at it a for the same genius, which taught how to draw up an army to advantage, naturally pointed out the proper disposition of a table.

But by a strange, though frequent revoabsolutely in the right in the instance he lution, which is one great proof of the weakness, or rather the corruption of Imman understanding, this very delicacy and elegance, which the good taste of literature and cloquence usually introduces into common life, for buildings, for instance, and entertainments, coming by little and little to degenerate into excess and luxory, introduces in its turn the bad taste of literature and eloquence. This Seneca informs us, in a very ingenious manner, in one of his epistles, where he seems to have drawn a good description of himself, though he did not perceive it.

One of his friends had asked him, whence the alteration could possibly arise which was sometimes observable in eloquence, and which carried most people into certain general faults; such as the affectation of bold and extravagant figures, metaphors struck off without measure or caution, sentences so short and abrupt, that they left people rather to guess what they meant, than conveyed a meaning.

Seneca answers this question by a common proverb among the Greeks; " As is their life, so is their discourse," Talis hominibus fuit oratio, qualis vita. As a private person lets us into his character by his discourse, so the reigning style is oft an image of the public manners. The heart carries the understanding away with it, and communicities its vices to it, as well as its virtues. When men strive to be distinguished from the rest of the world by novelty, and refinement in their furniture, buildings, and emertainments, and a studious search after every thing that is not in common use; the same taste will prevail in elo quence, and introduce novelty and irregularity there. When the mind is once accostomed to despise rules in manners, it will not follow them in style. Nothing will then go down but what strikes by its being new and glaring, extraordinary and affected. Trilling and childish thoughts will take place of such as are bold and overstrained to an excess. We shall affect a sleek and florid style, and an elocation pompous indeed, but with little more than mere sound in it.

And this sort of faults is generally the effect of a single man's example, who, having gained reputation enough to be followed by the multitude, sets up for a master, and gives the strain to others. 'Tis thought honourable to imitate him, to observe and copy after him, and his atyle becomes the rule and model of the public taste.

As then luxury in diet and dress is a plain indication that the manners are not under so good a regulation as they should be; so a licentiousness of style, when it becomes public and general, shews evidently a depravation and corruption of the understandings of mankind.

To remedy this evil, and reform the thoughts and expressions used in style, it will be requisite to cleanse the spring from whence they proceed. 'Tis the mind that must be cured. When that is sound and vigorous, cloquence will be so too: but it becomes feeble and languid when the mind is enfeebled and enervated by pleasures and delights. In a word, it is the mind which presides, and directs, and gives motion to the whole, and all the rest follows its impressions.

He has observed elsewhere, that a style too studied and far-fetched is a mark of a little genius. He would have an orator, especially when upon a grave and serious subject, be less curious about words, and the manner of placing them, than of his matter, and the choice of his thoughts. When you see a discourse laboured and polished with so much carefulness and study, you may conclude, says he, that it comes from a mean capacity, that busies itself in trifles. A writer of great genius will not stand for such minute things. He thinks and speaks with more nobleness and grandeur, and we may discern, in all he says, a certain easy and natural air, which argues a man of real riches, who does not endeavour to appear so. He then compares this florid prinked eloquence to young people curled out and powdered, and continually before their glass and the toilet: Barba et coms nitidos, de capsula totos. Nothing great and solid can be expected from such characters. So also with orators. The discourse is in a manner the visage of the mind. If it is decked out, tricked up, and painted, it is a sign there is some defect in the mind. and all is not sound within. So much finery. displayed with such art and study, is not the proper ornament of eloquence. Non est ornamentum virile, concinnitas.

Who would not think, upon hearing Seneca talk thus, that he was a declared enemy of bad taste, and that no one was more capable of opposing and preventing it than he? And yet it was he, more than any other, that contributed to the depravation of taste, and corruption of eloquence. I shall take an occasion to speak upon this subject in another place, and shall do it

the more freely, as there is cause to fear lest the bad taste for bright thoughts, and turns of expression, which is properly the character of Seneca, should prevail in our own age. And I question whether this be not a mark or presage of the ruin of eloquence we are threatened with, as the immoderate luxury that now reigns more than ever, and the almost general decay of good manners, are perhaps also the fatal harbingers of it.

One single person of reputation sometimes, as Seneca observes, and he himself is an instance of it, who by his eminent qualifications shall have acquired the esteem of the public, may suffice to introduce this bad taste, and corrupt style. Whilst moved by a secret ambition, a man of this character strives to distinguish himself from the rest of the orators and writers of his age, and to open a new path, where he thinks it better to march alone at the head of his new disciples, than follow at the heels of the old masters; whilst he prefers the reputation of wit to that of solidity, pursues what is bright rather than what is solid, and sets the marvellous above the natural and true; whilst he chuses rather to apply to the fancy than to the judgment, to dazzle reason than convince it, to surprise the hearer into an approbation, rather than deserve it; and by a kind of delusion and soft enchantmentcarry off the admiration and applauses of superficial minds (and such the multitude always are); other writers, seduced by the charms of novelty, and the hopes of a like success, will suffer themselves insensibly to be hurried down the stream, and add strength to it, by following it. And thus the old taste, though better in itself, shall give way to the new one without redress, which shall presently assume the force of law, and draw a whole nation after it.

This should awaken the diligence of the masters in the university, to prevent and hinder, as much as in them lies, the ruin of good taste; and as they are entrusted with the public instruction of youth, they should look upon this care as an essential part of their duty. The custom, mauners, and laws of the ancients have changed; they are often opposite to our way of life, and the usages that prevail amongst us, and the knowledge of them, may be therefore less necessary for us. Their actions are gone and cannot return; great events have had their course, without any rea-

son left for us to expect the like; and the revolutions of states and empires have perhaps very little relation to their present situation and wants, and therefore become of less concern to us. But good taste, which is grounded upon immutable principles, is always the same in every age; and it is the principal advantage that young persons should be taught to obtain from reading of ancient authors, who have ever been looked upon with reason as the masters, depositories, and guardians of sound eloquence and good taste. In fine, of all that may anywise contribute to the cultivating the mind, we may truly say this is the most essential part, and what ought to be preferred before all others.

This good taste is not confined to literature; it takes in also, as we have already suggested, all arts and sciences, and branches of knowledge. It consists therefore in a certain just and exact discernment, which points out to us, in each of the sciences and branches of knowledge, whatever is most curious, beautiful, and useful, whatever is most essential, suitable, or necessary to those who apply to it; how far consequently we should carry the study of it; what ought to be removed from it; what deserves a particular application and preference before the rest. For want of this discernment, a man may fall short of the most essential part of his profession, without perceiving it; nor is the case so rare as one might imagine. An instance taken from the Cyropædia of Xenophon will set the matter in a clear light.

The young Cyrus, son of Cambyses King of Persia, had long been under the tuition of a master in the art of war, who was without doubt a person of the greatest abilities and best reputation in his time. One day, as Gambyses was discoursing with his son, he took occasion to mention his master, whom the young Prince had in great veneration, and from whom he pretended he had learnt in general whatever was necessary for the command of an army. Has your master, says Cambyses, given you any lectures of economy; that is, has he taught you how to provide your troops with necessaries, to supply them with provisious, to prevent the distempers that are incident to them, to cure them when they are sick, to stregthen their bodies by frequent exercise, to raise emulation among them, how to make yourself obeyed, estnemed, and beloved by them? Upon all these points, an-M m swered swered Cyrus, and several others, the King ran over to him, he has not spoke one word, and they are all new to me. And what has he taught you then? To exercise my arms, replies the young Prince, to ride, to draw the bow, to cast the spear, to form a camp, to draw the plan of a fortification, to range my troops in order of battle, to make a review, to see that they march, file off, and encamp. Cambyses smiled, and let his son see, that he had learnt nothing of what was most essential to the making of a good officer, and an able general; and taught him far more in one conversation, which certainly deserves well to be studied by young gentlemen that are designed for the army, than his famous master had done in many

Every profession is liable to the same inconvenience, either from our not being sufficiently attentive to the principal end we should have in view in our applications to it, or from taking custom for our guide. and blindly following the footsteps of others, who have gone before us. There is nothing more useful than the knowledge of history. But if we rest satisfied in loading our memory with a multitude of facts of no great curiosity or importance, if we dwell only upon dates and difficulties in chronology or geography, and take no pains to get acquainted with the genius, manners, and characters of the great men we read of, we shall have learnt a great deal, and know but very little. A treatise of rhetoric may be extensive, enter into a long detail of precept, define very exactly every trope and figure, explain well their differences, and largely treat such questions as were warmly debated by the rhetoricians of old; and with all this be very like that discourse of rhetoric Tully speaks of, which was only lit to teach people not to apeak at all, or not to the purpose. Scripsit artem rhetoricum Gleunthes, sed sic, ut si quis obnutescere concupierit, nihil alind legere debeut. In philosophy one might spend abundance of time in knotty and abstruse disputes, and even learn a great many fine and curious things, and at the same time neglect the essential part of the study, which is to form the judgment and direct the manners,

In a word, the most necessary qualification, not only in the art of speaking and the sciences, but in the whole conduct of our life, is that taste, prudence, and discretion, which upon all subjects and on every

occasion teaches us what we should do, and how to do it. Illud dicere satis habee, nihil esse, non mode in orando, sed in amni vita, prius consilio. Rollin.

\$ 238. Dr. Johnson's Preface to his Edition of Shakespeare.

That praises are without reason lavished on the dead, and that the honours due only to excellence are paid to antiquity, is a complaint likely to be always continued by those, who, being able to add nothing to truth, hope for eminence from the beresies of paradox; or those, who, being forced by disappointment upon consolatory expedients, are willing to hope from posterity what the present age refuses, and flatter themselves that the regard, which is yet denied by envy, will be at last bestowed by time.

Antiquity, like every other quality that attracts the notice of mankind, has undoubtedly votaries that reverence it, not from reason, but from prejudice. Some seem to admire indiscriminately whatever has been long preserved, without considering that time has sometimes co-operated with chance; all perhaps are more willing to honour past than present excellence; and the mind contemplates genius through the shade of age, as the eye surveys the sum through artificial opacity. The great contention of criticism is to find the faults of the moderns, and the beauties of the ancients. While an author is yet living, we estimate his powers by his worst performance; and when he is dead, we rate them by his best.

To works, however, of which the acellence is not absolute and definite, but gradual and comparative; to works on raised upon principles demonstrative and scientific, but appealing wholly to observation and experience, no other taste can be applied than length of duration and contimiance of esteem. What mankind have long possessed they have often examined and compared; and if they persist to value the possession, it is because frequent comparisons have confirmed opinion in its favour. As among the works of nature no man can properly call a river deep, or a mountain high, without the knowledge of many mountains, and many rivers; 50, in the productions of genius, nothing can be styled excellent till it has been compared with other works of the same kind. Demonstration immediately displays its power, and has nothing to hope or fear

531

from the flux of years; but works tentative and experimental must be estimated by their proportion to the general and collective ability of man, as it is discovered in a long succession of endeavours. Of the first building that was raised, it might be with certainty determined, that it was found or square; but whether it was spacious or lofty must have been referred to time. The Pythagorean scale of numbers was at once discovered to be perfect; but the poems of Homer we yet know not to transcend the common limits of human intelligence, but by remarking, that nation after nation, and century after century. has been able to do little more than transpose his incidents, new name his characters, and paraphrase his sentiments.

The reverence due to writings that have long subsisted, arises, therefore, not from any credulous confidence in the superior wisdom of past ages, or gloomy persuasion of the degeneracy of mankind, but is the consequence of acknowledged and indubitable positions, that what has been longest known has been most considered, and what is most considered is best understood.

The poet, of whose works I have undertaken the revision, may now begin to assume the dignity of an ancient, and claim the privilege of established fame and prescriptive veneration. He has long outlived his century, the term commonly fixed at the test of literary merit. Whatever advantages he might once derive from personal allusion, local customs, or temporary, opinions, have for many years been lost; and every topic of merriment, or motive of sorrow, which the modes of artificial life afforded him, now only obscure the scenes which they once illuminated. The effects of favour and competition are at an end; the tradition of his friendships and his enemies has perished; his works support no opinion with arguments, nor supply any faction with invectives; they can neither indulge vanity, nor gratify malignity; but are read without any other reason than the desire of pleasure, and are therefore praised only as pleasure is obtained: yet, thus unassisted by interest or passions, they have past through variations of taste and change of manners, and, as they devolved from one generation to another, have received new honours at every transmission.

But because human judgment, though it be gradually gaining upon certainty, never becomes infallible; and approbation, though long continued, may yet be only

the approbation of prejudice or fashion; it is proper to enquire, by what peculiarities of excellence Shakespeare has gained and kept the favour of his countrymen.

Nothing can please many and please long, but just representations of general nature. Particular manners can be known to few, and therefore few only can judge how nearly they are copied. The irregular combinations of fanciful invention may delight awhile, by that novelty of which the common satiety of life sends us all in quest; but the pleasures of sudden wonder are soon exhausted, and the mind can only

repose on the stability of truth.

Shakespeare is, above all writers, at least above all modern writers, the poet of nature; the poet that holds up to his readers. a faithful mirror of manners and of life. His characters are not modified by the customs of particular places, unpractised by the rest of the world; by the peculiarities of studies or professions, which can operate but upon small numbers; or by the accidents of transient fashions or tempurary opinious; they are the genuine progeny of common humanity, such as the world wil. always supply, and observation will always find. His persons act and speak by the influence of those general passions and principles by which all minds are agitated, and the whole system of life. is continued in motion. In the writings of other poets, a character is too often an individual; in those of Shakespeare, it is commonly a species.

It is from this wide extension of design that so much instruction is derived. It is this which fills the plays of Shakespeare with practical axioms and domestic wisdom. It was said of Euripides, that every verse was a precept: and it may be said of Shakespeare, that from his works may be collected a system of civil and occonomical prudence. Yet his real power is not shewn in the splendor of particular passages, but by the progress of his fable, and the tenor of his dialogue; and he that tries to recommend him by select quotations, will succeed like the pedant in Hierocles, who, when he offered his house to sale, carried a brick in his pocket as a specimen.

It will not easily be imagined how much Shakespeare excels in accommodating his sentiments to real life, but by comparing him with other authors. It was observed of the ancient schools of declamation, that the more diligently they were frequented, the more was the student disqualified for the world, because he found nothing there

M m 2

which

which he should ever meet in any other place. The same remark may be applied to every stage but that of Shakespeare. Thetheatre, when it is under any other direction, is peopled by such characters as were never seen, conversing in a language which was never heard, upon topics which will never arise in the commerce of mankind. But the dialogue of this author is often so evidently determined by the incident which produces it, and is pursued with so much ease and simplicity, that it seems scarcely to claim the merit of fiction, but to have been gleaned by diligent selection out of common conversation and common occurrences.

Upon every other stage the universal agent is love, by whose power all good and evil is distributed, and every action quickened or retarded. To bring a lover, a lady, and a rival into the fable; to entangle them in contradictory obligations, perplex them with oppositions of interest, and harass them with violence of desires inconsistent with each other; to make them meet in capture, and part in agony; to till their mouths with hyperbolical joy and outrageous sorrow; to distress them as nothing human ever was distressed; to deliver them as nothing human ever was delivered; is the business of a modern dramatist. For this, probability is violated, life is misrepresented, and language is depraved. But love is only one of many passions; and as it has no greater influence upon the sum of life, it has little operation in the dramas of a poet, who caught his ideas from the living world, and exhibited only what he saw before him. He knew that any other passion, as it was regular or exorbitant, was a cause of happiness or

Characters, thus ample and general, were not easily discriminated and preserved; yet perhaps no poet ever kept his personages anore distinct from each other. I will not say with Pope, that every speech may be assaigued to the proper speaker, because many speeches there are which have nothing characteristical: but, perhaps, though some may be equally adapted to every person, it will be difficult to had any that can be properly transferred from the present possessor to another claimant. The choice is right, when there is reason for choice.

Other dramatists can only gain attention by hyperbolical or aggravated characters, by fabulous and unexampled excellence or deprayity, as the writers of barbarous re-

mances invigorated the reader by a giant and a dwarf; and he that should form his expectations of human affairs from the play, or from the tale, would be equally deceived. Shakespeare has no heroes; his scenes are occupied only by men, who act and speak as the reader thinks that he should himself have spoken or acted on the same occasion: even where the agency is supernatural, the dialogue is level with life. Other writers disguise the most matural passions and most frequent incidents; so that he who contemplates them in the book will not know them in the world: Shakespeare approximates the remote, and familiarizes the wonderful; the event which he represents will not happen; but, if it were possible, its effects would probably be such as he has assigned; and it may be said, that he has not only shewn human nature as it acts in real exigencies, but as it would be found in trials, to which it cannot be exposed.

This therefore is the praise of Shakespeare, that his drama is the mirror of life; that he who has mazed his imagination, in following the phantoms which other writers raise up before him, may here be cured of his delirious ecstacies, by reading human sentiments in human language, by scenes from which a hermit may estimate the transactions of the world, and a confessor predict the progress of the

passions.

His adherence to general nature has exposed him to the censure of critics, who form their judgments upon narrower principles. Dennis and Rymer think his Romans not sufficiently Roman; and Voltaire censures his kings as not completely royal. Dennis is offended, that Menenius, a senator of Rome, should play the bulfoon; and Voltaire perhaps thinks decency violated when the Danish usurper is represented as a drunkard. But Shakespears always makes nature predominate over accident; and if he preserves the essential character, is not very careful of distinctions superinduced and adventitious. His story requires Romans or Kings, but he thinks only on men. He knew that Rome, like every other city, had men of all dispositions; and wanting a buffoon, he went into the senate-house for that which the senatehouse would certainly have afforded him. He was inclined to shew an usurper and a murderer not only odious, but despicable; he therefore added drunkenness to his other qualities, knowing that kings love wine

like other men, and that wine exerts its natural power upon kings. These are the petty cavils of petty minds; a poet overlooks the casual distinction of country and condition, as a painter, satisfied with the figure, neglects the drapery.

The censure which he has incurred by mixing comic and tragic scenes, as it extends to all his works, deserves more consideration. Let the fact be first stated and

then examined.

Shakespeare's plays are not, in the rigorous and critical sense, either tragedies or comedies, but compositions of a distinct kind; exhibiting the real state of sublumary nature, which partakes of good and evil, joy and sorrow, mingled with endless variety of proportion, and innumerable modes of combination; and expressing the course of the world, in which the loss of one is the gain of another; in which, at the same time, the reveller is hastening to his wine, and the mourner burying his friend: in which the malignity of one is sometimes defeated by the frolie of another; and many mischiefs and many benefits are done and hindered without design.

Out of this chaos of mingled purposes and casualties, the ancient poets, according to the laws which custom had prescribed, selected some the crimes of men, and some their absurdities; some the momentous vicisitudes of life, and some the lighter occurrences; some the terrors of distress, and some the gaieties of prosperity. Thus rose the two modes of imitation, known by the names of tragedy and comedy, compositions intended to promote different ends by contrary means, and considered as so little allied, that I do not recollect, among the Greeks or Romans, a single writer who attempted both.

Shakespeare has united the powers of exciting laughter and sorrow, not only in one mind, but in one composition. Almost all his plays are divided between serious and ludicrous characters; and in the successive evolutions of the design, sometimes produce seriousness and sorrow, and sometimes levity and laughter.

That this is a practice contrary to the rules of criticism will be readily allowed; but there is always an appeal open from criticism to nature. The end of writing is to instruct; the end of poetry is to instruct by pleasing. That the mingled drama may convey all the instruction of tragedy or comedy cannot be denied, because it includes both in its alterations of exhibition,

and approaches nearer than either to the appearance of life, by shewing how great machinations and slender designs may promote or obviate one another, and the high and the low co-operate in the general system by unavoidable concatenation.

It is objected, that by this change of scenes the passions are interrupted in their progression, and that the principal event, being not advanced by a due gradation of preparatory incidents, wants at least the power to move, which constitutes the perfection of dramatic poetry. This reasoning is so specious, that it is received as true even by those who in daily experience feel it to be false. The interchanges of mingled scenes seldom fail to produce the intended vicissitudes of passion. cannot move so much, but that the attention may be easily transferred; and though it must be allowed that pleasing melancholy be sometimes interrupted by unwelcome levity, yet let it be considered likewise, that melancholy is often not pleasing, and that the disturbance of one man may be the relief of another: that different auditors have different habitudes : and that upon the whole, all pleasure consists in variety.

The players, who in their edition divided our author's works into comedies, histories, and tragedies, seem not to have distinguished the three kinds by any very exact or definite ideas.

An action which ended happily to the principal persons, however serious or distressful through its intermediate incidents, in their opinion constituted a comedy. This idea of a comedy continued long amongst us; and plays were written, which by changing the catastrophe, were tragedies to-day, and comedies to-morrow.

Tragedy was not in those times a poem of more general dignity or elevation than comedy; it required only a calamitous conclusion, with which the common criticism of that age was satisfied, whatever lighter pleasure it afforded in its progress.

History was a series of actions, with no other than chronological succession, independent of each other, and without any tendency to introduce or regulate the conclusion. It is not always very nicely distinguished from tragedy. There is not much nearer approach to unity of action in the tragedy of Antony and Cleopatra, than in the history of Richard the Second. But a history might be continued M m 3

through many plays; as it had no plan, it matural, and therefore durable; the adhad no limits.

Through all these denominations of the drama, Shakespeare's mode of composition is the same; an interchange of seriousness and merriment, by which the mind is softened at one time, and exhilarated at agother. But whatever be his purpose, whether to gladden or depress, or to conduct the story, without vehemence or emotion, through tracts of easy and familiar dialogue, he never fails to attain his purpose; as he commands us, we laugh or mourn, or sit silent with quiet expectation, in tranduillity without indifference,

When Shakespeare's plan is understood, most of the criticisms of Rymer and Voltaire vanish away. The play of Hamlet is opened, without impropriety, by two lago bellows at Brabantio's window, without injury to the scheme of the play, though in terms which a modern audience would not easily endure; the character of Polonius is seasonable and useful; and the Grave-diggers themselves

may be heard with applause.

Shakespeare engaged in dramatic poetry with the world open before him; the rules of the ancients were yet known to few; the public judgment was unformed: he had no example of such fame as might force him upon imitation, nor critics of such authority as might restrain his extravagance; he therefore indulged his natural disposition; and his disposition, as Rymer has remarked, led him to comedy. In tragedy he often writes, with great appearance of toil and study, what is written at last with little felicity; but in his comic scenes, he seems to produce, without labour, what no labour can improve. In tragedy he is always struggling after some oceasion to be comic; but in comedy he seems to repose, or to luxuriate, as in a mode of thinking congenial to his nature. In his tragic scenes there is always something wanting; but his comedy often surpasses expectation or desire. His comedy pleases by the thoughts and the language, and his tragedy, for the greater part, by incident and action. His tragedy seems to be skill, his comedy to be instinct.

The force of his comic scenes has suffered little diminution, from the changes made by a century and a half, in manners or in words. As his personages act upon principles arising from genuine passion, very little modified by particular forms, their pleasures and vexations are communicable to all times and to all places; they are

ventitious peculiarities of personal habits are only superficial dyes, bright and pleasing for a little while, yet soon fading to a dim tint, without any remains of former lustre; but the discriminations of true passion are the colours of nature; they pervade the whole mass, and can only perish with the body that exhibits them. The accidental compositions of heterogeneous modes are dissolved by the chance which combined them; but the uniform simplicity of primitive qualities neither admits increase, nor suffers decay. The sand heaped by one flood is scattered by another, but the rock always continues in its place. The stream of time, which is continually washing the dissoluble fabrics of other poets, passes without injury to the adamant of Shakespeare.

If there be, what I believe there is, in every nation, a style which never becomes obsolete, a certain mode of phraseology so consonant and congenial to the analogy and principles of its respective language, as to remain settled or unaltered; this style is probably to be sought in the common intercourse of life, among those who speak only to be understood, without ambition of elegance. The polite are always catching modish innovations, and the learned depart from established forms of speech, in hopes of finding or making better; those who wish for distinction forsake the vulgar, when the vulgar is right; but there is a conversation above grossness and below refinement, where propriety resides, and where this poet seems to have gathered his comic dialogue. He is therefore more agreeable to the ears of the present age than any other author equally remote, and among his other excellencies deserves to be studied as one of the original masters of our language.

These observations are to be considered not as unexceptionably constant, but as containing-general and predominant truth. Shakespeare's familiar dialogue is affirmed to he smooth and clear, yet not wholly without ruggedness or difficulty; as a country may be eminently fruitful, though it has spots unfit for cultivation: his characters are praised as natural, though their sentiments are sometimes forced, and their actions improbable; as the earth upon the whole is spherical, though its surface is varied with protuberances and

Shakespeare with his excellencies has likewise faults, and faults sufficient to ob-

MUSTE

scure and overwhelm any other merit. I shall shew them in the proportion in which they appear to me, without envious malignity or superstitious veneration. No question can be more innocently discussed than a dead poet's pretensions to renown; and little regard is due to that bigotry which sets candour higher than truth.

His first defect is that to which may be imputed most of the evil in books or in men. He sacrifices virtue to convenience, and is so much more careful to please than to instruct, that he seems to write without any moral purpose. From his writings, indeed, a system of social duty may be selected, for he that thinks reasonably must think morally; but his precepts and axioms drop casually from him; he makes no just distribution of good or evil, nor is always careful to shew in the virtuous a disapprobation of the wicked; he carries his persons indifferently through right and wrong, and at the close dismisses them without further care, and leaves their examples to operate by chance. This fault the barbarity of his age cannot extenuate ; for it is always a writer's duty to make the world better, and justice is a virtue independent on time or place.

The plots are often so loosely formed, that a very slight consideration may improve them, and so carelessly pursued, that he seems not always fully to comprehend his own design. He omits opportunities of instructing or delighting, which the train of his story seems to force upon him, and apparently rejects those exhibitions which would be more affecting, for the sake of

those which are more casy.

It may be observed, that in many of his plays the latter part is evidently neglected. When he found himself near the end of his work, and in view of his reward, lie shortened his labour to snatch the profit. He therefore remits his efforts where he should most vigorously exert them, and his catastrophe is improbably produced

or imperfectly represented.

He had no regard to distinction of time or place, but gives to one age or nation, without scruple, the customs, institutions, and opinions of another, at the expense not only of likelihood, but of possibility. These faults Pope has endeavoured, with more zeal than judgment, to transfer to his imagined interpolators. We need not wonder-to find Hector quoting Aristotle, when we see the loves of Theseus and Hippolyta combined with the Gothic mythology of

fairies. Shakespeare, indeed, was not the only violator of chronology; for, in the same age, Sydney, who wanted not the advantages of learning, has, in his Arcadia, confounded the pastoral with the feudal times, the days of innocence, quiet; and security, with those of turbulence, violence, and adventure.

In his comic scenes he is seldom very successful, when he engages his characters in reciprocations of smartness and contests of sareasm; their jests are commonly gross, and their pleasantry licentious; neither his gentlemen nor his ladies have much delicacy, nor are sufficiently distinguished from his clowns by any appearance of refined manners. Whether he represented the real conversation of his time is not easy to determine; the reign of Elizabeth is commonly supposed to have been a time of stateliness, formality, and reserve; yet, perhaps the relaxations of that severity were not very elegant. There must, however, have been always some modes of gaiety preferable to others, and a writer ought to choose the best.

In tragedy, his performance seems constantly to be worse, as his labour is more. The effusions of passion, which exigence forces out, are for the most part striking and energetic; but whenever he solicits his invention or strains his faculties, the offspring of his throes is tumour, meantness, tediousness, and obscurity.

In nurration, he affects a disproportionate pomp of diction, and a weariso ne train of circumlocution, and tells the incident imperfectly in many words, which might have been more plainly delivered in few. Narration in dramatic poetry is naturally tedious, as it is manimated and inactive, and obstructs the progress of the action; it should therefore always be rapid, and enlivened by frequent interruption. Shake-speare found it an incumbrance, and instead of lightening it by brevity, endeavoured to recommend it by dignity and splendor.

His declarations, or set speeches, are commonly cold and weak, for his power was the power of nature; when he endeavoured, like other tragic writers, to catch opportunities of amplification, and, instead of inquiring what the occasion demanded, to shew how much his stores of knowledge could supply, he seldoin escapes without the pity or resentment of his reader.

It is incident to him to be now and then entangled with an unwieldy sentiment, which he cannot well express, and will

M m 4

not reject; he atruggles with it a while, and, if it continues stubborn, comprizes it in words such as occur, and leaves it to be disentangled and envolved by those who have more leisure to bestow upon it.

Not that always where the language is intricate the thought is subtile, or the image always great where the line is bulky; the quality of words to things is very often neglected, and trivial sentiments and vulgar ideas disappoint the attention, to which they are recommended by sonorous

epithets and swelling figures.

But the admirers of this great poet have most reason to complain when he approaches nearest to his highest excellence, and seems fully resolved to sink them in dejection, and mollify them with tender emotions by the fall of greatness, the danger of innocence, or the crosses of love. What he does best, he soon ceases to do. He is not long soft and pathetic without some idle conceit, or contemptible equivocation. He no sooner begins to move, than he counteracts himself; and terror and pity, as they are rising in the mind, are checked and blasted by sudden frigidity.

A quibble is to Shakespeare what luminous vapours are to the traveller; he follows it at all adventures; it is sure to lead him out of his way, and sure to engulf him in the mire. It has some malignant power over his mind, and its fascinations are irresistible. Whatever be the dignity or profundity of his disquisition, whether he be enlarging knowledge, or exhausting affection, whether he be amusing attention with incident, or enchaining it with suspence, let but a quibble spring up before him, and he leaves his work unfinished. A quibble is the golden apple for which he will always turn aside from his career, or atoop from his elevation. A quibble, poor and barren as it is, gave him such delight, that he was content to purchase it, by the sacrifice of reason, propriety, and truth. A quibble was to him the latal Gleopatra for which he lost the world, and was content to lose it.

It will be thought strange, that, in enumerating the defects of this writer; I have not yet mentioned his neglect of the unities; his violation of those laws which have been instituted and established by the joint authority of poets and critics.

For his other deviations from the art of writing, I resign him to critical justice, without making any other demand in his layour, than that which must be indulged

to all human excellence; that his virtues be rated with his failings: but, from the censure which this irregularity may bring upon him, I shall, with due reverence to that learning which I must oppose, adventure to try how I can defend him.

His histories, being neither tragedies nor comedies, are not subject to any of their laws; nothing more is necessary to all the praise which they expect, than that the changes of action be so prepared as to be understood, that the incidents be various and affecting, and the characters consistent, natural, and distinct. No other unity is intended, and therefore none is to

be sought.

In his other works he has well enough preserved the unity of action. He has not, indeed, an intrigue regularly perplexed and regularly unravelled; he does not endeavour to hide his design only to discover it; for this is seldom the order of real events, and Shakespeare is the poet of nature: but his plan has commonly what Aristotle requires, a beginning, a middle, and an end; one event is concatenated with another, and the conclusion follows by easy consequence. There are perhaps some incidents that might be spared, as in other poets there is much talk that only fills up time upon the stage; but the general system makes gradual advances, and the end of the play is the end of expectation.

To the unities of time and place he has shewn no regard; and perhaps a nearer view of the principles on which they stand, will diminish their value, and which, draw from them the veneration which, from the time of Corneille, they have very generally received, by discovering that they have given more trouble to the poet, than

pleasure to the auditor.

The necessity of observing the unities of time and place arises from the supposed necessity of making the drama credible. The critics hold it impossible, that an action of months and years can be possibly believed to pass in three hours; or that the spectator can suppose himself to sit in the theatre, while ambassadors go and return between distant kings, while armies are levied and towns besieged, while an exile wanders and returns, or till he whom they saw courting his mistress, should lament the untimely fall of his son. The mind revolts from evident falsebood, and action loses its force when it departs from the resemblance of reality.

From

From the narrow limitation of time necessarily arises the contraction of place. The spectator, who knows that he saw the first act at Alexandria, cannot suppose that he sees the next at Rome, at a distance to which not the dragons of Medea could, in so short a time, have transported him; he knows with certainty that he has not changed his place; and he knows that place cannot change itself; that what was a house cannot become a plain; that what was Thebes can never be Persepolis.

Such is the triumphant language with which a critic exults over the misery of an irregular poet, and exults commonly without resistance or reply. It is time, therefore, to tell him, by the authority of Shake-tpeare, that he assumes, as an unquestionable principle, a position, which, while his breath is forming it into words, his understanding pronounces to be false. It is false, that any representation is mistaken for reality; that any dramatic fable, in its materiality, was ever credible, or, for a single moment, was ever credited.

The objection arising from the impossibility of passing the first hour at Alexandria, and the next at Rome, supposes, that when the play opens, the spectator really imagines himself at Alexandria; and believes that his walk to the theatre has been a voyage to Egypt, and that he lives in the days of Antony and Gleopatra. Surely he that imagines this may imagine more. He that can take the stage at one time for the palace of the Ptolemies, may take it in half an hour for the promontory of Actium. Delusion, if delusion be admitted. has no certain limitation; if the spectator can be once persuaded, that his old acquaintance are Alexander and Cassar, that 2 room illuminated with candles is the plain of Pharsalia, or the bank of Granicus, he is in a state of elevation above the reach of reason, or of truth, and from the heights of empyrean poetry, may despise the circumspections of terrestrial nature. There is no reason why a mind thus wandering in ecstacy should count the clock; or why an hour should not be a century in that calenture of the brain that can make the stage a field.

The truth is, that the spectators are always in their senses, and know, from the first act to the last, that the stage is only a stage, and that the players are only players. They came to hear a certain number of lines recited with just gesture and elegant modulation. The lines relate to some ac-

tion, and an action must be in some place; but the different actions that complete a story may be in places very remote from each other; and where is the absurdity of allowing that space to represent first Athens, and then Sicily, which was always known to be neither Sicily nor Athens, but a modern theatre?

By supposition, as place is introduced. time may be extended; the time required by the fable elapses' for the most part between the acts; for, of so much of the action as is represented, the real and poetical duration is the same. If, in the first act, preparations for war against Mithridates are represented to be made in Rome, the event of the war may, without absurdity, be represented, in the catastrophe, as happening in Pontus; we know that there is neither war, nor preparation for war; we know that we are neither in Rome nor Pontus; that neither Mithridates nor Lucultus are before us. The drama exhibits successive imitations of successive actions: and why may not the second imitation represent an action that happened years after the first, if it be so connected with it. that nothing but time can be supposed to intervene? Time is, of all modes of existence, most obsequious to the imagination; a lapse of years is as easily conceived as a passage of hours. In contemplation we easily contract the time of real actions, and therefore willingly permit it to be contracted when we only see their imitation.

It will be asked, how the drama moves, if it is not credited? It is credited with all credit due to a drama. It is credited, whenever it moves, as a just picture of a real original; as representing to the auditor what he would himself feel, if he were to do or suffer what is there feigned to be suffered or to be done. The reflection that strikes the heart is not, that the evils before us are real evils, but that they are evils to which we ourselves may be exposed. If there be any fallacy, it is not that we fancy the players, but that we fancy ourselves unhappy for a moment; but we rather lament the possibility, than suppose the presence of misery, as a mother weeps over her babe, when she remembers that death may take it from her. The delight of tragedy proceeds from our consciousness of fiction; if we thought murders and treasons real, they would please no more.

Imitations produce pain or pleasure, not because

because they are mistaken for realities. but because they bring realities to mind. When the imagination is recreated by a painted landscape, the trees are not supposed capable to give us shade, or the fountains coolness; but we consider how we should be pleased with such fountains playing beside us, and such woods waving over us. We are agitated in reading the history of Henry the Filth, yet no man takes his book for the field of Agincourt. A dramatic exhibition is a book recited with concomitants that increase or diminish its effect. Familiar comedy is often more powerful on the theatre, than in the page; imperial tragedy is always less. The humour of Petruchio may be heightened by grimace; but what voice or what gesture can hope to add dignity or force to the soliloguy of Cato?

A play read affects the mind like a play acted. It is therefore evident, that the action is not supposed to be real; and it follows, that between the acts a longer or shorter time may be allowed to pass, and that no more account of space or diration is to be taken by the auditor of a drama, than by the reader of a narrative, before whom may pass in an hour, the life of a hero, or the revolutions of an empire.

Whether Shakespeare knew the unites, and rejected them by design, or deviated from them by happy ignorance, it is, I think, impossible to decide, and useless to inquire. We may reasonably suppose, that, when he rose to notice, he did not want the counsels and admonitions of scholars and critics, and that he at last deliberately persisted in a practice, which he might have begun by chance. As nothing is essential to the fable but unity of action, and as the unities of time and place arise evidently from false assumptions, and by circumscribing the extent of the drama, lessens its variety, I cannot think it much to be lamented that they were not known by him, or not observed: nor, if such another poet could arise, should I very vehemently reproach him, that his first act passed at Venice, and his next in Cyprus, Such violations of rules, merely positive, become the comprehensive genius of Shakespeare, and such censures are suitable to the minute and slender criticism of Voltaire:

Non usque adeo permiscuit imis Longus summa dies, ut non, ri voce Metelli Serventur leges, malint Cæmre tolli.

Yet when I speak thus slightly of dramatic rules, I cannot but recollect how much wit and learning may be produced against me; before such authorities I am afraid to stand, not that I think the present question one of those that are to be decided by mere authority, but hecause it is to be suspected, that these perhaps have not been so easily received, but for better reasons than I have yet been able to find. The result of my enquiries, in which it would be ludicrous to boast of impartiality, is, that the unities of time and place are not essential to a just drama; that though they may sometimes conduce to pleasure, they are always to be sacrificed to the nobler beauties of varieties and instruction; and that a play written with nice observation of critical rules, is to be contemplated as an elaborate curiosity, as the product of superfluous and ostentatious art, by which is shewn, rather what is possible than what is necessary.

He that, without diminution of any other excellence, shall preserve all the unities unbroken, deserves the like applause with the architect, who shall display all the orders of architecture in a citadel, without any deduction from its strength: but the principal beauty of a citadel is to exclude the enemy; and the greatest graces of a play are to copy nature, and instruct life.

Perhaps, what I have here not dogmatically but deliberately written, may recal the principles of the drama to a new examination. I am almost frighted at my own temerity; and when I estimate the same and the strength of those that maintain the contrary opinion, am ready to sink down in reverential silence; as Æneas withdrew from the defence of Troy, when he saw Neptune shaking the wall, and Juno heading the besiegers.

Those whom my arguments cannot persuade to give their approbation to the judgment of Shakespeare, will easily, if they consider the condition of his life, make some allowance for his ignorance.

Every man's performances, to be rightly estimated, must be compared with the state of the age in which he lived, and with the sown particular opportunities; and though to a reader a book be not worse or better for the circumstances of the author, yet as there is always a silent reference of human works to human abilities, and as the inquiry, how far man may extend his denigns, or how high he may rate his native

force, is of far greater dignity than in what rank we shall place any particular performance, curio-ity is always busy to discover the instruments, as well as to survey the workmanship, to know how much is to be ascribed to original powers, and how much to casual and adventitious belp. The palaces of Peru or Mexico were certainly mean and incommodious habitations, if compared to the houses of European monarchs; yet who could forbear to view them with astonishment, who remembered that they were built without the use of iron?

The English nation, in the time of Shakespeare, was yet struggling to emerge from barbarity. The philology of Italy had been transplanted hither in the reign of Henry the Eighth; and the learned languages had been successfully cultivated by Lilly, Linacre, and More; by Pole, Cheke, and Gardiner: and afterwards by Smith, Clerk, Haddon, and Aschain. Greek was now taught to boys in the principal schools; and those who united elegance with learning, read, with great diligence, the Italian and Spanish poets. But literature was yet confined to professed scholars, or to men and women of high rank. The public was gross and dark; and to be able to read and write, was an accomplishment still valued for its rarity.

Nations, like individuals, have their infancy. A people, newly awakened to literary curiosity, being yet unacquainted with the true state of things, knows not how to judge of that which is proposed as its resemblance. Whatever a remote from common appearances is always welcome to vulgar, as to childish credulity; and of a country unenlightened by learning, the whole people is the vulgar. The study of those who then aspired to plebian learning was laid out upon adventures, giants, dragons, and enchantments. The Death of Arthur was the favourite volume.

The mind, which was feasted on the luxurious wonders of fiction, has no taste of the insipidity of truth. A play, which imitated only the common occurrences of the world, would, upon the admirers of Palmerin and Guy of Warwick, have made little impression; he that wrote for such an audience was under the necessity of looking round for strange events and fabulous transactions; and that incredibility, by which maturer knowledge is offended, was the chief recommendation of writings to unskilful curiosity.

Our author's plots are generally borrowed from novels; and it is reasonable to suppose, that he chose the most popular, such as were read by many, and related by more; for his audience could not have followed him through the intricacies of the drama, had they not held the thread of the story in their hands.

The stories, which we now find only in remoter authors, were in his time accessible and familiar. The fable of As you Like It, which is supposed to be copied from Chaucer's Gamelyn, was a little pamphlet of those times; and old Mr. Cibber remembered the tale of Hamlet in plain English prose, which the critics have now to seek in Saxo Grammiaticus.

His English histories he took from English chronicles and English ballads; and as the ancient writers were made known to his countrymen by versions, they supplied him with new subjects; he dilated some of Plutarch's lives into plays, when they had been translated by North.

His plots, whether historical or fabulous, are always crowded with incidents, by which the attention of a rude people was more easily caught than by sentiment or argumentation; and such is the power of the marvellous, even over those who de-'spise it, that every man finds his mind more strongly seized by the tragedies of Shakespeare than of any other writer: others please us by particular speeches; but he always makes us anxious for the event. and has, perhaps, excelled all but Homer in securing the first purpose of a writer, by exciting restless and unquenchable curiosity, and compelling him that reads his work to read it through.

The shows and bustle, with which his plays abound, have the same original. As knowledge advances, pleasure passes from the eye to the ear, but returns, as it declines, from the ear to the eye. Those to whom our author's labours were exhibited, had more skill in pomps or processions than in poetical language, and perhaps wanted some visible and discriminated events, as comments on the dialogue. He knew how he should most please; and whether his practice is more agreeable to nature, or whether his example has prejudiced the nation, we still find, that on our stage something must be done, as well as said, and inactive declamation is very coldly heard, however musical or elegant, passionate or sublime.

Voltaire expresses his wonder, that our author's

author's extravagancies are endured by a nation, which has seen the tragedy of Gato. Let him be answered, that Addison speaks the language of poets, and Shakespeare of We find in Cato innumerable beauties which enamour us of its author, but we see nothing that acquaints us with human sentiments or human actions; we place it with the fairest and the noblest progeny which judgment propagates by conjunction with learning; but Othello is the vigorous and vivacious offspring of observation impregnated by genius. Cato affords a splendid exhibition of artificial and fictitious manners, and delivers just and noble sentiments, in diction easy, elevated and harmonious, but its hopes and fears communicate no vibration to the heart; the composition refers us only to the writer; we pronounce the name of Cato, but we think on Addison.

The work of a correct and regular writer is a garden accurately formed and diligently planted, varied with shades, and scented with flowers; the composition of Shakespeare is a forest, in which oaks extend their branches, and pines tower in the air, interspersed sometimes with weeds and brambles, and sometimes giving shelter to myrtles and to roses; filling the eye with awful pomp, and gratifying the mind with endless diversity. Other poets display cabinets of precious rarities, minutely finished, wrought into shape, and polished into brightness. Shakespeare opens a mine which contains gold and diamonds in inexhaustible plenty, though clouded by incrustations debased by impurities, and mingled with a mass of meaner minerals.

It has been much disputed whether Shakespeare owed his excellence to his. own native force, or whether he had the common helps of scholastic education, the precepts of critical science, and the examples of ancient authors.

There has always prevailed a tradition, that Shakespeare wanted learning, that he had no regular education, nor much skill in the dead languages. Jonson, his friend, affirms, that he had small Latin and less Greek; who, besides that he had no imaginable temptation to falsehood, wrote at a time when the character and acquisitions of Shakespeare were known to multitudes. His evidence ought therefore to decide the controversy, unless some testimony of equal force could be opposed.

Some have imagined, that they have discovered deep learning in many imitations of old writers; but the examples which I have known urged were drawn from books translated in his time; or were such easy coincidences of thought, as will happen to all who consider the same subjects; or such remarks on life, or axioms of morality, as float in conversation, and are transmitted through the world in proverbial sentences,

I have found it remarked, that in this important sentence, Go before, I'll follow, we read a translation of I præ, sequar. I have been told, that when Galiban, after a pleasing dream, says, I cry'd to sleep again, the author imitates Anacreon, who had, like every other man, the same wish on the same occasion.

There are a few passages which may pass for imitations, but so few, that the exception only confirms the rule; he obtained them from accidental quotations, or by oral communication; and as he used what he had, would have used more if he had obtained it.

The Comedy of Errors is confessedly taken from the Menzechmi of Plautus; from the only play of Plautus which was then in English. What can be more probable, than that he who copied that would have copied more; but that those which were not translated were inaccessible?

Whether he knew the modern languages is uncertain. That his plays have some French scenes, proves but little; he might easily procure them to be written, and probably, even though he had known the language in the common degree, he could not have written it without assistance. In the story of Romeo and Juliet, he is observed to have followed the English translation, where it deviates from the Italian; but this, on the other part, proves nothing against his knowledge of the original. He was to copy, not what he knew himself, but what was known to his audience.

It is most likely that he had learned Latin sufficiently to make him acquainted with construction, but that he never advanced to an easy perusal of the Roman authors. Concerning his skill in modern languages, I can find no sufficient ground of determination; but, as no imitations of French or Italian authors have been discovered, though the Italian poetry was then high in esteem, I am inclined to believe, that he read little more than English, and chose for his fables only such tales as he found translated.

That much knowledge is scattered over his works is very justly observed by Pope,

but it is often such knowledge as books did not supply. He that will understand Shakeapeare must not be content to study him in the closet, he must look for his mearing sometimes among the sports of the field, and sometimes among the manufactures of the shop.

There is, however, proof enough that he was a very diligent reader, nor was our language then so indigent of books, but that he might very liberally indulge his curiosity without excursion into foreign literature. Many of the Roman authors were translated, and some of the Greek; the Reformation had filled the kingdom with theological learning; most of the topics of human disquisition had found Luglish writers; and poetry had been cultivated, not only with diligence, but success. This was a stock of knowledge sufficient for a mind so capable of appropriating and improving it.

But the greater part of his excellence was the product of his own genius. He found the English stage in a state of the utmost rudeness; no essays either in tragedy or comedy had appeared, from which it could be discovered to what degree of delight either one or other might be carried. Neither character nor dialogue were yet understood. Shakespeare may be truly said to have introduced them both amongst us, and in some of his happier scenes to have carried them both to the utmost height.

By what gradations of improvement he proceeded, is not easily known; for the chronology of his works is yet unsettled. Rowe is of opinion, that " perhaps we are not to look for his beginning, like those of other writers, in his least perfect works; art had so little, and nature so large a share in what he did, that for aught I know," says he, " the performances of his youth, as they were the most vigorous, were the best." But the power of nature is only the power of using, to any certain pupose, the materials which diligence procures, or opportunity supplies. Nature gives no man knowledge, and, when images are collected by study and experience, can only assist in combining or applying them. Shakespeare, however favoured by nature, could impart only what he had learned; and, as he must increase his ideas, like other mortals, by gradual acquisition, he, like them, grew wiser as he grew older, could display life better, as he knew it

more, and instruct with more efficacy, as he was himself more amply instructed.

There is a vigilance of observation, and accuracy of distinction, which books and precepts cannot confer; from this, almost all original and native excellence proceeds. Shakespeare must have looked upon mankind with perspicacity, in the highest degree curious and attentive. Other writers borrow their characters from preceding writers, and diversify them only by the accidental appendages of present manners; the dress is a little varied, but the body is the same. Our author had both matter and form to provide; for, except the characters of Chaucer, to whom I think he is not much indebted, there were no writers in English, and perhaps not many in other modern languages, which shewed life in its native colours.

The contest about the original benevolence or malignity of man, had not yet commenced. Speculation had not yet attempted to analyse the mind, to trace the passions to their sources, to unfold the seminal principles of vice and virtue, or sound the depths of the heart for the motives of action. All those inquiries, which from the time that human nature became the fashionable study, have been made sometimes with nice discernment, but often with idle subtilty, were yet unattempt-The tales with which the infancy of learning was satisfied, exhibited only the superficial appearances of action, related the events, but omitted the causes, and were formed for such as delighted in wonders rather than in truth. Mankind was not then to be studied in the closet; he that would know the world, was under the necessity of gleaning his own remarks, by mingling, as he could, in its business and amusements.

Boyle congratulated himself upon his high birth, because it favoured his curioaity, by facilitating his access. Shakespeare had no such advantage; he came to London a needy adventurer, and lived for a time by very mean employments. Many works of genius and learning have been performed in states of life that appear very little favourable to thought, or to enquiry: so many, that he who considers them, is inclined to think that he sees enterprize and perseverance predominating over all external agency, and bidding help and hindrance vanish hefore them. The genius of Shakespeare was not to be de-

pressed by the weight of poverty, nor limited by the narrow conversation to which men in want are inevitably condemned; the incumbrances of his fortune were shaken from his mind, as dew-drops from a lion's mane.

Though he had so many difficulties to encounter, and so little assistance to surmount them, he has been able to obtain an exact knowledge of many modes of life, and many casts of native dispositions; to vary them with great multiplicity: to mark them by nice distinctions; and to shew them in full view by proper combinations. In this part of his performances he had none to imitate, but has been himself imitated by all succeeding writers; and it may be doubted whether, from all his successors, more maxims of theoretical knowledge, or more rules of practical prudence, can be collected, than he alone has given to his country.

Nor was his intention confined to the actions of men; he was an exact surveyor of the inanimate world; his descriptions have always some peculiarities, gathered by contemplating things as they really exist. It may be observed, that the oldest poets of many nations preserve their reputation, and that the following generations of wit, after a short celebrity, sink into oblivion. The first, whoever they be, must take their sentiments and descriptions immediately from knowledge; the resemblance is therefore just; their descriptions are verified by every eye, and their sentiments acknowledged by every breast, Those whom their fame invites to the same. studies, copy partly them, and partly nature, till the books of one age gain such authority, as to stand in the place of nature to another; and imitation, always deviating a little, becomes at last capricious and casual. Shakespeare, whether life or nature be his subject, shews plainly that he has seen with his own eyes; he gives the image which he receives, not weakened or distorted by the intervention of any other mind; the ignorant feel his representations to be just, and the learned see that they are complete.

Perhaps it would not be easy to find any author, except Homer, who invented so much as Shakespeare, who so much advanced the studies which he cultivated, or effused so much novelty upon his age or country. The foran, the characters, the language, and the shows of the English drama are his. "He seems," says Denais, "to have been the very original of

our English tragical harmony, that is, the harmony of blank verse diversified often by dissyllable and tryssyllable terminations. For the diversity distinguishes it from heroic harmony, and by bringing it nearer to common use makes it more proper to gain attention, and more fit for action and dialogue. Such verse we make when we are writing prose; we make such verse in common conversation."

I know not whether this praise is rigorously just. The dissyllable termination, which the critic rightly appropriates to the drama, is to be found, though, I think, not in Gorboduc, which is confessedly before our author; yet in Theronymo, of which the date is not certain, but which there is reason to believe at least as old as his earliest plays. This however is certain, that he is the first who taught either tragedy or comedy to please, there being no theatrical piece of any older writer, of which the name is known, except to antiquaries and collectors of books, which are sought because they are scarce, and would not have been scarce had they been much esteemed.

To him we must ascribe the praises, unless Spenser may divide it with him, of having first discovered to how much smoothness and harmony the English language could be softened. He has speeches, perhaps sometimes scenes, which have all the delicacy of Rowe, without his effentines. He endeavours, indeed, commonly to strike by the force and vigour of his dialogue, but he never executes his purpose better, than when he tries to soothe by softuess.

Yet it must be at last confessed, that as we owe every thing to him, he owes something to us; that, if much of his praise is paid by perception and judgment, much is likewise given by custom and veneration. We fix our eyes upon his graces, and turn them from his deformities, and endure in him what we should in another loath or despise. If we endured without praising, respect for the father of our drama might excuse us; but I have seen, in the book of some modern critic, a collection of anomalies, which shew that he has corrupted language by every mode of depravation, but which his admirer has atcumulated as a monument of honour.

He has scenes of undoubted and perpetual excellence, but perhaps not one play, which if it were now exhibited as the work

^{*} It appears, from the induction of Ben Jonana's Bartholomes-Fair, to have been acted before the year 1590, STERVERS.

of a contemporary writer, would be heard to the conclusion. I am indeed far from thinking, that his works were wrought to his own ideas of perfection; when they were such as would satisfy the audience, they satisfied the writer. It is seldom that authors, though more studious of fame than Shakespeare, rise much above the standard of their own age; to add a little to what is best, will always be sufficient for present praise, and those who find themselves exalted into fame, are willing to credit their encomiasts, and to spare the labour of contending with themselves.

It does not appear, that Shakespeare thought his works worthy of posterity, that he levied any ideal tribute upon future times, or had any further prospect, than of present popularity and present profit. When his plays had been acted, his hope was at an end; he solicited no addition of honour from the reader. He therefore made no scruple to repeat the same jests in many dialogues, or to entangle different plots by the same knot of perplexity; which may be at least forgiven him by those who recollect, that of Congreve's four comedies, two are concluded by a marriage in a mask, by a deception, which, perhaps, never happened, and which, whether likely or not, he did not invent.

So careless was this great poet of future fame, that, though he retired to ease and plenty, while he was yet little declined into the rale of years, before he could be disgusted with fatigue, or disabled by informity, he made no collection of his works, nor desired to rescue those that had been already published from the depravations that obscured them, or secure to the rest a better destiny, by giving them to the world in their genuine state.

Johnson.

\$ 231. Pope's Preface to his Homen.

Homer is universally allowed to have had the greatest Invention of any writer whatever. The praise of Judgment Virgil has justly contested with him, and others may have their pretensions as to particular excellencies; but his Invention remains yet unrivalled. Nor is it a wonder if he has ever been acknowledged the greatest of poets, who most excelled in that which is the very foundation of poetry. It is the Invention that in different degrees distinguishes all great geniuses; the utmost stretch of human study, learning, and industry, which masters every thing besides, can never attain to this. It furnishes Art with all her materials, and without it,

Judgment itself can at best but steal wisely; for Art is only like a prudent steward that lives on managing the riches of Nature. Whatever praises may be given to works of judgment, there is not even a single beauty in them to which the invention must not contribute: as in the most regular gardens, art can only reduce the beauties of nature to more regularity, and such a figure, which the common eye may better take in, and is therefore more entertained with. And perhaps the reason why common critics are inclined to prefer a judicious and methodical genius to a great and fruitful one is, because they find it easier for themselves to pursue their observations through an uniform and bounded walk of art, than to comprehend the vast and various extent of nature.

Our author's work is a wild paradise, where if we cannot see all the beauties so distinctly as in an ordered garden, it is only because the number of them is infinitely greater. It is like a copious nurvery, which contains the seeds and first productions of every kind, out of which those who followed him have but selected some particular plants, each according to his fancy, to cultivate and beautify. If some things are too husuriant, it is owing to the richness of the soil; and if others are not arrived to perfection or maturity, it is only because they are over-run and opprest by

those of a stronger nature.

It is to the strength of this amazing invention we are to attribute that unequalled fire and rapture, which is so forcible in Homer, that no man of a true poetical spirit is master of himself while he reads him. What he writes, is of the most animated nature imaginable; every thing moves, every thing lives, and 'is put in action. If a council be called, or a battle fought, you are not coldly informed of what was said or done as from a third person, the reader is hurried out of himself by the force of the poet's imagination, and turns in one place to a hearer, in another to a spectator. The course of his verses resembles that of the army he describes; Oi d' de' i ous, work to wugi xbus mara ripolle. "They pour along like a fire that sweeps " the whole earth before it." It is however remarkable that his fancy, which is every were vigorous, is not discovered immediately at the beginning of his poem in its fullest splendour; it grows in the progress both upon himself and others, and becomes on fire, like a chariot-wheel, by its own rapidity. Exact disposition, just thought,

thought, correct elecution, polished numbers, may have been found in a thousand; but this poetical fire, this " vivida vis animi," in a very few. Even in works where all those are imperfect or neglected, this can overpower criticism, and make us admire even while we disapprove. Nay, where this appears, though attended with absurdities, it brightens all the rubbish about it, till we see nothing but its own splendor. This fire is discerned in Virgil, but discerned as through a glass, reflected from Homer, more shining than fierce, but every where equal and constant: in Lucan and Statius, it bursts out in sudden, shorty and interrupted flashes: in Milton it glows like a furnace kept up to an uncommon ardor by the force of art: in Shakespeare. it strikes before we are aware, like an 'accidental fire from heaven: but in Homer, and in him only, it burns every where clearly, and every where irresistibly.

I shall here endeavour to shew, how this wast Invention exerts itself in a manner superior to that of any poet, through all the main constituent parts of his work, as it is the great and peculiar characteristic which distinguishes him from all others.

This strong and ruling faculty was like a powerful star, which in the violence of its course, drew all things within its vortex. It seemed not enough to have taken in the whole circle of arts and the whole compass of nature, to supply his maxims and reflections; all the inward passions and affections of mankind, to furnish his characters; and all the outward forms and images of things for his descriptions; but, wanting yet an ampler sphere to expatiate in, he opened a new and boundless walk for his imagination, and created a world for himself in the invention of fable. That which Aristotle calls the " Soul of poetry," was first breathed into it by Homer. I shall begin with considering him in this part, as it is naturally the first; and I speak of it both as it means the design of a poem, and as it is taken for fiction.

Fable may be divided into the Probable, the Allegorical, and the Marvellous. The probable fable is the recital of such actions as though they did not happen, yet might, in the common course of nature; or of such as, though they did, become fables by the additional episodes and manner of telling them. Of this sort is the main story of an epic poem, the return of Ulysses, the settlement of the Trojans in Italy, or the like. That of the Iliad is the anger of

Achilles the most short and single subject that ever was chosen by any poet. Yes this he has supplied with a vaster variety of incidents and events, and crowded with a greater number of councils, speeches, battles, and episodes of all kinds, than are to be found even in those poems whose schemes are of the unmost latitude and irregularity. The action is harried on with the most vehement spirit, and its whole duration employs not so much as fifty days. Virgil, for want of so warm a genius, aided himself by taking in a more extensive subject, as well as a greater-length of time. and contracting the design of both Homer's poems into one, which is yet but a fourth part as large as his. The other epic poets have used the same practice, but generally carried it so far as to superinduce a multiplicity of fables, destroy the unity of action, and lose their readers in an unreasonable length of time. Nor is it only in the main design that they have been unable to add to his invention, but they have followed him in every episode and part of story. If he has given a regular catalogue of an army, they all draw up their forces in the same order. If he has funeral games for Patroclus, Virgil has the same for Anchises; and Statius (rather than omit them) destroys the unity of his action for those of Archemoras. If Ulysses visits the shades, the Æneas of Virgil, and Scipio of Sitius, are sent after him. If he be detained from his return by the allurements of Calvoso, so is Æneas by Dido, and Rinaldo by Armida. If Achilles be absent from the army on the score of a quarrel through half the poem, Rinaldo must absent himself just as long, on the like account. If he gives his hero a suit of celestial armour, Virgil and Tasso make the same present to theirs. Virgil has not only observed this close imitation of Homer, but where he had not led the way, supplied the want from other Greek authors. Thus the story of Sinon and the taking of Troy was copied (says Macrobius) almost word for word from Pisander, as the loves of Dido and Æneas are taken from those of Medea and Jason in Apollonius, and several others in the same manner.

To proceed to the allegorical fable: if we reflect upon these immunerable knowledges, those secrets of nature and physical philosophy, which Homer is generally supposed to have wrapped up in his allegories, what a new and ample sector of wonder may this consideration afford up! how fertile

will

will that imagination appear, which was able to clothe all the properties of elements, the qualifications of the mind, the virtues and vices, in forms and persons; and to introduce them into actions agreeable to the nature of the things they shadowed! This is a field in which no succeeding poets could dispute with Homer; and whatever commendations have been allowed them on this head, are by no means for their invention in having enlarged his circle, but for their judgment in having contracted it. For when the mode of learning changed in following ages, and science was delivered in a plainer manner: it then became as reasonable in the more modern poets to lay it aside, as it was in Homer to make use of it. And perhaps it was no unhappy circumstance for Virgil, that there was not in his time that demand upon him of so great an invention, as might be capable of furnishing all those allegorical parts of a poem.

The marvellous fable includes whatever is supernatural, and especially the machines of the gods. He seems the first who brought them into a system of machinery for poetry, and such a one as makes its greatest importance and dignity. For we find those authors who have been offended at the literal notion of the gods, constantly laving their accusation against Homer as the chief support of it. But whatever cause there might be to blame his machines in a philosophical or religious view, they are so perfect in the poetic, that mankind have been ever since contented to follow them; none have been able to enlarge the sphere of poetry beyond the limits he has set: every attempt of this nature has proved unsuccessful; and after all the various changes of times and religions, his gods continue to this day the gods of poetry.

We come now to the characters of his persons; and here we shall find no author has ever drawn so many, with so visible and surprising a variety, or given us such lively and affecting impressions of them. Every one has something so singularly his own, that no painter could have distinguished them more by their features, than the poet has by their manners. Nothing can be more exact than the distinctions he has observed in the different degrees of virtues and vices. The single quality of courage is wonderfully diversified in the several characters of the Hiad. That of Achilles is furious and intractable; that of Diomede forward, yet listening to advice, and subject to command: that of Ajax is heavy, and

self-confiding; of Hector, active and vigilant: the courage of Agamemnon is inspirited by love of empire and ambition; that of Menelaus mixed with softness and tenderness for his people: we find in Idomeneus a plain direct soldier, in Sarpedon a gallant and generous one. Nor is this judicious and astonishing diversity to be found only in the principal quality which constitutes the main of each character, but even in the under-parts of it, to which he takes care to give a tineture of that principal one. For example, the main characters of Ulysses and Nestor consist in wisdom; and they are distinct in this, that the wisdom of one is artificial and various, of the other natural, open, and regular. But they have, besides, characters of courage; and this quality also takes a different turn in each from the difference of his prudence: for one in the war depends still upon caution, the other upon experience. It would be endless to produce instances of these kinds.—The characters of Virgil are far from striking us in this open manner; they lie in a great degree hidden and undistinguished, and where they are marked most evidently, affect us not in proportion to those of Homer. His characters of valour are much alike; even that of Turnus seems no way peculiar but as it is in a superior degree; and we see nothing that differences the courage of Mnestheus from that of Sergesthus, Cloanthus, or the rest. In like manner it may be remarked of Statius's heroes, that an air of impetuosity runs through them all; the same horrid and savage courage appears in his Capaneus, Tydeus, Hippomedon, &c. They have a parity of character, which makes them seem brothers of one family. I believe when the reader is led into this track of reflection, if he will pursue it through the epic and tragic writers, he will be convinced how infinitely superior in this point the invention of Homer was to that of all others.

The speeches are to be considered as they flow from the characters, being perfect or defective as they agree or disagree with the manners of those who atter them. As there is more variety of characters in the Iliad, so there is of speeches, than in any other poem. Every thing in it has manners (as Aristotle expresses it) that is, every thing is acted or spoken. It is hardly credible, in a work of such length, how small a number of lines are employed in narration. In Virgil the dramatic part is

Nn

less in proportion to the narrative; and the speeches often consist of general reflections or thoughts, which might be equally just in any person's month upon the same occasion. As many of his persons have no apparent characters, so many of his speeches escape being applied and judged by the rule of propriety. We oftener think of the author himself when we read Virgil, than when we are engaged in Homer; all which are the effects of a colder invention, that interests us less in the action described; Homer makes us hearers, and Virgil leaves us readers.

If in the next place we take a view of the sentiments, the same presiding faculty is eminent in the sublimity and spirit of his thoughts. Longinus has given his opinion, that it was in this part. Homer principally excelled. What were alone sufficient to prove the grandeur and excellence of his sentiments in general, is, that they have so remarkable a parity with those of the scripture: Duport, in his Gnomologia Homerica, has collected innumerable instances of this sort. And it is with justice an excellent modern writer allows, that if Virgil has not so many thoughts that are low and vulgar, he has not so many that are sublime and noble; and that the Roman author seldom rises into very astonishing sentiments, where he is not fired by the fliad.

If we observe his descriptions, images, and similies, we shall find the invention still predominant. To what else can we a vibe that vast comprehension of images of every sort, where we see each circumstance of art, and individual of nature, summoned together, by the extent and fecundity of his imagination; to which all things, in their various views, presented themselves in an instant, and had their impressions taken off to perfection at a heat? Nay, he not only gives us the full prospects of things, but several unexpected peculiarities and side-views, unobserved by any painter but Homer. Nothing is so surprising as the descriptions of his battles, which take up no less than half the Hiad, and are supplied with so vast a variety of incidents. that no one bears a likeness to another; such different kinds of deaths, that no two heroes are wounded in the same manner: and such a profusion of noble ideas, that every battle rises above the last in greatness, horror and confusion. It is certain there is not near that number of images and descriptions in any epic poet; though every one has assisted himself with a great quantity out of him: and it is evident of Virgil especially, that he has scarce any comparisons which are not drawn from his master,

If we descend from hence to the expression, we see the bright imagination of Homer shining out in the most enlivened forms We acknowledge him the father of poetical diction, the first who taught that language of the gods to men. His expression is like the colouring of some great masters, which discovers itself to be laid on boldly, and executed with rapidity. It is indeed the strongest and most glowing imaginable, and touched with the greatest spirit. Aristotle had reason to say, he was the only poet who had found out living words: there are in him more daring figures and metaphors than in any good author whatever. An arrow is impatient to be on the wing, and a weapon thirsts to drink the blood of an enemy, and the like. Yet his expression is never too big for the sense. but justly great in proportion to it. It is the sentiment that swells and fills out the diction, which rises with it, and forms itself about it: for in the same degree that a thought is warmer, an expression will be brighter; as that is more strong, this will become more perspicuous: like glass in the furnace, which grows to a greater magnitude, and refines to a greater clearness, only as the breath within is more powerful, and the heat more intense.

To throw his language more out of prose, Homer seems to have affected the compound epithets. This was a sort of composition peculiarly proper to poetry, not only as it beightened the diction, but as it assisted and filled the numbers with greater sound and pomp, and likewise conduced in some measure to thicken the images, On this last consideration I cannot but attribute these also to the fruitfulness of his invention, since (as he has managed them) they are a sort of supernumerary pictures of the persons or things to which they are joined. We see the motion of Hector's plumes in the epithet xogudaixo, the landscape of Mount Neritus in that of singiφυλλω, and so of others; which particular images could not have been insisted upon so long as to express them in a description (though but of a single line) without diverting the reader too much from the principal action or figure. As a metaphor is a short simile, one of these epithets is a short description.

Lastly, if we consider his versification, we shall be sensible what a share of praise is due to his invention in that. He was nof satisfied with his language as he found it settled in any one part of Greece, but searched through its different dialects with this particular view, to beautify and perfect his numbers: he considered these as they had a greater mixture of vowels or consonants, and accordingly employed them as the verse required either a greater smoothness or strength. What he most affected was the Ionic, which has a peculiar sweetness from its never using contractions and from its custom of resolving the diphthongs into two syllables, so as to make the words open themselves with a more spreading and sonorous fluency. With this he mingled the Attic contractions, the broader Doric, and the feebler Æolic, which often rejects its aspirate, or takes off its accent; and compleated this variety by altering some letters with the licence of poetry. Thus his measures, instead of being fetters to his sense were always in readiness to run along with the warmth of his rapture, and even to give a farther representation of his motions, in the correspondence of their sounds to what they signified. Out of all these he has derived that harmony, which makes us confess he had not only the richest head, but the finest ear in the world. This is so great a truth, that whoever will but consult the tune of his verses, even without understanding them (with the same sort of diligence as we daily see practised in the case of Italian operas) will find more sweetness, variety, and majesty of sound, than in any other language or poetry. The beauty of his numbers is allowed by the critics to be copied but faintly by Virgil himself, though they are so just to ascribe it to the nature of the Latin tongue: indeed, the Greek has some advantages, both from the natural sound of its words. and the turn and cadence of its verse. which agree with the genius of no other Virgil was very sensible of language. this, and used the utmost diligence in working up a more intractable language to whatspever graces it was capable of; and in particular never failed to bring the sound of his line to a beautiful agreement with its sense. If the Grecian poet has not been so frequently celebrated on this account as the Roman, the only reason is, that fewer critics have understood one language than the other. Dionysius of Halicarnassus has pointed out many of our author's beauties in this kind, in his treatise

of the Composition of Words. It suffices at present to observe of his numbers, that they flow with so much ease, as to make one imagine Homer had no other care than to transcribe as fast as the Muses dictated; and at the same time with so much force and aspiring vigour, that they awaken and raise us like the sound of a trumpet. They roll along as a plentiful river, always in motion, and always full: while we are borne away by a tide of verse, the most rapid and yet the most

smooth imaginable.

Thus, on whatever side we contemplate Homer, what principally strikes us is his Invention. It is that which forms the character of each part of his work; and accordingly we find it to have made his fable more extensive and copious than any other, his manners more lively and strongly marked, his speeches more affecting and transported, his sentiments more warm and sublime, his images and descriptions more full and animated, his expression more raised and daring, and his numbers more rapid and various. I hope, in what has been said of Virgil, with regard to any of these heads, I have no way derogated from his character. Nothing is more absurd or endless, than the common method of comparing eminent writers by an opposition of particular passages in them, and forming a judgment from thence of their merit upon the whole. We ought to have a certain knowledge of the principal character and distinguishing excellence of each: it is in that we are to consider him. and in proportion to his degree in that we are to admire him. No author or man ever excelled all the world in more than one faculty; and as Homer has done this in Invention, Virgil has in Judgment. Not that we are to think Homer wanted Judgment, because Virgil had it in a more eminent degree, or that Virgil wanted Invention, because Homer possest a larger share of it: each of these great authors had more of both than perhaps any man besides, and are only said to have less in comparision with one another. Homer was the greater genius, Virgil the better artist. In one we most admire the man, in the other the work: Homer hurries and transports us with a commanding impetuosity, Virgil leads us with an attractive majesty: Homer scatters with a generous profusion, Virgil bestows with a careful magnificence: Homer, like the Nile, pour out his riches with a boundless over.

Virgil, like a river in its banks, with a gentle and constant stream. When we behold their battles, methinks the two poets resemble the heroes they celebrate; Homer, boundless and irresistible as Achilles, bears all before him, and shines more and more as the tumult increases; Virgil, calmly daring like Eneas, appears undisturbed in the midst of the action; dise poses all about him, and conquers with And when we look upon tranquillity. their machines. Homer seems like his own Jupiter in his terrors, shaking Olympus, scattering the lightnings, and bring the heavens; Virgil, like the same power in his benevolence, counselling with the gods; laying plans for coupires, and regularly ordering his whole creation.

But after all, it is with great parts, as with great virtues, they naturally border on some imperfection; and it is often hard to distinguish exactly where the virtue ends, or the fault begins. As prudence may sometimes sink to suspicion, so may a great judgment decline to coldness; and as magnanimity may run up to profusion or extravagance, so may a great invention to redundancy or wildness. If we look upon Homer in this view, we shall perceive the chief objections against him to proceed from so noble a cause as the ex-

cess of this faculty. Among these we may reckon some of his Marvellous Fictions, apon which so much criticism has been spent, as surpassing all the bounds of probability. Perhaps it may be with great and superior souls, as with gigantic bodies, which, exerting themselves with unusual strength, exceed what is commonly thought the due proportion of parts, to become miracles in the whole; and, like the old heroes of that make, commit something near extravagance, amidst a series of glorious and inimitable performances. Thus Homer has his speaking horses, and Virgil his myrtles distilling blood, where the latter has not so much as contrived the easy intervention of a Deity to save the probability.

It is owing to the same vast invention, that his similies have been thought too exuberant and full of circumstances. The force of his facility is seen in nothing more, than in its inability to couline itself to that single circumstance upon which the comparison is grounded: it runs out into embellishments of additional images, which he nower are so managed as not to over-

power the main one. His similies are like pictures, where the principal figure has not only its proportion given agreeable to the original, but is also set off with occasional ornaments and prospects. The same will account for his manner of heaping a number of comparisons together in one breath, when his fancy suggested to him at once so many various and corresponding images. The reader will easily extend this observation to more objections of the same kind.

If there are others which seem rather to charge him with a defect or narrowness of genius, than an excess of it; those seeming defects will be found upon examination to proceed wholly from the nature of the times he lived in. Such are his grosser representations of the gods, and the vicious and imperfect manners of his heroes; but I must here speak a word of the latter, as it is a point generally carried into extremes. both by the censurers and defenders of Homer. It must be a strange partiality to antiquity, to think with Madam Dacier, " that " those times and manners are so 66 much the more excellent, as they are " more contrary to ours." Who can be so prejudiced in their favour as to magnify the felicity of those ages, when a spirit of revenge and cruelty, joined with the practice of rapine and robbery, reigned through the world; when no mercy was shewn but for the sake of lucre; when the greatest princes were put to the sword, and their wives and daughters made slaves and concubines? On the other side, I would not be so delicate as those modern critics, who are shocked at the servile offices and mean employments in which we sometimes see the heroes of Homer engaged. There is a pleasure in taking a view of that simplicity in opposition to the luxury of succeeding ages, in beholding monarchs without their guards, princes tending their flocks, and princesses drawing water from the springs, When we read Homer, we ought to reflect that we are reading the most ancient author in the heathen world; and those who consider him in this light will double their pleasure in the perusal of him. Let them think they are growing acquainted with nations and people that are now no more; that they are stepping almost three thousand years back into the remotest antiquity. and entertaining themselves with a clear and surprising vision of things no where else

" Preface to her Homer.

to be found; the only true mirror of that ancient world. By this means alone their greatest obstacles will vanish; and what usually creates their dislike, will become a satisfaction.

This consideration may farther serve to answer for the constant use of the same epithets to his gods and heroes, such as the far darting Pheebus, the blue-eved Pallas, the swift-footed Achilles, &c. which some have censured as impertinent and tediously repeated. Those of the gods depended upon the powers and offices then believed to belong to them, and had contracted a weight and veneration from the rites and solemn devotions in which they were used: they were a sort of attributes in which it was a matter of religion to salute them on all occasions, and which it was an irroverence to omit. As for the epithets of great men, Mons. Boileau is of opinion, that they were in the nature of surnames, and repeated as such; for the Greeks, having no names derived from their fathers, were obliged to add some other distinction of each person; either naming his parents expressly, or his place of birth, profession, or the like: as Alexander, the son of Philip, Herodotus of Halicarnassus, Diogenes the Cynic, &c. Homer therefore, complying with the custom of his country, used such distinctive additions as better agreed with puetry. And indeed we have something parallel to these in modern times, such as the names of Harold Harefoot, Edmund Ironside, Edward Long-shanks, Edward the Black Prince, &c. If yet this be thought to account better for the propriety than for the repetition, I shall add a farther conjecture : Hesiod, dividing the world into its different ages, has placed a fourth age between the brazen and the iron one, of 44 Heroes distinct from other men: a divine race, who fought at Thebes and Troy, are called Demi-Gods, and live by the care of Jupiter in the islands of the blessed "." Now among the divine honours which were paid them, they might have this also in common with the gods, not to be mentioned without the solemnity of an epithet, and such as might be acceptable to them by its celebrating their families, actions, or qua-

What other cavils have been raised against Homer, are such as hardly deserve a reply, but will yet be taken notice of as they occur in the course of the work.

* Heaiod, lib. i. ver. 155, &c.

Many have been occasioned by an injudicious endeavour to exalt Virgil; which is much the same as if one should think to raise the superstructure by undermining the foundation: one would imagine, by the whole course of their parallels, that these critics never so much as heard of Homer's having written first; a consideration which whoever compares these two poets ought to have always in his eye. Some accuse him for the same things which they overlook or praise in the other; as when they prefer the fable and moral of the Æncis to those of the Iliad, for the same reasons which might set the Odysses above the Eneis: as that the hero is a wiser man; and the action of the one more beneficial to his country than that of the other; or else they blame him for not doing what he never designed; as because Achilles is not as good and perfect a prince as Æneas, when the very moral of his poem required a contrary character: it is thus that Rapin judges in his comparison of Homer and Virgil. Others select those particular passages of Homer, which are not so laboured as some that Virgil drew out of them; this is the whole management of Scaliger in his Poetices. Others quarrel with what they take for low and mean expressions, sometimes through a false delicacy and relinement, oftener from an ignorance of the graces of the original; and then triumple in the awkwardness of their own translations: this is the conduct of Perault in his Parallels. Lastly, there are others, who, pretending to a fairer proceeding, distinguish between the personal merit of Homer, and that of his work; but when they come to assign the causes of the great reputation of the Hiad, they found it upon the ignorance of his times and the prejudice of those that followed: and, in pursuance of this principle, they make those accidents (such as the contemion of the cities, &c.) to be the causes of his fame, which were in reality the consequences of his merit. The same might as well be said of Virgil or any great author, whose general character will infallibly raise many casual additions to their reputation. This is the method of Mons, de la Motte; who yet confesses upon the whole, that in whatever age Homer had lived, he must have been the greatest poet of his nation, and that he may be said in this sense to be the master even of those who surpassed him.

In all these objections we see nothing that contradicts his title to the honour of

N n 3

the chief invention; and as long as this (which indeed is the characteristic of poetry itself) remains unequalled by his followers, he still continues superior to them. A cooler judgment may commit fewer faults, and be more approved in the eyes of one sort of critics: but that warmth of fancy will carry the loudest and most universal applauses, which holds the heart of a reader under the strongest enchantment. Homer not only appears the inventor of poetry, but excels all the inventors of other arts in this, that he has swallowed up the honour of those who succeeded him. What he has done admitted no increase, it only left room for contraction or regulation. He shewed all the stretch of fancy at once; and if he has failed in some of his flights, it was but because he attempted every thing. A work of this kind seems like a mighty tree which rises from the most vigorous seed, is improved with industry, flourishes, and produces the finest fruit; nature and art conspire to raise it; pleasure and profit join to make it valuable: and they who find the justest faults, have only said, that a few branches (which run luxuriant through a richness of nature) might be lopped into form to give it a more regular appearance.

Having now spoken of the beauties and defects of the original, it remains to treat of the translation, with the same view to the chief characteristic. As far as that is seen in the main parts of the poem, such as the fable, manuers, and sentiments, no translator can prejudice it but by wilful omissions or contractions. As it also breaks out in every particular image, description, and simile, whoever lessens or too much softens those, takes off from this chief character. It is the first grand duty of an interpreter to give his author entire and unmaimed; and for the rest, the diction and versification only are his proper province; since these must be his own, but the others he is to take as he finds them.

It should then be considered, what methods may afford some equivalent in our language for the graces of these in the Greek. It is certain no literal translation can be just to an excellent original in a superior language: but it is a great mistake to imagine (as many have done) that a rash paraphrase can make amends for this general defect; which is no less in danger to lose the spirit of an ancient, by deviating into the modern manners of expression. If there be sometimes a dark-

ness, there is often a light in antiquity which nothing better preserves than a version almost literal. I know no liberties one ought to take, but those which are necessary for transfusing the spirit of the original, and supporting the poetical style of the translation: and I will venture to say, there have not been more men misled in former times by a servile dull adherence to the latter, than have been deluded in ours by a chimerical insolent hope of raising and improving their author. It is not to be doubted that the fire of the poem, is what a translator should principally regard, as it is most likely to expire in his managing: however, it is his salest way to be content with preserving this to his utmost in the whole, without endeavouring to be more than he finds his author is, in any particular place. It is a great secret in writing, to know when to be plain, and when poetical and figurative; and it is what Homer will teach us, if we will but follow modestly in his footsteps. Where his diction is bold and losty, let us raise ours as high as we can; but where he is plain and humble, we ought not to be deterred from imitating him by the fear of incurring the censure of a mere English critic. Nothing that belongs to Homer seems to have been more commonly mistaken than the just pitch of his style; some of his translators having swelled into lustian in a proud confidence of the sublime; others sunk into flatness in a cold and timorous notion of simplicity. Methinks I see these different followers of Homer, some sweating and straining after him by violent leaps and bounds, (the certain signs of false mettle); others slowly and servilely creeping in his train, while the poet himself is all the time proceeding with an unaffected and equal majesty before them. However, of the two extremes, one could sooner pardon frenzy than frigidity: no author is to be envied for such commendations as he may gain by that character of style, which his friends must agree together to call simplicity, and the rest of the world will call dulness. There is a graceful and dignified simplicity, as well as a bald and sordid one, which differ as much from each other as the air of a plain man from that of a sloven: it is one thing to be tricked up, and another not to be dressed at all. Simplicity is the mean between ostentation and rusticity.

This pure and noble simplicity is no where in such perfection as in the Scripture and our author. One may affirm, with all respect to the inspired writings, that the divine spirit made use of no other words but what were intelligible and common to men at that time, and in that part of the world; and as Homer is the author nearest to those, his style must of course bear a greater resemblance to the sacred books than that of any other wri-This consideration (together with what has been observed of the parity of some of his thoughts) may methinks preserve their full image by one or two induce a translator on the one hand to give into several of those general phrases and manners of expression, which have attained a veneration even in our language from being used in the Old Testament; as on the other, to avoid those which have been appropriated to the Divinity, and in a manner consigned to mystery and refigion.

For a farther preservation of this air of simplicity, a particular care should be taken to express with all plainness, those moral sentences and proverbial speeches which are so numerous in this poet. They have something venerable, and I may say oracular, in that unadorned gravity and shortness with which they are delivered: a grace which would be utterly lost by endeavouring to give them what we call a more ingenious (that is, a more

modern) turn in the paraphrase.

Perhaps the mixture of some Grecisma and old words, after the manner of Milton, if done without too much affectation, might not have an ill effect in a version of this particular work, which most of any other seems to require a venerable antique But certainly the use of modern terms of war and government, such as platoon, campaign, junto, or the like (into which some of his translators have fallen) cannot be allowable; those only excepted, without which it is impossible to treat the subjects in any living language.

There are two peculiarities in Homer's diction, which are a sort of marks, or moles, by which every common eye distinguishes him at first sight; those who are not his greatest admirers look upon them as defects, and those who are, seem pleased with them as beauties. I speak of his compound epithets, and of his repetitions. Many of the former cannot be done literally into English without destroying the purity of our language. I believe such should be retained as slide easily of themselves into an English com-

pound, without violence to the ear, or to the received rules of composition; as well as those which have received a sanction from the authority of our best poets, and are become familiar through their use of them; such as the cloud-compelling Jove, &c. As for the rest, whenever any can be as fully and significantly expressed in a single word as in a compound one, the course to be taken is obvious.

Some that cannot be so turned as to words, may have justice done them by circumlocution; as the epithet sipogianaloc to a mountain, would appear little or ridiculous translated literally " leaf-shaking," but affords a majestic idea in the periphrasis: "The lofty mountain shakes his waving woods." Others that admit of differing significations, may receive an advantage by a judicious variation according to the occasions on which they are introduced. For example, the epithet of Apollo, ingGolog, or " far-shooting, is capable of two explications; one literal in respect to the darts and how, the ensigns of that god; the other allegorical with regard to the rays of the sun: therefore in such places where Apollo is represented as a god in person, I would use the former interpretation; and where the effects of the sun are described, I would make choice of the latter. Upon the whole, it will be necessary to avoid that perpetual repetition of the same epithets which we find in Homer; and which, though it might be accommodated (as has been already shewn) to the ear of those times, is by no means so to ours: but one may wait for opportunities of placing them, where they derive an additional beauty from the occasions on which they are employed; and in doing this properly, a translator may at once shew his fancy and his judgment.

As for Homer's repetitions, we may divide them into shree sorts; of whole narrations and speeches, of single sentences, and of one verse or hemistich. I hope it is not impossible to have such a regard to these, as neither to lose so known a mark of the author on the one hand, nor to offend the reader too much on the other. The repetition is not ungraceful in these speeches, where the dignity of the speaker renders it a sort of insolence to alter his words; as in the messages from gods to men, or from higher powers to inferiors in concerns of state, or where the ceremonial of religion seems to require it, in the solemo

Nn 4

forms of prayer, oaths, or the like. In other cases, I believe, the best rule is, to be guided by the nearness, or distance, at which the repetitions are placed in the original: when they follow too close, one may vary the expression; but it is a question, whether a professed translator be authorised to omit any: if they be tedious, the author is to answer for it.

It only remains to speak of the Versification. Homer (as has been said) is perpetually applying the sound to the sense, and varying it on every new subject. This is indeed one of the most exquisite beauties of poetry, and attainable by very few: I know only of Homer eminent for it in the Greek, and Virgil in Latin. I am sensible it is what may sometimes happen by chance, when a writer is warm, and fully possessed of his image: however it may be reasonably believed they designed this, in whose verse it so manifestly appears in a superior degree to all others. Few readers have the ear to be judges of it; but those who have, will see I have endeavoured at this beauty.

Upon the whole, I must conclude myself utterly incapable of doing justice to Ho-I attempt him in no other hope but that which one may entertain without much vanity, of giving a more tolerable copy of him than any entire translation in verse has yet done, We have only those of Chapman, Hobbes, and Ogilby. Chapman has taken the advantage of an inmeasurable length of verse, notwithstanding which, there is scarce any paraphrase more loose and rambling than his. He has frequent interpolations of four or six lines, and I remember one in the thirteenth book of the Odysses, ver. 312, where be has spun twenty verses out of two. He is often mistaken in so bold a manner, that one might think he deviated on purpose, if he did not in other places of his notes insist so much upon verbal trifles. He appears to have had a strong affectation of extracting new meanings out of his author, insomuch as to promise, in his rhyming preface, a poem of the mysteries he had revealed in Homer: and perhaps he endeavoured to strain the obvious sense to this end. His expression is involved in fustian, a fault for which he was remarkable in his original writings, as in the tragody of Bussy d'Amboise, &c. In a word, the nature of the man may account for his whole performance; for he appears, from his preface and remarks, to

have been of an arrogant turn, and an enthusiast in poetry. His own boast of having finished half the Hiad in less than fifteen weeks, shews with what negligence his version was performed. But that which is to be allowed him, and which very much contributed to cover his defects, is a daring fiery spirit which animates his translation, which is something like what one might imagine Homer himself would have writ before he arrived at years of discretion.

Hobbes has given us a correct explanation of the sense in general; but for particulars and circumstances he continually lops them, and often omits the most beautiful. As for its being esteemed a close translation, I doubt not many have been led into that error by the shortness of it, which proceeds not from his following the original line by line, but from the contractions above mentioned. He sometimes omits whole similes and sentences, and is now and then guilty of mistakes, into which no writer of his learning could have fallen, but through carelessness. His poetry, as well as Ogilby's, is too mean for criticism.

It is a great loss to the poetical world that Mr. Dryden did not live to translate the Hiad. He has left us only the first book, and a small part of the sixth; in which, if he has in some places not truly interpreted the sense, or preserved the antiquities, it ought to be excused on account of the haste he was obliged to write in. He seems to have had too much regard to Chapman, whose words he sometimes copied, and has unhappily followed him in passages where he wanders from the original. However, had he translated the whole work, I would no more have attempted Homer after him than Virgil, his version of whom (notwithstanding some human errors) is the most noble and spirited translation I know in any language. But the fate of great genuises is like that of great ministers, though they are confessedly the first in the commonwealth of letters, they must be envied and calumniated only for being at the head of it.

That which, in my opinion, ought to be the endeavour of any one who translates Homer, is above all things to keep alive that spirit and fire which makes his chief character: in particular places, where the sense can bear any doubt, to follow the strongest and most poetical, as most

agreeing.

agreeing with that character; to copy him in all the variations of his style, and the different modulations of his numbers; to preserve, in the more active or descriptive parts, a warmth and elevation; in the more sedate or narrative, a plainness and solemnity; in the speeches, a fullness and perspicuity; in the sentences, a shortness and gravity: not to neglect even the little figures and turns on the words, nor sometimes the very cust of the periods, neither to omit nor confound any rites or customs of antiquity; perhaps too he ought to include the whole in a shorter compass than has hitherto been done by any translator. who has tolerably preserved either the sense or poetry. What I would farther recommend to him, is to study his author rather from his own text than from any commentaries, how learned soever, or whatever figure they may make in the estimation of the world; to consider him attentively in comparison with Virgil above all the ancients, and with Milton above all the moderns. Next these, the archbishop of Cambray's Telemachus may give him the truest idea of the spirit and turn of our author, and Bossu's admirable treatise of the epic poem the justest notion of his design and conduct. But after all, with whatever judgment and study a man may proceed, or with whatever happiness he may perform such a work, he must hope to please but a few; those only who have at once a taste of poetry, and competent learning. For to satisfy such as want either, is not in the nature of this undertaking; since a mere modern wit can like nothing that is not modern, and a pedant nothing that is not Greek.

What I have done is submitted to the public, from whose opinions I am prepared to learn; though I fear no judges so little as our best poets, who are most sensible of the weight of this task. As for the worst, whatever they shall please to say, they may give me some concern as they are unhappy men, but none as they are malignant writers. I was guided in this translation by judgments very differeat from theirs, and by persons for whom they can have no kindness, if an old observation be true, that the strongest antipathy in the world is that of looks to men of wit. Mr. Addison was the first whose advice determined me to undertake this task, who was pleased to write to me upon that occasion, in such terms as I cannot repeat without vanity. I was

obliged to Sir Richard Steele for a very early recommendation of my undertaking to the public. Dr. Swift promoted my interest with that warmth with which he always serves his friend. The humanity and frankness of Sir Samuel Garth are what I never knew wanting on any occasion. I must also acknowledge, with infinite pleasure, the many friendly offices, as well as sincere criticisms, of Mr. Congreve, who had led me the way in translating some parts of Homer; as I wish, for the sake of the world, he had prevented me in the rest. I must add the names of Mr. Rowe and Dr. Parnell. though I shall take a farther opportunity of doing justice to the last, whose goodnature (to give it a great panegyric) is no less extensive than his learning. The favour of these gentlemen is not entirely undeserved by one who bears them so true an affection. But what can I say of the honour so many of the great have done me, while the first names of the age appear as my subscribers, and the most distinguished patrons and ornaments of learning as my chief encouragers? Among these, it is a particular pleasure to me to find that my highest obligations are to such who have done most honour to the name of poet: that his grace the duke of Buckingham was not displeased I should undertake the author, to whom he has given (in his excellent Essay) so complete a praise,

"Read Homer once, and you can read no more;
"For all books else appear so mean, so poor,
"Verse will seen Proces, but till possible and

"Verse will seem Prose; but still persist to read, "And Homer will be all the books you need."

That the Earl of Halifax was one of the first to favour me, of whom it is hard to say, whether the advancement of the polite arts is more owing to his generosity or his example. That such a genius as my Lord Bolingbroke, not more distinguished in the great scenes of business than in all the useful and entertaining parts of learning, has not refused to be the critic of these sheets, and the patron of their writer. And that so excellent an imitator of Homer as the noble author of the tragedy of Heroic Love, has continued his partiality to me, from my writing Pastorals, to my attempting the Hiad. I cannot deny myself the pride of confessing, that I have. had the advantage not only of their advice for the conduct in general, but their correction of several particulars of this translation.

I could say a great deal of the pleasure of being distinguished by the earl of Carnarvon; but it is almost absurd to particularize any one generous action in a person whose whole life is a continued series of them. Mr. Stanhope, the present secretary of state, will pardon my desire of having it known that he was pleased to promote this affair. The particular zeal of Mr. Harcourt (the son of the late lord chancellor) gave me a proof how much I am honoured in a share of his friendship, I must attribute to the same motive that of several others of my friends, to whom all acknowledgments are rendered unnecessary by the privileges of a familiar correspondence: and I am satisfied I can no better way oblige men of their turn, than by my silence.

In short, I have found more patronsthan ever Homer wanted. He would have thought himself happy to have met the same favour at Athens, that has been shown me by its learned rival, the university of Oxford. If my author had the wits of after ages for his defenders, his translator has had the Beauties of the present for his advocates; a pleasure too great to be changed for any fame in re-And I can hardly envy him those pompous honours he received after death, when I reflect on the enjoyment of so many agreeable obligations, and easy friendships, which make the satisfaction of life. This distinction is the more to be acknowledged, as it is shewn to one whose pen has never gratified the prejudices of particular parties, or the vanities of particular men. Whatever the success may prove, I shall never repent of an undertaking in which I have experienced the candour and friendship of so many persons of merit; and in which I hope to pass some of those years of youth that are generally lost in a circle of follies, after a manner neither wholly unuseful to others, nor disagreeable to myself.

\$ 235. An Essay on Virgil's Georgics prefixed to Mr. Dryden's Translation.

Virgil may be reckoned the first who introduced three new kinds of poetry among the Romans, which he copied after three of the greatest masters of Greece. Theoretius and Homer have still disputed for the advantage over him in pastoral and heroics; but I think all are unanimous in giving him the precedence to Hesiod in

his Georgics. The truth of it is, the sweetness and rusticity of a pastoral cannot be so
well expressed in any other tongue as in
the Greek, when rightly mixed and qualified with the Doric dialect; nor can the
majesty of an heroic poem any where appear so well as in this language, which has
a natural greatness in it, and can be often
rendered more deep and sonorous by the
pronunciation of the Ionians. But in the
middle style, where the writers in both
tongues are on a level, we see how far Virgil has excelled all who have written in

the same way with him. There has been abundance of criticism spent on Virgil's Pastorals and Æneids, but the Georgies are a subject which none of the critics have sufficiently taken into their consideration; most of them passing it over in silence, or casting it under the same head with Pastoral; a division by no means proper, unless we suppose the style of a husbandman ought to be imitated in a Georgic, as that of a shepherd is in Pastoral. But though the scene of both these poems lies in the same place, the speakers in them are of a quite different character, since the precepts of husbandry are not to be delivered with the simplicity of a plowman, but with the address of a poet. No rules therefore that relate to Pastoral can any way affect the Georgies, since they fall under that class of poetry which consists in giving plain and direct instructions to the reader; whether they be moral duties, as those of Theognis and Pythagoras; or philosophical speculations, as those of Aratus and Lucretius; or rules of practice, as those of Hesiod and Virgil. Among these different kinds of subjects, that which the Georgics go upon is, I think, the meanest and least improving, but the most pleasing and delightful. cepts of morality, besides the natural corruption of our tempers, which makes us averse to them, are so abstracted from ideas of sense, that they seldom give an opportunity for those beautiful descriptions and images which are the spirit and life of Natural philosophy has indeed poetry. sensible objects to work upon, but then it often puzzles the reader with the intricacy of its notions, and perplexes him with the multitude of its disputes. But this kind of poetry I am now speaking of, addresses itself wholly to the imagination: it is altogether conversant among the fields and woods, and has the most delightful part

of nature for its province. It raises in

landscapes, whilst it teaches us, and makes the dryest of its precepts look like a description. A Georgic therefore is some part of the science of husbandry put into * a pleasing dress, and set off with all the beauties and embellishments of poetry." Now since this science of husbandry is of a very large extent, the poet shews his skill in singling out such precepts to proceed on. as are useful, and at the same time most capable of ornament. Virgil was so well acquainted with this secret, that to set off his first Georgic he has run into a set of precepts, which are almost foreign to his subject in that beautiful account he gives us of the signs in nature, which precede the changes of the weather.

And if there be so much art in the choice of fit precepts, there is much more required in the treating of them, that they may fall in after each other by a natural unforced method, and shew themselves in the best and most advantageous light. They should all be so finely wrought together in the same piece, that no coarse seam may. discover where they join; as in a curious intensibly, that we see the variety without being able to distinguish the total vanishing of the one from the first appearance of Nor is it sufficient to range and dispose this body of precepts into a clear and easy method, unless they are delivered to us in the most pleasing and agreeable manner; for there are several ways of conveying the same truth to the mind of man; and to choose the pleasantest of these ways, is that which chiefly distinguishes poetry from prose, and makes Virgil's rules of husbandry pleasanter to read than Varro's. Where the prosewriter tells us plainly what ought to be done, the poet often conceals the precept in a description, and represents his countryman performing the action in which he would instruct his reader. Where the one sets out, as fully and distinctly as he can, all the parts of the truth which he would communicate to us; the other singles out the most pleasing circumstance of this truth, and so conveys the whole in a more diverting manner to the understanding, I shall give one instance out of a multitude of this nature that might be found in the Georgics, where the reader may see the different ways Virgil has taken to express the same thing, and how much

our minds a pleasing variety of scenes and landscapes, whilst it teaches us, and makes the dryest of its precepts look like a description. 'A Georgic therefore is some 'part of the science of husbandry put into bear grafting on each other:

Et sæpe alterius ramos impune videmus Vertere in alterius, mutatamque insita mala Ferrepyrum, et prunis lapidosa rubescere coroa. — Steriles Platani malos gessere valentes, Castanea fagos, or nusque incanuit albo Flore pyri: Glademque fues fregere sub ulmis, — Nee longum tempus: & ingens Exiit ad exclum ramis felicibus arbos; Maraturque novas frondes et non sua poma.

Here we see the poet considered all the effects of this union between trees of different kinds, and took notice of that effect which had the most surprise, and by consequence the most delight in it, to express the capacity that was in them of being thus united. This way of writing is every where much in use among the poets, and is particularly practised by Virgil, who loves to suggest a truth indirectly, and without giving us a full and open view of it, to let us see just so much as will naturally lead the imagination into all the parts brede of needle-work one colour falls away that lie concealed. This is wonderfully by such just degrees, and another rises so diverting to the understanding, thus to receive a precept, that enters, as it were, through a bye-way, and to apprehend an idea that draws a whole train after it. For here the mind, which is always delighted with its own discoveries, only takes the hint from the peet, and seems to work out the rest by the strength of her own faculties.

> But since the inculcating precept upon precept, will at length prove tiresome to the reader, if he meets with no entertainment, the poet must take care not to incumber his poem with too much business: but sometimes to relieve the subject with a moral reflection, or let it rest awhile, for the sake of a pleasant and pertinent digression. Nor is it sufficient to run out into beautiful and diverting digressions (as it is generally thought) unless they are brought in aptly, and are something of a piece with the main design of the Georgic: for they ought to have a remote alliance at least to the subject, that so the whole poem may be more uniform and agreeable in all its parts. We should never quite lose sight of the country, though we are sometimes entertained with a distant prospect of it. Of this nature are Virgil's descriptions of the original of agriculture, of the fruitfulness of Italy, of a country

life, and the like, which are not brought in by force, but naturally rise out of the principal argument and design of the poem,. I know no one digression in the Georgics that may seem to contradict this observation, besides that in the latter end of the first book, where the poet launches out into a discourse of the battle of Pharsalia, and the actions of Augustus. But it is worth while to consider, how admirably he has turned the course of his narration into its proper channel, and made his husbandman concerned even in what relates to the battle, in those inimitable lines:

Scilicet et tempus veniet, cum finibus illis Agricola incurvo terram molitus aratro, Exesa inveniet scabră rabigine pila: Aut gravibus rastris galeas pulsabit manes, Grandiaque effosis mirubitur osea sopulchris.

And afterwards, speaking of Augustus's actions, he still remembers that agriculture ought to be some way hinted at throughout the whole poem:

Dignus honos: squalent abductis arva colonis: Et curvæ rigidum talces conflantur in ensem.

We now come to the style which is proper to a Georgic; and indeed this is the part on which the poet must lay out all his strength, that his words may be warm and glowing, and that every thing he describes may immediately present itself, and rise up to the reader's view. He ought in particular, to be careful of not letting his subject debase his style, and betray him into a meanness of expression, but every where to keep up his verse, in all the pomp of numbers and dignity of words.

I think nothing which is a phrase or saying in common talk should be admitted into a serious poem; because it takes off from the solemnity of the expression, and gives it too great a turn of familiarity; much less ought the low phrases and terms of art that are adapted to husbandry, have any place in such a work as the Georgic. which is not to appear in the natural simplicity and nakedness of its subject, but in the pleasantest dress that poetry can bestow on it. Thus Virgil, to deviate from the common form of words, would not make use of tempore but sydere in his first verse; and every where else abounds with metaphors, Grecisms, and circumlecutions, to give his verse the greater pomp, and preserve it from sinking into a plebeian style. And herein consists Virgil's master-piece,

who has not only excelled all other poets, but even himself in the language of his Georgics; where we receive more strong and lively ideas of things from his words, than we could have done from the objects themselves; and find our imaginations more affected by his descriptions, than they would have been by the very sight of what he describes.

I shall now, after this short scheme of rules, consider the different success that Hesiod and Virgil have met with in this kind of poetry, which may give us some further notion of the excellence of the Georgics. To begin with Hesiod; if we may guess at his character from his writings, he had much more of the husbandman than the poet in his temper: he was wonderfully grave, discreet, and frugal: he lived altogether in the country, and was probably, for his great prudence, the oracle of the whole neighbourhood. principles of good husbandry ran through his works, and directed him to the choice of tillage and merchandize, for the subject of that which is the most celebrated of them. He is every where bent on instruction, avoids all manner of digressions, and does not stir out of the field once in the whole Georgic. His method in describing month after month, with its proper seasons and employments, is too grave and simple: it takes off from the surprise and variety of the poem, and makes the whole look but like a modern almanack in verse. The reader is carried through a course of weather, and may before-hand guess whether he is to meet with snow or rain, clouds or sunshine, in the next description. His descriptions indeed have abundance of nature in them, but then it is nature in her simplicity and undress. Thus, when he speaks of January, "The wild beasts," says he,." run shivering through the woods, " with their heads stooping to the ground, " and their tails clapt between their legs; "the goats and oxen are almost flea'd " with cold; but it is not so bad with the sheep, because they have a thick coat of wool about them. The old men too " are bitterly pinched with the weather; " but the young girls feel nothing of it, " who sit at home with their mothers by " a warm fire-side." Thus does the old gentleman give himself up to a loose kind of tattle, rather than endeavour after a just poetical description. Nor has he shewn more of art or judgment in the precepts he has given us, which are sown so very thick.

thick, that they clog the poem too much, and are often so minute and full of circumstances, that they weaken and unnerve his But after all, we are beholden to him for the first rough sketch of a Georgic: where we may still discover something venerable in the antiqueness of the work; but if we would see the design enlarged, the figures reformed, the colouring laid on, and the whole piece finished, we must expect it from a greater master's hand.

Virgil has drawn out the rules of tillage and planting into two books, which Hesiod has dispatched in half a one: but has so raised the natural rudeness and simplicity of his subject, with such a significancy of expression, such a pomp of verse, such variety of transitions, and such a solemn air, in his reflections, that if we look on both poets together, we see in one the plainness of a downright countryman, and in the other something of rustic majesty, like that of a Roman dictator at the plow tail. He delivers the meanest of his precepts with a kind of grandeur; he breaks the clods and tosses the dung about with an air of gracefulness. His prognostications of the weather are taken out of Aratus, where we may see how judiciously he has picked out those that are most proper for his husbandman's observation; how he has enforced the expression, and heightened the images, which he found in the original.

The second book has more wit in it, and a greater boldness in its metaphors, than any of the rest. The poet, with a great beauty, applies oblivion, ignorance, wonder, desire, and the like, to his trees. The last Georgic has indeed as many metaphors, but not so daring as this; for human thoughts and passions may be more naturally ascribed to a bee, than to an inmimate plant. He who reads over the pleasures of a country life, as they are described by Virgil in the latter end of this book, can scarce be of Virgil's mind, in preferring even the life of a philosopher

We may, I think, read the poet's clime in his description; for he seems to have been in a sweat at the writing of it:

-O quis me gelidis sub montibus Hemi Sistat, et ingenti ramorusu protegat umbra!

And is every where mentioning among his chief pleasures, the coolness of his shades and rivers, vales and grottoes; which a more northern poet would have emitted,

for the description of a summy hill and fire-

The third Georgic seems to be the most laboured of them all; there is a wonderful vigour and spirit in the description of the horse and chariot-race. The force of love is represented in noble instances, and very sublime expressions. The Scythian winterpiece appears so very cold and bleak to the eye, that a man can scarce look on it. without shivering. The murrain at the end has all the expressiveness that words can give. It was here that the poet strained hard to outdo Lucretius in the description of his plague; and if the reader would see what success he had, he may find it at large

in Scaliger.

But Virgil seems no where so well pleased as when he is got among his bees, in the fourth Georgic; and ennobles the actions of so trivial a creature, with metaphors drawn from the most important concerns of mankind. His verses are not in a greater poise and hurry in the battles of Aneas and Turnus, than in the engagement of two swarms. And as in his Æneis he compares the labours of his Trojans to those of bees and pismires, here he compares the labours of the bees to those of the Cyclops. In short, the last Georgic was a good prelude to the Eneis; and very well shewed what the poet could do in the description of what was really great, by his describing the muck grandeur of an insect, with so good a grace. There is more pleasantness in the little platform of a garden, which he gives us about the middle of this book, than in all the spacious walks and water-works of Rapin. The speech of Proteus at the end can never be enough admired, and was indeed very fit to conclude so divine a work.

After this particular account of the beauties in the Georgics, I should in the next place endeavour to point out its imperfections, if it has any. But though I think there are some few parts in it that are not so beautiful as the rest, I shall not presume to name them, as rather suspecting my own judgment, than I can believe a fault to be in that poem, which lay so long under Virgil's correction, and had his last hand put to it. The first Georgic was probably burlesqued in the author's life time: for we still find in the scholiasts a verse that ridicules part of a line translated from Hesiod-Nudus ara, sere nudus. -And we may easily guess at the judgment of this extraordinary critic, whoever

he was, from his censuring in this particular precept. We may be sure Virgil would not have translated it from Hesiod, had he not discovered some beauty in it; and indeed the beauty of it is what I have before observed to be frequently met with in Virgil, the delivering the precept so indirectly, and singling out the particular circumstances of sowing and plowing naked, to suggest to us that these employments are proper only in the hot season of the year.

I shall not here compare the style of the Georgies with that of Lucretius, which the reader may see already done in the preface to the second volume of Dryden's Miscellany Poems: but shall conclude this poem to be the most complete, elaborate, and finished piece of all antiquity. The Æneis, indeed, is of a nobler kind; but the Georgic is more perfect in its kind. The Æneis has a greater variety of beauties in it, but those of the Georgic are more exquisite. In short, the Georgic has all the perfection that can be expected in a poem written by the greatest poet in the flower of his age, when his invention was ready, his imagination warm, his judgment settled, and all his faculties in their full vigour and maturity. Addison.

p 236. History of the HEATHEN DEITIES.

1. Coelus and Terra. Colus is said to be the son of the Air, great father of the gods, and husband of Terra the daughter of the Earth; by whom he had the Cyclops, Oceanus, Titan, the Hundred Giants, and many other children, the most eminent of which was Saturn.

Nothing is more uncertain than what is related of Cœlus and Terra, and the whole fable plainly seems to signify that the Air and Earth were the common father and parent of all created beings. Cœlus was called Uranus by the Greeks, and Terra was also named Vesta; she presided over all feasts and banquets; and the first fruits of the earth were offered to her in the most solemn sacrifices. According to the fable, Cœlus was dethroned by his youngest son Saturn, and wounded by him, to prevent his having more children.

2. SATURN. Saturn was the son of Coelus and Terra, and the most ancient of all the gods. Titan, his elder brother, resigned his birth-right to him, on tondition that he should destroy all his male

issue, that the empire of the world might in time fall to his posterity. Saturn accepted of this condition; but Titan afterwards suspecting that his brother had broke the contract hetween them, made war against him, and kept him in prison; from whence he was released by his son Jupiter, and re-instated in his government: he was afterwards dethroned by Jupiter himself.

Saturn being driven from his throne, left the kingdom, and went into Italy, and there lived with king Janus. That part of Italy where he concealed himself was called Latium.

He is represented as the emblem of Time, with a scythe in his hand; and in his time, it is said, was the golden age of the earth, when the ground yielded all

sorts of fruit without culture, and Astræa, or Justice, dwelt among men, who lived together in perfect love and amity.

The Saturnalia, or Feasts of Saturn, were instituted by Tullus king of the Romans; or, according to Livy, by Sempronius and Minutius the consuls.

3. CYBELE. Cyhele was the wife of Saturn, and accounted mother of the gods: she was called Ops by the Latins, and Rhea by the Greeks. She was also named Bona Mater, Vesta, and Terra.

Cybele hath her head crowned with towers, and is the goddess of cities, garrisons, and all things that the earth sustains. She is the earth itself, on which are built many towers and castles.

In her hand she carries a key, because, in winter the earth locks up her treasures, which in the spring she unlooses, brings forth, and dispenses with a plentiful hand

She is seated in a chariot, because the earth hangs in the air, being poised by its own weight. Her garments were painted with flowers of various colours, and figured with images of several creatures; which needs no explanation, since every one knows, that such a dress is suitable to the earth.

Divine honours were daily paid to this goddess; and the priests of Cybele performed their sacrifices with a confused noise of timbrels, pipes, cymbals, and other instruments; and the sacrificants profaned both the temple of their goddess, and the ears of their hearers, with howling, riot, and every kind of wantonness.

The priests of this goddess were called Galli, from a river in Phrygia. They

were also called Curetes, Corybantes, Telchines, Cabiri, and Idaei Dactyli.

4. JUPITER. Jupiter, son of Saturn and Cybele, or Ops, is the father and king of gods and men. He is represented sitting on a throne of ivory and gold, holding thunder in his right hand, and in the left a scepter made of cyprus; which wood, being free from corruption, is a symbol of eternal empire. On this scepter sits an eagle: either because he was brought up by that bird, or that heretofore the eagle sitting upon his head, portended his reign; or because in the war against the Giants, it brought him the thunder, and thence was called his Armourbearer. He had golden shoes, and an embroidered cloak, adorned with various Bowers, and figures of animals,

He was educated, as well as born, upon Ida, a mountain in Crete; but by whom, the variety of opinions is wonderful.

There are some who affirm, that he was nursed by the Curetes, or Corybantes; some by the Nymphs; and some by Amalthea, daughter of Melissus king of that island. Others, on the contrary, have recorded, that he was fed by the bees with honey; others, by goat's milk.

They add besides, that the goat being dead, and the skin pulled off, Jupiter made of it a shield, called Ægis, which he used afterwards in the battle against the Giants.

Jupiter, after he had deposed his father Saturn from the throne, and expelled him the kingdom, divided the parental inheritance with his two brothers, Neptune and Pluto. He so obliged and assisted mankind by great favours, that he not only got the title of Jupiter, but also obtained divine honours, and was esteemed the common father of gods and men.

Jupiter had names almost innumerable; which he obtained, either from the places where he lived, and wherein he was worshipped, or from the various actions of his life.

The Greeks called him Ammon or Hammon, which signifies sandy. He obtained this name first in Lybia, where he was worshipped under the figure of a ram; because when Bacchus was athirst in the desarts of Arabia, and implored the assistance of Jupiter, Jupiter appeared in the form of a ram, opened a fountain with his foot, and discovered it to him.

He was called Capitolinus, from the Capitoline hill, on the top whereof he had the first temple that ever was built in Rome; which Tarquin the Elder first vowed to build, Tarquin the Proud did build, and Horatius the Consul dedicated. He was besides called Tarpeius, from the Tarpeian rock on which this temple was built. He was also styled Optimus Maximus, from his power and willingness to profit all men.

The title of Dodonzeus was given Jupiter from the city Dodonz in Chaonia, which was so called from Dodona, a nymph of the sea. Near to this city was a grove sacred to him, which was planted with oaks, and famous, because in it was the most

ancient oracle of all Greece.

The name Feretrius was given him, because after the Romans had overcome their enemies they carried the imperial spoils (Spolia Opima) to his temple. Romulus first presented such spoils to Jupiter, after he had slain Acron, king of Cænina; and Cornelius Gallus offered the same spoils, after he had conquered Tolumnius, king of Hetruria; and, thirdly, M. Marcellus, when he had vanquished Viridomarus, king of the Gauls.

Those spoils were called Opima, which one general took from the other in battle.

He is also named Olympius from Olympus the name of the master who taught him, and of the heaven wherein he resides.

The Greeks called him Euring /Soter!
Servator, the Saviour, because he delivered them from the Medes.

He was likewise called Xenius, or Hospitalis; because he was thought the author of the laws and customs concerning hospitality.

5. Juno. Juno was the queen of Heaven, both the sister and wife of Jupiter; the daughter of Saturn and Ops; born in the island Samos, where she lived while she continued a virgin.

Juno became extremely jealous of Jupiter, and never ceased to perplex the children he had by his mistresses. She was mother of Vulcan, Mars, and Hebe; she was also called Lucina, and presided over marriages and births; and is represented in a chariot drawn by peacocks, with a sceptre in her right hand, and a crown on her head; her person was august, her carriage noble, and her dress elegant and neat.

Iris, the daughter of Thaumas and Electra, was servant and peculiar messenger of Juno. Because of her swiftness, she is painted with wings, sitting on a rainbow. It was her office to unloose the souls of dying women from the chains of the body.

6. Apollo. Apollo is described as a beardless youth, with long hair, crowned with laurel, and shining in an embroidered vestment; holding a bow and arrows in his right hand, and a harp in the left. Sometimes he is seen with a shield in the one hand, and the Graces in the other. The power of this god is threefold; in heaven, where he is called Sol; in earth, where he is styled Apollo. He generally is painted with a harp, shield, and arrows.

He was the son of Jupiter and Latona. His mother, who was the daughter of Cacus the Titan, conceived twins by Jupiter; at which Juno being incensed, sent the serpent Python against her; Latona, to avoid the intended mischief, fled into the island Delos, where she brought forth Apollo and Diana at the same birth.

By the invention of physic, music, poctry, and rhetoric, he deservedly presided over the Muses. He also taught the arts of fortelling and archery; by which he so much obliged mankind, that he was enrolled in the number of the gods.

He destroyed all the Cyclops, the forgers of Jupiter's thunderholts, with his arrows, to revenge the death of his son Asseulapius, whom Jupiter had killed with his thunder, because, by the power of physic, he restored the dead to life again.

He fell violently in love with the virgin Daphne, so famous for her modesty. When he pursued her she was changed into a laurel, the most chaste of trees: which is never corrupted with the violence of heat or cold, but remains always flourishing, always pure.

Apollo raised the walls of the city of Troy by the music of his harp alone; and was challenged by Marsyas, a proud musician; but the god flaved him alive, because he presumed to contend with him in his own art, and alterwards turned him into a river. Also when Midas, king of Phrygia, toolishly determined the victory to the god Pan, when Apollo and he sang together. Apollo stretched his ears to the length and shape of asses ears.

This god had many names. He is

المراسين أمدونها

called Cynthius, from the mountain Cynthus in the Island of Delos; from whence Diana is also called Cynthia; and Delius, from the same Island, because he was born there.

He is called Delphicus, from the city Delphi in Bocotia, where he had the most famous temple in the world. They say, that this famous oracle became dumb at the birth of our Saviour; and when Augustus desired to know the reason of its silence, the oracle answered him, That, in Judæa, a child was born who was the Supreme God, and had commanded him to depart, and return no more answers.

He is called Paran, either from allaying sorrows, or from his exact skill in hunting, wherefore he is armed with arrows.

He is called Pheebus, from the swiftness of his motion, or from his method of healling by purging.

He was rained Pythius, not only from the serpent Python, which he had killed, but likewise from asking and consulting; for none among the gods delivered more responses than he; especially in the temple which he had at Delphi, to which all nations resorted, so that it was called the oracle of all the earth. These oracles were given out by a young virgin, called Pythia from Pythius, one of Apollo's names.

7. Sot. 'Sol, who enlighteneth the world, is exteemed the same as Apollo. He was the father of Phaton by Clymene; and, as a proof of his paternal affection, promised to grant his son whatever he should request. The rash youth asked the guidance of his chariot for one day: Sol in vain used every argument to dissuade him from the enterprize; but having sworn by the river Styx, an oath it was unlawful for the gods to violate, unwillingly granted his request, and gave him the necessary instructions for his behaviour.

Phæton, transported with joy, mounted the chariot, and began to lash the flaming steeds; but they finding the ignorance of their new driver, ran through the air, and set both heaven and earth on fire, Jupiter, to prevent a total conflagration, struck Phæton with thunder from his chariot, and plunged him into the river Po. His sisters, Phæthuso, Lampetia, and Phœbe, and also Gyenus his friend, immoderately bewaited his death on the banks of the

river:

river; and, by the pity of the gods, his tifters were changed into poplar trees, and his friend Cycnus into a twan.

8. MERCURY. Mercury, fon of Jupiter and Maia, daughter of Atlas, was the god of eloquence and inerchandize, and medlenger of the gods.

He is represented a young man, with a cheerful countenance, an honest look, and lively eyes; fair without paint, with winged those and hat, and holding in his hand a winged rod, bound about with two

ferpents.

He had many remarkable qualities, on account of which they worthipped him as a god. He is faid to have invented letters, and the use of them; it is evident, that he excelled in eloquence, and the faculty of speaking; and therefore was accounted the god of rhetoric and oratory. He is reported to have been the first inventor of contracts, weights, and measures; he also taught the arts of buying, felling, and tratic; and thence was called the god of merchants, and of gain.

In the art of thieving, he far exceeded all the sharpers that ever have been, and is named the Prince and God of Tricking. The very day in which he was born, he stole away the cows of king Admetus, though attended by Apollo himself; who, while he complained of the thest, and bent his bow with an intent of revenge, found himself robbed of his quiver and arrows

ulto.

He was a wonderful mafter at making peace: and pacified not only mortals, but also the gods themselves, when they quarrelled. This faculty is signified by the rod which he holds in his hand, and which formerly he got from Apollo, to whom he

he had before given a harp.

He had divers offices: the chief were, to carry the commands of Jupiter; also to attend persons dying, to unloose their fouls from the chains of the body, and carry them down to hell: likewife to revive, and replace into new bodies, those that had already completed their time in the Elysian fields.

g. Mars. Mars, the son of Jupiter and Juno, or, as is related by Ovid, of Juno only, who conceived him by the touch of a flower flewed her by Flora.

Mars is the go l of war, fierce in afpect, fiern in countenance, and terrible in dress; he fits in a chariot drawn by two horfes, which are driven by a diftracted woman. He is covered with armour, and brandiffies a fpear in his right land. Sometimes he is reprefented fitting on horieback, formidable with his whip and fpear, with a cock near him, the emblem of watchfulnets.

His fervants are Fear and Terror. Difcord also goes before in a tattered garment, and Clamour and Anger follow

him.

Bellona, goddefs of war, is the companion of Mars, or, according to others, his fifter or wife. She prepares for him his chariot and horses, when he goes to battle.

Itis name, Mars, fets forth the power and influence he has in war, where he

prefides over the foldiers.

He is called Gradivus, from his stateliness in marching, or from his vigour in

brandithing his fpear.

He is called Quirinus from Quris, or Quiris, fignifying a fpear. This name was afterwards attributed to Romulus, who, with Remus, was effected the fon of Mars; from whom the Romans were called Quirites.

10. BACCHUS. Bacchus was son of Jupiter and Semele, and is faid to have been nourithed by Jupiter in his thigh on the death of his mother. As foon as he was born, he was committed to the care of Silenus and the Nymphs, to be brought up; and, in reward for their fervice, the Nymphs were received into heaven, and there changed into flars called the Hyades.

Bacchus is a filthy, shameful, and immodest god; with a body naked, red face, lascivious look, swoln cheeks and belly, dispirited with luxury, and intoxicated

with wine.

He is crowned with ivy and vine-leaves, and in his hand holds a thyrius for a fcepter. His chariot is drawn fometimes by tygers and lious, fometimes by lynxes and panthers; a drunken band of Sutyrs, Demons, and Nymphs, prefiding over the wine-prefirs, fairies of the fountains, and priefteffes, attend him as his guard, and old Silenus, riding on an afs, brings up the rear.

Bacchus invented fo many things useful to mankind, either in finishing controversies, building cities, enacting law, or obtaining victories, that for this region he was admitted into the council of the

) o gods,

gods, by the joint fuffrages of the whole nerva. She was called Minerva, as force world.

He first planted the vine and drank the juice of the grape; the tillage of the ground and making honey, are attributed to Bacchus; when he was king of Phænicia, he influeded his subjects in trade and navigation. He promoted fociety amongst men, and brought them over to religion and the knowledge of the gods.

He fubdued the Indians, and many other nations, and triumphed in a chariot drawn by tigers. Riding on an elephant, he travelled Egypt, Syria, Phrygia, and all the Eaft, gained many and great victories, and there erected pillars, as Hercules

did in the Wells

He had various names: he was called Bromius, from the crackling of fire, and noife of thunder, that was heard when his mother was killed in the embraces of Jupiter.

Binater, because he had two mothers. Evius, or Evous; for in the war with the Giants, when Jupiter did not see Bacchus, he thought that he was killed; and cried out, Alas, Son! Or, because when he found that Bacchus had overscome the Giants, by changing himself into a lion, he cried out again, H'ell done,

Evan, from the acclamations of the Bacchantes, who were therefore called Evantes.

Eleleus and Lleus, from the acclamation wherewith they animated the foldiers before the fight, or encouraged them in the battle itfelf. The fame acclamation was alle ufed in celebrating the Orgia, which were facrifices offered up to Bacchus,

lacchus was also one of the names given to Bucchus, from the noife which men when drunk make.

Liber, and Liber Pater, from libero, as in Greek they call him Eximbiging [Eleutheries] the Deliverer.

Alfo Leneus, and Lyaus; for wine frees the mind from cares, and those who have drank plentifully, speak too often whatsoever comes into their minds.

the goddefs of wildom, war, irts, and iences, was the daughter of Jupiter; o finding no likelihood of having chiller the dren is forehead with his hammer: and, the months, he brought forth Mi-

nerva. She was called Minerva, as some fay, from the threats of her itern and fierce look. Initead of a woman's drefs, the is arrayed in armour; wears a golden head-piece, and on it glittering crefts; a brazen coat of mail covers her breaft; the brandithes a lance in her right hand, and in her left holds a thield, whereon is painted the grifly head of Medula, one of the Gorgons, rough and formidable with fnakes.

Upon the head of this goddefs there was an olive crown, which is the fymbol of peace; either because war is only made that peace may follow; or because the taught men the use of that tree.

There were five Minervas; but that one, to whom the reft are referred, was defeended of Jupiter. For he, as fone fay, finding that his wife was barren, through grief tiruck his forehead, and brought torth Minerva.

This godders, like Verta and Diana, was a perpetual virgin; and fo great a lover of chaffity, that the deprived Tirefas of his eyes, because he saw her bathing in the fountain of Helicon.

Minerva was the inventrefs of divers arts, especially of spinning; and therefore.

the dittaff is afcribed to her.

The Athenians were much devoted to her worthip; and the had been adored by that people before Athens itfelt was built. The Rhodians also paid great honour to this goddefs. She was extremely jealous left any one thould excel her in any art; and near her are placed divers mathematical inftruments, as goddefs of arts and feiences. The cock and the owl are facted to her; the first being expective of contract and watchfulnefs, and the latter the emblem of caution and forefight.

Minerva reprefents wildom, that is, uf-ful knowledge, joined with different practice; and comprehends the understanding of the most noble arts, together with all the virtues, but more especially that of chastity. Her birth from Jupiter's head, is most certainly an emblem, that all human arts and sciences are the production of the mind of man, directed by superior wisdom.

12. Venus. Venus is faid to be the daughter of Jupiter and Dione. She is fivled the goddefs of the Graces, Eloquence, Beauty, Neatnefs, and Cheerfulnefs; in her countenance many charms abound.

She

She is clothed with a purple mantle glittering with diamonds, and refulgent with a rofy crown; the breathes pleafures, and thows in foftnefs. Two Cupids attend at her fides, the Graces fland round her, and the lovely Adonis follows after, gently holding up her train. Her chariot is of ivory, finely carved, beautifully painted and gilt, fathioned in form of a thell, and drawn by fwans, doves, and fwallows, or functimes by fparrows, as the directs, when the pleafes to mount it.

She is faid to have fprung from the fioth of the fea; and, being laid in a fhell, as it were in a cradle, to have been driven by Zephyrus upon the island of Cyprus, where the Horæ received her, cherithed her in their bosons, educated, and adorned her; and when she was grown up, they carried her into heaven, and presented her to the gods, who being taken with herbeauty, all throve to marry her; but at lait she was betrothed to Vulcan, to whom afterwards she was given in wedlock.

The first of Venus's companions was Hymenaus, the god of marriage, and protector of virgins. Maids newly married offered facritices to him, as also to the goddess Concordia.

Cupid, the god of love, was the next of Venus's companions. She also passfionately loved Adonis, a beautiful youth.

The poets fpeak of two Cupids; one of which is an ingenious youth, the fon of Jupiter and Venus, a celefial deity; the other a debauchee, fon of Nox and Erebus, whose companions are Drunkennes, Sorrow, Enmity, Contention, and other plagues of that kind.

The Graces, called Charities, were three fifters, daughters of Jupiter and Eurynome, or Venus.—Thefe will be more particularly mentioned in a future place.

Venus was worthipped under various names: Cypris and Cypria, Cytheris and Cytherea, from the illands of Cyprus and Cytherea, whither the was first carried in a fea-shell.

Erycina, from the mountain Eryx, in the ifland of Sicily; upon which Æneas built a splendid and samous temple to her honour, because the was his mother.

Idylia and Acidalia, from the mountain Idalus, in the idand Cyprus, and the fountain Acidalius, in Bootia.

Marina, because she was born of the sea, and begotten of the froth of the waters.

From thence the is called Aphroditis and

Anadyomone, that is, emerging out of the waters, as Apelles painted her.

She is called Paphia, from the city Paphos in the iffand of Cyprus, where they incrificed flowers and frankincenfe to her: also the Leibian Queen, from Leibos, in the fame illand.

On a sulpute at a feast of the gods, between Juno, Pallas, and Venus, for the pre-eminence of beauty, Jupiter, not being able to bring them to an agreement, referred the decision to Paris, a thepherd on Mount Ida, with direction that a golden apple thould be given to the faireit. Paris determined the prize in favour of Venus, and adigned to her the golden reward. Venus, in return for this fingular regard to her, promifed Paris Helena, the faireit beauty in the world. Paris failed into Greece with a great fleet, and brought away Helen, who had been betrothed to Menelaus, king of Sparta; but he being then absent, Paris carried her away with him to Troy, which brought on the famous fiege of that city, as is related in the Grecian Hittory.

[Thefe were the principal, or first class of Deities in the Heathen Mythology: the Dii Majores, to whom the highest degree of worship was paid; as it was universally imagined, that these deities were more eminently employed in the government of the world, and presided over the immediate concerns of mankind.

Vulcan, Neptune, Pluto, and fome others, are also esteemed principal Deities; but mention will be made of these as they occur in the several orders or ranks of Terrestrial, Marine, and Internal Deities.]

I. TERRESTRIAL.

- 1. TITAN. Titan, the elder brother of Saturn, though not a god, claims the first place, being the elder son of Calus and Terra; and, on an agreement with Jupiter his younger brother, he yielded to him his birthright, as is before mentioned. His sons were the Giants, called from him Titans.
- 2. VESTA. Vefta, the eldeft of all the goddeftes, the mother of Saturn, and the wife of Cœlus, is reprefented as a matron fitting and holding a drum. She is not reckoned among the Celetials, the being the Earth herfelf. Vefta is her name O ο 2

from cloathing, because the earth is cloathed with plants and fruits. Shefits, because the earth being immoveable, refls in the lowest part of the world. She carries a drum, because the earth contains the boisterous winds in its botom.

Her head is alto furrounded with divers flowers and plants, voluntarily weaving themselves into a crown, while animals of every kind play about, and fawn upon ber. By reason the earth is round, Vetta's temple at Rome was built round; and they lay, that her image was orbicular in fome places.

It is no wonder that the first oblations were offered to her, fince all the facrifices ipring from the earth; and the Greeks both began and concluded all facrifices

with this goddels.

3. VULCAN. Vulcan, the huband of Yenus, was ion of Jupiter and Juno (tome fav of Juno only;) but, being born deformed, he was catt down from heaven by Jupiter as foon as he was born, and in the fall broke his leg. He was the god of fubterraneous fires, and pretided over metals.

He first made his addresses to Minerva, and was refuted by her: he afterwards married Venus, but that goddefs difre-

garded him for his deformity.

Vulcan made the chariot of the fun, and supplied Jupiter with thunder: he fixed his forges on Mount .T.tna, but chiefly in the island Lemnos, were he worked for the gods, and taught the natives the art of working iron by fire. His forgemen were the Cyclops, who were repreiented as having only one eye, in the middle of their foreheads. Apollo, it is faid, flew them all, for having forged the thunder with which Jupiter firuck Æsculapius, the god of phytic. The principal temple of Vulcan was on Mount Altna; and he is painted with a hat of blue colour, the fumbol of fire.

He was called Mulciber, or Multifer, from his foftening and polithing iron.

4. JANUS. Janus was the fon of Colus and Hecate. He had a double face and forehend in one and the fame head; hence he was called the two-faced god; and therefore is faid to fee things placed behand his back, as well as before his face. In his right hand he holds a key, and in his left a rod; and beneath his feet are twelve altars.

dicated to him, some of which had double doors, others four gates; because he was fometimes reprefented with four faces,

It was a cuttom among the Romans, that, in his temple, the confuls were inaugurated, and from thence faid to open the year on the kalends of January, when new laurel was put on the fratue of the god, The temple of Janus was held in great veneration by the Romans, and was kept open in the time of war, and that in the time of peace; and it is remarkable, that, within the space of feven hundred years, this temple was thut only thrice; once by Numa; afterwards by the confuls Marcus Artilius and Titus Manlius, after a league firuck up with the Carthaginians; and, latily, by Augustus, after the victory of Actium.

5. LATONA. Latona was the daughter of Phabe, and Casus the Titan; whom, for her great beauty, Jupiter loved and deflowered.

When June perceived her with child, the cast her out of heaven to the earth, having first obliged Terra to swear, that the would not give her any where an habitation to bring forth her young; and befides, the fent the ferpent Python to perfecute the harlot all over the world. But in vain; for in the illand Delos, under a palm or an olive-tree, Latona brought forth Diana and Apollo.

6. Diana. Diana, goddefs of hunting. was the daughter of Ceres and Jupiter. and litter of Apollo. She is usually painted in a hunting habit, with a bow in her hand, a quiver tall of arrows hanging down from her thoulders; and her breatt covered with the fkin of a deer; the was the goddefs of hunting and chaffity.

She has three different names, and as many offices: in the heavens the is called Luna and Phobe, on the earth Diana, and in hell Hecate. In the heavens the enlightens all things by her rays; on the earth the fubdues all the wild beafts by her bow and darts; and in hell keeps in fubjection the ghotis and spirits, by her power and authority.

Diana was exposed by her mother in the ftreets, and was nourified by fhepherds: for which reason, the was worthipped in the fireets, and her ftatue ufually fet before the doors of the houses.

Many temples were crected to this god-He had feveral temples built and de- defs, of which, that of Epitefus was the

chiel.

chief. The woods, groves, and forests, were also confecrated to her.

Acteon, grandfon of Cadmus, a famous bunter, introducing himself into the privacy of Diana, whilst the was bathing in a fountain, the goddess changed him into a stag, and he was devoured by his dogs.

 AURORA. Aurora was the daughter of Terra and Titan, the filter of the fun and moon, and mother of all the flurs.

She fits high in a golden chariot, drawn by white horfes. She was much taken with thelove of Cephalus, a very beautiful youth; and when the could by no perfunctionmove him to violate his faith, plighted to his wife Procris, daughter of the king of Athens, the carried him up into heaven by force.

Aurora being ulfo charmed with the fingular beauty of Tithonus, fon of Laomedon, and brother of Priamus, carried hun up into heaven, joined him to hertelf in wedlock, and from the Fates obtained immortality for him initead of a portion.

Memnon was the fon of this marriage, who, when he came to Troy, to bring afistance to Priamus, fighting in a single combat with Achilles, was slain.

8. CERES. Ceres is reprefented as a lady, tall in ftature, venerable with majefly, beautified with yellow hair, and crowned with a turban composed of the ears of corn. She holds in her right hand a burning torch, and, in her left, a handful of poppies and ears of corn.

She was daughter of Saturn and Ops, and of to great beauty, that the drew the gods into the love and admiration of her

She first invented and taught the art of tilling the earth, of towing pulie and corn, and of making bread; whereas before men ate only acorns. As soon as agriculture was introduced, and men began to contend about the limits of those fields, which before were common and uncultivated, the enacted laws, and determined the rights and properties of each person when disputes arose.

Ceres is beautiful, because the earth, which the resembles, gives a very delightful and beautiful spectacle to beholders; especially when it is arrayed with plants, divertified with trees, adorned with flowers, enriched with fruits, and covered with green herbs; when it displays the honours

of the Spring, and pours forth the gifts of Autumn with a bountiful hand.

She holds a lighted torch, because when Proterpine was itolen away by Pluto, the lighted torches with the flames of mount Aitna, and with them sought her daughter through the whole world. She allo carries poppies, because when spent with grief, and could not obtain the least rest or steep, Jupiter gave her poppies to eat, which plant, they say, has a power of creating steep and sorgetfulness.

Among various nations, the first fruits of the earth were offered to Ceres, as goddes of corn and agriculture; and the Cerealia, or Mysteries instituted in honour of Ceres, both in Greece and Sicily, were of two forts: the greater, or chief, were peculiar to Ceres, and called Eleutinia, from Eleutis, a city of Attica; and, in the leder, facrifices were made alto to Proferpine.

In these seats, the votaries ran through the public freets with great noise and lamentation, carrying lighted torches in their hands, in representation of the search made by Ceres after her daughter, when stolen by Pluto.

II. M.RINE DEITIES.

1. NEPTUNE. Neptune was the fon of Saturn and Ops, and brother of Jupiter and Pluto. His mother preferved him from the devouring jaws of his father, who ateup all the male children, and conveyed him to shepherds to be brought up as is before mentioned. In the divition of his father's dominions by Jupiter, the empire of the sea was allotted to Neptune.

He having joined with Apollo in a confpiracy against Jupiter, they were both driven from heaven; and, by Jupiter's command, forced to ferve Laomedon in building the walls of Troy. Neptune, not receiving the reward of his fervice, fent a fea-monther on the coasts, which ravaged the country.

Neptune afterwards became characteristic and long bore her diddain; at laft, by the allitance of a Dolphin, and the power of flattery, he drew her into marriage. Neptune, as an acknowledgment for this kindness, placed the dolphin among the stars, and he became a constellation.

As to the actions of this god; the prets fay, that in a diffute with Minerva, who should give a name to Athens, the capital city of Greece, he struck the ground with

Oog hi

his trident, and produced a horfe; for which reafon the Athenians facrificed to him that animal. Neptune was called Pofeidon by the Greeks: the Romans gave him alfo the name of Confus, and erected analtar to him in the circus of Rome. The Circenlian games, or horfe-races, intituted in honour of him, were, from this name, called Confusha. In these games, which were celebrated in themonths of February and July, the rape of the Sabine virgius was represented.

Neptune is effected governor of the fea, and father of the rivers and fountains. He is represented riding on the fea in a car, in the torm of a fhell, drawn by fea-horfes, preceded by Tatons. He holds a trident in his hand, as an emblem of his fovereignty, and is attended by the younger

Tritons, and fea-nymphs.

The other DESTIES are,

1. Oceanus, a marine deity, defeended from Carlus and Veria; and by the ancients was called, not only the father of rivers, but also of animals, and of the gods themselves.

 Thetis, goddefs of the fea, wife of Oceanus, by whom the is faid to have had many fons; the chief of whom was Nereus, who dwelt in the Ægean fea, and by

his wife Doras had fifty daughters, called from him Nercides. Thetis is repretented fitting in a chariot, in the form of a thell,

drawn by dolphins.

3. Amphitrite, daughter of Oceanus and Doris, goddens of the fea, and wife of Neptune. She is by the poets frequently taken for the fea itfelf; and by fome writers, Thetis and Amphitrite are faid to be the fame perfon.

A. Triton, the fon of Neptune and Amphitrite, was also his companion and trumpeter. In the upper part of his body he bears the refemblance of a man, and of a fifth in the lower part. Most of the fea gods from him are called Tritons.

5. The Syrens were inhabitants of the fea. They had faces of women, but the bodies of flying hith. Their names were Parthenope, Ligara, and Leucoiia. Their dwelt-near the coatt of Sicily, and drew to them all pattengers by the freetness of

their finging, and then devoured them. III. INTERNAL DEITIES.

1. Pluto. Pluto, for of Saturn and Rhea, and brother of Jupiter and Neptune. In the divition of his father's kingdom, when he was dethroned by Jupiter, Pluto had the western parts assigned to him, which gave rife to the poetical fable, that he was the god of hell.

Thefe internal kingdoms are attributed to him, not only because the western part of the world fell to him by lot; but also because he introduced the use of burying and funeral obsequies: hence he is believed to exercise a sovereignty over the dead. He fits on a dark throne, holding a key initead of a fceptre, and wearing a crown of chony. Sometimes be is crowned with a diadem, foractimes with cyprefs, and fometimes with the daffodil, which flower Proferpine was gathering when he fiole her away. He is called Dis by the Latins, and hades by the Greeks, which lait fignities dark and gloomy. His horfes and chariot are of a black colour; and hit nelf is often painted with a rod in his hand for a fceptie, and covered with a head-piece.

2. PROSERPINE. Proferpine is queen of hell, the infernal Juno, and wife of Pluto. She was daughter of Jupiter and Ceres.

When none of the goddesses would marry Pluto, because of his deformity, the god being vexed that he was despited, and forced to live a single life, in a rage mounted his chariot, and suddenly sprung up from a den in Sicily amongst a company of very beautiful virgins, who were gathering flowers in the fields of Enna. Pluto, inflamed with the love of Proferpine, carried her off with him, and fink into the earth, not far from Syracuse, where suddenly a lake arose.

The nymphs, her companions, being firuck with terror, acquainted her mother with the lofs of her daughter. Ceres, with lighted torches from Mount Ætua, long fought her in vain: but at laft, being informed by the number Arethufa, that the was folen by Pluto, the went down into hell, where the found Proferpine queen of those dark dominions. The enraged mether complained to Jupiter of the violence offered to her daughter by his brother Pluto. Jupiter promifed that the thould return to the earth, provided the had eat nothing in hell; hereupon Ceres went down rejucing: and Profernine was returning with transport, when Afcalaphus declared, that he faw Proferpine cat fome grains of a pomegranate which the gathered in Pluto's orchard; by this difcovery her return was itopped. The mother, incenfed at this intelligence, changed Afcalaphus into an owl; and, by her importunate intreaty, extorted from Jupiter, that Proferpine thould live one half of the year with her, and the reft of the time with her hufband Plato. Proferpine afterwards fo loved this difagreeable hufband, that the became jealous of him, and changed his mittrefs Mentha into the herb named Mint.

The other DEITIES are.

1. Plutus, either from the affinity of name, or that both were gods of riches, is frequently joined to Pluto. He was faid to be blind, void of judgment, and of a nature quite timorous, all which qualities denote tome peculiar property of this god; blind and void of judgment, in the unequal distribution of riches, as he frequently pattes by good men, whilst the wicked are loaded with wealth; and two-rous, by reason the rich are contiantly in far, and watch over their treasures with great care and anxiety.

2. Nor, goddels of darkness, is the most ancient of all the goddelles. She married the river Erebus in hell, by whom the had many daughters. Nox is painted in black

robes befor with flars.

3. Charon, the fon of Erebus and Nox, is the ferry man of hell. He is reprefented by the paets as a terrible, grim, dirty old fellow. According to the fable, he attended with his boat, and, for a finall piece of money, carried over the river Styx the foals of the dead; yet not all promifcuouity, but only those whose bodies were committed to the grave; for the unburied shades wandered about the shores an hundred years, and then were admitted into the loat and service ever the lake.

4. The Giants, or Titans, were at first inhabitants of the earth; who, truting to their great flature and strength, waged war againt Jupiter, and attempted to dethrene him from the possession of heaven. In this battle, they heaped up mountains upon mountains, and from thence darted trees of are into heaven. They hurled also prodigious stones and folid rocks, which falling again upon the earth, or in the feu, became mountains or islands; but being unfuccessful in their attempt, and defire yed by the thunder of Jupiter, with the allifunce of the other gods, they were driven from the earth and cast into hell.

5. The Fates were three in number.

daughters of Erebus and Nox. These were faid to preside over time past, present, and to come. Their mames are Clothe, Lachesis, and Atropos. Their office is to superintend the thread of life; Clotho holds the distast, and draws the thread, Lachesis turns the spindle, and Atropos cuts the thread with her feithers; that is, the sirst calls us into life, the second determines our lot and condition, and the third tanishes our life.

6. The Furies or Eumenules, were daughters of Nox and Acheron. They were three, namely, Alecto, Megara, Tafyphone: their abode was in hell, to torment the wicked; they were armed with blazing torches, and furrounded with finakes, and other infiruments of horror,

The RIVERS of HELL were,

1. Acheron, Son of Sol and Terra. He fupplied the Titans with water when they waged war against Jupiter; who for this reason, changed him into a river, and east him into hell. The waters of this river are extremely mindly and bitter.

 Styr, the principal river of hell; and held in fo great veneration by the gods, that whoever broke the eath he had once made by this river, was deprived of his divinity for one handred years.

 Cocytus. This river is increased by the tears of the wicked; and flows with a lamentable noise, imitating the damned.

4. Phlegethon. This river twells with fiery waves, and rolls fireams of fire. The fouls of the dead, having patied over thefe rivers, are carried to Phito's palace.

5. Lethe is a river in hell. If the ghofts of the dead drink the waters of this river, they are faid to lofe the remembrance of all that had patied in this world.

[It may here be very properly observed, that these infernal regions, the residence of Pluto, are said to be a subterraneous calvern, whither the shades or fouls of mortal descended, and were judged by Minos, Hagus, and Rhadamanthus, appointed by Pluto judges of hell. This place contained Tartarus, the abode of the unhappy; also Elysum, the abode of those that had lived well. Cerberus, a dog with three heads, was door-keeper, and covered with servents, always waited at the infernal gate, to prevent mortals from entering, or the manes or shades from going out. Charon.

004

as is faid before, was ferryman of hell, and conducted the departed fouls to the tribunal of Minos. The Harpies, or birds of prey, were also inhabitants of hell. These were indifferently called Furia, Ocypete and Lamiæ; and were instruments in the hands of the gods to raise wars in the world, and disturb the peace of mankind.]

Fable relates two remarkable punishments in hell. 1. Ixion, for attempting to seduce Juno, was by Jupiter cast into hell, and condemned to be chained to a wheel, which continually whirled round.

2. Sysiphus the son of Holus, was doomed in hell to roll a huge round stone from the bottom to the top of a mountain, whence it immediately descended. This punishment was allotted him, because he revealed the secrets of the gods and discovered to Asopus the place where Jupiter had concealed his daughter Agina.

INFERIOR DEITIES.

In the Heathen Mythology, there are many other deities or gods of inferior note, fiyled Dii Minores; and as these frequently occur in the writings of the poets, it is necessary to make brief mention of them.

The Muses, daughters of Jupiter and Mnemofyne, goddels of memory, were the reputed goddeffes of the feveral arts and felences, and prefided over the feafts and folemnities of the gods. They were the companions of Apollo, and inhabited with him chiefly on the hills of Parnatius, Helicon, and Pindus. The Hippocrene, and other fountains at the foot of Parnatius, were facred to them; as were alfothe palm-tree and the laurel. They are reprefented young and very handsome, and are nine in number.

r. Clio is faid to be the chief mufe. She derives her name from glory and renown. She presided over history, and is said to be the inventres of the late.

 Callupe, fo called from the fweetnels of her voice. She prefided over cloquence and heroic poety.

3. Erato, or, the Lovely. She prefided over lyric poetry.

4. Thalia, from the gaiety and pleafantry of her fongs, called the Flourishing Maid. She invented comedy and geometry.

5. Melpomene was the mufe of that age.

She prefided over tragedy, and melancholy fubicels.

6. Terpfichore, or, the Jovial. She prefided over mufic and dancing.

Euterpe, fo called because the imparts joy. She invented the flute, and presided over music: the is also said to be the patroness of logic.

8. Polyhymnia, to called from multiplicity of fongs. She is faid to excel in memory, and prefide over history.

 Urania, or, the Celetial Muse. She presided over divine poety, and is said to be the inventres of astronomy.

The Muses are distinguished by masks, lyres, garlands, globes, and other emblems, expressive of their different offices or accomplishments.

PEGASUS, the famous horfe of ancient fable, was an attendant on Apollo and the Muses; he inhabited the hills of Parnasus, Helicon, and other mountains. He is said, to be sprung from the blood of Medusa, killed by Perseus, and is represented by the poets with wings to his sides, expressive of the slights and elevation of the mind in poetry. When Perseus cut off the head of Medusa, the horse Pegasus struck the ground with his soot; upon which, at the bottom of the hill, a sountain arose named Hippocrene. This sountain was facred to Apollo and the Muses.

The Graces, called alfo Charities, were three fifters, daughters of Jupiter and Eurynome, or Venus. The first was named Aglaia from her cheerfulness; the second Thalia from her perpetual verdure; and the third Euphrosyne, from delight. They were companions of the Muses and Mercury, and attendants on Venus. They are represented with pleasing countenances and naked, to denote that our actions should be free and candid, not covered over with dislimulation or deceit. A chain binds their arms together, to express that the link of love and harmony should be united and unbroken.

THEM 15, ASTREA, and NEMESIS were three goddefes; the first of law and peace; the tecond of justice; and the third, a rewarder of virtue, and punisher of vice.

Æorus, god of the winds, and fon of Jupiter and Acefia.

Monus, fon of Nox and Somnus, and god of banter or jefting.

Pan, fon of Mercury and Penelope, was the god of the woods and fliepherds. He is represented half man and half goat.

441.40

with a large pair of horns on his head, a crook in one hand, a pipe, composed of reeds, in the other. The Arcadians much admired his music, and paid him divine honours. The Romans also built a temple to Pan, at the foot of Mount Palatine, and his feasits were called Lupercalia. Sylvanus and Faunus were also gods of the forests, from whom were descended the other rural drities, as Satyrs, Sylvans, Fauns, Nymphs, or Dryades, who were all inhabitants of the woods.

PALES is the goddefs of the shepherds and pasture, and by some is called Magna Mater and Vesta. They offered to her milk and wasfers of millet for a good growth of pasture. Her seasts, Palilia, were celebrated about the eleventh or twelfth of the kalends of May, on which day Romulus sounded the city of Rome.

FLORA, goddess of the spring and slowers, and wife of Zephyrus. She is represented adorned with garlands, and near her is a basket of slowers. Feronia is also counted the goddess of groves and orchards.

PONONA was goddess of the gardens, and all fruit-trees and plants. She was beloved of Vertumnus, as Ovid relates.

PRIAPUS, fon of Venus and Bacchus, an obficene deity. He also presided over gardens.

TERMINUS was a deity who prefided over the boundaries of lands, which were held to facred, that whoever removed a land-mark, or ploughed them up, was subject to death. On the last day of the year, the Romans offered facrifice to the god Terminus; and these festivals were called Terminalia.

CUPID, god of love, fon of Mars and Venus, is reprefented blind, with a bow in his hand, and a quiver of arrows on his thoulders, with which he wounds the hearts of lovers.

HYMENEUS, or Hymen, fon of Apollo and Urania, or, as fome fay, of Bacchus and Venus. He is the god of marriage; and is reprefented under the figure of a young man, holding a torch in his hand, with a crown of roles, or fweet marjorum, on his head.

The PENATES and LARES were also deemed gods; the first presided over provinces and kingdoms, and the latter over houses and particular families. The Lares notice presided ever the highways; and they were wont to facrifice to these houshold gods, frankingenie, wine, bread, corn, and

a cock; and, according to fome writers, a lamb and a hog.

The Genti alfo were spirits, or deities, that presided over all persons and places. And indeed so great were the number of these inserior gods, that the ancient mythology furnished almost as many deities as there are things in nature; for there was no part of the body, or action of life, but had a peculiar divinity, by whom it was said to be immediately directed or protected.

ÆSCULAPIUS, fon of Apollo and the nymph Coronis, was the god of physic: he was stain by Jupiter with a thunderbolk forged by the Cyclops, on the complaint of Pluto for raising the dead, or rather recovering men, by his skill in medicine, from their tickness. He was worthipped under the figure of a serpent; and sometimes he is represented seated on a throne of goldand ivory, with a long beard, holding a rod environed with a serpent, and a dog at his feet.

The Cyclors, four in number, were fons of Neptune and Amphitrite. They were fervants to Vulcan, and had only one eye, placed in the middle of their foreheads: they were flain by Apollo, in revenge for torging the thunderbolts with which Jupiter killed Æfculapius, as is before related. They inhabited the itland of Sicily; and, on account of their great firength, were deemed giants by the poets.

Silent's was the folter-father of Bacchus. He is accounted the god of abstruse mysteries and knowledge. He is repreferted as a fat, old, drunken fellow, riding on an ais.

ÆGYPTIAN DEITIES.

Osinus, Apis, and Scrapis, are different names of one and the laune derty, fon of Jupiter by Niobe, and butband to Io, daughter of Inachus and Ifmena. Jupiter became pathonately in love with fo; and in order to purfue his unlawful pattion, changed her into a cow. lo, to avoid the refentment of Juno, fled into Egypt; and Ofirus, after he had reigned many years over the Argives in Peloponnetus, left his kingdom to his brother digialus, and failed into Egypt to feek new dominions. He there married Io, who was also named Itis; and, obtaining the government, they taught the Egyptians hubandry, alto every other useful art and ference, and governed with great wildom and equity.

Ofiris, having conferred the greatest benefits

benefits on his own fubjacts, committed the regency of his kingdom to Ifs; and, with a large body of forces, fet out in order to civilize the reft of mankind. This he performed more by the power of pertuation, and the foothing arts of mulic and poetry, than by the terror of his arms. He marched tirit into Æthiopia, thence to Arabia and India; and, returning to Egypt, was thin by his brother Typion, and furied at Memphis, the chief city of Egypt.

lies afterwards vanquified Typhon, reigned happily in Egypt to her death, and was also buried at Memphis.

Ones, for of Ohris and Ilis, fucceeded to the government. The Egyptians deemed hun the protector of the river Nile, the averter of evils, governor of the world, and the author of plenty.

There deities of the Egyptians were held in the greatest veneration. Temples were crecked, and divine honours paid to Ohns under the figure or an on; and the prieficiles of this facrificed to that goddels unier different thapes, according to the purpoies for which they were intended, And, as fable is faid to take its origin from the Egyptians, it will appear, from their intercoarie with the Jews long refident in Egypt, that a mixture of true religion and error increased that false worsinp, which first prevailed in that country, and afterwards foread into Rome, and the more diffant parts of the world. Thefe gods of the Egyptians were worthipped under various names and characters, according to the prevailing opinion of different countries, or fome other incident, Thus, according to Herodotus, Ofiris and Bacchus are the fame; according to Diodorns the hiltorian, Ohris is Sol, Jupiter, &c. and Plutarch fuys, Ohris, Serapis, and Apis of the Egyptians, are Pluto, Oceanus, &c. in the Roman mythology.

his is faid to be the fame with the Roman Cybele, Ceres, Minerva, Lana, &c., and was called the modiler of the gods. Orus alfo was thefymbol of light, and was figured as a winged boy. He was named the Hermes of the Greeks, and the Apallo and Cupid of the Romans.

Both in Egypt and Rome, each deity had his peculiar temple, where the most fiderin facrities were made to them, according to the prevailing nation of their power and influence. The worthip of thele gods to far prevailed among the Romans, that they erected to their honeur

a public edifice named the Pantheon, in which, as a general repolitory, were placed the fratues of their feveral deities, with their respective symbols: Jupiter was diftinguithed by a thunderbolt: Juno by a crown; Mars by a helmet; Apollo, or the Sun, by its beams; Diana, or the Moon, by a crefcent; Ceres by a cornacopia, or horn of planty, or an ear of corn; Cupid by a bundle of arrows; Mercury by wings on his feet, and a caduceus, or wand, in his hand; Burchus by the ivv; Venus by the beauty of her perion; and the reft had the like diffinguithing characters placed above their flatues, or in their hands, according to the received opinion of the people, or the ingenuity of the artift,

Of OBJOLES.

The ORACLES of the uncients were deemed the predictions, myferious declarations of the wad of the gods; it may, with a kind of certainty, be admitted, that the natural bent of the mind of man to fearch into futurity gave rife to this infilition.

To whatever cause, however, the origin may be afcribed, the inititution of oracles became general, among the idolatrons nations, and increated over the face of the whole earth. Not to mention other nations, the oracles of the Egyptians and Greeks were numerous, efpectably of the latter people, at leaft we have a more full account of them. Theoracle of Dodona, a city of Epirus in Greece, was facred to Jupiter; the oracle of Jupiter Hammond was also of antient date, and famous in Lybia; the oracle of Apollo at Heliopolis was of great note; the oracle also of Apollo at Delphi, if not the most ancient, was the mon celebrated of all Greece, informuch that it was called the oracle of the whole earth. And, indeed, for ftablithed was the credit of their oracular declarations, that the enacting laws, the reformation of government, also peace or war, were not undertaken by flates or princes, but even in the more common concerns of lift, no parterial butinefs was entered upon without the function of the oracle. oracle had its prieft or priefters, who delivered out the answers of the gods. These answers, for the most part, were in verfe, and couched under fuch mysterious terms. that they admitted of a double interpretution; mionuch, that whether the prediction was completed, or the expectation of the implicant difappointed, the oracle was

clear

clear from blame. The oracle of Apollo at Delphos, being in the greatest reputation, was reforted to from all parts. The
prictics of Apollo was named Pythia, from
the ferpent P-thon, killed by that god, as
is before mentioned. The offerings to the
gods on these applications were liberal,
according to the ability, or the importance
of the answer required by the supplicant:
and, it is faid, the temple and city of
Delphos especially, was, by these means,
filled with immense treasure.

The principal oracle of the Egyptians was at Memphis, a royal city of Egypt, where they erected an altar, and worthipped their god Apis, under the figure of an ox. His wife his had also worthip, and her priefts were called Haai.

The Sybilline Oracles were certain women, whom the ancients believed to be endued with the gift of prophecy. They are faid to be ten in number, and were famous i all lands. They had no fixed refidence, but travelled into different countries, and delivered their predictions in verte in the Greek tongue. One of these Sybils, named Laythrae, or Cunnan, from Cunn, a city in the Ionian sea, according to Virgil, came into Italy, and was held in the highest efteem by the Romans, who consolited the oracle of the Sybil on all occasions that related to the welfare of the republic.

Augury, or the art of divination by birds, the meteors of the heavens, or the entrails of beafts, was held in the higheft veneration by the idolatrons nations. The people of God, the Jews, were not free from idolatry in the time of Moles; and we read also in holy writ, that Saul, being vexed in fpirit, applied to the feers, or persons skilled in the knowledge of futufity. But not to go fo far back, Romulus and Remys confulted the Auguries before they built Rome; and the foundation of that city was determined by the flight of birds. Numa chablified a college of Augms, and confirmed his regulation of the Roman flate by their function. It appears alfo, in the history of that people, that no national concern was entered upon, without first confulting the Auguries : and according to the propitious or bad omen, they made peace or war, and appointed Imgifrates. Indeed the Augurs, and their declarations, were held in to high regard by the Romans, that whoever contemned them was accounted impious and pro-

phane. To conclude, divination, or the ipirit of prediction, made a confiderable part of the Pagan theology, especially among the Homans, those lords of the world, who fell into the general delution, and adopted almost all the gods of every people they subdued.

CONCLUSION. Of fabulous History.

Notwithstanding the origin of suble seems uncertain, and to be lost in antiquity, it may be said to take its rise from truth, or succeed history. And is 'he foregoing relation of the Heathen deties, it is evident, many particulurs correspond with the history of the most early transactions, as they are recorded by Moses in holy writ. The golden age of Saturn, the wars of the Giants, the delage of Deucalion, and the repeopling of the earth, declare their origin from divine truth, as received and delivered down by the patriarchs.

On the confusion of tongues at the building of Babel, and the differsion of mankiad, the tradition of the patriarreb became subject to variation; and, as is observed by the learned Rollin, the change of habitation, and diversity of language, opened the door of error, and introduced an alteration in worthip, agreeable to the foil, or rather according to the humour, or some accidental event of the respective colonies.

However confused and erroneous the general worthip of man became, it is evident, from every circumstance, that, in the first stages of the world, mankind knew but one Deity, the SUPREME GOD, and Creator of the universe; but, afterwards, when men abandoned themfelves to vice, and, as is faid in Scripture, " went a whoring 6 after their own inventions," and departed from the purity of their forefathers, their ideas of the Divinity became weakened and initead of the worthip of the only TRUE Gon, they substituted other deities, or objects of worthip, more agreeable to the comprehention of their own deprayed nature. Thus, by a mixture of truth and fable, one deity became productive of another, till at laft the inventive fancy gradually gave life to every vilible object, both in the heavens, and on earth. Thus, " having changed the glory of the uncor-" ruptible God, into an image made like " corruptible man, and to birds, and four-" footed beatls, and creeping things, and " ferving the creature more than the Cre-" ator," not only Jupiter, Mars, Venus, and

other false deities, but stars, rivers, and fountains, animals, reptiles, and plants, received divine adoration. At length, great men and heroes, who excelled in any uteful ference, or became famous by conqueits, or a fuperior conduct of life, by an eafy transition from admiration to a superflitious respect, were deemed more than human, and had divine honours paid to them also under different names, in different countries; or, probably, prompted by ambition, they affirmed to theinfelves the homage and adoration that was due only to the Divine Creator, the Au-MIGHTY LORD, and Governor of the world. This accounts for that multitude of deities, both in heaven and on earth, which makes the marvellous part of antient nction, and became the object of Pagan divinity, when the earth was overwhelmed with darkness, and, as is expressed in holy writ, " the hearts of men went after their " idols."

The fertile imagination of the poets, who celebrated the exploits of the ancient heroes, and exprelled the common actions of life in figurative characters, joined to the extravagance of prietis and orators in their panegyries on the living and the dead, greatly forwarded the work of fable; and in time, learning being obliterated, their writings were looked upon as registers of facts. Thus the world grown old in error, by the folly and credulity of mankind fiction got admission into history, and became at last a necessary part in composing the annals of the early ages of the world.

For this cause, an acquaintance with fabulous hittory, as is before observed, is become a necessary part of polite learning in the education of youth and for the due understanding the Greek and Roman authors; alto the paintings, fratues and other monuments of antiquity. By this knowledge, the tender mind will moreover be impired with an early abhorrence of the ubturd ceremomes and improus tenets of the Heathen mythology; and, at the fame time, be imprefied with the deepelt fente and veneration for the Christian religion, the light of the Gospel in Caratar Jesus, who, in the fulness of time, through the tenner mercies of God, difpelled those clouds of darknets, ignorance, and folly, which had long debated human nature, and foread over the face of the earth the greated and most ablerd superstitions, as is before related, and will faither appear

from many incidents in the histories of Greece and Rome.

§ 237. Concerning the Neglect of Oratorival Numbers.—Observations upon Dr. TILLOTON'S Style.—The Care of the ancient Orators with respect to Numerous Compusition, stated and recommended. In a Letter.

The passage you quote is entirely in my fentiments. I agree with that celebrated author andyouriels, that our oratory is by no means in a state of perfection; and, though it has much itrength and folidity, that it may yet be rendered far more polished and affecting. The growth, indeed, of cloquence, even in those countries where the flourished most, has ever been exceedingly slow. Athens had been in possession of all the other polite improvements, long before her pretensions to the persuative arts werein any degree considerable; as the earliest orator of note among the Roma as didnotappear sooner than about a century before Tully.

That great mafter of perfustion, taking notice of this remarkable circumflance, afligns it as an evidence of the superior difficulty of his favourite art. Polibly there may be some truth in the observation: but whatever the cause be, the fact, I believe, is undeniable. Accordingly eloquence has by no means made equal advances, in our own country, with her fifter arts; and though we have feen fome excellent poets, and a few good painters, rife up amongit us, yet I know not whether our nation can tupply us with a fingle orator of deferved entinence. One cannot but be furprifed at this, when it is confidered, that we have a profession set apart for the purposes of pertuation, and which not only affords the moti animating and interesting topics of rhetoric, but wherein a talent of this kind would prove the likelieft, perhaps, of any other, to obtain those ambitious prizes which were thought to contribute to much to the fuccefsful progress of ancient eloquence.

Among the principal defects of our Englith orators, their general difregard of harmony has, I think, been the leaft obferved. It would be injuffice indeed to deny that we have fome performances of this kind among to us tolerably mutical; but it mut be acknowledged at the fame time, that it is more the effect of accident than defign, and vather a proof of the power of our language, than of the art of our orators.

Dr.

Dr. Tillotion, who is frequently mentioned as having carried this species of eloquence to its highest perfection, feenis to have had no fort of notion of rhetorical sombers: and may I venture to add, without hazarding the imputation of an affected fingularity, that I think no man had ever lefs pretentions to genuine oratory than this celebrated preacher? If any thing could raife the flame of eloquence in the breatt of an orator, there is no occasion upon which one thould imagine it would be more likely to break out, than in celebrating departed merit; vet the two fermore which he preached on the death of Mr. Gonge and Dr. Whichcote, are as cold and languid performances as were ever, perhaps, produced upon fuch an animating tubject. One cannot indeed but regret, that he, who abounds with fuch noble and generous fentiments, should want the art of fetting them off with all the advantage they deferve; that the fublime in morals fould not be attended with a fuitable elevation of language. The truth however is, his words are frequently ill-chosen, and almost always ill-placed: his periods are both tedious and unbarmonious; as his metaphors are generally mean, and often ridiculous. It were eaty to produce numterless infrances in support of this aftertion. Thus, in his fermion preached before queen Anne, when the was princefs of Denmark, he talks of fqueezing a parable, thrufting religion by, driving a firiect bargain with God, tharking thifts, &c; and, speaking of the day of judgment, he defcribes the world as cracking aboutourears. I cannot however but acknowledge, in justice to the oratorical character of this most valuable prelate, that there is a noble finplicity, in fome few of his fermons; as his excellent discourse on sincerity deserves to be mentioned with particular applause,

But to thow his deficiency in the article I am confidering at prefent, the following fincture will be fufficient, among many others that might be cited to the fame " One might be apt," lavs he, purpose. " to think, at first view, that this parable " was over-done, and wanted fomething " of a due decorum; it being hardly cre-" dible, that a man, after he had been to " mercifully and generously dealt withal, " as upon his humble request to have so " huge a debt fo treely forgiven, thould, whilft the memory of fo much mercy " was freth upon him, even in the very " next moment handle his fellow-fervant,

" who had made the fame humble request to him which he had done to his lord, with fo much roughness and cruelty,

" for to incontiderable a tum."

This whole period (not to mention other objections which implit juilly be raited against it) is unmufical throughout; but the concluding members, which ought to have been particularly flowing, are most inforably loote and disjointed. If the delicacy of Tully's ear was to exquifitely refined, as not always to be suitisfied even when he read Demosthenes; how would it have been offended at the hardness and dispance of so unharmonious a tentence!

Nothing, perhaps, throws our eloquence at a greater diffance from that of the aucients, than this Gothic arrangement; as those wonderful effects, which fometimes attended their elocution, were, in all probability, chiefly owing to their fkill in mufical concords. It was by the charm of numbers, united with the fireigth of reaion, that Tully confounded the andacious Cataline, and filenced the eloquent Hortentius. It was this that deprived Curio of all power of recollection, when he rose up to eppofe that great mafter of enchanting rhetorie; it was this, in a word, made even Cæfar himfelf tremble; nav, what is yet more extraordinary, made Cafar alter his determined purpole, and acquit the man he had refolved to condemn.

You will not suspect that I attribute too much to the power of numerous compofition, when you recollect the infiance which Tully produces of its wonderful effedt. He informs, you may remember, in one of his rhetorical treatifes, that he was himfelf a witness of its influence, as Carbo was once haranguing to the people. When that orator pronounced the following tentence, Patris dictum fapiens, temcritar filii comprobacit, it was aftonishing. favs he, to observe the general applante which followed that harmonious close. A modern ear, perhaps, would not be much affected upon this occasion: and, indeed, it is more than probable, that we are ignorant of the art of pronouncing that period with its genuine emphasis and cadence. We are certain, however, that the mutic of it confitted in the dichorce with which it is terminated: for Cicero hungfelf affores us, that if the found menfore had been changed, and the words placed in a different order, their whole effect would have been absolutely destroyed.

This art was first introduced among the

Girch 2

Greeksby Thrafymachus, though fome of theadmirers of Hogrates attributed the invention to that orator. It does not appear to have been observed by the Romans till near the time of Tully, and even then it was by no means univerfally received, The ancient and lefs numerous manner of composition had full many admirers, who were fuch enthulialis to antiquity as to adopt her very defects. A disposition of the same kind may, perhaps, prevent its being received with us; and while the archbithop fluil maintain his authority as an orator, it is not to be expected that any great advancement will be made in this species of cloquence. That firength of underlanding likewife, and folidity of reason, which is fo eminently our national characteriffic, may add fomewhat to the difficulty of reconciling us to a fludy of this kind; as at first glance it may feem to lead an orator from his grand and principal aim, and tempt him to make a facrifice of fenfe to found. It must be acknowledged, indeed, that in the times which succeeded the diffolution of the Roman republic, this art was to perverted from its true end, us to become the fingle fludy of their enervated orators. Plany the younger often complains of this contemptible affectation; and the polite author of that elegant dialogue, which, with very little probability, is attributed either to Tacitus or Quincillian, afferes us it was the ridiculous boaft of certain orators, in the time of the declention of genuine eloquence, that their barangues were capable of being fet to mufic, and fung upon the stage. But it must be remembered, that the true end of this art I am recommending, is to aid, not to fuperfede reason: that it is so far from being necellarily effeminate, that it not only adds grace but thrength to the powers of perfindion. For this purpose Tully and Quinctilian, those great matters of numerous composition, have laid it down as a fixed and invariable rule, that it mult never appear the effect of labour in the orator; that the tuneful flow of his periods muft always feem the cafual refult of their difposition; and that it is the highest offence against the art, to weaken the expression, in order to give a more mufical tone to the cadence. In fhort, that no unmeaning words are to be thrown in merely to fill up the requilite measure; but that they must fill rife in fenfe as they improve in found. Fitzosborne.

§ 238. Upon Grace in Writing. In a Letter.

When I mentioned Grace as effential in conflituting a fine writer, I rather hoped to have found my fentiments reflected back with a clearer light by yours, than imagined you would have called upon me to explain in form, what I only threw out by accident. To confess the truth, I know not whether, after all that can be faid to illuftrate this uncommon quality, it must not at lati be refolved into the poet's wequeo monthrare et fentio toutum. In cases of this kind, where language does not topply us with proper words to express the notions of one's mind, we can only convey our fentiments in figurative terms: a defect which necellarily introduces fome obfcurity.

I will not therefore undertake to mark out with any fort of precision, that idea which I would express by the word Grace: and, perhaps, it can no more be clearly described than justly defined. To give you, however, a general intimation of what I mean when I apply that term to compositions of genius, I would refemble it to that eafy air which fo remarkably diffinguithes certain perfons of a genteel and liberal caft. It confitts not only in the particular beauty of fingle parts, but arifes from the general fymmetry and confiruetion of the whole. An author may be just in his fentiments, lively in his figures. and clear in his expression; yet may have no claim to be admitted into the rank of finished writers. Those several members. must be so agreeably united as mutually to reflect beauty upon each other; their arrangement must be so happily disposed as not to admit of the lead transposition without manifest prejudice to the entire piece. The thoughts, the metaphors, the allutions, and the diction, thould appear eafy and natural, and feem to arife like to many spontaneous productions, rather than as the effects of art or labour.

Whatever, therefore, is forced or affected in the fentiments; whatever is pompous or pedantic in the expression, is the very reverse of Grace. Her mien is neither that of a prude nor accoquet: she is regular without formality, and sprightly without being fantastical. Grace, in short, is to good writing what a proper light is to a fine picture: it not only shews all the figures in their several proportions and relations, but thewathem in the most advantageous manner.

As

As gentility (to refume my former illustration) appears in the minuteff action, and improves the most inconfiderable getture; fo Grace is discovered in the placing even mongle word, or the turn of a mere explesive. Neither is this inexpressible quality confined to one species of composition only, but extends to all the various kinds; to the humble pational as well as to the lofty epic; from the slightest letter to the most foleum discourse.

I know not whether Sir William Temple may not be confidered as the first of our profe authors, who introduced a graceful manner into our language. At leaft that quality does not feem to have appearedearly, or thread far, amongst us. wherefoever we may look for its origin, it is certainly to be found in its highest perfection in the effays of a gentleman whose writings will be diffinguifhed fo long as politenels and good-fente have any adnurers. 't hat becoming air which Tully elected the criterion of time composition, and which every reader, he fays, imagines foeafy to be imitated, yet will find fodifficult to attain, is the prevailing characterinc of all that excellent author's mottelegant performances. In a word, one may tottly apply to him what Plato in his allegorical language, favs of Arittophanes; that the Graces, having fearched all the world round for a temple wherein they might for ever dwell, fettled at last in the breast of Mr. Addition. Fitzosborne.

§ 230. Concerning the Style of Horace, in his Moral Writings. In a Latter.

Are you aware how far I may miffead you, when you are willing to relign your-felf to my guidance, through the regions of criticifar? Remember, however, that take the lead in these paths, not in confidence of my own superior knowledge of them, but in compliance with a request, which I never knew yet how to refuse. In fairt I give you my sentiments, because it is my feutiments you require; but I give them at the same time rather as doubts than decisions.

After having thus acknowledged my infuticiency for the office you have aftered use. I will venture to confets, that the poet who has gained over your approbation, has been far lefs fucciful with same. I have ever thought, with a very celebrated modern writer, that

Le vers le miene rempli, la plus noble pensée, Ne pect plaire à l'esprit quand l'oreille est bloisée. Bozzi au.

Thus, though I admit there is both wit in the millery, and Brength in the leatiments of your friend's moral epittle, it by no means fulls in with those notions I have formed to myfelf, concerning the effential requifites in compositions of this kind. He feems, indeed, to have widely deviated from the model he protetles to have lead in view, and is no more like Horace, than Hyperion to a Satyr. His deficiency in point of verification, not to mention lies want of elegance in the general manuer of his poem, is fufficient to activoy the pretended refemblance. Nothing, in truth, can be more abfurd, than to write its poetical meafure, and yet neglect harmout; us of all the kinds of falle fivle, that which is neither profe nor verfe, but I know not what inartificial combination of powerless words bordered with rhyme, is far, farely, the most insufferable.

But you are of opinion, I perceive (and it is an opinion in which you are not fingular) that a negligence of this kind may be justified by the authority of the Roman fatirift: yet furely those who entertain that notion, have not theroughly attended either to the precepts or the practice of Herace, He has attributed, I confefs, his fatirical composition to the inspiration of a certain. Mure, whom he diffinguithes by the title of the muta pedeficis; and it is this expreflion which feems to have milled the generality of his imitators. But though he will not allow her toffy, he by no means intends the thould creep; on the contrary, it may be faid of the Mufe of Horace, as of the Eve of Milton, that

- grace is in all her fteps,

That this was the idea which Horace bimfelf had of her, is evident, not only from the general air which prevails in his Satires and Epitiles, but from feveral exprefs declarations, which he lets fall in his progrefs through them. Even when he speaks of her in his greatest fits of modefiv, and deferibes her as exhibited in his own moral writings, he particularly infitts upon the eafe and harmony of hermotions. Though he humbly difclaims, indeed, all pretentions to the higher poetry, the acer spiritus et vis, as he calls it the represents his tivle as being governed by the tempora certa modofque, as flowing with a certain regular and agreeable cadence. Accordingly, we find him particularly condemning his predecefor Lacilius for the difforance of his numbers; and he profelles to have made the experiment, whether the fame

kind

kind of moral subjects might not be treated in more fort and easy measures:

Quid votat et nofmet ".ucil! feripta legentes, Quaerce nun ilius, nun rerum dura negară Veraculus natura magis inclos et cuntes Nofins!

The truth is, a tuneful cadence is the lingle prerogative of poetry, which he pretends to claim to his writings of this kind; and to far is he from thinking it unclential, that he acknowledges it as the only feparation which diffing uithes them from profe. If that were once to be broken down, and the mufical order of his words defiroyed, there would not, he tells us, he the leaft appearance of poetry remaining.

Nou Invenias etiam disjecti membra poetre.

However, when he delivers himself in this humble firain, he is not, you will observe, sketching out a plan of this species of poetry in general; but speaking merely of his own performances in particular. His demands rife much higher, when he informs us what he expects of those who would fucceed in composit.ons of this moral kind. He then not only requires flowing numbers but an expression concise and unincumbered; wit exerted with good breeding, and managed with referve; as upon fome occations the fentiments may be enforced with all the firength of eloquence and poetry: and though in some parts the piece may appear with a more ferious and folemn cast of colouring, yet, upon the whole, he tells us it must be lively and riant. This I take to be his meaning in the following paffage:

Eft brevitate opus, ut currat fententia, neu fe Imperiat verbis laffas onerantibus aures; La termone opus eil modo rheioris atque poëtm; Interdum urbain, parcentis viribus atque Extenuntis eas contuito.

Such, then, was the notion which Horace had of this kind of writing. And if there is any propriety in these his rules, if they are sounded on the truth of taite and art; I sear the performance in question, with numberless others of the same samp (which have not however wanted admirers) must inevitably stand condemned. The truth of it is, most of the pieces which are usually produced upon this plan, rather give one an image of Luchius, than of Horace; the authors of them seem to missake the awkward negligence of the savounte of Scipio, soy the easy air of the friend of Nitcenas.

You will still tell me, perhaps, that the example of Horace himself is an unanswerable objection to the notion I have embraced; as there are numberless lines in his Satires and Epittles, where the verfinication is evidently neglected. But are you fure, Hortenius, that those lines which found fo unharmonious to a modern ear. had the fame effect upon a Roman one? For myfelf, at least, I am much inclined to believe the contrary: and it feems highly incredible, that he who had ventured to centure Lucibus for the uncouthness of his numbers, should hunfelf be notoriously guilty of the very fault against which he so firough exclaims. Most certain it is, that the deleacy of the ancients, with respect to numbers, was far fuperior to any thing that modern taile can pretend to: and that they discovered differences which are to us abiolutely imperceptible. To mention only one remarkable inflance; a very ancient writer has observed upon the following verfe in Virgil,

Arma virumque cano. Troje qui primus als cris.

that if inflead of primus we were to pronounce it primis (is being long, and us fhort) the entire harmony of the line would be defiroyed.—But whose car is now so exquitely sentially, as to perceive the distinction between those two quantities? Some retinement of this kind might probably give mutic to those lines in Horace, which now seem so untuneable.

In subjects of this nature it is not possible, perhaps, to express one's ideas in any very precife and determinate manner. I will only therefore in general observe, with respect to the requilite tivle of these performances, that it contitts in a natural cafe of expression, an elegant familiarity of phrase, which though formed of the most usual terms of language, has yet a grace and energy, no lefs firiking than that of a more elevated diction. There is a certain lively colouring peculiar to compositions in this way, which, without being to bright and glowing as is necessary for the higher peetry, is nevertheless equally removed from whatever appears harth and dry. But particular inflances will, perhaps, better illuftrate my meaning, than any thing I can farther fay to explain it. There is scarce a line in the Moral Epifiles of Mr. Pope, which might not be produced for this purpofe. I chuse however to lay before you the following veries, not as preferring them to many others which might be quoted from that inimitable fatirift; but as they afford me an opportunity of comparing them with a vertion of the fame original lines, of which they are an imitation; and, by that means, of the ving you at one view what I conceive is, and is not, in the true manner of Horace:

Peace is my dear delight—not Fleury's more; But touch me, and no mimitter fo fore: Whoe'er offends, at fome unlucky time, Eldes into vertic, and hitches in a rhyme; Sacred to ridicule his whole life long. And the lad burden of fome merry fong.

I will refer you to your own memory for the Latin pallinge, from whence Mr. Pope has taken the general hint of these verses; and content myself with adding a translation of the lines from Horace by another hand:

Behold me blamelefs bard, how fond of peace? But he who hurts me (usy, I will be heard). Had better take a lion by the beard; His eyes thall weep the folly of his tongue, By laughing crowds in rueful ballad fung.

There is a strength and spirit in the former of these passages, and a statues and languor in the latter, which cannot fail of being discovered by every reader of the leati delicacy of differnment: and yet the words which compose them both are equally founding and fignificant. rules then, which I just now mentioned from Horace, will point out the real cause of the different effects which these two pallages produce in our minds; as the paifages themselves will serve to confirm the treth and justice of the rules. In the lines of Mr. Pope, one of the principal beauties will be found to confift in the shortness of the expression; whereas the sentiments in the other are too much incumbered with words. Thus for instance,

Peace is my dear delight,

is pleasing, because it is concise; as,

Behold me blameless bard, how fond of peace 1

is, in comparison of the former, the verba lagias oncrantia aures. Another distinguishing perfection in the imitator of Horace is that spirit of gaiety which he has disused through these lines, not to mention those happy, though familiar images of siding into verse, and hitching in rhyme; which can never be sufficiently admired but the translator, on the contrary, has tast too serious an air over his numbers, and appears with an emotion and warnest-ness that disappoints the force of his fatire:

May, I will be heard,

has the mien of a man in a passion; and His eyes shall weep the fully of his tongue,

though a good line in itself, is much too folemn and tragical for the undisturbed pleasantry of Horace.

But I need not entermore minutely into an examination of these passages. The general hints I have thrown out in this letter will suite to shew you wherein I imagine the true manner of Horace consists. And after all, perhaps, it can no more be explained, than acquired by rules of art. It is what true genuis can only execute, and just taste alone discover. Fitzostorne.

§ 240. Concerning the Criterion of Take. In a Letter.

It is well, my friend, that the age of transformation is no more: otherwife I should tremble for your fevere attack upon the Mufes, and expect to fee the flory of your metamorphofis embellish the poetical miracles of some modern Ovid. But it is long fince the fate of the Piërides has gained any credit in the world, and you may now, in full fecurity, contemn the divinities of a arnafius, and fpeak irreverently of the daughters of Jove himfelf. You fee, neverthelefs, how highly the Ancients conceived of them, when they thus represented them as the offspring of the great father of gods and men. You reject, I know, this article of the heathen creed: but I may venture, however, to affert, that philosophy will confirm what fable has thus invented, and that the Muses are, in firici truth, of heavenly extraction.

The charms of the fine arts are, indeed, literally derived from the Author of all nature, and founded in the original frame and constitution of the human mind. Accordingly, the general principles of tafte are common to our whole species, and arise from that internal fenfe of beauty which every man, in some degree at least, evidently possesses. No rational mind can be for wholly void of all perceptions of this fort, as to be capable of contemplating the various objects that furround him, with one equal coldness and indifference. There are certain forms which must necessarily fill the foul with agreeable ideas; and the is instantly determined in her approbation of them, previous to all reasonings concerning their use and convenience. It is upon these general principles, that what is called fine taile in the arts is founded; and confequently is by no means to precarlous and unfettled

unfettled an idea as you chuse to describe it. The truth is, taite is nothing more than this universal tense of beauty, rendered more exquisite by genius, and more correct by cultivation: and it is from the simple and original ideas of this fort, that the mind learns to form her judgment of the higher and more complex kinds. Accordingly, the whole circle of the imitative and oratorical arts is governed by the same general rules of criticism; and to prove the certainty of these with respect to any one of them, is to establish their validity with regard to all the rest. I will therefore consider the Criterion of Taste in

relation only to fine writing.

Each species of composition has its diftinct perfections: and it would require a much larger compais than a letter affords to prove their respective beauties to be derived from truth and nature; and consequently reducible to a regular and precife flandard. I will only mention therefore those general properties which are effential to them all, and without which they must necessarily be defective in their feveral kinds. Thefe, I think, may be comprehended under uniformity in the defign, variety and refemblance in the metaphors and fimilitudes, together with propriety and harmony in the diction. Now, fome or all of these qualities constantly attend our ideas of beauty, and necessarily raife that agreeable perception of the mind, in what object foever they appear. charms of fine composition then, are so far from existing only in the heated imagination of an enthufiaftic admirer, that they refult from the conflitution of nature herfelf. And perhaps the principles of criticifm are as certain and indisputable, even as those of the mathematics. Thus, for inflance, that order is preferable to confusion, that harmony is more pleasing than dissonance, with some few other axioms upon which the science is built; are truths which strike at once upon the mind with the fame force of conviction, as that the whole is greater than any of its parts, or, that if from equals you take away equals, the remainder will be equal. And in both cases, the propositions which reflupon thefe plain and obvious maxims, feem equally capable of the fame evidence of demonstration.

But as every micilectual, as well as animal, faculty is improved and faculty interpretable exercise; the more the foul exerts this berinternal tanks of beauty upon any par-

ticular object, the more the will enlarge and refine her relish for that peculiar species. For this reason the works of those great masters, whose performances have been long and generally admired, supply a farther criterion of fine tafte, equally fixed and certain as that which is immediately derived from Nature herielf. The truth is, fine writing is only the art of raiting agreeable fenfations of the intellectual kind; and, therefore, as by examining those original forms which are adapted to awaken this perception in the mind, we learn what those qualities are which constitute beauty in general; fo by observing the peculiar continuction of those compofitions of genius which have always pleafed, we perfect our idea of fine writing in particular. It is this united approbation, in persons of different ages and of various characters and languages, that Longinus has made the telt of the true fublime; and he might with equal juttice have extended the fame criterion to all the inferior excellencies of elegant composition. Thus the deference paid to the performances of the great matters of antiquity, is fixed upon just and folid reasons: it is not because Arinotle and Horace have given us the rule of criticism, that we must submit to their authority; it is because those rules are derived from works which have been diffinguished by the uninterrupted admiration of all the more improved part of mankind, from their earliest appearance down to this prefent hour. For whatever, through a long feries of ages, has been univerfally efteemed as beautiful, cannot but be conformable to our just and natural ideas of beauty.

The opposition, however, which fometimes divides the opinions of those whose judgments may be supposed equal and perfect, is urged as a powerful objection against the reality of a fixed canon of criticifm: it is a proof, you think, that after all which can be faid of fine tafte, it must ultimately be refolved into the peculiar relath of each individual. But this diverfity of fentiments will not, of itfelf, deftroy the evidence of the criterion; fince the fame effect may be produced by numberless other causes. A thousand accidental circumfiances may occur in counteracting the force of the rule, even allowing it to be ever fo fixed and invariable, when left in its free and uninfluenced frate. Not to mention that false bias which party or perfonal diflike may ax upon the mind,

the

the most unprejudiced critic will find it difficult to difengage himfelf entirely from those partial affections in favour of particular beauties, to which either the general course of his studies, or the peculiar cast of his temper, may have rendered him moft femible. But as perfection in any works of genius refults from the united beauty and propriety of its feveral diffinct parts, and as it is impossible that any human compolition should possels all those qualities in their highest and most fovereign degree; the mind, when the pronounces judgment upon any piece of this fort, is apt to decide of its merit, as those circumstances which the most admires, either prevail or are deficient. Thus, for inflance, the excellency of the Roman mafters in painting, confitts in beauty of defign, noblenefs of attitude, and delicacy of expression; but the charms of good colouring are wanting. On the contrary, the Venetian school is faid to have neglected defign a little too much; but at the fame time has been more attentive to the grace and harmony of well-disposed lights and shades. Now it will be admitted by all admirers of this soble art, that no composition of the pencil can be perfect, where either of thefe qualities are ablent; yet the most accomplithed judge may be fo particularly ftruck with one or other of these excellencies, in preference to the rest, as to be influenced in his cenfure or applaufe of the whole tablature, by the predominancy or deficiency of his favourite beauty. Something of this kind (where the meaner prejudices do not operate) is ever, I am perfuaded, the occasion of that diversity of fentences which we occationally hear pronounced by the most approved judges on the same piece. But this only thews that much caution is necessary, to give a fine talle its full and unobstructed effect; not that it is in itielf uncertain and precarious.

Fitzofborne.

§ 241. Reflections upon feeing Mr. Pore's House at Binfield. In a Letter.

Your Letter found me just upon my return from an excursion into Berkshire, where I have been paying a vifit to a friend, who is drinking the waters at Sunning-Hill. In one of my morning rides, over that delightful country, I accidentally passed through a little village, which afforded me much agreeable meditation; as in times to come, perhaps, it will be vifited by the lovers of the polite arts, with as much veneration as Virgil's tomb, or any other celebrated fpot of antiquity. The place I mean is Binfield, where the Poet, to whom I am indebted (in common with every reader of tafte) for fo much exquitte entertainment, fpent the earlieft part of his youth. I will not fcruple to confefs, that I looked upon the fcens where he planned fome of those beautiful performances, which first recommended him to the notice of the world, with a degree of enthuliafin; and could not but confider the ground as facred that was impressed with the footsteps of a genius that undoubtedly does the highest honour to our age and nation.

The lituation of mind in which I found myfelf upon this occasion, suggested to my remembrance a passage in Tully, which I thought I never to thoroughly entered into the fpirit of before. That noble author, in one of his philosophical convertationpieces, introduces his friend Atticus as observing the pleasing effect which scenes of this nature are wont to have upon one's mind: " Movemur enim," fays that polite Roman, " nescio quo pacto, locis ir sis, in " quibus corum, quos deligimus aut ad-" miramur, adfunt vettigia. Me quidem ipfie illæ noftræ Athenæ, non tam operibus magnificis exquititique antiquorum artibus delectant, quam recordatione fummorum virorum, ubi quisque " habitare, ubi sedere, ubi disputare sit " folitus."

Thus, you fee, I could defend myfelf by an example of great authority, were I in danger upon this occasion of being ridiculed as a romantic visionary. But I am too well acquainted with the refiged fentiments of Orontes, to be under any apprehension he will condemn the impreffions I have here acknowledged. On the contrary, I have often heard you mention with approbation, a circumitance of this kind which is related by Silius Italieus. The annual ceremonies which that post performed at Virgil's sepulchre, gave you a more favourable opinion of his tafle, you confessed, that any thing in his works was able to raite.

It is certain, that fome of the greatest names of antiquity have diffinguithed themselves, by the high reverence they shewed to the poetical character. Scipio, you may remember, defired to be laid in the fame tomb with Ennius; and I am inclined to pardon that fuccessful madmay Alexander many of his extravagancies, for the

Pp2

Pindar, at the facking of Thebes.

There feems, indeed, to be formething in pactry that raifes the professors of that very fingular talent, far higher in the effirmation of the world in general, than those who excel in any other of the refined And accordingly we find that poets have been diftinguished by antiquity with the most remarkable honours. Thus Horger, we are told, was deitied at Smyrna; as the citizens of Mytilene samped the image of Sappho upon their public coin: Anaereon received a folenin invitation to fpend his days at Athens, and Hipparchus, the fon of Pililiratus, titted out a fplendid vessel in order to transport him thither: and when Virgil came into the theatre at Rome, the whole audience role up and faluted him, with the fame respect as they would have paid to Augustus him-

Painting, one would imagine, has the faireft pretentions of rivalling her fifter art in the number of admirers; and yet, where Apelles is mentioned once, Homer is celebrated a thousand times. Nor can this be accounted for by urging that the works of the latter are fill extant, while those of the former have perished long fince: for is not Milton's Paradife Loft more univerfally effected than Raphael's Cartoons.

The trath, I imagine, is, there are more who are natural judges of the harmony of numbers, than of the grace of proportions. One meets with but few who have not, in some degree at least, a tolerabbe car; but a judicious eye is a far more uncommon pollession. For as words are the univerfal medium, which all men employ in order to convey their fentiments to each other; it feems a just confequence that they thould be more generally formed for relithing and judging of performances in that way: whereas the art of reprefenting ideas by means of lines and colours, lies more out of the road of common ufe, and is therefore less adapted to the tatte of the general run of mankind.

I hazard this observation, in the hopes of drawing from you your fentiments upon a fubject, in which no man is more qualified to decide: as indeed it is to the converfation of Orontes, that I am indebted for the discovery of many refined delicacies in the imitative arts, which, without his judicious affiftance, would have lain

generous regard paid to the memory of concealed to me with other common ob-Fitzosborne.

> § 242. Concerning the Use of Ancient Mythology in Modern Poetry, In a

If there was any thing in any former letter inconfiftent with that efteem which is juttly due to the ancients, I defire to retractit in this; and difavow every expreftion which might feem to give precedency to the moderns in works of genius. I am so far indeed from entertaining the fentiments you impute to me, that I have often endeavoured to account for that fuperiority which is so visible in the compolitions of their poets: and have frequently affigned their religion as in the number of those causes, which probably concurred to give them this remarkable pre-eminence. That enthubalm which is fo effential to every true artift in the poetical way, was confiderably heightened and enflamed by the whole turn of their facred doctrines; and the fancied prefence of their Mufes had almost as wonderful an effect upon their thoughts and language, as if they had been really and divinely infpired. Whilft all nature was supposed to fwarm with divinities, and every oak and fountain was believed to be the residence of fome prefiding deity; what wonder if the poet was animated by the imagined influence of fuch exalted fociety, and found himfelf transported beyond the ordinary limits of fober humanity? The mind when attended only by mere mortals of fuperior powers, is observed to rise in her strength; and her faculties open and enlarge themselves when she acts in the view of those, for whom the has conceived a more than common reverence. But when the force of superstition moves in concert with the powers of imagination, and genius is inflamed by devotion, poetry must shine out in all her brightest persection and fplendour.

Whatever, therefore, the philosopher might think of the religion of his country; it was the interest of the poet to be thoroughly orthodox. If he gave up his creed, he must renounce his numbers: and there could be no inspiration, where there were no Muses. This is so true, that it is in compositions of the poetical kind alone that the ancients feem to have the principal advantage over the moderns : in every other especies of writing one might venture

perhaps

perhaps to affert, that these latter ages have, at least, equalled them. When I say so, I do not consine myself to the productions of our own nation, but comprehend likewise those of our neighbours: and with that extent the observation with possibly hold true, even without an exception in favour of history and oratory.

But whatever may with justice be determined concerning that question, it is certain, at least, that the practice of all forceeding poets confirms the notion for which I am principally contending. Though the alters of Paganism have many ages fince been thrown down, and groves are no longer facred; yet the language of the poets has not changed with the religion of the times, but the gods of Greece and Rome are still adored in modern verie. Is not this a confession, that fancy is enlivened by superstition, and that the ancient bards catched their rapture from the old mythology? I will own, however, that I think there is fomething ridiculous in this unnatural adoption, and that a modern poet makes but an aukward figure with his antiquated gods. When the Pagan fystem was fanctioned by popular belief, a piece of machinery of that kind, as it had the air of probability, afforded a very striking manner of celebrating any remarkable circumstance, or raising any common one. But now that this superftition is no longer supported by vulgar opinion, it has loft its principal grace and efficacy, and feems to be, in general, the most cold and uninteresting method in which a poet can work up his fentiments. What; for inftance, can be-more unaffecting and fpiritless, than the compliment which Boileau has paid to Louis the XIV th on his famous passinge over the Rhine? He represents the Naiads, you may remember, as alarming the god of that river. with an account of the march of the French monarch; upon which the rivergod assumes the appearance of an old experienced commander, and flies to a Dutch fort, in order to exhort the garrison to fally out and dispute the intended pasage. Accordingly they range themselves in form of battle, with the Rhine at their head; who, after some vain efforts, ohferving Mars and Bellona on the fide of the enemy, is so terrified with the view of those superior divinities, that he most gallantly runs away, and leaves the hero in quiet possession of his banks. I know not how far this may be relished by critics, or

justified by custom; but as I am only mentioning my particular taste, I will acknowledge, that it appears to me extremely

imipidand puerile.

I have not, however, fo much of the fpirit of Typhœus in me, as to make war upon the gods without refiriction, and attempt to exclude them from their whole poetical dominions. To represent natural, moral, or intellectual qualities and affections as persons, and appropriate to them those general emblems by which their powers and properties are usually typified in Pagan theology, may be allowed as one of poetical rhetoric. When Dryden, addressing himself to the month of May as to a person, says,

For thee the Graces lead the dancing hours;

one may confider him as fpeaking only in metaphor: and when fuch shadowy beings are thus just shown to the imagination. and immediately withdrawn again, they certainly have a very powerful effect. But I can relish them no farther than as figures only; when they are extended in any ferious composition beyond the limits of metaphor, and exhibited under all the various actions of real perfons, I cannot but confider them as fo many abfurdities, which cuftom has unreasonably patronized. Thus Spenfer, in one of his pattorals, reprefents the god of love as flying, like a bird, from bough to bough. A shepherd, who hears a rutiling among the buthes, fuppofes it to be fome game, and accordingly discharges his bow. Cupid returns the shot. and after feveral arrows had been mutually exchanged between them, the unfortunate fwain discovers whom it is he is contending with; but as he is endeavouring to make his escape, receives a désperate wound in the heel. This siction makes the fubject of a very pretty idyllium in one of the Greek poets; yet is extremely flat and difgusting as it is adopted by our British bard. And the reason of the difference is plain; in the former it is supported by a popular fuperfittion; whereas no ftrain of imagination can give it the least air of probability, as it is worked up by the latter,

Quedeunque mihi oftendis fie, incredulus edi. Hon

I must confess, at the same time, that the inimitable Prior has introduced this subulous scheme with such uncommon grace, and has paid so many genteel com-Pp 2 pliments to his mistress by the assistance of Venus and Cupid, that one is carried off from observing the impropriety of this machinery, by the pleasing address with which he manages it; and I never read his tender poems of this kind, without applying to him what Seneca somewhere says upon a similar occasion: Major ille est qui judicium abstulit, quam qui meruit.

To speak my fentiments in one word, I would leave the gods in full possession of allegorical and burlesque poems: in all others I would never suffer them to make their appearance in person and as agents, but to enter only in simile or allusion. It is thus Waller, of all our poets, has most happily employed them: and his application of the story of Daphne and Apollo will serve as an instance, in what manner the ancient mythology may be adopted with the utmost propriety and beauty.

Fitzojborne.

§ 243. On the Delicacy of every Author of Genius, with respect to his own performances. In a Letter.

If the ingenious piece you communicated to me, requires any further touches of your pencil, I must acknowledge the truth to be, what you are inclined to fufnect, that my friendship has imposed upon my judgment. But though in the prefent instance your delicacy seems far too refined; yet, in general, I must agree with you, that works of the most permanent kind, are not the effects of a lucky moment, nor firuck out at a fingle heat. The best performances, indeed, have generally coft the most labour; and that ease, which is fo effential to fine writing, has feldom been attained without repeated and fevere corrections: Ludentis speciem dabit et torquebitur, is a motto that may be applied, I believe, to most successful authors of genius. With as much facility as the numbers of the natural Prior feem to have flowed from him, they were the refult (if I am not mitinformed) of much application: and a friend of mine, who undertook to tranferibe one of the nobleft performances of the fineft genius that this, or perhaps any age can boath, has often affored me, that there is not a fingle line, as it is now publifted, which flands in conformity with the original manuscript. The truth is, every feutiment has its peculiar-expression, and every word its precife place, which do not always immediately prefent themfelves, and generally demand frequent trials,

before they can be preperly adjusted; not to mention the more important difficulties, which necessarily occur in settling the plan and regulating the higher parts which compose the structure of a simpled work

Those, indeed, who know what pangs it costs even the most fertile genius to be delivered of a just and regular production, might be inclined, perhaps, to cry out with the most ancient of authors, Oh! that mine adversary had written a book! A writer of refined tafte has the continual mortification to find himself incapable of taking entire pollession of that ideal beauty which warms and fills his imagination. His conceptions still rife above all the powers of his heart, and he can but faintly copy out those images of perfection, which are impreffed upon his mind, Never was any thing, fays Tully, more beautiful than the Venus of Apelles, or the Jove of Phidias; yet were they by no means equal to thole high notions of beauty which animated the geniules of those wonderful artists. In the fame manner, he observes, the great masters of oratory imagined to themselves a certain perfection of eloquence, which they could only contemplate in idea, but in vain attempted to draw out in expreffion. Perhaps no author ever perpetuated his reputation, who could write up to the full standard of his own judgment; and I am perfuaded that he, who upon a furvey of his compositions can with entire complacency pronounce them good, will hardly find the world join with him in the same favourable fentence.

The most judicious of all poets, the inimitable Virgil, used to resemble his productions to those of that animal, who, agreeably to the notions of the Ancients, was supposed to bring forth her young into the world, a mere rude and shapeless mass; he was obliged to retouch them again and again, he acknowledged, before they acquired their proper form and beauty. Accordingly we are told, that after having fpent eleven years in composing his Æneid, he intended to have fet apart three more for the revifal of that glorious perform-But being prevented by his last fickness from giving those finishing touches which his exquitite judgment conceived to be full necessary, he directed his friends Tucca and Varius to burn the noblest poem that ever appeared in the Roman language. In the fame spirit of delicacy, Mr. Dryden tells us, that had he taken

mere

more time in translating this author, he might possibly have succeeded better: but never, he assures us, could be have succeeded so well as to have satisfied himself.

In a word, Hortenhus, I agree with you, that there is nothing more difficult than to fill up the character of an author, who proposes to raite a just and lasting admiration; who is not contented with those little transient flathes of applaufe, which attend the ordinary race of writers, but confiders only how he may thine out to posterity; who extends his views beyond the prefent generation, and cultivates those productions which are to flourith in future ages. What Sir William Temple observes of poetry, may be applied to every other work where taile and imagination are concerned: " It requires the greatest con-" traries to compole it; a genus both " penetrating and folid; an expression both " ftrong and delicate. There must be a " great agitation of mind to invent, a great " calm to judge and correct: there must " be upon the same tree, and at the same " time, both flower and fruit." But though I know you would not value yourfelf upon any performance, wherein thefe very oppolite and very lingular qualities were not conspicuous: vet I must remind you at the same time, that when the file ceases to polish, it must necessarily weaken. You will remember, therefore, that there is a medium between the immoderate caution of that orator, who was three Olympiads in writing a fingle oration; and the extravagant expedition of that poet, whose funeral pile was composed of his own numberlefs productions. Fitzofborne,

§ 244. Reflections upon Style. In a Letter. The beauties of ftyle feem to be generally confidered as below the attention both of an author and a reader. I know not therefore, whether I may venture to acknowledge, that among the numberlefs graces of your late performance, I particularly admired that strength and elegance with which you have enforced and adorned the noblest fentiments.

There was a time, however, (and it was a period of the trueft refinements) when an excellence of this kind was eftermed in the number of the politest accomplishments; as it was the ambition of some of the greatest names of antiquity to diffinguish themselves in the improvement of their native tongue. Julius Cæsar, who was not only the greatest hero, but the

fineft gentleman that ever, perhaps, appeared in the world, was defirous of adding this talent to his other most shining endowments: and we are told he fludied the language of his country with much application: as we are fure he possessed it in its highest elegance. What a lofs, Euphrouius, is it to the literary world, that the treatife which he wrote upon this subject, is perified with many other valuable works of that age! But though we are deprived of the benefit of his observations, we are happily not without an inflance of their effects; and his own memoirs will ever remain as the best and brightest exemplar, not only of true generalthip, but of fine writing. He published them, indeed, only as materials for the ufe of those who should be disposed to enlarge upon that remarkable period of the Roman flory; yet the purity and gracefulness of his ftyle were fuch, that no judicious writer durft attempt to touch the subject after him.

Having produced fo illustrious an instance in favour of an art, for which I have ventured to admire you; it would be impertinent to add a second, were I to cite a less authority than that of the immortal Tully. This noble author, in his dialogue concerning the celebrated Roman orators, frequently mentions it as a very high encomium, that they possessed the elegance of their native language; and introduces Brutus as declaring, that he should prefer the honour of being esteemed the great master and improver of Roman eloquence, even to the glory of many triumphs.

But to add reason to precedent, and to view this art in its use as well as its dignity; will it not be allowed of fome importance, when it is confidered, that eloquence is one of the most considerable auxiliaries of truth? Nothing indeed contributes more to fubdue the mind to the force of reason, than her being supported by the powerful affiftance of masculine and vigorous oratory. Ason the contrary, the most legitimate arguments may be disappointed of that fuccels they deferve, by being attended with a spiritless and enseebled expression. Accordingly, that most elegant of writers, the inimitable Mr. Addison, obferves, in one of his effays, that " there " is as much difference between compre-" hending a thought cloathed in Cicero's " language and that of anordinary writer, " as between feeing an object by the light

" of a taper and the light of the fun."

It is furely then a very flrange conceit

Pp4

of the celebrated Malbranche, who feems to think the pleafure which arifes from perufing a well written piece is of the criminal kind, and has its fource in the weakness and efferninacy of the human heart. A man must have a very uncommon feverity of temper indeed who can find any thing to condemn in adding charms to truth, and gaining the heart by captivating the ear; in uniting roses with the thorns of science, and joining pleasure with instruction.

The truth is, the mind is delighted with a fine flyle upon the fame principle that it prefers regularity to confusion, and beauty to deformity. A taste of this fort is indeed so far from being a mark of any depravity of our nature, that I should rather consider it as an evidence, in some degree, of the moral rectitude of its constitution, as it is a proof of its retaining some relish at least of harmony and order.

One might be apt indeed to suspect, that certain writers amongst us had considered all beauties of this fort in the fame gloomy view with Malbranche: or, at leaft, that they avoided every refinement in ftyle, as unworthy a lover of truth and philosophy. Their fentiments are funk by the lowest expressions, and feem condemned to the first curfe of creeping upon the ground all the days of their life. Others, on the contrary, mistake pomp for dignity; and, in order to raife their expressions above sulgar language, lift them up beyond common apprehensions, esteeming it (one fliould imagine) a mark of their genius, that it requires fome ingenuity to penetrate their meaning. But how few writers like Euphronius, know to hit that true medium which lies between those diffant extremes! How feldom do we meet with an author, whose expressions, like those of my friend, are glowing but not glaring, whose metaphors are natural but not common, whose periods are harmonious but not poetical; in a word, whose sentiments are well fet, and shewn to the understanding in their truest and most advantageous lustre.

Fitzopborne,

§ 245. On Thinking. In a Letter.

If one would rate any particular merit according to its true valuation, it may be necessary, perhaps, to consider how far it can be justly claimed by mankind in general. I am sure, at least, when I read the very uncommon sentiments of your last letter, I sound their judicious author rise

in my efteem, by reflecting that there is not a more fingular character in the world, that that of a thinking man. It is not merely having a fucceffion of ideas, which lightly thim over the mind, that can with any propriety be flyled by that denomination. It is observing them separately and diffinctly, and ranging them under their respective classes; it is calmly and steadily viewing our opinions on every fide, and refolutely tracing them through all their confequences and connections, that conftitutes the man of reflection, and diffinguithes reason from fancy. Providence, indeed, does not feem to have formed any very confiderable number of our species for an extensive exercise of this higher faculty; as the thoughts of the far greater part of mankind are necessarily restrained within the ordinary purposes of animal life. But even if we look up to those who move in much fuperior orbits, and who have opportunities to improve, as well as leifure to exercife, their understandings; we shall find, that thinking is one of the least exerted privileges of cultivated humanity.

It is, indeed, an operation of the mind which meets with many obstructions to check its just and free direction; but there are two principles, which prevail more or less in the constitutions of most men, that particularly contributes to keep this faculty of the foul unemployed: I mean, pride and indolence. To descend to truth through the tedious progression of wellexamined deductions, is confidered as a reproach to the quickness of understanding; as it is much too laborious a method for any but those who are possessed of a vigorous and refolute activity of mind. For this reason, the greater part of our species generally chuse either to seize upon their conclusions at once, or to take them by rebound from others, as best suiting with their vanity or their laziness. Accordingly, Mr. Locke observes, that there are not fo many errors and wrong opinions in the world as is generally imagined. Not that he thinks mankind are by any means uniform in embracing truth; but because the majority of them, he maintains, have no thought or opinion at all about those doctrines concerning which they raife the greatest clamour. Like the common foldiers in an army, they follow where their leaders direct, without knowing, or even enquiring, into the cause for which they fo warmly contend.

This will account for the flow steps by

which fruth has advanced in the world, on one fide; and for those absurd systems which, at different periods, have had an universal currency, on the other. For there is a strange disposition in human nature, either blindly to tread the same paths that have been traversed by others, or to strike out into the most devious extravalgancies: the greater part of the world will either totally renounce their reason, or reason only from the wild suggestions of an heated imagination.

From the faine fource may be derived those divisions and animosities which break the union both of public and private focieties, and turn the peace and harmony of human intercourse into dislonance and contention. For while men judge and act by such measures as have not been proved by the standard of dispassionate reason, they must equally be mistaken in their estimates both of their own conduct and

that of others.

If we turn our view from active to contemplative life, we may have occasion perhaps to remark, that thinking is no less uncommon in the literary than the civil world. The number of those writers who can, with any justice of expression, be termed thinking authors, would not form a very copious library, though one were to take in all of that kind which both ancient and modern times have produced. Necesfarily, I imagine, must one exclude from a collection of this fort, all critics, commentators, translators, and, in short, all that numerous under-tribe in the commonwealth of literature, that owe their existence merely to the thoughts of others. I hould reject for the fame reason, such compilers as Valerius Maximus and Aulus Gellius: though it must be owned, indeed, their works have acquired an accidental value, as they preferve to us feveral curious traces of antiquity, which time would otherwife have entirely worn out. Those teeming geniules like wife, who have propagated the fruits of their studies through a long feries of tracts, would have little pretence, I believe, to be admitted as writers of reaction. For this reason I cannot regret the loss of those incredible numbers of compositions which some of the Ancients are faid to have produced;

Quale fuit Cassi rapido serventius amni Ingenium; capsis quem sama est esse, librisque Ambustum propriis.

Thus Epicurus, we are told, left behind

him three hundred volumes of his own works, wherein he had not inferted a fingle quotation; and we have it upon the authority of Varro's own words, that he himfelf composed four hundred and ninety books. Seneca affures us, that Didymus the Grammarian wrote no less than four thoufand; but Origen, it feems, was yet more prolific, and extended his performances even to fix thousand treatites. It is obvious to imagine, with what fort of materials the productions of fuch expeditious workmen were wrought up : found thought and wellmatured reflections could have no share. we may be fure, in these hasty performances. Thus are books multiplied, whilst authors are fearce; and fo much eatier is it to write than to think! But shall I not myself, Palamedes, prove an instance that it is so, if I suspend any longer your own more important reflections, by interrupting you with fach as mine?

Fitzosborne.

§ 246. Reflections on the Advantages of Conversation.

That "it is not good for man to be alone," is true in more views of our species than one; and fociety gives strength to our reason, as well as polish to our manners. The foul, when left entirely to her own folitary contemplations, is infenfibly drawn by a fort of conftitutional bias, which generally leads her opinions to the fide of her inclinations. Hence it is that the contracts those peculiarities of reasoning, and little habits of thinking, which fo often confirm her in the most funtailical errors. But nothing is more likely to recover the mind from this falle bent, than the counterwarmth of impartial debate. Conversation opens our views, and gives our faculties a more vigorous play; it puts us upon turning our notions on every fide, and holds them up to a light that discovers these la-

tent

tent flaws which would probably have lain concealed in the gloom of unagitated abfraction. Accordingly, one may remark, that most of those wild doctrines, which have been let loofe upon the world, have generally owed their birth to persons whose circumstances or dispositions have given them the fewest opportunities of canvaising their respective systems in the way of free and friendly debate. Had the authors of many an extravagant hypothesis difcuffed their principles in private circles, ere they had given vent to them in public, the observation of Varro had never, perhaps, been made, (or never, at least, with fo much justice) that " there is no opinion " fo abfurd, but has fome philosopher or " other to produce in its support."

Upon this principle, I imagine, it is, that fome of the finest pieces of antiquity are written in the dialogue manner. Plato and Tully, it should feem, thought truth could never be examined with more advantage than amidit the amicable opposition of well-regulated converfe. It is probable, indeed, that subjects of a ferious and philofophical kind were more frequently the topics of Greek and Roman converlation than they are of ours; as the circumstances of the world had not yet given occasion to those prudential reasons which may now, perhaps, reftrain a more free exchange of fentiments amongst us. There was something, likewife, in the very fcenes themfelves where they usually assembled, that almost unavoidably turned the stream of their conversations into this useful channel. Their moms and gardens were generally adorned, you know, with the flatues of the greatest matters of reason that had then appeared in the world; and while Socrates or Aritiotle food in their view, it is no" wonder their discourse sell upon those subjects which fuch animating reprefentations would naturally fuggeft. It is probable, therefore, that many of those ancient pieces which are drawn up in the dialogue manner, were no imaginary convertations invented by their authors; but faithful transcripts from real life. And it is this circumftance, perhaps, as much as any other, which contributes to give them that remarkable advantage over the generality of modern compositions which have been formed upon the same plan. I am sure, at leaft, I could fearce name more than three or four of this kind which have appeared in our language worthy of notice. My lord Shaftefoury's dialogue, intitled "The Mo-

ralists;" Mr. Addison's upon Ancient Coms; Mr. Spence's upon the Odyffey; together with those of my very ingenious friend, Phylemon to Hydaipes; are, almost, the only productions in this way which have hitherto come forth amongli us with advantage. Thefe; indeed, are all masterpieces of the kind, and written in the true spirit of learning and politeness. The converfation in each of these most elegant performances is conducted, not in the usual abfurd method of introducing one difputant to be tamely filenced by the other; but in the more lively dramatic manner, where a just contrast of characters is preferred throughout, and where the feveral fpeakers fupport their respective sentiments with all the strength and spirit of a well-bred op-Fitzoforne. polition.

§ 247. On the Great Historical Ages.

Every age has produced heroes and politicians; all nations have experienced revolutions; and all histories are nearly alike, to those who seek only to furnish their memories with facts; but whosoever thinks, or, what is still more rare, whosoever has taste, will find but four ages in the history of the world. These four happy ages are those in which the arts were carried to persection; and which, by serving as the area of the greatness of the human mind, are examples for posterity.

The first of these ages to which true glory is annexed, is that of Philip and Alexander, or that of a Pericles, a Demonhenes, an Aristotle, a Plato, an Apelles, a Phidias, and a Praxiteles; and this of ancient Greece; the rest of the known world was then in a state of barbarism.

The fecond age is that of Cæfar and Augustus, distinguished likewise by the names of Lucretius, Cicero, Titus, Livius, Virgil, Horace, Ovid, Varro, and Vitravius.

The third is that which followed the taking of Constantinople by Mahomet II. Then a samily of private citizens was seen to do that which the kings of Europeought to have undertaken. The Medicis invited to Florence the Learned, who had been driven out of Groece by the Turks.—This was the age of Italy's glory. The polite arts had already recovered a new life in that country; the Italians honoured them with the title of Virtu, as the first Greeks had distinguished them by the name of Wisslow. Every thing tended towards persection;

perfection; a Michael Angelo, a Raphael, a Titian, a Tatio, and an Ariofto, flourished. The art of engraving was invented; elegant architecture appeared again, as admirable as in the most triumphant ages of Rome; and the Gothic barburifm, which had distigured Europe, in every kind of production, was driven from Italy, to make way for good tatte.

The arts, always transplanted from Greece to Italy, found themselves in a favourable foil, where they instantly produced fruit. France, England, Germany, and Spain, aimed, in their turns, to gather these fruits; but either they could not live in those climates, or else they degenerated

very fait.

Francis I. encouraged learned men, but fuch as were merely learned men: he had architects; but he had no Michael Angelo, nor Palladio: he endeavoured in vain to etablith fchools for painting; the Italian matters whom he invited to France, raifed no pupils there. Some epigrams and a few loofe tales, made the whole of our poetry. Rabelais was the only profe writer in vague, in the time of Henry II.

In a word, the Italians alone were in possession of every thing that was beautiful, excepting music, which was then but in a rude state; and experimental philosophy, which was every where equally un-

known.

Latily, the fourth age is that known by the name of the age of Louis XIV, and is perhaps that which approaches the neurest to perfection of all the four; enriched by the discoveries of the three former ones, it has done greater things, in certain kinds than those three together. All the arts, indeed, were not carried further than under the Medicis, Augustus, and Alexander; but human reason was in general more improved. In this age we first became acquainted with found philosophy. It may truly be faid, that from the last years of Cardinal Richelieu's administration till those which followed the death of Louis XIV, there has happened fuch a general revolution in our arts, our genius, our manters, and even in our government, as will ferve as an immortal mark to the true glory of our country. This happy influence has not been confined to France; it has communicated itself to England, where it has firred up an emulation which that ingenious and deeply-learned nation flood in need of at that time; it has introduced tafte into Germany, and the friences into

Ruffia; it has even re-animated Italy, which was languithing; and Europe is indebted for its politeness and spirit of society to the court of Louis XIV.

Before this time, the Italians called all the people on this fide the Alps by the name of Barbarians. It must be owned that the French, in fome degree, deferved this reproachful epithet. Our foreigthers joined the romantic gallantry of the Moors with the Gothic rudeness. They had hardly any of the agreeable arts amongst them; which is a proof that the ufeful arts were likewife neglected: for, when once the things of ule are carried to perfection. the transition is quickly made to the elegant and the agreeable; and it is not at all aftonishing, that painting, sculpture, poetry, eloquence, and philosophy, should be in a manner unknown to a nation, who, though poffelled of harbours on the Weitern ocean and the Mediterranean fea, were without thips; and who, though fond of luxury to an excefs, were hardly provided with the most common manua-

The Jews, the Genoefe, the Venetians, the Portuguese, the Flemish, the Dutch, and the English, carried on, in their turns, the trade of France, which was ignorant even of the first principles of commerce. Louis XIII. at his accession to the crown, had not a fingle thip; the city of Paris contained not quite four hundred thousand men, and had not above four fine public edifices; the other cities of the kingdom refembled those pitiful villages which we fee on the other fide of the Loire. The nobility, who were all stationed in the country, in dangeons, farrounded with deep ditches, oppressed the peasant who cultivated the land. The high roads were almost impassable; the towns were destitute of police : and the government had hardly any credit among foreign nations.

We must acknowledge, that, ever fince the decline of the Carlovingian family, France and languished more or lefs in this infirm state, merely for want of the benefit of a good administration.

For a state to be powerful, the people must either enjoy a liberty founded on the laws, or the royal authority must be fixed beyond all opposition. In France, the people were slaves till the reign of Philip Augustus: the noblemen were tyrants till Lewis XI.; and the kings, always employed in maintaining their authority against their vassals, had neither leisure to think

about

about the happiness of their subjects, nor the power of making them happy.

Lewis XI. did a great deal for the regal power, but nothing for the happinels or glory of the nation. Francis I. gave birth to trade, navigation, and all the arts; but he was too unfortunate to make them take root in the nation during his time, fo that they all perished with him. Henry the Great was on the point of raising France from the calamities and barbarifins in which she had been plunged by thirty years of difcord, when he was affaffinated in his capital, in the midft of a people whom he had begun to make happy. The Cardinal de Rickelieu, bufied in humbling the house of Austria, the Calvinists, and the Grandees, did not enjoy a power fufficiently undiffurbed to reform the nation; but he had at least the honour of beginning this happy work.

Thus, for the space of 900 years, our genius had been almost always restrained under a Gothic government, in the midst of divisions and civil wars; destitute of any laws or fixed customs; changing every second century a language which still continued rude and unformed. The nobles were without discipline, and strangers to every thing but war and idleness: the clergy lived in disorder and ignorance; and the common people without industry, and stupised in their wretchedness.

The French had no share either in the great discoveries, or admirable inventions of other nations: they have no title to the difcoveries of printing, gunpowder, glasses, telescopes, the fector, compals, the air-pump, or the true fystem of the univerfe: they were making tournaments, while the Portuguese and Spaniards were discovering and conquering new countries from the east to the west of the known world. Charles V. had already scattered the treasures of Mexico over Europe, before the subjects of Francis I. had discovered the uncultivated country of Canada; but, by the little which the French did in the beginning of the fixteenth century we may fee what they are capable of when properly conducted. Voltaire.

§ 248. On the Constitution of ENGLAND.

In every government there are three forts of power; the legislative; the executive, in respect to things dependent on the law of nations; and the executive, in regard to things that depend on the civil law.

By virtue of the first, the prince or maghinate enacts temporary or perpetual laws, and amends or abrogates those that have been already enacted. By the second, he makes pence or war, sends or receives embaliles, he chablishes the public fecurity, and provides against invasions. By the third, he punishes criminals, or determines the disputes that arise between individuals. The latter we shall call the judiciary power, and the other simply the executive power of the state.

The political liberty of the fubject is a tranquillity of mind, arifing from the opinion each person has of his fasety. In order to have this liberty, it is requisite the government be so constituted as one man

need not be afraid of another.

When the legislative and executive powers are united in the same person, or in the same body of magistrates, there can be no liberty; because apprehensions may arise, left the same monarch or senate should enact tyramical laws, to execute them in a tyramical manner.

Again, there is no liberty, if the power of judging be not feparated from the legislative and executive powers. Were it joined with the legislative, the life and liberty of the fubject would be exposed to arbitrary controul; for the judge would be then the legislator. Were it joined to the executive power, the judge might behave with all the violence of an oppressor.

There would be an end of every thing, were the fame man, or the fame body, whether of the nobles, or of the people, to exercife those three powers, that of enacting laws, that of executing the public resolutions, and that of judging the crimes or differences of individuals.

Most kingdoms of Europe enjoy a moderate government, because the prince, who is invested with the two first powers, leaves the third to his subjects. In Turkey, where these three powers are united in the Sultan's person, the subjects grown under the weight of a most frightful oppression.

In the republics of Italy, where these three powers are united, there is less liberty than in our monarchies. Hence their government is obliged to have recourse to as violent methods for its support, as even that of the Turks; witness the state inquisitors at Venice, and the lion's mouth, into which every informer may at all hours throw his written accusations.

What

What a fituation must the poor subject be in under those republics! The same body of magistrates are possessed, as executors of the law, of the whole power they have given themselves in quality of legislators. They may plunder the state by their general determinations; and, as they have likewise the judiciary power in their hands, every private citizen may be ruined by their particular decisions.

The whole power is here united in one body; and though there is no external pomp that indicates a despotic sway, yet the people feel the effects of it every

moment.

Hence it is that many of the princes of Europe, whose aim has been levelled at arbitrary power, have constantly set out with uniting in their own persons all the branches of magistracy, and all the great

offices of state.

I allow, indeed, that the mere hereditary ariftocracy of the Italian republics, does not answer exactly to the despotic power of the eastern princes. The number of magistrates sometimes foftens the power of the magistracy: the whole body of the nobles do not always concur in the fame deligns; and different tribunals are erected, that temper each other. Thus, at Venice, the legislative power is in the Council, the executive in the Pregadi, and the judiciary in the Quarantia. But the mifchief is, that these different tribunals are composed of magistrates all belonging to the fame body, which conftitutes almost one and the fame power.

The judiciary power ought not to be given to a flanding fenate; it should be exercised by persons taken from the body of the people (as at Athens) at certain times of the year, and pursuant to a form and manner prescribed by law, in order to erect a tribunal that should last only as

long as necessity requires.

By this means the power of judging, a power fo terrible to mankind, not being annexed to any particular flate or profession, becomes as it were, invitible. People have not then the judges continually prefent to their view; they fear the office, but not the magistrate.

In accufations of a deep or criminal nature, it is proper the person accused should have the privilege of chuting in some measure, his judges, in concurrence with the law; or at least he should have a right to except against so great a number, that the remaining part may be deemed his own choice.

The other two powers may be given rather to magistrates or permanent bodies, occause they are not exercised on any private subject; one being no more than the general will of the state, and the other the execution of that general will.

But though the tribunals ought not to be fixed, yet the judgments ought, and to fuch a degree as to be always conformable to the exact letter of the law. Were they to be the private opinion of the judge, people would then live in fociety without knowing exactly the obligation it lays them under.

The judges ought likewise to be in the same station as the accused, or in other words, his peers, to the end that he may not imagine he is sallen into the hands of persons inclined to treat him with rigour.

If the legislature leaves the executive power in potterion of a right to imprison those subjects who can give security for their good behaviour, there is an end of liberty; unless they are taken up, in order on answer without delay to a capital crime: in this case they are really free, being subject only to the power of the law.

But should the legislature think itself in danger by some secret conspiracy against the state, or by a correspondence with a foreign enemy, it might authorise the executive power, for a short and limited time, to imprison suspected persons, who in that case would lose their liberty only for a while, to preserve it for ever.

And this is the only reasonable method that can be substituted to the tyrannical magistracy of the Ephori, and to the state inquisitors of Venice, who are also despotical.

As in a free state, every man who is supposed a free agent, ought to be his own governor; to the legislative power should reside in the whole body of the people. But since this is impossible in large states, and in small ones is subject to many inconveniences, it is fit the people should act by their representatives, what they cannot act by themselves.

The inhabitants of a particular town are much better acquainted with its wants and interests, than with those of other places; and are better judges of the capacity of their neighbours, than of that of the rest of their countrymen. The members therefore of the legislature should not be chosen from the general body of the nation; but it is proper, that in every considerable place, a representative should be elected by the inhabitants.

The great advantage of representatives is their being capable of disculing affairs. For this the people collectively are extremely unfit, which is one of the greatest ancouveniences of a democracy,

It is not at all necessary that the reprefentatives, who have received a general instruction from their electors, should wait to be particularly instructed in every affair, us is practised in the diets of Germany. True it is, that by this way of proceeding, the speeches of the deputies might with greater propriety be called the voice of the nation; but, on the other hand, this would throw them into infinite delays, would give each deputy a power of controlling the assembly; and on the most urgent and pressing occasions, the springs of the nation might be stopped by a single caprice.

When the deputies, as Mr. Sidney well observes, represent a body of people, as in Holland, they ought to be accountable to their constituents: but it is a different thing in England, where they are

deputed by boroughs.

All the inhabitants of the feveral diftricks ought to have a right of voting at the election of a representative, exceptuch as are in so mean a fituation, as to be deemed to have no will of their own.

One great fault there was in most of the ancient republics; that the people had a right to active resolutions, such as require some execution; a thing of which they are absolutely incapable. They ought to have no hand in the government, but for the chusing of representatives, which is within their reach. For though sew can tell the exact degree of men's capacities, yetthere are nonebut are capable of knowing, in general, whether the perfounder is better qualified than most of his neighbours.

Neither ought the reprefentative body to be chosen for active resolutions, for which it is not for fit: but for the enacting of laws, or to see whether the laws already enacted he duly executed; a thing they are very capable of, and which none indeed but themselves can properly perform.

In a flute, there are always perfors diftinguithed by their birth, riches, or homours; but were they to be confounded with the common people, and to have only the weight of a fingle vote like the reft, the common liberty would be their fluvery, and they would have no interest in supporting it, as most of the popular resplutions would be against them. The share they have, therefore, in the legislature, ought to be proportioned to the other advantages they have in the state; which happens only when they form a body that has a right to put a stop to the enterprizes of the people, as the people have a right to-put a stop to theirs.

The legislative power is therefore comnitted to the body of the nobles, and to the body chosen to represent the people, which have each their assemblies and deliberations apart, each their separate views

and interests.

Of the three powers above-mentioned, the judiciary is in fome measure next to nothing. There remains therefore only two; and as those have need of a regulating power to temper them, the part of the legislative body, composed of the nobility is extremely proper for this very purpose.

The body of the nobility ought to be hereditary. In the first place it is so in its own nature: and in the next, there must be a considerable interest to preserve its privileges; privileges that in themselves are obnoxious to popular envy, and of course, in a free state, are always in dan-

ger

But as an hereditary power might be tempted to purfue its own particular interests, and forget those of the people; it is proper that, where they may reap a fingular advantage from being corrupted as in the laws relating to the supplies, they should have no other share in the legislation, than the power of rejecting, and not

that of refolving.

By the power of refolving, I mean the right of ordaining by their own authority, or of amending what has been ordained by others. By the power of rejecting, I would be underflood to mean the right of annulling a refolution taken by another, which was the power of the tribunes at Rome. And though the perfon poffelled of the privilege of rejecting may likewife have the right of approving, yet this approbation pattes for no more than a declaration, that he intends to make no use of his privilege of rejecting, and is derived from that very privilege.

The executive power ought to be in the hands of a monarch: breasse this branch of Government, which has always need of expedition, is better administered by one than by many: whereas whatever depends on the legislative power, is oftentimes better regulated by many than by a single

perfor.

But

But if there was no monarch, and the executive power was committed to a certain number of persons selected from the legislative body, there would be an end then of liberty; by reason the two powers would be united, and the same persons would actually sometimes have, and would moreover be always able to have, a share in both.

Were the legislative body to be a confiderable time without meeting, this would likewise put an end to liberty. For one of these two things would naturally follow; either that there would be no longer any legislative resolutions, and then the state would fall into anarchy; or that these resolutions would be taken by the executive power, which would render it absolute.

It would be needless for the legislative body to continue always assembled. This would be troublesome to the representatives, and moreover would cut out too much work for the executive power, so as to take off its attention from executing, and oblige it to think only of desending its own prerogatives, and the right it has to execute.

Again, were the legislative body to be always affembled, it might happen to be kept up only by filling the places of the deceased members with new representatives; and in that case, if the legislative body was once corrupted, the evil would be past all remedy. When different legislative bodies succeed one another, the people, who have a bad opinion of that which is actually fitting, may reasonably entertain fome hopes of the next; but were it to be always of the same body, the people, upon feeing it once corrupted, would no longer expect any good from its laws; and of course they would either become desperate, or full into a state of indolence.

The legislative body should not assemble of itself. For a body is supposed to have no will but when it is affembled: and befides, were it not to affemble unanimously it would be impossible to determine which was really the legislative body, the part affembled or the other. And if it had a right to prorogue itself, it might happen never to be prorogued: which would be extremely dangerous in case it shouldever attempt to encroach on the executive power. Belides, there are feafons, fome of which are more proper than others, for affembling the legislative body: it is fit therefore that the executive power should regulate the time of convening as well as

the duration of those affemblies, according to the circumstances and exigencies of state known to stiels.

Were the executive power not to have a right of putting a flop to the encroachments of the legislative body, the latter would become despotic; for as it might arrogate to itself what authority it pleased, it would soon destroy all the other powers.

But it is not proper, on the other hand, that the legislative power should have a right to stop the executive. For as the executive has its natural limits, it is useless to confine it; besides, the executive power is generally employed in momentary operations. The power, therefore, of the Roman tribunes was faulty, as it put stop not only to the legislation, but likewise to the execution itself; which was attended with infinite mischiefs.

But if the legislative power, in a free government, ought to have no right to top the executive, it has a right, and ought to have the means of examining in what manner its laws have been executed; an advantage which this government has over that of Crete and Sparta, where the Cosmi and the Ephori gave no account of their administration.

But whatever may be the iffue of that examination, the legislative body ought not to have a power of judging the person, nor of course the conduct, of him who is instructed with the executive power. His person should be sacred, because, as it is necessary for the good of the state to prevent the legislative body from rendering themselves arbitrary, the moment he is accused or tried, there is an end of liberty.

In this case the state would be no longer a monarchy, but a kind of republican, though not a free government. But as the person intrusted with the executive power cannot abuse it without bad counfellors, and such as hate the laws as ministers, though the laws favour them as subjects; these men may be examined and punished. An advantage which this government has over that of Gnidus, where the law allowed of no such thing as calling the Amymones to an account, even after their administration; and therefore the people could never obtain any satisfaction for the injuries done them.

[•] These were magistrates chosen annually by the people. See Stephen of Byzantium.

[†] It was lawful to accuse the Ruman magifirates after the expiration of their several offices. See Dionys, Halicarn, 1.9, the affair of Genutius the tribune.

Though, in general, the judiciary power ought not to be united with any part of the legislative, yet this is liable to three exceptions, founded on the particular interest

of the party accused.

The great are always obnoxious to popular envy; and were they to be judged by the people, they might be in danger from their judges, and would moreover be deprived of the privilege which the meanest subject is possessed of, in a free state, of being tried by their peers. The nobility, for this reason, ought not to be cited before the ordinary courts of judicature, but before that part of the legislature which is composed of their own body.

It is possible that the law, which is clearfighted in one fense, and blind in another,
might in some cases be too severe. But us
we have already observed, the national
judges are no more than the mouth that
pronounces the words of the law, mere pasfive beings, incapable of moderating either
its force or rigour. That part, therefore,
of the legislative body, which we have just
now observed to be a necessary tribunal
on another occasion, is also a necessary tribunal in this; it belongs to its supreme authority to moderate the law in savour of

the law itself, by mitigating the fentence. It might also happen, that a subject intrusted with the administration of public affairs might infringe the rights of the people, and be guilty of crimes which the ordinary magistrates either could not, or would not punish. But in general the legiflative power cannot judge; and much lefs can it be a judge in this particular cafe, where it reprefents the party concerned, which is the people. It can only therefore impeach: but before what court shall it bring its impeachment? Must it go and abase itself before the ordinary tribunals, which are its inferiors, and being composed moreover of men who are chosen from the people as well as itfelf, will naturally be fwayed by the authority of fo powerful an accuser? No: in order to preserve the dignity of the people, and the security of the fubject, the legislative part which reprefents the people, must bring in its charge before the legislative part which reprefents the nobility, who have neither the fame interests nor the fame passions.

Here is an advantage which this government has over most of the ancient republics, where there was this abuse, that the people were at the same time both judge and accuser.

The executive power, purfaant to what has been already faid, ought to have a fhare in the legislature by the power of rejecting, otherwise it would soon be fripped of its prerogative. But should the legislative power usurp a share of the executive, the latter would be equally undone.

If the prince were to have a share in the legislature by the power of resolving, liberty would be lost. But as it is necesfary he should have a share in the legislature, for the support of his own prerogative, this share must consist in the power

of rejecting.

The change of government at Rome was owing to this, that neither the senate, who had one part of the executive power, nor the maguitrates, who were intrusted with the other, had the right of rejecting, which was entirely lodged in the peo-

Here then is the fundamental confliction of the government we are treating of. The legislative body being composed of two parts, one checks the other by the mutual privilege of rejecting: they are both checked by the executive power, as the executive is by the legislative.

These three powers should naturally form a state of repose or inaction. But as there is a necessity for movement in the course of human assairs, they are forced to move, but still to move in concert.

As the executive power has no other part in the legislative than the privilege of rejecting, it can have no share in the public debates. It is not even necessary that it should propose, because, as it may always disapprove of the resolutions that shall be taken, it may likewise reject the decisions on those proposals which were made against its will.

In some ancient commonwealths, where public debates were carried on by the people in a body, it was natural for the executive power to propose and debate with the people, otherwise their resolutions must have been attended with a strange consusion.

Were the executive power to ordain the raising of public money, otherwise than by giving its consent, liberty would be at an end; because it would become legislative in the most important point of legisla-

If the legislative power was to fettle the subsidies, not from year to year, but for ever.

ever, it would run the risk of losing its liberty, because the executive power would no longer be dependent; and when once it was possessed of such a perpetual right, it would be a matter of indifference, whether it held it of itself, or of another. The fame may be faid, if it thould fix, not from year to year, but for ever, the fea and fand forces with which it is to intrut the executive power.

To prevent the executive power from being able to opprefs, it is requisite that the armies with which it is entrufted flould confift of the people, and have the fame fpirit as the people; as was the case at Rome till the time of Marius. To obtain this end, there are only two ways; either that the persons employed in the army should have sufficient property to answer for their conduct to their fellow-subjects, and be enlifted only for a year, as was customary at Rome; or if there should be a flanding army, composed chiefly of the most despieable part of the nation, the legiflative power thould have a right to difband them as foon as it pleafed; the foldiers should live in common with the rest of the people; and no feparate camp, barracks, or fortrefs, thould be fuffered.

When once an army is established, it ought not to depend immediately on the legislative, but on the executive power; thing; its bufiness confishing more in acting than in deliberation.

From a manner of thinking that prevails amongst mankind, they set a higher valueupon courage than timoroufnels, on activity than prudence, on thrength than counsel. Hence the army will ever defpile a fenate, and respect their own officers. They will naturally flight the orders fent them by a body of men, whom they look upon as cowards, and therefore unworthy to command them. So that as from as the army depends on the legifla-. tive body, the government becomes a military one; and if the contrary has ever happened, it has been owing to fome extraordinary circumstances. It is because the army has always kept divided; it is because it was composed of several bodies, that depended each on their particular province; it is because the capital towns were strong places defended by their nateral fituation, and not garrifoned with regular troops. Holland, for inflance, is fill fafer than Venice: the might drown

or starve the revolted troops; for as they are not quartered in towns capable of turnithing them with necessary sublistence, this fublifience is of courfe precurious.

Whoever duall read the admirable treatife of Tacitus on the manuers of the Germans, will find that it is from them the Englith have borrowed the idea of their political government. This beautiful fyftem was invented first in the woods.

As all human things have an end, the flate we are fpeaking of will lofe its liberty, it will perish. Have not Rome, Sparta. and Carthage perithed? It will perith when the legislative power shall be more corrupted than the executive,

It is not my bufinefs to examine whether the Englith actually enjoy this liberty, or It is fufficient for my purpole to obferve, that it is established by their laws; and lenguire no further.

Neither do I pretend by this to undervalue other governments, nor to fav that this extreme political liberty ought to give uncafinels to those who have only a moderate share of it. How thould I have any fuch detign, I who think that even the excess of reason is not always defirable, and that mankind generally find their account better in mediums than in extremes

Harrington, in his Oceana, has also inand this, from the very nature of the quired into the highest point of liberty to which the conflitution of a finte may be carried. But indeed of him it may be faid, that for want of knowing the nature of real fiberty, he bufied himfelf in purfult of an imaginary one; and that he built a Chalcedon, though he had a Byzantiun, before his eves. Montefquieu,

§ 249. Of COLUMBUS, and the Differery of AMERICA,

It is to the discoveries of the Portuguese in the old world, that we are indebted for the new: if we may call the conqueft of America an obligation, which proved fo fatal to its inhabitants, and at times to the conquerors themselves.

This was doubtlefs the most important event that ever happened on our globe. one half of which had been hitherto frangers to the other. Whatever had been effeemed most great or poble before, feemed abforbed in this kind of new creation. We fill mention with respectful admiration, the names of the Argonauts, who did not perform the hundredth part application, before Ifabella's court would of what was done by the failors under Gama and Albuquerque. How many altars would have been raifed by the ancients to a Greek, who had discovered America! and yet Bartholomew and Christopher Columbus were not thus rewarded.

Columbus, struck with the wonderful expeditions of the Portuguefe, imagined that fomething greater might be done; and from a bare inspection of the map of three ships, on August 23, in the year our world, concluded that there must be another, which might be found by failing always well. He had courage equal to his genius, or indeed superior, seeing he had to ftruggle with the prejudices of his contemporaries, and the repulserof faveral princes to whom he tendered his fervices. Genoa, which was his native country, treated his schemes as visionary, and by that means loft the only opportunity that could have offered of aggrandizing her power, Henry VII. king of England, who was the greedy of money to hazard any on this noble attempt, would not litten to the propofals made by Columbus's brother; and Columbus himfelf was rejected by John II. of Portugal, whose attention was wholly employed upon the coast of Africa. He had no prospect of success in applying to the French, whose marine lay totally neglected, and their affairs more confused than ever, during the minority of Charles VIII. The emperor Maximilian had neither ports for shipping, money to fit out a fleet, nor fufficient courage to engage in a scheme of this nature. The Venetians, indeed, might have undertaken it; but whether the natural aversion of the Genoese to these people would not suffer Columbus to apply to the rivals of his country, or that the Venetians had no idea of any thing more important than the trade they carried on from Alexandria and in the Levant, Columbus at length fixed all his hopes on the court of Spain.

Ferdinand, king of Arragon, and Ifabella, queen of Cattile, had by their marriage, united all Spain under one dominion, excepting only the kingdom of Grenada, which was ftill in the possession of the Moors; but which Ferdinand foon after took from them. The union of these two princes had prepared the way for the greatness of Spain : which was afterwards begun by Columbus; he was however

confent to accept of the inestimable benefit this great man offered it. The bane of all great projects is the want of money. The Spanish court was poor; and the prior, Perez, and two merchants, named Pinzono, were obliged to advance leventeen thousand ducais towards litting out the armament. Columbus procured a patent from the court, and at length fet fail from the port of Palos in Andaluia, with

It was not above a month after his departure from the Canary iflands, where he had come to an anchor to get refreshment, when Columbus discovered the first island in America; and during this thort run, he fuffered more from the murmurings and discontent of the people of his fleet, than he had done even from the refusals of the princes he had applied to. This island, which he discovered, and named St. Salvador, lies about a thousand leagues from the Canaries; prefently after, he likewife discovered the Lucayen islands, together with those of Cuba and Hispaniola, now called St. Domingo.

Ferdinand and Ifabella were in the utmost surprize, to see him return, at the end of nine months, with some of the American natives of Hispaniola, several rarities from that country, and a quantity of gold. with which he presented their majesties.

The king and queen made him fit down in their presence, covered like a grandee of Spain, and created him high admiral and viceroy of the new world. Columbus was now every where looked upon as an extraordinary person sent from heaven. Every one was vying who should be foremost in affitting him in his undertakings, and embarking under his command. He foon let fail again, with a fleet of feventeen flips. He now made the discovery of several other new islands, particular the Caribbees and Jamaica. Doubt had been changed into admiration on his first voyage; in this, admiration was turned into envy.

He was admiral and viceroy, and to thefe titles might have been added that of the benefactor of Ferdinand and Ifabella. Nevertheless, he was brought home prifoner to Spain, by judges who had been purposely fent out on board to observe his conduct. As foon as it was known that Columbus was arrived, the people ran in obliged to undergo eight years of inceffant. Shouls to meet him, as the guardian genius of Spain. Columbus was brought from the thip, and appeared on those chained hands and feet.

He had been thus treated by the orders of Fonfeca, bithop of Burgos, the intendant of the expedition, whose ingratitude was as great as the other's iervices. Habella was athamed of what the faw, and did all in her power to make Columbus amends for the injuries done to him: however, he was not fuffered to depart for four years, either because they seared that he would seize upon what he had discovered for hunfelf, or that they were willing to have time to observe his behaviour. At length he was fent on another voyage to the new world; and now it was, that he discovered the continent, at fix degrees diffance from the equator, and faw that part of the coast on which Carthagena has been fince built.

At the time that Columbus first promised a new hemisphere, it was insided upon that no such hemisphere could exist: and after he had made the actual discovery of it, it was pretended that it had been known long before. I thall not mention one Martin Behem, of Nuremberg, who, it is faid, went from that city to the firaits of Mugellan in 1460, with a patent from the Duchels of Burgundy, who, as the was not alive at that time, could not iffue patents. Nor shall I take notice of the pretended charts of this Martin Behem, which are fill flewn: nor of the evident contradictions which diferedit this flory; but, in fort, it was not pretended that Martin Behem had peopled America; the honour wasgiven to the Carthaginians, and a book of Arithotle was quoted on the occasion, which he never wrote. Some found out a conformity between fome words in the Caribbee and Hebrew languages, and did not fail to follow fo fine an opening. Others were positive that the children of Noah, after fettling in Siberia, paffed from thence over to Cunada on the ice; and that their descendants, afterwards born in Canada, had gone and peopled Peru. According to others again, the Chinese and Japanese fent colonies into America, and carried over lions with them for their divertion, though there are no lions either in China or Japan. In this manner have many learned men argued upon the discoveries made by men of genius. If it should be aked, how men first came upon the continent of America? is it not eafily answered, that they were placed there by the fame Power who causes trees and grafs to grow?

The reply which Columbus made to fome of those who envied him in the high reputation he had gained, is ftill famous. I hele people pretended that nothing could be more easy than the discoveries he had made; upon which he proposed to them to fet an egg upright on one of its ends : but when they had tried in vain to do it, he broke one end of the egg, and fet it upright with eafe. They told him any one could do that: How comes it then, replied Columbus, that not one among you thought of it?-This flory is related of Brunellefchi, who improved architecture at Florence many years before Columbus was born. Most bon mots are only the repetition of things that have been faid before.

The athes of Columbus cannot be affeeted by the reputation he gained while living, in having doubled for us the works of the creation. But mankind delight to do justice to the illustrious dead, either from a vain hope that they enhance thereby the merit of the living, or that they are naturally fond of truth. Americo Vefpucci, whom we call Americus V espusius, a merchant of Florence, had the konour of giving his name to this new half of the globe, in which he did not policis one acre of land, and pretended to be the first who difcovered the continent. But supposing it true, that he was the first discoverer, the glory was certainly due to him, who had the penetration and courage to undertake and perform the first voyage. Honour, as Newton fays in his dispute with Leibnitz. is due only to the first inventor; those that follow after are only his scholars. Columbus had made three voyages, as admiral and viceroy, five years before Americus Vefpulius had made one as a geographer. under the command of admiral Ojeda; but this latter writing to his friends at Florence, that he had discovered a new world, they believed him on his word; and the citizens of Florence decreed, that a grand illumination thould be made before the door of his house every three years, on the feast of All Saints. And yet could this man be faid to deferve any honours, for happening to be on board a fleet that, in 1489, failed along the coaft of Brazil, when Columbus had, five years before, pointed out the way to the rest of the world?

There has lately appeared at Florence' a life of this Americas Vespusius, which seems to be written with very little regard to truth, and without any conclusive reasoning. Several French authors are there

Qq3

complained

complained of, who have done justice to Columbus's merit; but the writer thould not have fallen upon the French authors, but on the Spanith, who were the first that This writer favs, that did this juttice. " he will confound the vanity of the French " nation, who have always attacked with " impunity the honour and fucceis of the " Italian nation." What vanity can there be in faying, that it was a Genoefe who first discovered America? or how is the honour of the Italian nation injured in owning, that it was to an Italian, born in Genos, that we are indebted for the new world? I purposely remark this want of equity, good-breeding, and good-fenfe, as we have too many examples of it; and I must fay, that the good French writers have ingeneral been the leaft guilty of this infufferable fault; and one great reason of their being fo univerfally read throughout Europe, is their doing jutice to all na-

The inhabitants of these islands, and of the continent, were a new race of men. They were all without beards, and were as much attend the faces of the Spaniards, as they were at their thips and artillery: they at first looked upon these new vilitors as montters or gods, who hadcome out of the fky, or the fea. These voyages, and those of the Portuguese, had now taught us how inconfiderable a fpot of the globe our Europe was, and what an attenithing variety reigns in the world. Indoftan was known to be inhabited by a race of men whose complexions were yellow. In Africa and Afia, at fome diffance from the equator, there had been found feveral kinds of black men: and after travellers had penetrated into America as far as the line, they met with a race of people who were tolerably white. The natives of Brazil are of the colour of bronze. The Chinese still appear to differ entirely from the reft of mankind, in the make of their eves and notes. But what is till to be remarked is, that into whatfoever regions thefe various races are transplanted, their complexions never change, unless they mingle with the natives of the country. The mucous membrane of the negroes, which is known to be of a black colour, is a manifest proof that there is a differential principle in each species of men, as well as plants.

Dependant upon this principle, nature has formed the different degrees of genius, and the characters of nations, which are feldom known to change. Hence the negroes are flaves to other men, and are purchased on the coast of Africa, like beats, for a sum of money; and the vast multitudes of negroes transplanted into our American colonics, serve as slaves under a very inconsiderable number of Europeans. Experience has likewise taught us how great a superiority the Europeans have over the Americans, who are every where easily overcome, and have not dared to attempt a revolution, though a thousand to one superior in numbers.

This part of America was also remarkable on account of its unimals and plants, which are not to be found in the other three parts of the world, and which are of so great use to us. Horses, corn of all kinds, and iron, were not wanting in Mexico and Peru; and among the many valuable commodities unknown to the old world, cochineal was the principal, and was brought us from this country. Itsufe in dying has now made us forget the fearlet, which for time immemorial had been the only thing known for giving a fine red colour.

The importation of cochineal was foon forceeded by that of indigo, cacao, vahille, and those woods which serve for ornament and medicinal purposes, particularly the quinquina, or jesuits bark, which is the only specific against intermitting fevers. Nature has placed this remedy in the mountains of Peru, whilst she had disperied the disease it cured through all the rett of the world. This new continent likewise furnished pearls, coloured stones, and diamonds.

It is certain, that America at prefent furnishes the meanest citizen of Europe with his conveniencies and pleafures. The gold and filver mines, at their first difcovery, were of fervice only to the kings of Spain and the merchants : the reft of the world was impoverished by them, for the great multitudes who did not follow bufnels, found themselves possessed of a very finall quantity of fpecie, in comparison with the immense sums accumulated by those, who had the advantage of the first discoveries. But, by degrees, the great quantity of gold and filver which was fent from America, was difperfed throughout all Europe, and by passing into a number of hands, the diffribution is become more equal. The price of commodities is likewife increased in Europe, in proportion to the incroase of specie.

To comprehend how the treasures of America pulled from the possession of the Spaniards Spaniards into that of other nations, it will be fufficient to confider these two things: the use which Charles V. and Philip II. made of their money: and the manner in which other nations acquired a share in the wealth of Peru.

The emperor Charles V, who was always travelling, and always at war, necessiarly dispersed a great quantity of that specie which hereceived stom Mexico and Peru, through Germany and Italy. When he sent his son Philip over to England, to marry queen Mary, and take upon him the title of King of England, that prince deposited in the tower of London twenty-feven large cheets of silver in burs, and an hundred horse-loads of gold and silver coin. The troubles in Flanders, and the intrigues of the league in France, cost this Philip, according to his own consellion, above three thousand millions of livres of our money.

The manner in which the gold and filver of Peru is diffributed amongst all the people of Europe, and from thence is fent to the East-Indies, is a surpriting, though well known circumstance. By a strict law enacted by Fordinand and Ifabella, and afterwards contirmed by Charles V. and all the kings of Spain, all other nations were not only excluded the entrance into any of the ports in Spanith America, but likewife from having the leaft there, directly or indirectly, in the trade of that part of the world. One would have imagined, that this law would have enabled the Spaniards to fubdue all Farope; and yet. Spain fubfits only by the continual violation of this very law. It can hardly furnish exports for America to the value of four millions; whereas the reft of Europe fometimes fend over merchandize to the amount of near fifty millions. This prodigious trade of the nations at enmity or in alliance with Spain, is carried on by the Spaniards themfelves, who are always fathful in their dealings with individuals, and always cheating their king. The Spaniards gave no fecurity to foreign merchants for the performance of their contracts; a mutual credit, without which there never could have been any commerce, supplies the place of other obligations.

The manner in which the Spaniards for a long time configned the gold and filver to foreigners, which was brought home by their galleons, was fill more furprifing. The Spaniard, who at Cadiz is properly factor for the foreigner, delivered the bul-

lion he received to the care of certain bravoes, called Meteors: thefe, armed with pittols at their belt, and a long fword, carried the bullion in parcels properly marked, to the ramparts, and flung them over to other meteors, who waited below, and carried them to the boats which were to receive them, and these bouts carried them on board the thips in the road. Thefe meteors and the factors, together with the commissaries and the guards, who never diffurbed them, had each a fiated fee, and the foreign merchant was never cheated. The king, who received a daty upon this money at the arrival of the galleons, was likewife a gamer : fo that preperly theaking, the law only was cheated; a law which would be absolutely useless if not cluded, and which, nevertheless, cannot yet be abrogated, because old prejudices are always the most disticult to be overcome amongit men.

The greatest instance of the violation of this law, and of the fidelity of the Spuniards, was in the year 1684, when war was declared between France and Spain. His catholic majetty endeavoured to feize upon the effects of all the French in his kingdom; but he in vain iffued edicts and admonitions, inquiries and excommunications; not a fingle Spanish factor would betray his French correspondent. This fidelity, which does fo much honour to the Spanish nation, plainly shews, that men only willingly obey those laws, which they themselves have made for the good of society, and that those which are the mere effects of a fovereign's will, always meet

with opposition.

As the difcovery of America was at first the fource of much good to the Spaniards, it afterwards occasioned them many and confiderable evils. One has been, the depriving that kingdom of its subjects, by the great numbers necellarily required to people the colonies: another was, the infeeting the world with a difeafe, which was before known only in the new world, and particularly in the illand of Hispaniola. Several of the companions of Christopher Columbus returned home intected with this contagion, which afterwards fpread over Europe. It is certain, that this poifon, which taints the fprings of life, was peculiar to America, as the plague and the fmall pox were difeates originally endemial to the fouthern parts of Numidia. We are not to believe, that the eating of human fleth, practifed by fome of the American Qq3

American favages, occasioned this diforder. There were no cannibals on the itland of Hispaniola, where it was most frequent and inveterate; neither are we to uppose, with some, that it proceeded from too great an excets of fensual pleasures. Nature had never punished excetes of this kind with such disorders in the world; and even to this day, we find that a momentary indulgence, which has been passed for eight or ten years, a my bring this cruel, and thameful feourge upon the chatteit union.

The great Columbus, after having built feveral houses on these islands, and discovered the continent, returned to Spain, where he enjoyed a reputation unfullied by rapine or crucity, and died at Valladolid in 1506. But the governors of Cuba and Hifpaniola, who fucceeded him, being perfunded that these provinces furnished gold, refolved to make the discovery at the price of the lives of the inhabitants. In thort, whether they thought the natives had conceived an implacable hatred to them; or that they were apprehentive of their fuperior numbers; or that the rage of flaughter, when once begun, knows no bounds, they, in the space of a few years, entirely depopulated Hupaniola and Cuba, the former of which contained three millions of inhabitants, and the latter above fix hundred thouland.

Bartholomew de la Cafas, bishop of Chiapa, who was an eye-witness to these desolations, relates, that they hunted down the natives with dogs. These wretched favages, almost naked and without arms, were pursued like wild beasts in the foretis, devoured alive by dogs, that to death, or surprised and burnt in their habitations.

He farther declares, from ocular testimony, that they frequently caused a number of these miserable wretches to be summoned by a priest to come in, and submit to the Christian religion, and to the king of Spain; and that after this ceremony, which was only an additional act of injustice, they put them to death without the least remorie.—I believe that de la Casus has exaggerated in many parts of his relation; but, allowing him to have faid tentines more than is truth, there remains enough to make us shudder with horror.

It may feem furprising, that this maffacre of a whole race of men could have been carried on in the fight, and under the administration of feveral religious of the order of St. Jerome; for we know that Cardinal Ximenes, who was prime miniter of Catile before the time of Charles V. fent over four monks of this order, in quality of prelidents of the royal council of the ifland. Doubtlefs they were not able to retilt the torrent; and the hatred of the natives to their new matters, being with juit reason become implacable, rendered their defluction unhappily necessary.

Voltaire.

§ 250. The Influence of the Progress of Science on the Manners and Characters of Men.

The progress of science, and the cultivation of literature, had confiderable effect in changing the manners of the European nations, and introducing that civility and refinement by which they are now ditinguithed. At the time when their empire was overturned, the Romans, though they had loft that correct taile which has rendered the productions of their ancestors the frandards of excellence, and models for imitation to incceeding ages, ftill preferved their love of letters, and cultivated the arts with great ardour. But rude barbarians were to far from being firnck with any adrairation of these unknown accomplishments, that they despited them. were not arrived at that frate of fociety, in which those faculties of the human mind, that have beauty and elegance for their objects, begin to unfold themselves. They were firangers to all those wants and defires which are the parents of ingenious invention; and as they did not comprehend either the merit or utility of the Roman arts, they deflroyed the monuments of them, with industry not inferior to that with which their potterity have fince fludied to preferve, or to recover them. The convultions occasioned by their fettlement in the empire: the frequent as well as violent revolutions in every kingdom which they effablished; together with the interior defeels in the form of government which they introduced, banished security and leifure; prevented the growth of taile or the culture of science; and kept Europe, during several centuries, in a flate of ignorance. But as foon as liberty and independence began to be felt by every part of the community, and communicated fome tafte of the advantages arising from commerce, from public order, and from personal security, the human mind became confcious of powers which it did not formerly perceive, and fond of occupations or purfaits of which it was formerly incapable. Towards the beginning of the twelfth century, we differ the first symptoms of its awakening from that lethargy in which it had long been funk, and observe it turning with currolity and attention towards new

objects. The first literary efforts, however, of the European nations, in the middle ages, were extremely ill-directed. Among nations, as well as individuals, the powers ofimagination attain formedegree of vigour before the intellectual faculties are much exercifed in speculative or abstract disquifition. Men are poets before they are philosophers. They feel with fentibility, and deferibe with force, when they have made but little progrefs in invettigation or reaforing. The age of Homer and of Hefiod long preceded that of Thales, or of Socrates. But unhappily for literature, our ancestors, deviating from this course which nature points out, plunged at once into the depths of abitrufe and metaphyfical inquiry. They had been converted to the Christian faith foon after they fettled in their new conquests: but they did not receive it pure. The prefumption of men had added to the simple and instructive doctrines of Christianity, the theories of a vain philosophy, that attempted to penetrateinto mytteries, and to decide quettions which the limited faculties of the human mind are unable to comprehend, or to retolve. These over curious speculations were incorporated with the fystem of religion, and came to be confidered as the moth effential part of it. As foon then, as curiofity prompted men to inquire and to reason, these were the subjects which first presented themselves, and engaged their attention. The scholastic theology, with its infinite train of bold disquisitions, and fubtile diftinctions concerning points which are not the object of human reason, was the first production of the spirit of enquiry after it began to refume some degree of

activity and vigour in Europe.

It was not this circumflance alone that gave fuch a wrong turn to the minds of men, when they began again to exercife talents which they had fo long neglected. Most of the perfons who attempted to reviveliterature in the twelfth and thriteenth centuries, had received instruction, or derived their principles of science from the Greeks in the eastern empire, or from the Arabians in Spain and Africa. Both these people, acute and inquisitive to excess, cor-

rupted those sciences which they cultivated. The former rendered theology a fystem of speculative refinement, or of endless controverly. The latter communicated to philolophy a spirit of metaphytical and frivolous fubtlety. Mifled by thefe guides, the persons who first applied to science were involved in a maze of intricate inquiries. Intlead of allowing their fancy to take its natural range, and to produce fuch works of invention as might have improved their tatte, and refined their fentiments; inflead of cultivating those arts which embellish human life, and render it comfortable; they were fettered by authority; they were led aftray by example, and waited the whole force of their genius in speculations as unavailing as they were difficult.

But fruitless and ill-directed as these speculations were, their novelty rouled, and their boldness interested, the human The ardour with which men purfued these uninviting studies was astonishing. Genuine philotophy was never cultivated, in any enlightened age, with greater zeal. Schools, upon the model of those inflituted by Charlemagne, were opened in every cathedral, and almost in every monattery of note. Colleges and univertities were erected, and formed into communities, or corporations, governed by their own laws, and invefted with feparate and extensive jurisdiction over their own mem-A regular courfe of studies was planned. Privileges of great value were conterred on masters and icholars. Academical titles and honours of various kinds were invented, as a recompence for both. Nor was it in the schools alone that superiority in science led to reputation and authority; it became the object of respect in life, and advanced fuch as acquired it to a rank of no inconsiderable enumence. Allured by all these advantages, an incredible number of fludents reforted to these new feats of learning, and crowded with eagerness into that new path which was open to fame and distinction.

But how confiderable foever these first efforts may appear, there was one circumstance which prevented the effects of them from being as extensive as they ought to have been. All the languages in Europe, during the period under review, were barbarous. They were destitute of elegance, of force, and even of perspicuity. No attempt

[•] From the subversion of the Roman empire to the beginning of the sixteenth century.

had been hitherto made to improve or to polish them. The Latin tongue was confecrated by the church to religion. Cuftom, with authority fearce lefs facred, had appropriated it to literature. All the fciences caltivated in the twelfth and thirteenth centuries were taught in Latin. All the books with respect to them, were written in that language. To have treated of any important fulgect in a modern language, would have been deemed a degradation of it. This confined science within a very narrow circle. The learned alone were admitted into the temple of knowledge; the gate was thut against all others, who were allowed to remain involved in their former darkness and ignorance.

But though science was thus prevented, during feveral ages, from dutinfing itself through fociety, and its influence was circonsideribed, the progress of it may be mentioned, nevertheless, among the great causes which contributed to introduce a change of manners into Europe. That ardent, though ill-judged, spirit of inquiry, which I have deferibed, occasione la fermentation of mind, which put ingenuity and invention in metion, and gave them vigour. It led men to a new employment of their faculties, . hich they found to be agreeable, as well as interefting. It accustomed them to exercises and occupations which tended to foften their manners, and to give them tome relith for those gentle virtues which are peculiar to nations among whom feience had been cultivated with fuccess,

Robertion.

§ 251. On the respect paid by the LACE-DEMONIANS and ATHENIANS to old Age:

It happened at Athens, during a public reprefentation of fome play exhibited in honour of the commonwealth, that an old gentleman came too late for a place fuitable to his age and quality. Many of the young gentlemen, who observed the difficulty and confution he was in, made figns to him that they would accommodate him if he came where they fat; the good man bittiled through the crowd accordingly; but when he came to the feats to which he was invited, the jeft was, to fit close and expole him as he flood, out of countenance, to the whole audience. The frolic went round all the Athenian benches. But on thole occations, there were also particular places affigued for foreigners: when the good man fkulked towards the boxes ap-

pointed for the Lacedæmonians, that honeft people, more virtuous than polite, role up all to a man, and, with the greatest respect, received him among them. The Athenians, being studenly touched with a fense of the Spartan virtue, and their own degeneracy, gave a thunder of applause; and the old man oried out, "The Athe-" nians understand what is good, but the " Lacedæmonians practise it."

Spectator.

§ 252. On PETUS and ARRIA.

In the reign of Claudius, the Roman emperor, Arria, the wife of Cæcinna Pætus, was an illustrious pattern of magna-

nimity and conjugal affection.

It happened that her hutband and her fon were both, at the same time, attacked with a dangerous illness. The fon died. He was a youth endowed with every quality of mind and person which could endear him to his parents. His mother's heart was torn with all the anguish of grief; yet the refolved to conceal the dittreffing event from her hutband. She prepared and conducted his funeral fo privately, that Pætus did not know of his death. Whenever the came into her hufband's bed-chamber, the pretended her fon was better; and, as often as he inquired after his health, would answer, that he had rested well, or had eaten with an appetite. When the found that the could no longer reftrain her grief. but her tears were guthing out, the would leave the room, and, having given vent to her pallion, return again with dry eyes and a ferene countenance, as if the had left her forrow behind her at the door of the chamber.

Camillus Scribonianus, the governor of Dalmatia, having taken up arms against Claudius, Pætus joined himself to his party, and was foon after taken prisoner, and brought to Rome. When the guards were going to put him on board the ship, Arria befought them that she might be permitted to go with him. "Certainly," faid she, "you cannot resuse a man of consular dig-"nity, as he is, a few attendants to wait "upon him; but, if you will take me, I "alone will perform that office." This savour, however, was refused; upon which she hired a small sithing veilel, and boldly ventured to follow the ship.

Returning to Rome, Arria met the wife of Scriboniums in the emperor's palace, who prefling her to differer all that the knew of the infurrection,—" What!" faid he, "the hall I regard thy advice, who faw "the hufband murdered in the very arms, "and yet furviveft him?"

Pætus being condemned to die, Arria formed a deliberate refolution to thure his fate, and made no fecret of her intention. Thrafea, who married her daughter, attempting to diffuade her from her purpole, among other arguments which he ufed, faid to her, "Would you then, if my life "were to be taken from me, advite your "daughter to die with me?" "Moft certainly I would?" the replied, "if the "had lived as long, and in as much "harmony with you, as I have lived with "Pætus."

Pertifting in her determination, the found means to provide herfelf with a dagger: and one day, when the observed a more than usual gloom on the countenance of Petus, and perceived that death by the hand of the executioner appeared to hum more terrible than in the field of glory—perhaps, too, sensible that it was chiefly for her sake that he withed to live—the drew the dagger from her fide, and stabled herfelf before his eyes. Then instantly plucking the weapon from her breast, the presented it to her hashand, saying, "My "Petus, it is not painful." Pling.

§ 253. ABDOLONYMUS raifed to the Government of Sidon.

The city of Sidon having furrendered to Alexander, he ordered Hephasium to beliew the crown on him whom the Sidomans thould think most worthy of that honour. Hephaeltion being at that time refident with two young men of diffinction, offered them the kingdom; but they refuled it, telling him that it was contrary to the laws of their country, to admit any one to that honour, who was not of the royal family. He then, having expressed his admiration of their difinterefied fpirit, defired them to name one of the royal race, who might remember that he received the crown through their hands. Overlooking many who would have been ambitious of this high honour, they made choice of Abdolonymus, whose fingular merit had ren-

In the Tatler, No. 72, a fancy piece is drawn founded on the principal fact in this flory, but wholly fictitious in the circumfunces of the tale. The author, millaking Cacinna Partus for Thrafas Patus, has accufed even Nero unjuitly; charging him with an action which certainly belonged to Claudius. See Pliny's Epifiles, Book iii. Ep. 26, Dion. Caffina, Lib. Ix. and Tacitus, Lib. xvi. 43.

dered him conspicuous even in the vale of obfcurity. Though remotely related to the royal family, a feries of misfortunes had reduced him to the necessity of cultivating a garden, for a finall flipend, in the suburbs of the city.

While Abdolonymus was bufily employed in weeding his garden, the two friends of Hepharitim, bearing in their hands the entigns of royalty, approached him, and faluted him king, informing him that Alexander had appointed him to that office; and requiring him immediately to exchange his ruttie garb, and utentils of hulbandry, for the regal robe and feeptre. At the fame time, they urged him, when he thould be feated on the throne, and have a nation in his power, not to forget the humble condition from which he had been raifed.

All this, at the first, appeared to Abdolonymus as an illusion of the fancy, or an insult offered to his poverty. He requested them not to trouble him farther with their impertinent jets, and to find some other way of amusing themselves, which might leave him in the peaceable enjoyment of his obscure habitation.—At length, however, they convinced him that they were serious in their proposal, and prevailed upon him to accept the regal office, and accompany them to the palace.

No fooner was he in polletion of the government, than pride and envy created him enemies, who whifpered their murmurs in every place, till at laft they reached the ear of Alexander; who, commanding the new-elected prince to be fent for, required of him with what temper of mind he had borne his poverty. " Would to Heaven," replied Abdolonymus, "that I may beable " to bear my crown with equal moderation: " for when I possessed little, I wanted no-" thing: thefo hands tupplied me with what-"ever I defired." From this answer, Alexander formed to high an idea of his wifdom, that he confirmed the choice which had been made, and annexed a neighbouring province to the government of Sidon. Quintus Curtius.

§ 254. The Resignation of the Emperor Charles V.

Charles refolved to refign his kingdoms to his ion, with a foleranity fuitable to the importance of the transaction; and to perform this last act of fovereignty with such formal pomp, as might leave an indelible impression on the minds, not only of his

fubjects,

subjects, but of his successor. With this view, he called Philip out of England, where the previft temper of his queen, which increased with her despair of having iffue, rendered him extremely unhappy; and the jealoufy of the English left him no hopes of obtaining the direction of their affairs. Having affembled the frates of the Low Countries, at Bruffels, on the twentyfifth of October, one thousand five hundred and fifty-five, Charles feated himfelf, for the last time, in the chair of state; on one tide of which was placed his fon, and on the other his fifter, the queen of Hungary, regent of the Setherlands; with a fplendid retinue of the grandees of Spain, and princes of the empire flanding behind him. The prefident of the council of Flanders, by his command, explained in a few words, his intention in calling this extraordinary meeting of the flates. He then read the instrument of relignation, by which Charles furrendered to his fon Philip all his territories, jurifdiction, and authority in the Low Countries; absolving his subjects there from their oathof allegiance to him, which he required them to transfer to Philip, his lawful heir, and to ferve him with the fame lovalty and real which they had manifelted during to long a course of years, in support of his government.

Charles then role from his feat, and leaning on the shoulder of the prince of Orange, because he was unable to stand without support, headdressed himself to the audience, and, from a paper which he held in his hand, in order to affift his memory, he recounted with dignity, but without oftentation, all the great things which he had undertaken and performed fince the commencement of his administration. He observed, that, from the seventeeth year of his age, he had dedicated all his thoughts and attention to public objects: referving no portion of his time for the indulgence of his eafe, and very little for the enjoyment of private pleafure; that, either in a pacific or hostile manner, he had vitited Germany nine times, Spain fix times, France four times, Italy feven times, the Low Countries ten times, England twice, Africa as often, and had made eleven voyages by fea: that while his health permitted him to discharge his duty, and the vigour of his conflitution was equal, in any degree, to the arduous office of governing fuch extensive dominions, he had never thunned labour, nor repined under fatigue :

that now, when his health was broken, and his vigour exhaulted by the rage of an incurable diffemper, his growing infirmities admonished him to retire: nor was he so fond of reigning, as to retain the fceptre in an impotent hand, which was no longer able to protect his subjects, or to render them happy: that, initead of a fovereign worn out with difeates, and fcarcely half alive, he gave them one in the prime of life, accultomed already to govern, and who added to the vigour of youth, all the attention and fagacity of maturer years: that if, during the courfe of a long adminifiration, he had committed any material error in government; or if, under the preffure of to many and great affairs, and amidit the attention which he had been obliged to give to them, he had either neglected, or injured any of his fubjects, he now implored their forgivenels: that, for his part, he thould ever retain a grateful fente of their fidelity and attachment, and would carry the remembrance of it along with him to the place of his retreat, as his iweetest confolation, as well as the best reward for all his fervices; and, in his lait prayers to Almighty God, would pour forth his ardent withes for their welfare,

Then, turning towards Philip, who fell on his knees, and kiffed his father's hand, " If," fays he, " I had left you by my " death, this rich inheritance, to which I " have made such large additions, some " regard would have been justly due to my " memory on that account : but now, when " I voluntarily relign to you what I might " ftill have retained, I may well expect " the warmest expressions of thanks on " your part. With thefe, however, I dif-" penfe: and thall confider your concern " for the welfare of your fubjects, and your " love of them, as the best and most ac-" ceptable testimony of your gratitude to " me. It is in your power, by a wife and " virtuous administration, to justify the " extraordinary proof which I this day give of my paternal affection; and to " demonstrate, that you are worthy of the confidence which I repose in you. Pre-" ferve an inviolable regard for religion; " maintain the Catholic faith in its purity; " let the laws of your country be facred in " your eyes: encroach not on the rights " and privileges of your people: and, if " the time shall ever come, when you shall " wish to enjoy the tranquillity of private " life, may you have a fon endowed with "fuch qualities, that you can refign your "teeptre to him with as much tatisfaction "as I give up mine to you."

As foon as Charles had inified this long addiefs to his fubjects, and to their new fovereign, he funk into the chair, exhaufted, and ready to faint with the fatigue of fuch an extraordinary effort. During his diffeourfe, the whole audience melted into tears; fome, from admiration of his magnanimity; others, foftened by the experisons of tenderness towards his son, and of love to his people; and all were affected with the deepest forrow, at losing a sovereign, who had diffinguished the Netherlands, his native country, with particular marks of his regard and attachment.

A few weeks afterwards, Charles, in an aftembly no lefs fplendid, and with a ceremonal equally pompous, refigned to his fon the crowns of Spain, with all the territories depending on them, both in the Old and in the New World. Of all thefe vaft poffessions he referved nothing to hunfelf but an annual pension of an hundred thousand crowns, to destray the charges of his family, and to afford him a thaill turn for acts of beneficence and charter.

The place he had chosen for his retreat, was the monastery of St. Julius, in the province of Efframadura. It was feated in a vale of no great extent, watered by a fmall brook, and furrounded by riting grounds, covered with lofty trees. From the nature of the foil, as well as the temperature of the climate, it was effected the most healthful and delicious situation in Spain. Some months before his relig-Bation, he had fent an architect thither, to add a new apartment to the monaftery, for his accommodation; but he gave firich orders, that the fivle of the building should be such as suited his present situation rather than his former dignity. It confified, only of fix rooms; four of them in the form of fryars' cells, with naked walls; the other two, each twenty feet fquare, were hung with brown cloth, and furnished in the most simple manner. They were all on a level with the ground; with a door on one fide, into a garden, of which Churles himself had given the plan, and which he had filled with various plants, intending to cultivate them with his own hands. On the other fide, they communicated with the chapel of the monastery, in which he was to perform his devotions. In this hamble retreat, hardly fufficient for the

comfortable accommodation of a private gentleman, did Charles enter, with twelve domestics only. He buried there, in foltude and sileuce, his grandeur, his ambition, together with all those vast projects which, during halfa century, had alarmed and agitated Europe, filling every kingdom in it, by turns, with the terror of his arms, and the dread of being subjected to his power.

Robertson.

§ 255. An Account of MULY MOLUC.

When Don Sebastian, king of Portugal, had invaded the territories of Muly Moluc, emperor of Morocco, in order to dethrone him, and fet his crown upon the head of his nephew, Moluc was wearing away with a diffemper which he himfelf knew was incurable. However, he prepared for the reception of fo formidable an enemy, He was indeed to far fpent with his tickness, that he did not expect to live out the whole day, when the last decisive battle was given; but knowing the fatal confequences that would happen to his children and people, in cafe he thould die before he put an end to that war, he commanded his principal officers, that if he died during the engagement, they should conceal his death from the army, and that they thould ride up to the litter in which his corpfe was carried, under pretence of receiving orders from him as ufual. Before the battle begun, he was carried through all the ranks of his army in an open latter, as they flood drawn up in array, encouraging them to fight valiantly in defence of their religion and country. Finding afterwards the battle to go against bins, though he was very near his laft agonies, he threw himfelf out of his litter, rallied his army, and led them on to the charge; which afterwards ended in a complete victory on the fide of the Moors. He had no fooner brought his men to the engagement, but finding himfelf utterly fpent, he was again replaced in his litter, where laying his finger on his mouth, to enjoin fecreev to his officers, who food about him, he died a few moments after in that posture,

Spectator.

§ 256. An Account of VALENTINE and UNKION.

At the fiege of Namur by the allies, there were in the ranks of the company commanded by captain Pincent, in colonel Frederic Hamilton's regiment, one Unnion, a corporal, and one Valentine, a private centinel; there happened between thefe two men a dispute about an affair of love, which, upon fome aggravations, grew to an irreconcileable hatred. Unnion being the officer of Valentine, took all opportunities even to firike his rival, and profess the spite and revenge which moved him to it. The centinel bore it without refillance; but frequently faid, he would die to be revenged of that tyrant. They had fpent whole months in this manner, the one injuring, the other complaining; when, in the midft of this rage towards each other, they were commanded upon the attack of the cafile, where the corporal received a thot in the thigh, and fell; the French prelling on, and he expecting to be trampled to death, called out to his enemy, " Ah, Valentine ! can you leave me here?" Valentine immediately ran back, and in the midft of a thick fire of the French, took the corporal upon his back, and brought him through all that danger as far as the abbey of Salfine, where a cannon ball took off his head; his body fell under his enemy whom he was carrying off. Unnion immediately forgot his wound, rofe up, tearing his bair, and then threw himfelf upon the bleeding carcafe, crying, " Ah Valentine! was it for me, who have fo barbaroutly used thee, that thou haft died? I will not live after thee." He was not by any means to be forced from the body, but was removed with it bleeding in his arms, and attended with tears by all their comrades who knew their enmity. When he was brought to a tent, his wounds were drelled by force; but the next day, ftill calling upon Valentine, and lumenting his cruelties to him, he died in the pangs of remorfe.

§ 257. An Example of Historical Narration from Salatust.

The Trojans (if we may believe tradition) were the first founders of the Roman commonwealth; who, under the conduct of Æmas, having made their cleape from their own ruined country, gotto Italy, and there for fome time lived a rambling and unfettled life, without any fixed place of abode, among the natives, an uncultivated people, who had neither law nor regular government, but were wholly free from all ruleorreitraint. This mixed multitude, however, crowding together into one city, though originally different in extraction, language, and customs, united into one body, in a furprifingly short space of time.

And as their little state came to be improved by additional numbers, by policy, and by extent of territory, and feemed likely to make a figureamong the nations, according to the common course of things, the appearance of prosperity drew upon them the envy of theneighbouring frates; fo that the princes and people who bordered upon them, begun to feek occasions of quarrelling with them. The alliances they could form were but few; for molt of the neighbouring states avoided embroiling themselves on their account. The Romans, feeing that they had nothing to truft to but their own conduct, found it necessary to bestir themselves with great diligence, to make vigorous preparations, to excite one another to face their enemies in the field, to hazard their lives in defence of their liberty, their country, and their families. And when, by their valour, they repulfed the enemy, they gave affifiance to their allies, and gained friendships by otten giving, and feldom demanding, favours of that fort. They had, by this time, established a regular form of government, to wit, the monarchical. And a fenate, confifting of men advanced in years, and grown wife by experience, though infirm of body, confulted with their Lings upon all important matters, and, on account of their age, and care of their country, were called fathers. Afterwards, whea kingly power, which was originally ellablithed for the prefervation of liberty, and the udvantage of the flate, came to degenerate into lawlefs tyranny, they found it necessary to alter the form of government, and to put the supreme power into the hands of two chief magistrates, to be held for one year only: hoping, by this contrivance, to prevent the bad effects naturally arifing from the exorbitant licentioufness of princes, and the indefeasible tenure by which they generally imagine they hold their fovereignty, &cc.

Sall, Bell. Catilinar.

§ 258. The Story of DAMON and PYTHIAS.

Damon and Pythias, of the Pythagorean fect in philosophy, lived in the time of Dionysius, the tyrant of Sicily. Their mutual friendship was so strong, that they were ready to die for one another. One of the two (for it is not known which) being condemned to death by the tyrant, obtained leave to go into his own country, to settle his affairs, on condition that the other

other should consent to be imprisoned in his flead, and put to death for him, if he did not return before the day of execution. The attention of every one, and especially of the tyrant himself, was excited to the highest pitch; as every body was curious to fee what thould be the event of fo ftrange an affair. When the time was almost elapfed, and he who was gone did not appear, the rathness of the other, whose fanguine friendthip had put him upon running fo feemingly defperate a hazard, was univerially blamed. But he ftill declared, that be had not the leaft fhadow of doubt in his mind of his friend's fidelity. The event thewed how well he knew him. He came in due time, and furrendered himfelf to that fate, which he had no reason to think he should escape; and which he did not defire to escape by leaving his friend to fuller it in his place. Such fidelity foftened even the favage heart of Dionyfius himself. He purdoned the condemned. lie gave the two friends to one another; and begged that they would take himfelf Val. Max. Cic. in for a third.

§ 259. The Story of Dionysius the Tyrant.

Dionyfius the tyrant of Sicily, shewed how far he was from being happy, even whilfthe had abounded in riches, and all the pleatures which riches can procure. Damocles, one of his flatterers, was complimenting him upon his power, his treasures, and the inagnificence of his royal flute, and athrming, that no monarch ever was greater or happier than he. " Have you " a mind, Damocles," fays the king, " to " tatle this happiness, and know by ex-" perience, what my enjoyments are, of "which you have so high an idea?" Damodes gladly accepted the offer. Upon which the king ordered, that a royal banquet should be prepared, and a gilded couch placed for him, covered with rich embroidery, and fideboards loaded with gold and filver plate of immenfe value. Pages of extraordinary beauty were ordered to wait on him at table; and to obey his commands with the greatest readiness, and the most profound submittion. Neither ointments, chaplets of flowers, nor rich perfumes were wanting. The table was loaded with the most exquisite delicacies of every kind. Damocles fancied himfelf amongst the gods. In the midst of all his happineis, he fees, let down from the roof exactly over his neck as he lay indulging

himself in state, a glittering sword hung by a single hair. The sight of destruction thus threatening him from on high, soon put a stop to his joy and revelling. The pomp of his attendance, and the glitter of the carved plate, gave him no longer any pleasure. He dreads to stretch forth his hard to the table. He throws off the chaplet of roses. He hastens to remove from his dangerous situation, and at last begs the king to restore him to his former humble condition, having no desire to enjoy any longer such a dreadful kind of happiness.

Cic. Tusc. Quest.

§ 260. A remarkable Instance of filial Duty.

The prator had given up to the triumvir a woman of fome rank, condemned, for a capital crime, to be executed in the prifon. He who had charge of the execution, in confideration of her birth, did not immediately put her to death. He even ventured to let her daughter have access to her in prison : carefully fearthing her, however, as the went in, left the thould carry with her any futienance; concluding, that in a few days the mother must of course perish for want, and that the feverity of putting a woman of family to a violent death, by the hand of the executioner, might thus be avoided. Some days palling in this manner, the triumvir began to wonder that the daughter till came to vifit her mother, and could by no means comprehend, how the latter thould live fo long. Watching, therefore, carefully, what paffed in the interview between them, he found, to his great attonishment, that the life of the mother had been, all this while, supported by the milk of the daughter, who came to the prison every. day, to give her mother her breafts to fuck. The firange contrivance between them was reprefented to the judges, and procured a pardon for the mother. Nor was it thought fufficient to give to fo dutiful a daughter the forfeited life of her condemned mother, but they were both maintained afterwards by a pension fettled on them for life. And the ground upon which the prifon flood was conferrated, and a temple to filial piety built upon it.

What will not fitial duty contrive, or what hazards will it not run, if it will put a daughter upon venturing, at the peril of her own life, to maintain her imprifened and coudemacd mother in fo unufual a

manner!

manner? For what was ever heard of more firange, than a mother fucking the breafts of her own daughter? It might even feem so unnatural as to render it doubtful whether it might not be, in some fort, wrong, if it were not that duty to parents is the first law of nature.

Val. Max. Plin.

§ 261. The Continence of Scipio Arai-

The foldiers, after the taking of New Carthage, brought before Scipio a young lady of fuch diffinguished beauty, that she attracted the eyes of all wherever the went. Scipio, by enquiring concerning her country and parents, among other things learned, that the was betrothed to Allucius, prince of the Celtiberians. He immediately ordered her parents and bridegroom to be fent for. In the mean time he was informed, that the young prince was fo excellively enamoured of his bride, that he could not furvive the lois of her. For this reason, as foon as he appeared, and before he fpoke to her parents, he took great care to talk with him. " As you and " I are both young," faid he, " we can " converse together with greater freedom. "When your bride, who had fallen into " the hands of my foldiers, was brought 6 before me, I was informed that you " loved her paffionately; and, in truth, " her perfect beauty left me no room to doubt of it. If I were at liberty to in-"dulge a vonthful passion, I mean ho-" nourable and lawful wedlock, and were " not folely engrofied by the affairs of my " republic, I might have hoped to have d been pardoned my excellive love for fo " charming a miftrefs. But as I am fitu-" ated, and have it in my power, with " pleafure I promote your happiness. Your " future fpouse has met with a civil and " modeft treatment from me, as if the had " been amongst her own parents, who are " foon to be yours too. I have kept her " pure, in order to have it in my power " to make you a prefent worthy of you " and of me. The only return I alk of " you for this favour is, that you will be " a friend to the Roman people; and that 46 if you believe me to be a man of worth, " as the states of Spain formerly expe-" rienced my father and uncle to be, you " may know there are many of Rome " who refemble us; and there are not "a people in the universe, whom you

44 ought less to defire to be an enemy, or " more a friend, to you or yours." The youth, covered with bluthes, and full of joy, embraced Scipio's hands, praying the immortal gods to reward him, as he himfelf was not capable to do it in the degree he himfelf defired, or he deferved. Then the parents and relations of the virgin were called. They had brought a great fum of money to ranfom her. But feeing her reflored without it, they began to beg Scipio to accept that fum as a prefent; protesting they would acknowledge it as a favour, as much as they did the refloring the virgin without injury offered to her. Scipio, unable to retift their importunate folicitations, told them, henccepted it; and ordering it to be laid at his feet, thus addressed Allucius; "To the " portion you are to receive from your " father-in-law, I add this, and beg you " would accept it as a nuptial prefent." So he defired him to take up the gold, and keep it for himfelf. Transported with joy at the prefents and honours conferred on him, he returned home, and expatiated to his countrymen on the merits of Scipio. "There is come amongst us," faid he, " a " young hero, like the gods, who conquers " all things as well by generofity and be-" neficence, as by arms." For this reason, having raifed troops among his own subjects, he returned a few days after to Scipio with a body of 1400 horse,

Lity.

\$ 262. The private Life of EMILIUS SCIPIO.

The taking of Numantia, which terminated a war that difgraced the Roman name, completed Scipio's military exploits. But in order to have a more perfect idea of his merit and character, it feems that, after having feen him at the head of armies, in the tumult of battles, and in the pomp of triumphs, it will not be loft labour to confider him in the repose of a private life, in the midft of his friends, family, and household. The truly great man ought to be fo in all things. The magistrate, general, and prince, may conftrain themselves, whilft they are in a manner exhibiting themselves as speciacles to the public, and appear quite different from what they really are. But reduced to themselves, and without the witnesses who force them to wear the mask, all their lustre, like the pomp of the theatre, often abandons them, and leaves little more to be feen in them than meannels and narrownels of

Scipio did not depart from himfelf in any respect. He was not like certain paintings, that are to be feen only at a diffance; he could not but gain by a Beater view. The excellent education which he had had, through the care of his father Paulus Æmilius, who had provided him with the most learned masters of those times, as well in polite learning as the fciences; and the infiructions he had received from Polybius, enabled him to fill up the vacant hours he had from public allairs prohtably, and to support the leifore of a private life, with pleature and dignity. This is the clorious tellimony given of him by an hittorian: " Nobody "knew better how to mingle believe and "action, nor to use the intervals of reft " from public bufinefs with more elegance " and tatle. Divided between arms and "books, between the military labours of " the camp, and the peaceful occupations " of the closet, he either exercised his body "in the dangers and fatigues of war, or

" his mind in the fludy of the sciences ."

The first Scipio Africanus used to say, That he was never lefs idle, than when at leifure, or less alone, than when alone. A fine faying, cries Cicero, and well worthy of that great man. And it fliews that, even when inactive, he was always employed; and that when alone, he knew how to converse with himself. A very extraordinary disposition in persons accultomed to motion and agitation, whom leifure and folitude, when they are reduced to them, plunge into a difgust for every thing, and fill with melancholy; fo that they are displeased in every thing with themselves, and fink under the heavy burden of having nothing to do. This faying of the first Scipio feems to me to fuit the second still better, who having the advantage of the other by being educated in a take for polite learning and the sciences, found in that a great resource against the inconvenience of which we have been speaking. Besides which, having usually Polybius and Panætius with him, even in the field, it is easy to judge that his house was open, in times of peace, to all the Every body knows, that the comedies of Terence, the most accomplished work of that kind Rome ever pro-

Valleius Paterculus.

duced, for natural elegance and beauties, are atcribed to him and Lælius, of whom we thall foon fpeak. It was publicly enough reported, that they affifted that poet in the composition of his pieces; and Terence bimitelt makes it an honour to him in the prologue to the Adelphi. shall undoubtedly not advise any body, and leaft of all perfons of Scipio's rank, to write comedies. But on this occasion, let us only confider take in general for letters. Is there a more ingenuous, a more affecting pleafure, and one more worthy of a wife and virtuous man, I might perhaps add, or one more necellary to a military perion, than that which results from reading works of wit, and from the convertation of the learned? Providence thought fit, according to the observation of a Pagan, that he thould be above those trivial pleafures, to which persons without letters, knowledge, curiofity, and tafte for reading, are obliged to give themselves

Another kind of pleasure, still more senfible, more warm, more natural, and more implanted in the heart of man, conflituted the greatest felicity of Scipio's life; this was that of friendthip; a pleature feldom known by great perions or princes, becaute, generally loving only themselves, they do not deferve to have friends. However, this is the most grateful tie of human fociety; fo that the poet Ennius fays, with great reason, that to live without friends is not to live. Scipio had undoubtedly a great number of them, and those very illuttrious : but I shall speak here only of Lælius, whose probity and prudence acquired him the furname of the Wife.

Never, perhaps, were two friends better fuited to each other than those great men. They were almost of the same age, and had the fame inclination, benevolence of mind, tafte for learning of all kinds, principles of government, and zeal for the public good. Scipio, no doubt, took place in point of military glory, but Leelius did not want merit of that kind; and Cicero tells us, that he fignalized himfelf very much in the war with Viriathus. As to the talents of the mind, the superiority, in respect of eloquence, seems to have been given to Lælius; though Cicero does not agree that it was due to him, and fays, that Lælius's style favoured more of the ancient manner, and had fomething left agreeable in it than that of Scipio.

Let us hear Lælius himfelf (that is the

words Cicero put into his mouth) upon the strict union which subsisted between Scipio and him. " As for me," favs Lælins, " of all the gifts of nature or fortune, " there are none, I think, comparable to " the happiness of baving Scipio for my " friend. I found in our triendthip a per-" fect conformity of fentiments in respect " to public affairs; an inexhautlible fund " of counfels and supports in private life; " with a tranquillity and delight not to " be expressed. I never gave Scipio the " leaft offence, to my knowledge, nor " ever heard a word escape him that did " not pleafe me. We had but one house, " and one table at our common expence, " the fragality of which was equally the " taile of both. In war, in travelling, in " the country, we were always together, " I do not mention our findies, and the "attention of us both always to learn 44 fomething; this was the employment of " all our leifure hours, removed from the 44 fight and commerce of the world."

Is there any thing comparable to a friendthip like that which Lælius has jult described? What a confolation is it to have a fecond felf, to whom we have nothing fecret, and in whole heart we may pour out our own with perfect effution! Could we tafte prosperity so sensibly, if we had no one to thare in our joy with us? And what a relief is it in advertity, and the accidents of life, to have a triend till more affected with them than ourselves! What highly exalts the value of the friendthip we fpeak of, was its not being founded at all upon interest, but folcly upon efteem for each other's virtues. "What " occasion," favs Lælius, " co-ild Scipio " have of me? Undoubtedly none; nor 1 " of him. But my attachment to him was " the effect of my high effects and admira-" tion of his virtues; and his to me arole " from the favourable idea of my character " and manners. The friendthip mercafed " afterwards upon both fides, by habit and 4 commerce. We both, indeed, derived " great advantages from it; but those " were not our view, when we began to " love each other."

I cannot place the famous embaffy of Scipio Africanus into the Eatland Egypt, better than here; we shall fee the fame tufte of fimplicity and modelly, as we have just been reprefenting in his private life, thing out in it. It was a maxim with the Romans, frequently to fend ambaffadors to their allies, to take cognizance of their

affairs, and to accommodate their differences. It was with this view that three illuttrious perfons, P. Scipio Africanus, Sp. Munning, and L. Metellus, were fent into Egypt, where Ptolemy Physon then reigned, the most cruel tyrant mentioned in hittory. They had orders to go from thence to Syria, which the indolence, and afterwards the captivity of Demetrius Niconor amongst the Parthians, made a prev to troubles, factions, and revolts. They were next to vifit Afia Minor and Greece; to inspect into the affairs of those countries; to inquire into what manner the treaties made with the Romans were observed; and to remedy, as far as posfible, all the diforders that thould come to their knowledge. They acquitted themfelves with fo much equity, wifdom, and ability, and did fuch great fervices to those to whom they were fent, in re-establishing order amongst them, and in accommodating their differences, that, when they returned to Rome, ambailadors arrived there from all the parts in which they had been, to thank the fenate for having fent persons of such great merit to them, whose wisdom and goodness they could not fufficiently commend.

The first place to which they went, according to their instructions, was Alexandria. The king received them with great anguisticence. As for them, they affects it to little, that at their entry, Scipio, who was the richest and most powerful person of Rome, had only one friend, the philosopher Pametius, with him, and five domesties. His victories, says anancient writer, and not his attendants, were considered; and his personal virtues and qualities were effected in him, and not the glitter

of gold and filver.

Though, during their whole flay in Egypt, the king caused their table to be covered with the most exquisite provisions of every kind, they never touched any but the most supple and common, despising all the rest, which only serve to soften the mind and enervate the body .-- But, on fuch occasions, ought not the ambassadors of fo powerful a finte as Rome to have fullained its reputation of majefty in a foreign nation, by appearing in public with a memerous train and magnificent equipages? This was not the tate of the Romans, that is, of the people that, among all nations of the earth, thought the most justly of true greatness and folid glory. Rollin. ₹ 263. § 263. On Punctuation.

Punctuation is the art of marking in writing the feveral paufes, or refts, between tentences and the parts of fentences, according to their proper quantity or proportion, as they are expressed in a just and accurate pronunciation.

As the feveral articulate founds, the fyllables and words, of which fentences confiit, are marked by letters: fo the refls and paufes, between fentences and their

parts, are marked by Points.

But, though the feveral articulate founds are pretty fully and exactly marked by letters of known and determinate power; yet the feveral paufes, which are ufed in a just pronunciation of diffourfe, are very imperfectly expressed by Points.

For the different degrees of connexion between the feveral parts of fentences, and the different paufes in a just pronuncation, which express those degrees of connexion according to their proper value admit of great variety; but the whole number of Points, which we have to express this variety, amounts only to four.

Hence it is, that we are under a necesfity of expressing pauses of the same quantity, on different occasions, by different Points; and more frequently of expressing pauses of different quantity by the same Points.

So that the doctrine of Punchation hant needs be very imperfect: few precife tules can be given which will hold without exception in all cases; but much must be left to the judgment and taste of the writer.

On the other hand, if a greater number of marks were invented to express all the possible different pauses of pronunciation; the doctrine of them would be very perplexed and difficult, and the use of them would rather embarrais than affilt the seader.

It remains, therefore, that we be conbat with the rules of Punctuation, laid down with as much exactness as the nature of the subject will admit; such as may serve for a general direction, to be accommodated to different occasions; and to be supplied, where descient, by the writer's judgment.

The feveral degrees of connexion between fentences, and between their principal confiructive parts, Rhetericians have confidered under the following diftinctions, as the most obvious and remarkable: the Period, Colon, Semicolon, and Comma.

The Period is the whole fentence, complete in itself, wanting nothing to make a full and period fense, and not connected in construction with a subsequent sentence.

The Colon, or Member, is a chief confructive part, or greater division, of a fen-

tence,

The Semicolon or Half-member, is a lefs constructive part, or subdivision, of a sentence or member.

A fentence or member is again subdivided into Commas, or Segments; which are the least constructive parts of a fentence or member, in this way of considering it; for the next subdivision would be the resolution of it into phrases and words.

The Grammarians have followed this division of the Rhetoricians, and have appropriated to each of these distinctions its mark, or point; which takes its mane from the part of the sentence which it is employed to distinguish: as follows:

The Period
The Colon
The Semicolon
The Comma

The proportional quantity, or time, of the points, with respect to one another, is determined by the following general rule: The Period is a paufe in quantity or duration double of the Colon: the Colon is double of the Semicolon; and the Semicolon is double of the Comma. So that they are in the fame proportion to one another, as the Semibref, the Minim, the Crotchet, and the Quaver, in mulic. The precife quantity, or duration, of each paule or note cannot be defined; for that varies with the time: and both in discourse and music the same composition may be rebearfed in a quicker or a flower time : but in mutic the proportion between the notes remains ever the fame; and in discourse, if the doctrine of Punctuation were exact, the proportion between the paules would be ever invariable.

The Points then being defigned to express the pauses which depend on the different degrees of connexion between sentences, and between their principal constructive parts; in order to understand the meaning of the Points, and to know how to apply them properly, we must consider the nature of a sentence, as divided into its principal constructive parts, and the degrees

Rr

of connexion between those parts upon which such divition of it depends.

To begin with the least of these principal constructive parts, the Comma. In order the more clearly to determine the proper application of the Point which marks it, we must distinguish between an impersect phrase, a simple sentence, and a compounded sentence.

An imperfect phrase contains no affertion, or does not amount to a proposition or fentence.

A simple sentence has but one subject, and one finite verb.

A compounded fentence has more than one fubject, or one finite verb, either expressed or understood: or it consists of two or more simple sentences connected together.

In a fentence, the subject and the verb may be each of them accompanied with several adjuncts; as the object, the end, the circumstances of time, place, manner, and the like; and the subject or verb may be either immediately connected with them, or mediately; that is, by being connected with some thing, which is connected with some other; and so on.

If the fevoral adjuncts affect the subject or the verb in a different manner, they are only so many impersect phrases; and the sentence is simple.

A timple fentence admits of no Point; by which it may be divided, or distinguished into parts:

If the feveral adjuncts affect the fubject or the verb in the fame manner, they may be refolved into to many fimple fentences; the fentence then becomes compounded, and it must be divided into its parts by Points.

For, if there are several subjects belonging in the same manner to one verb, or several verbs belonging in the same manner to one subject, the subjects and verbs are still to be accounted equal in number: for every verb must have its subject, and every subject its verb; and every one of the subjects, or verbs, should or may have its point or distinction.

Examples:

44 The paffion for praife produces excellent effects in women of fenfe." Addison, Speck. No 73. In this sentence passion is the subject, and produces the verb; each of which is accompanied and connected with its adjuncts. The subject is not passion in general, but a particular passion deter-

mined by its adjunct of specification, as we may call it; the passion for praise. So likewise the verbis immediately connected with its object, excellent effects; and mediately, that is by the intervention of the word effects with women, the subject in which these effects are produced; which again is connected with its adjunct of specification; for it is not meaned of women in general, but of women of sense only. Lattly, it is to be observed, that the verb is connected with each of thefe feveral adjuncts in a different manner; namely with effects, as the object; with women, as the tubject of them; with sense, as the quality or characteristic of those women. The adjuncts therefore are only to many imperfect phrases; the sentence is a simple sentence, and admits of no Point, by which it may be diftinguished into parts.

"The passion for praise, which is so very vehement in the sair sex, produces excellent effects in women of sails." Here a new verb is introduced, accompanied with adjuncts of its own; and the subject is repeated by the relative pronoun which. It now becomes a compounded sentence, made up of two simple sentences, one of which is inserted in the middle of the other; it must therefore be dittinguished into its component parts by a point placed on each side of the additional sentence.

"How many inflances have we [in the fair fex] of chaffity, fidelity, devotion! How many ladies diftinguith themfelves by the education of their children, care of their families, and love of their hufbands; which are the great qualities and atchevements of women-kind; as the making of war, the carrying on of traffic, the administration of justice, are those by which men grow famous and get themselves a name." Ibid.

In the first of these two sentences, the adjuncts chastity, sidelity, devotion, are connected with the verb by the word instances in the same manner, and in effect make so many distinct sentences: "how many instances have we of chastity! how many instances have we of devotion!" They must therefore be separated from one another by a point. The same may be said of the adjuncts, "education of their children, &c." in the sormer part of the next sentence: as likewise of the several subjects, "the making of war, &c." in the latter part; which have in effect each

their verb; for each of these " is an atchievement by which men grow samous."

As fentences themselves are divided into simple and compounded, so themenbers of sentences may be divided likewise into simple and compounded members: for whole sentences, whether simple or compounded, may become members of other sentences by means of some additional connexion.

Simple members of features clotely connected together in one compounded member, or features, are diffinguithed or feparated by a Comma: as in the forego-

ing examples.

So likewife, the cafe abfolute; nouns in opposition, when comitting of many terms; the participle with fomething depending on it; are to be diffinguished by the Community for they may be refolved into simple members.

When an address is made to a person, the noun, answering to the vecative cate in Latin, is diffingushed by a Comma.

Examples:

- "This faid, He form'd thee, Adam; thee, O man, Dutt of the ground."
- "Now morn, her roly steps in th' eastern clime Advancing, fow'd the easth with orient pearl." Million.

Two nouns, or two adjectives, connected by a fingle Copulative or Disjunctive, are not separated by a point: but when there are more than two, or where the conjunction is understood, they must be distinguished by a Comma.

Simplemembers connected by relatives, and comparatives, are, for the most part, diffinguished by a Comma: but when the numbers are thort in comparative fentences; and when two members are closely connected by a relative, retiraining the general notion of the antecedent to a particular fense; the panse becomes almost intensible, and the Comma is better omitted.

Examples:

"Raptures, transports, and extasses, are the rewards which they conter: fighs and tears, prayers and broken hearts, are the offenass which are paid to them."

Addison, ibid.

"Gods, partial, changeful, palionate, unjult. Managundutes were rage, tevenge, et luft." "What is fweeter than honey? and what is stronger than a lion?"

A circumstance of importance, though no more than an imperiect phrate, may be fet off with a Comma on each fide, to give it greater force and distinction.

Example:

"The principle may be defective or faulty; but the confequences it produces are to good, that for the benefit of mankind, it ought not to be extinguished."

Addison, ibid.

A member of a fentence, whether simple or compounded, that requires a reater pause than a Comma, yet does not of itself make a complete sentence, but is sollowed by something closely depending on it, may be distinguished by a Semicolon.

Example:

"But as this pallion for admiration, when it works according to reason, improves the beautiful part of our species in every thing that is laudable; so nothing is more destructive to them, when it is governed by vanity and folly."

Addison, ibid.

Here the whole fentence is divided into two parts by the Semicolon; each of which parts is a compounded member, divided into its fimple members by the Comma.

A member of a tentence, whether simple or compounded, which of ittelf would make a complete sentence, and so requires a greater pause than a Semicolon, yet is followed by an additional part making amore full and perfect tense, may be diffinguished by a Colon.

Example:

"Were all books reduced to their quinteffence, many a bulky author would make his appearance in a penny paper: there would fearce be any fuch thing in nature as a folio: the works of an age would be contained on a few fieldes: not to mention millions of volumes that would be utterly annihilated." Addison, Spect. No 124.

Here the whole fentence is divided into four parts by Celens: the first and last of which are compounded members, each divided by a Cemma; the second and third are simple members.

When a Semicolon has preceded, and a greater paufe is faill necessary; a Colon

may be employed, though the fentence be incomplete.

The Colon is alfo commonly ufed, when an example, or a fpeech, is introduced.

When a fentence is so far perfectly finished, as not to be connected in construction with the following sentence, it is marked with a Period.

In all cases, the proportion of the several points in respect to one another is rather to be regarded, than their supposed precise quantity, or proper office, when taken separately.

Befides the points which mark the paules in discourse, there are others which denote a different modulation of the voice in correspondence with the sense. These are, The Interrogation point,
The Exclamation point,
The Parenthefis,

thus
marked

()

The Interrogation and Exclamation Points are sufficiently explained by their names: they are indeterminate as to their quantity or time, and may be equivalent in that respect to a Semicolon, a Colon, or a Period, as the sense requires. They mark an elevation of the voice.

The Parenthelis incloses in the body of a sentence a member inserted into it, which is neither necessary to the sense, nor at all assets the construction. It marks a moderate depression of the voice, with a pause greater than a Comma.

Lowth.

BOOK THE THIRD.

ORATIONS, CHARACTERS, AND LETTERS.

 The first Oration against Philip: pronounced in the Archonship of Aristodemus, in the first year of the Hundred and Seventh Olympiad, and the minth of Philip's reign.

INTRODUCTION.

TE have feen Philip opposed in his defign of passing into Greece, through Thermopylæ; and obliged to retire. The danger they had thus escaped deeply affected the Athenians. So during an attempt, which was, in effect, declaring his purpofes, filled them with aftonishment: and the view of a power, which every day received new accessions, drove them even to despair. Yet their aversion to public butine is was ftill predominant, They forgot that Philip might renew his attempt; and thought they had provided fufficiently for their security, by posting a body of troops at the entrance of Attica, under the command of Menelaus, a foreigner. They then proceeded to convene an affembly of the people, in order to confider what measures were to be taken to check the progress of Philip. On which occasion Demosthenes, for the first time, appeared against that prince; and displayed those abilities, which proved the greatest obstacle to his deligns.

At Athens, the whole power and management of affairs were placed in the people. It was their prerogative to receive appeals from the courts of juffice, to abrogate and enact laws, to make what alterations in the flate they judged convenient; in fhort, all matters, public or private, foreign or domestic, civil, military, or religious, were determined by them.

Whenever there was occasion to deliberate, the people affembled early in the morning, fometimes in the forum or public place, fometimes in a place called Pnyx, but most frequently in the theatre of Bacchus. A few days before each affembly there was a Пеоревина or Placard fixed on the statues of some illustrious men erected in the city, to give notice of the lubject to be debated. As they refused admittance into the affembly to all perfons who had not attained the neceffury age, fo they obliged all others to attend. The Lexiarche stretched out a cord dyed with fearlet, and by it pushed the people towards the place of meeting. Such as received the ftain were fined; the more diligent had a fmall pecuniary reward. Thefe Lexiarchs were the keepers of the register, in which were inrolled the names of fuch citizens as had a right of voting. And all had this right who were of age, and not excluded by a personal fault. Undutiful children, cowards, brutal debauchees, prodigals, debtors to the public, were all excluded. Until the time of Cecrops, women had a right of fuffrage, which

they were faid to have loft, on account of their partiality to Minerva, in her dispute with Neptune, about giving a name to the city.

In ordinary cates, all mutters were first deliberated in the senate of five hundred, compoled of fifty fenators choten ont of each of the ten tribes. Each tribe had its turn of prefiding, and the fifty fenators in office were called Prytanes. And, according to the number of the tribes, the Attic year was divided into ten parts, the four first containing thirty-fix, the other thirty-five days; in order to make the Lunar year complete, which, according to their calculation, contained one hundred and fifty-tour days. During each of these divisions, ten of the fifty Prytanes governed for a week, and were called Proedri: and, of thefe, he who in the course of the week presided for one day, was called the Epiliate: three of the Proedri being excluded from this office,

The Paytanes affembled the people: the Proedri declare the occasion; and the Epiftatæ demand their voices. This was the case in the ordinary assemblies: the extraordinary were convened as well by the generals as the Prytanes; and fometimes the people niet of their own accord, without

waiting the formalities.

The allembly was opened by a facrifice; and the place was sprinkled with the blood of the victim. Then an imprecution was pronounced, conceived in their terms: " May the gods pur-" fue that man to deliruction, with " all limrace, who thall act, fpeak, " or contrive, any thing against this " flate !" This ceremony being finished, the Proedri declared the occasion of the affembly, and reported the opinion of the fenate. It any doubt wrote, an herald, by committion from the Epithata, with a loud voice, invited any citizen, first of those above the age of bity, to speak his opinion: and then the reft according to their ages. This right of precedence had been granted by a law of Solon, and the order of meaking determined intirely by the difference of yours. In the time of Demoglicaes, this law was not in force. It is faid to have been repealed about lifty years before the date of this oration. Yet the custom fill continued, out of respect to the reasonable and decent purpose for which the law was originally enacted. When a speaker has delivered his fentiments, he generally called on an officer, appointed for that purpofe, to read his motion, and propound it in form. He then fat down, or refumed his discourse, and enforced his motion by additional arguments: and fometimes the fpeech was introduced by his motion thus propounded. When all the ipeakers had ended, the people gave their opinion, by firetching out their hands to him whose proposal pleafed them moft. And Xenophon reports, that, night having come on when the people were engaged in an important debate, they were obliged to deter their determination till next day, for tear of confesion, when their hands were to be raited.

Porrexerunt manus, faith Cicero (pro Flecco) & Psephisma natum est. And, to conflitute this Pfephifmaor decree, fix thousand citizens at least were required. When it was drawn up, the name of its author, or that perfon whofe opinion has prevailed, was prefixed: whence, in speaking of it, they call it his decree. The date of it contained the name of the Archon, that of the day and month, and that of the tribe then preliding The bulinets being over, the Prytanes dif-

mined the aftembly.

The reader who chuses to be more minutely informed in the cuftoms, and manner of procedure in the public attemblies of Athens, may confult the Archælogia of ArchLiftop Potter, Sigenius or the Concionatrices of

Arittophanes.

HAD we been convened, Athenians! on some new subject of debate, I had waited until most of the usual persons had declared their opinions. If I had approved of any thing proposed by them, I should have continued filent: It not, I had then attempted to speak my sentiments. But fince thois very points on which the fe fpeakers have oftentimes been heard already are, at this time, to be confidered; though I have arifen first, I prefume I may expect your pardon; for if they on former occafions had advised the mediary mediares, ye would not have found it needful to conful; at prefent.

First then, Athenians! these our affairs must not be thought desperate; no, though their situation seems intirely deplorable. For the most shocking circumstance of all our past conduct is really the most savourable to our future expectations. And what is this? That our own total indolence hat been the cause of all our present disculties. For were we thus distressed, in spite of every vigorous effort which the honour of our state demanded, there were then no hope of a recovery.

In the next place reflect (you who have been informed by others, and you who can yourselves remember) how great a power the Lacedemonians not logglince pofferfed; and with what resolution, with what dignity you disdained to act unworthy of the flate, but maintained the war against them for the rights of Greece. Why do I mention these things? That ye may know, that ye may fee, Athenians! that if duly vigilant, ye cannot have my thing to fear; that if once remifs, not any thing can happen agreeable to your defires: witness the then powerful arms of Lacedemon, which a just attention to your interests enabled you to vanquish; and this man's late infolent attempt, which our infenfibility to all our great concerns hath made the cause of this contufion.

If there be a man in this affembly who thinks that we must find a formidable enemy in Philip, while he views, on one hand, the numerous armies which attend him; and, on the other, the weakness of the state thus despoiled of its dominions; he thinks juftly. Yet let him reflect on this: there was a time, Athenians! when we poffefied Pydna, and Potidæa, and Methoue, and all that country round: when many of those states now subjected to him were free and independent; and more inclined to our alliance than to his. Had then Philip reasoned in the same manner, " How hall I dare to attack the Atheni-" ans, whose garrifous command my ter-" mory, while I am defitute of all af-" fittance!" He would not have engaged in those enterprizes which are now crowned with fuccefs; nor could be have raifed hindelf to this pitch of greatness. No, Athenians! he knew this well, that all thefe places are but prizes, laid between the combatants, and ready for the conqueror: that the dominions of the abjent devolve naturally to those who are in the field; the possessions of the supine to the active and intrepid. Animated by thefe

fentiments, he overturns whole countries; he holds all people in subjection: some, as by the right of conquest; others, under the title of allies and considerates: for all are willing to consederate with those whom they see prepared and resolved to exert themselves as they ought.

And if you (my countrymen!) will now at length be perfuaded to entertain the like fentiments; if each of you, renouncing all evations, will be ready to approve himfelf an ufeful citizen, to the utmost that his flation and abilities demand; if the rich will be ready to contribute, and the young to take the field; in one word, if you will be yourfelves, and banish those vain hopes which every fingle person entertains, that while fo many others are engaged in public bufiness, his service will not be required; you then (if Heaven to pleafes) thall regain your dominions, recal those opportunities your fupinencis hath neglected, and chattife the infolence of this man. For you are not to imagine, that like a god, he is to enjoy his prefent greatnels for ever fixed and unchangeable. No, Athenians! there are, who hate him, who fear him, who envy him, even among those seemingly the most attached to his caufe. Theie are passions common to mankind: nor must we think that his friends only are exempted from them. It is true they lie concealed at prefent, as our indolence deprives them of all refource. But let us shake off this indolence! for you fee how we are fituated; you fee the outrageous arrogance of this man, who does not leave it to your choice whether you thall act, or remain quiet; but braves you with his menaces; and talks (as we are informed) in a ftrain of the highest extravagance; and is not able to reft fatisfied with his prefent acquifitions, but is ever in purfuit of further conquests; and while we fit down, inactive and irrefolute, incloses us on all fides with his toils.

When, therefore, O my countrymen! when will you exert your vigour? When routed by fome event? When forced by fome necessity? What then are we to think of our present condition? To freemen, the degrace attending on misconduct is, in my opinion, the most urgent necessity. Or, say, is it your side ambition to wander through the public places, each enquiring of the other, "What new advices?" Can any thing be more new, than that a man of Macedonshould conquer the Athenians, a d give law to Greece? "is Philip

R 1 4

46 depol 2

" dead? No, but in great danger." How are you concerned in those rumours? Suppose he should meet some fatal stroke: you would foon raife up another Philip, if your interests are thus regarded. For it is not to his own ftrength that he fo much owes his elevation, as to our fupmeness. And should some accident affect him; hould fortune, who hath ever been more careful of the flate than we ourfelves, now repeat her favours (and may the thus crown them!) be affired of this, that by being on the fpot, ready to take advantage of the confusion, you will every where be absoute masters; but in your present disposition, even if a favourable juncture thould prefent you with Amphipolis, you could not take possession of it, while this sufpence prevails in your defigns and in your

And now, as to the necessity of a general vigour and alacrity; of this you must be fully perfuaded; this point therefore I shall urge no further. But the nature of the armament, which, I think, will extricate you from the prefent difficulties, the numbers to be raifed, the fublidies 10quired for their support, and all the other necessaries; how they may (in my opinion) be best and most expeditiously provided; thefe things I shall endeavour to explain. But here I make this request, Athenians! that you would not be precipitate, but fuspend your judgment till you have heard me fully. And if, at first, I feem to propofe a new kind of armament, let it not be thought that I am delaying your affairs. For it is not they who cry out, " Infantly!" " This moment!" whose counfels fuit the present juncture (as it is not possible to repel violences already committed by any occasional detachment) but he who will shew you of what kind that armament must be, how great, and how supported, which may subfit until we yield to peace, or till our enemies fink beneath our arms; for thus only can we be fecured from future dangers. Thefe things, I think, I can point out; not that I would prevent any other perion from declaring his opimon; thus far am I engaged. How I can acquit myfelf, will immediately appear: to your indements I appeal.

First then, Athemans! I say that you should fit out lifty ships of war; and then refolve, that on the first emergency you will embark yourselves. To these I infit that you must add transports, and other necessary vessels sufficient for half our horse.

Thus far we should be provided against those sudden excursions from his own kingdom to Thermopylæ, to the Cherfonefus, to Olynthus, to whatever places he thinks proper. For of this he should necessarily be perfuaded, that possibly you may break out from this immoderate indolence, and fly to some scene of action; as you did to Eubœa, and formerly, as we are told, to Haliartus, and, but now, to Thermopylæ. But although we should not act with all this vigour, (which yet I must regard as our indispensable duty) still the measures I propose will have their use: as his fears may keep him quiet, when he knows we are prepared (and this he will know, for there are too many among ourselves who inform him of every thing): or, if he thould despife our armament, his fecurity may prove fatal to him; as it will be abfolutely in our power, at the first favourable juncture, to make a descent upon his own coafts.

These then are the resolutions I propofe; these the provisions it will become you to make. And I pronounce it ftill farther necessary to raise some other forces which may harafs him with perpetual incursions. Talk not of your ten thousands, or twenty thousands of foreigners; of those armies which appear fo magnificent on paper: but let them be the natural forces. of the flate; and if you chuse a single perfon, if a number, if this particular man, or whomever you appoint as general, let them be entirely under his guidance and authority. I also move you that sublistence be provided for them. But as to the quality. the numbers, the maintenance of this body: how are these points to be settled? I now proceed to fpeak of each of them diffractly.

The body of infantry therefore-But here give me leave to warn you of an error which buth often proved injurious to you. Think not that your preparations never can be too magnificent; great and terrible in your decrees : in execution weak and contemptible. Let your preparations, let your supplies at first be moderate, and add to these if you find them not sufficient. I fay then that the whole body of infantry fhould be two thousand; of these, that five hundred should be Athenians, of such an age as you shall think proper; and with a flated time for fervice, not long, but such as that others may have their turn of duty. Let the reft be formed of foreigners. thefe you are to add two hundred horfe, fifty of them at least Athenians, to ferve in the fame manner as the foot. For these you are to provide transports. And now, what farther preparations? Ten light gallies. For as he bath a naval power, we must be provided with light vessels, that our troops may have a secure convoy.

But whence are these forces to be subfifted? This I shall explain, when I have first given my reasons why I think such numbers sufficient, and why I have advifed that we should serve in person. As to the numbers, Athenians! my reason is this: it is not at prefent in our power to provide a force able to meet him in the open field; but we must harass him by depredations: thus the war must be carried on at first. We therefore cannot think of raifing a prodigious army (for fuch we have neither pay nor provisions), nor must our forces be absolutely mean. And I have proposed, that citizens should join in the fervice, and help to man our fleet; because I am informed, that some time fince, the state maintained a body of auxiliaries at Corinth, which Polystratus commanded, and Iphicrates, and Chabrias, and fome others; that you vourfelves ferved with them; and that the united efforts of these auxiliary and domestic forces gained a confiderable victory over the Lacedemomans. But, ever fince our armies have been formed of foreigners alone, their victories have been over our allies and confederates, while our enemies have arifen to an extravagance of power. And thefe armies, with icarcely the flightest attention to the fervice of the flate, fuil off to fight for Artabazus, or any other person; and their general follows them; nor should we wonder at it; for he cannot command, who cannot pay his foldiers. What then do I recommend? That you should take away all pretences both from generals and from foldiers, by a regular payment of the army. and by incorporating domestic forces with the auxiliaries, to be as it were inspectors into the conduct of the commanders. For at prefent our manner of acting is even ridiculous. If a man should ask, " Are " you at peace, Athenians?" the answer would immediately be, " By no means! " we are at war with Philip. Have not " we chosen the usual generals and officers " both of horse and soot?" And of what we are all these, except the single person whom you fend to the field? The reft attend your priefts in their processions. So that, as if you formed fo many men of clay, you make your officers for thew, and

not for fervice. My countrymen! should not all these generals have been chosen from your own body; all these several officers from your own body, that our force might be really Athenian? And yet, for an expedition in savour of Lemnos, the general must be a citizen, while troops, engaged in detence of our own territories, are commanded by Menelaus. I say not this to detract from his merit; but to whomsoever this command bath been intruited, surely he should have derived it from your voices.

Perhaps you are fully fensible of thefe truths; but would rather hear me upon another point; that of the supplies; what we are to raife, and from what funds. To this I now proceed.—The fum therefore necessary for the maintenance of these forces, that the foldiers may be fupplied with grain, is fomewhat above ninety talents. To the ten gallies, forty talents, that each vessel may have a monthly allowance of twenty minæ. To the two thousand foot the same sum, that each foldier may receive ten drachmæ a month for corn. To the two hundred horfe, for a monthly allowance of thirty drachmae each, twelve talents. And let it not be thought a fmall convenience, that the foldiers are supplied with grain: for I am clearly fatisfied, that if fuch a provision be made, the war itfelf will supply them with every thing elfe, fo as to complete their appointment, and this without an injury to the Greeks or allies : and I myfelf am ready to fail with them, and to answer for the confequence with my life, thould it prove otherwise. From what fund the fum which I propose may be supplied, shall now be explained.

[Here the fecretary of the affembly reads a scheme for raising the supplies, and proposes it to the people in form, in the name of the orator.]

These are the supplies, Athenians I in our power to raise. And, when you come to give your voices, determine upon some effectual provision, that you may oppose Philip, not by decrees and letters only, but by actions. And, in my opinion, your plan of operation, and every thing relating to your armament, will be much more happily adjusted, if the situation of the country, which is to be the scene of action, be taken into the account; and if you rested; that the winds and seasons have greatly contributed to the rapidity of l'hilip's conquests; that he watches the blow-

ing of the Etchans, and the feverity of the winter, and forms his fieges when it is impollible for us to bring up our forces. It is your part then to confider this, and not to carry on the war by occasional detachments, (they will ever arrive too late) but by a regular army confiantly kept up. And for winter quarters you may command Leinnes, and Thaffus, and Sciathus, and the adjacent iflands; in which there are, ports and provisions, and all things nevertary for the foldiery in abundance. As to the feafon of the year, in which we may land our forces with the greatest eafe, and be in no danger from the winds, either upon the coalt to which we are bound, or at the entrance of those harbours where we may put in for provisions-this will be cafily discovered. In what manner, and at what time our forces are to act, their general will determine, according to the juncture of affairs. What you are to perform, on your part, is contained in the decree I have now proposed. And if you will be perfuaded, Athenians! first to raife there supplies which I have recommended, then to proceed to your other preparations, your infantry, navy, and cavalry; and, latily, to confine your forces, by a law, to that fervice which is appointed to them; referving the care of distribution of their money to yourselves, and thrictly examining into the conduct of the general; then, your time will be no longer wasted in continual debates upon the fame fubject, and fearcely to any purpose; then, you will deprive him of the meit confiderable of his revenues. For his arms are now supported, by feizing and making prizes of those who pass the seas. -But is this all?-No.-You thall also be secure from his attempts: not as when some time since he sell on Lemnos and Imbrus, and carried away your citizens in chains: not as when he furprized your veffels at Geraffus, and spoiled them of an unspeakable quantity of riches: not as when lately he made a defcent on the coast of Marathon, and carried off our facred galley; while you could neither oppose these insults, nor detach your forces at fuch junctures as were thought convenient.

And now, Athenians! what is the reason (think ye) that the public sessivals in homour of Minerva and of Bacchus are always calcharactat the appointed time, when there the direction of them falls to the lot of non of commence, or of persons lets distinguished: (i) trivals which cost more treat-

fure than is ufually expended upon a whole nevy; and more numbers and greater preparations, than any one perhaps ever coit) while your expeditions have been all too late, as that to Methone, that to Pegafa, that to Potidea. The reason is this: every thing relating to the former is afcertained by law; and every one of you knows long before, who is to conduct the leveral entertainments in each tribe; what he is to receive, when, and from whom, and what to perform. Not one of these things is left uncertain, not one undetermined. But in affairs of war, and warlike preparations, there is no order, no certainty, no regulation. So that, when any accident alarms us, first, we appoint our trierarchs; then we allow them the exchange; then the fupplies are confidered. These points once fettled, we refolve to man our fleet with firangers and foreigners; then find it neceffary to supply their place ourselves. In the midd of thefe delays, what we are failing to defend, the enemy is already mafter of: for the time of action we spend in proparing : and the junctures of attairs will not wast our flow and irrefolute measures .--These forces too, which we think may be depended on, until the new levies are raifed, when put to the proof plainly difcover their infufficiency. By thefe means hath he arrived at fuch a pitch of infolence, as to fend a letter to the Eubocans, conceived in such terms at these;

. . The LETTER is read.

What hath now been read, is for the most part true, Athenians! too true! but perhaps not very agreeable in the recital. But if, by suppressing things ungrateful to the ear, the things themselves could be prevented, then the fole concern of a public speaker should be to please. If, on the contrary, these unseasonably pleasing speeches be really injurious, it is thaineful, Athenians, to deceive yourfelves, and, by deferring the confideration of every thing difugreeable, never once to move until it be too late; and not to apprehend that they who conduct a war with prudence, are not to follow, but to direct events; to direct them with the fame absolute authority, with which a general leads on his forces; that the courie of affairs may be determined by them, and not determine their measures. But you, Athenians, although pollefied of the greatest power of all kinds, thips, infantry, cavalry, and treafure:

treasured yet, to this day have never employed any of them featonably, but are ever last in the field. Just as barbariuns engage at boxing, to you make war with Philip: for, when one of them receives a blow, that blow engages him: if thruck in another part, to that part his hands are failted: but to ward on the blow, or to watch his antagonitt- for this, he hath neither skill nor spirit. Even so, if you bear that Philip is in the Cherionefus, you relove to lend forces thither; if in Thermopyle, thither; if in any other place, you hurry up and down, you follow his flandard. But no uteful fcheme for carrying on the war, no wife provisions are ever thought of, until you hear of fome enterprife in execution, or already crowned with fueetis. This might have formerly been pardonable, but now is the very critical moment, when it can by no means be admitted.

It feems to me, Athenians, that fome divinity, who, from a regard to Athens, looks down upon our conduct with indignation, hath inspired Philip with this restless ambition. For were he to fit down in the quiet enjoyment of his conquells and acquifitions, without proceeding to any new attempts, there are men among you, who, I think, would be unmoved at those transactions, which have branded our state with the odious marks of intamy, cowardice, and all that is bale. But as he fill purfues his conquetts, as he is fill extending his ambitious views, poslibly he may at last call you forth, unless you have renounced the name of Athenians. To me it is afton thing, that none of you look back to the beginning of this war, and confider that we engaged in it to chattife the infolence of Philip; but that now it is become a defensive war, to fecure us from his attempts. And that he will ever be repeating thefe attempts is manifest, unless some power rifes to oppose him. But, if we wait in expectation of this, if we fend our armaments composed of empty gallies, and those hopes with which tome Ipeaker may have flattered you; can you then think your interest well secured? shall we not embark? thall we not fail, with at least a part of our domestic forge, now, once we have not hitherto?-But where thall we make our descent?-Let us but the gage in the enterprile, and the war itfelf. Athenians, will these us where he is weakett. But if we fit at home, liftening to the mutual invettives and accurations of our ora-

tors, we cannot expect, no, not the leaft fucrefs, in any one particular. Wherever a part of our city is detached, although the whole be not pretent, the favour of the gods and the kindness of fortune attend to fight upon our fide; but when we fend out a general, and an infiguificant decree, and the hones of our speakers, mistortune and difappointment must enfue. Such expeditions are to our enemies a fport, but finke our allies with deadly apprehentions. For it is not, it is not possible for any one man to perform every thing you defire. He may promife, and harangue, and accuse this or that perion : but to fuch proceedings we owe the ruin of our affairs. For when a general who commanded a wretched coltection of unpaid foreigners, both been defeated; when there are perions here, who, in arraigning his conduct, dare to advance falfehoods, and when you lightly engage in any determination, just from their luggettions; what must be the confequence? How then thall thefe abuses be removed? -By offering yourfelves, Athenians, to execute the commands of your general, to be witnesses of his conduct in the field, and his judges at your return: fo as not only to hear how your affairs are transacted. but to infrect thein. But now, fo thamefully are we degenerated, that each of our commanders is twice or thrice called before you to answer for his life, though not one of them daved to hazard that life, by once engaging his enemy. No: they chuse the death of robbers and pilferers, rather than to fall as becomes them. Such malefactors should die by the sentence of the law. Generals thould meet their fate bravely in the field.

Then, as to your own conduct-forme wander about, crying, Philp hath joined with the Lacedemonians, and they are concerting the defiguation of Thebes, and the diffolution of fome free trates. Others affire us he hath tent an embaffy to the king; others, that he is fortifying places in Illyria. Thus we all go about training our feveral tales. I do believe indeed, Athenians! he is intoxicated with his greatness, and does entertain his imagination with many fuch visionary prospects, as he fees no power rifing to oppose him. and is elated with his forcefs. But I cannot be perfuaded that he bath fo taken has meafores, that the weakeft among us know what he is next to do : (for it is the weakeft among us who spread these rumours) - Let us difregard them: let us be perfuaded of this, that he is our enemy, that he hath speiled us of our dominions, that we have long been subject to his insolence, that whatever we expected to be done for us by others, hath proved against us, that all the resource left is in ourselves, that, if we are not inclined to carry our arms abroad, we may be forced to engage here-let us be perfuaded of this, and then we shall come to a proper determination, then shall we be freed from those idle tales. For we are not to be fo folicitous to know what particular events will happen; we need but be convinced nothing good can happen, unless you grant the due attention to affairs, and be ready to act as becomes Athenians.

I, on my part, have never upon any occation chosen to court your favour, by speaking any thing but what I was convinced would ferve you. And, on this occasion, I have freely declared my fentiments, without art, and without referve. It would have pleafed me indeed, that, as it is for your advantage to have your true interest laid before you, so I might be affured that he who layeth it before you, would share the advantages: for then I had spoken with greater alacrity. However, uncertain as is the confequence with respect to me, I yet determined to fpeak, because I was convinced that these measures, if pursued, must have their use. And, of all those opinions which are offered to your acceptance, may that be chosen, which will best advance the Leiand. general weal!

§ 2. The first Olynthiac Oration: pronounced four years after the first Philippic, in the Archonship of Callimachus, the fourth year of the Hundred and Secenth Olympiad, and the twelfth of Philip's reign.

INTRODUCTION.

The former Oration doth not appear to have had any confiderable effect. Philip had his creatures in the Athenian affembly, who probably recommended lefs vigorous measures, and were but too favourably heard. In the meantime, this prince purfued his ambitious designs. When he found himfelf thut out of Greece, he turned his arms to fuch remote parts, as he might reduce without alarming the states of Greece., And, at the fame time, he revenged himfelf upon the Athenians, by making himself master of some places which they laid claim to. At length his fuccess emboldened him to declare those intentions which he had long entertained fecretly against the Olynthians.

Olynthius (a city of Thrace possessed by Greeks originally from Chalcis,--a town of Eubœa and colony of Athens) commanded a large tract called the Chalcidian region, in which there were thirty-two cities. It had arisen by degrees to fuch a pitch of grandeur, as to have frequent and remarkable contests both with Athens and Lacedemon. Nor did the Olynthians shew great regard to the friendship of Philip when he first came to the throne, and was taking all measures to secure the possession of it. For they did not feruple to receive two of his brothers by another marriage, who had fled to avoid the effects of his jealousy; and endeavoured to conclude an alliance with Athens, against him, which he, by fecret practices, found means to defeat. But as he was yet fcarcely fecure upon his throne, instead of expreffing his refentment, he courted, or rather purchased, the alliance of the Olynthians, by the cession of Anthemus, a city which the kings of Macedon had long disputed with them, and afterwards, by that of Pydna and Potidsea; which their joint forces had belieged and taken from the Athenians. But the Olyathians could not be influenced by gratitude towards fuch a benefactor. The rapid progress of his arms, and his glaring acts of pertidy, alarmed them exceedingly. He had already made fome inroads on their territories, and now began to act against them with less reierve. They therefore difpatched ambassadors to Athens to propose an alliance, and request asfiftunce against a power which they were equally concerned to oppose.

Philip an ected the highest referement at this step; alledged their mutual engagements to adhere to each other in war and peace; inveighed against their harbouring his brothers, whom he called the conspirators; and, under pretence of punishing their infractions, pursued his hostilities with double vigour, made himself master of some of their cities, and threatened the capital with a siege.

In the meantime the Olynthians prefied the Athenians for immediate fuc-

cours.

cours. Their ambaffadors opened their commission in an assembly of the people, who had the right either to agree to, or to reject their demand. As the importance of the occasion increased the number of speakers, the elder orators had debated the affairs before Demosthenes arose. In the following oration therefore he fpeaks as to a people already informed, urges the necessity of joining with the Olynthians, and confirms his opinion by powerful arguments; lays open the defigns and practices of Philip, and labours to remove their dreadful apprehensions of his power. He concludes with recommending to them to reform abuses, to restore ancient difcipline, and to put an end to all domestic dissensions.

IN many inftances (Athenians!) have the gods, in my opinion, manifestly declared their favour to this state: nor is it least observable in this present juncture. For that an enemy should arise against Philip, on the very confines of his kingdom, of no inconfiderable power, and, what is of most importance, so determined spon the war, that they confider any accommodation with him, first, as insidious, next, as the downfal of their country: this feems no lefs than the gracious interposition of Heaven itself. It must, therefore, be our care (Athenians!) that we ourselves may not frustrate this goodness. For it must reslect disgrace, nay, the foulest infamy upon us, if we appear to have thrown away not those states and territories only which we once commanded, but those alliances and favourable incidents, which fortune hath provided for us.

To begin on this occasion with a display of Philip's power, or to prefs you to exert your vigour, by motives drawn from hence, is, in my opinion, quite improper. And why? Because whatever may be offered upon fuch a fubject, fets hum in an honourable view, but feems to me, as a reprouch, to our conduct. For the higher his exploits have arisen above his former elemation, the more must the world admire him: while your difgrace hath been the greater, the more your conduct buth proved unworthy of your state. These things therefore I shall pass over. He indeed, who examines justly, must find the fource of all his greatness here, not in himleif. But the services he hath here re-

ceived, from those whose public administration hath been devoted to his interest; those fervices which you must punish, I do not think it reasonable to display. There are other points of more moment for you all to hear; and which must excite the greatest abhorrence of him, in every reasonable mind.—These I shall lay before you.

And now, should I call him perjured and perfidious, and not point out the instances of this his guilt, it might be deemed the mere virulence of malice, and with justice. Nor will it engage too much of your attention to hear him fully and clearly convicted, from a full and clear detail of all his actions. And this I think useful upon two accounts: first, that he may appear, as he really is, treacherous and falfe; and then, that they who are struck with terror, as if Philip was fomething more than human, may fee that he hath exhaufted all those artifices to which he owes his present elevation: and that his affairs are now ready to decline. For I myfelf (Athenians!) should think Philip really to be dreaded and admired, if I faw him raifed by honourable means. But I find, upon reflection, that at the time when certain persons drove out the Olynthians from this affembly, when defirous of conferring with you, he began with abusing our simplicity by his promife of furrendering Amphipolis, and executing the fecret article of his treaty, then so much spoken of: that, after this, he courted the friendship of the Olynthians by feizing Potidea, where we were rightful fovereigns, defpoiling us his former allies, and giving them possession: that, but just now, he gained the Thesialians, by promising to give up Magnefia; and, for their case, to take the whole conduct of the Phocian war upon himself. In a word, there are no people who ever made the least use of him, but have fuffered by his fubtlety: his prefent greatness being wholly owing to his deceiving those who were unacquainted with him, and making them the inftruments of his fuccefs. As thefe states therefore raifed him, while each imagined he was promoting fome interest of theirs; these states must also reduce him to his former meannefs, as it now appears that his own private interest was the end of all his actions.

Thus then, Athenians! is Philip circumftanced, If not, let the man fland forth, who can prove to me, I should have

1016

faid to this affembly, that I have afferted their things fallely; or that they whom he hath deceived in former intrances, will confide in him for the future; or that the Theflatians, who have been fo bafely, fo undefervedly enflaved, would not gladly embrace their freedom. - If there be any one among you, who acknowledges all this, yet thinks that Philip will support his power, as he hath fecured places of thrength, convenient ports, and other like advantages; he is deceived. For when forces join in harmony and affection, and one common interest unites the confederating powers, then they share the toils with alacrity, they endure the diffrefies, they perfevere. But when extravagant ambition, and lawlefs power (as in his cafe) have aggrandited a fingle perfon; the first protence, the flightest accident, overthrows him, and all his greatness is dashed at once to the ground. For it is not, no. Athemians! it is not possible to found a latting power upon injuffice, perjury, and treathery. Thefe may perhaps fucceed for once; and borrow for a while, from hope, a gay and flourithing appearance. But time betrays their weakness; and they fall into ruin of themselves. For, as in fiructures of every kind, the lower parts thould have the greatest sirmness, to the grounds and principles of actions though be jult and true. But thefe advantages are not found in the actions of Philip.

I fay then that you should dispatch fuccours to the Olynthians: (and the more bonourably and expeditiously this is propoied to be done, the more agreeably to my fentiments) and fend an embaliy to the Thenalians, to inform fome, and to enliven that spirit already raised in others: (for it hath actually been refolved to demand the retitution of Pagasa, and to affert their claim to Magnesia.) And let it be your care, Athenians, that our ambaffadors may not depend only upon words, but give them tome action to display, by taking the field in a manner worthy of the flate, and engaging in the war with vigour. For words, if not accompanied by actions, must ever appear vain and con-.temptible; and particularly when they come from us, whose prompt abilities, and well-known eminence in fpeaking, make us to be always heard with the greater fulpicion.

Would you indeed regain attention and confidence, your incufures must be greatly changed, your conduct totally reformed;

your fortunes, your perfons, must appear devoted to the common cause; your utmost efforts must be exerted. If you will act thus, as your honour and your interest require; then, Athenians! you will not only discover the weakness and intincerity of the confederates of Philip, but the ruinous condition of his own kingdom will alto be laid open. The power and fovereignty of Macedon may have fome weight indeed, when joined with others. Thus, when you marched against the Olynthians, under the conduct of Timotheus, it proved an ofeful ally; when united with the Olynthians against Potidwa, it added fomething to their force; just now, when the Theifalians were in the midit of diforder, fedition, and confusion, it aided them against the family of their tyrants: (and in every cafe, any, even a finall accession of thrength, is, in my opinion, of confiderable effect.) But of itself, unsupported, it is infirm, it is totally differnpered: for by all those glaring exploits, which have given has this apparent greatness, his wars, his expeditions, he hath rendered it yet weaker than it was naturally. For you are not to imagine that the inclinations of his fubjects are the fame with those of Philip. He thirits for glory: this is his object, this he engerly purtues, through toils and dangers of every kind; despiting talety and life, when compared with the honour of atchieving such actions as no other prince of Macedon could ever boaft of. But his fubjects have no part in this ambition. Harafied by those various excurfions he is ever making, they grown under perpetual calamity; torn from their bulinefs, and their families, and without opportunity to dispose of that pittance which their toils have carned; as all commerce is thut out from the coast of Macedon by the war.

Hence one may perceive how his fubjects in general are affected to Philip. But then his auxiliaries, and the foldiers of his phalanx, have the character of wonderful forces, trained completely to war. And yet I can affirm, upon the credit of a perfon from that country, incapable of fallehood, that they have no fuch fuperiority. For, as he affires me, if any man of experience in military affairs hould be found among them, he difinifies all fuch, from an ambition of having every great action aforibed wholly to himself: (for, besides his other passions, the man hath this ambition in the highest degree.) And if any per-

hn, from a fense of decency, or other virtuous principles, betrays a diflike of his daily intemperance, and riotings, and obfenities, he lofes all favour and regard; fo that none are left about him, but wretches who fublift on rapine and flattery, and who, when heated with wine, do not feruple to descend to such inflances of revelry, as it would thock you to repeat. Nor can the truth of this be doubted: for they whom we all confpired to drive from hence, as infamous and abandoned, Cullius the public fervant, and others of the fame flump; buffoons, compofers of lewd fongs, in which they ridicale their companions: these are the perfors whom he entertains and carelles. And these things, Athenians, trifling as they may appear to fome, are to men of just differement great indications of the weakness both of his mind and fortune. At prefent, his fuccesses cast a shade over them; for prosperity bath great power to veil fach baseness from observation. But let his arms meet with the least difgrace, and all his actions will be exposed. is a truth, of which he himfelf, Athenians! will, in my opinion, foon convince you, if the gods favour us, and you excit your vigour. For as in our bodies, while a man is in health he feels no effect of any inward weakness; but, when disease attacks him, every thing becomes fentible in the veffels, in the joints, or in whatever other part his frame may be difordered; to in states and monarchies, while they carry on a war abroad, their defects escape the geperal eve: but when once it approaches their own territory, then they are all de-

If there be any one among you who, from Philip's good fortune, concludes that be must prove a formidable enemy; such reatening is not unworthy a men of prudence. Fortune bath great influence, nay, the whole influence, in all buman affairs; but then, were I to chuse, I should prefer the fortune of Athens (if you vourielves will affert your own cause, with the least degree of vigour) to this man's fortune. For we have many better reasons to deprodupon the favour of Heaven, than this man. But our prefent state, is in my opimon, a state of total inactivity; and he who will not exert his own firength, cannot apply for aid, either to his friends or to the gods. It is not then furprising, that he who is himfelf ever amidft the dangers and labours of the field; who is everywhere; whom no opportunity escapes; to whom no featon is unfavourable; should be fuperior to you, who are wholly engaged in contriving delays, and framing decrees, and enquiring after news. I am not furprifed at this, for the contrary muit have been furprising: if, we, who never act in any fingle inflance, as becomes a thate engaged in war, thould conquer him, who, in every infrance, acts with an indefatigable vigilance. This indeed furprites me; that you, who fought the cause of Greece neumft Lacedemon, and generously declined all the many favourable opportunities of ; garandizing yourfelves; who, to fecure their property to others, parted with your own, by your contributions; and bravely exposed yourselves in battle; should now decline the fervice of the field, and delay the necessary supplies, when called to the defence of your own rights: that you, in whom Greece in general, and each particular flate, bath often found protection, should fit down quiet spectators of your own private wrongs. This I fay furprites me; and one thing more; that not a man among you can reflect how long a time we have been at war with Philip, and in what measures, this time hath all been wasted. Yun are not to be informed, that, in delaying, in hoping that others would affert our caule, in accusing each other, in impeaching, then again entertaining hopes, in fuch measures as are now purfued, that time hath been entirely waited. And are you to devoid of apprehention, as to imagine, when our flate bath been reduced from greatness to wretchedness, that the very same conduct will raise us from wretchedness to greatness? No! this is not reasonable, it is not natural; for it is much eatier to defend, than to acquire dominions. But, now, the war hath left us nothing to defend: we must acquire. And to this work you yourselves alone are equal,

This, then, is my opinion. You should raife supplies; you should take the field with alacrity. Profecutions should be all supplied until you have recovered your affairs; let each man's sentence be determined by his actions: honour those who have deterved applants; let the iniquitous meet their punishment: let there be no pretences, no desiciencies on your part; for you cannot bring the actions of others to a severe senting, unlets you have first been careful of your own daty. What indeed can be the reason, think ye, that

gvery

every man whom we have fent out at the head of an army, hath deferted your fervice, and fought out fome private expedition? (if we must speak ingenuously of thefe our generals alto,) the reaton is this: when engaged in the fervice of the flate, the prize for which they fight is yours. Thus, thould Amphipolis be now taken, you instantly possess yourselves of it: the commanders have all the danger, the rewards they do not share. But, in their private enterprifes, the dangers are lets; the acquititions are all shared by the generals and foldiers; as were Lampfacus. Siggum, and those vessels which they plundered. Thus are they all determined by their private interest. And, when you turn your eyes to the wretched state of your affairs, you bring your generals to a trial; you grant them leave to fpeak; you hear the necessities they plead; and then acquit them. Nothing then remains for us, but to be diffracted with endless contests and divisions: (some urging these, some those measures) and to seel the public calamity. For in former times, Athenians, on divided into clatles, to raife supplies. Now the buliness of these clusies is to gowern; each hath an orator at its head, and a general, who is his creature; the THREE BUNDRED are alliftants to thefe, and the rest of you divide, some to this, some to that party. You must rectify these diforders: you muit appear yourielves: you must leave the power of speaking, of adviting, and of acting, open to every citisen. But if you futier fome perfons to iffue out their mandates, as with a royal authority; if one fet of men be forced to fit out thips, to raife supplies, to take up arms; while others are only to make deerees against them, without any charge, any employment belides; it is not pollible that any thing can be effected feafonably and fuccefully: for the injured party ever will defert you; and then your fole refource will be to make them feel your refentment inflead of your enemies.

To fam up all, my fentiments are thefe:

That every man should contribute in proportion to his fortune; that all should take the field in their turns, until all have served; that whoever appears in this place should be allowed to speak: and that when you give your voices, your true interest only should determine you, not the authority of this or the other speaker. Pursue this course, and then your applanse will not be lavished on some orator, the

moment he concludes; you yourfelves will there it hereafter, when you find how greatly you have advanced the interests of your state.

Leland.

§ 3. The second Olynthiac Oration: pronounced in the same year:

INTRODUCTION.

To remove the impression made on the minds of the Athenians by the preceding oration, Demades and other popular leaders in the interests of Philip role up, and opposed the propositions of Demostheres, with all their eloquence. Their opposition, however, proved ineffectual: for the affembly decreed, that relief should be fent to the Olynthians : and thirty gallies and two thousand forces were accordingly dispatched, under the command of Chares. But these faccours, confifting entirely of mercenaries, and commanded by a general of no great reputation, could not be of confiderable fervice: and were befides fufpected, and fcarcely lefs dreaded by the Olynthians than the Macedonians themselves. In the mean time, the progress of Philip's arms could meet with little interruption. He reduced feveral places in the region of Chalcis, razed the fortress of Zeira, and, having twice defeated the Olynthians in the field, at last flut them up in their city. In this emergency, they again applied to the Athenians, and preffed for fresh and effectual fuccours. In the following oration, Demosthenes endeavours to fupport this petition; and to prove that both the honour and the interest of the Athenians demanded their immediate compliance. As the expence of the armament was the great point of difficulty, he recommends the abrogation of fuch laws, as prevented the proper fettlement of the funds neceffary for carrying on a war of fuch importance. The nature of their laws will come immediately to be ex-

It appears, from the beginning of this oration, that other speakers had arisen before Demothenes, and inveighed loudly against Philip. Full of the national prejudices, or disposed to flatter the Athenians in their notions of the dignity and importance of their fiate,

thate, they breathed nothing but indignation against the enemy, and possibly, with some contempt of his present enterprises, proposed to the Athemians to correct his arrogance, by an invasion of his own kingdom. Demosithenes, on the contraly, insists on the necessity of self-desence; endeavours to rouse his hearers from their security, by the terror of impending danger; and affects to consider the desence of Olynthus, as the last and only means of preserving the very being of Athens.

I AM by no means affected in the fame manner, Athenians! when I review the state of our affairs, and when I attend to those speakers who have now declared their fentiments. They intift, that we thould punish Philip: but our affairs, fituated as they now appear, warn us to guard against the dangers with which we ourselves are threatened. Thus far therefore I must differ from these speakers, that I apprehend they have not proposed the proper object of your attention. There was a time indeed. I know it well, when the fate could have possessed her own domimons in fecurity, and fent out her armes to inflict challifement on Philip. I myfelf have foen that tilne when we enjoyed fuch power. But, now, I am perfuaded we should confine ourselves to the protection of our allies. When this is once effected, then we may confider the punithment his outrages have merited. But, till the first great point be well secured, it is weakness to debate about our more remote concernments.

And now, Athenians, if ever we flood in need of mature deliberation and couned, the present juncture calls loudly for them. To point out the course to be purfeed on this emergency, I do not think the greatest difficulty : but I am in doubt in what manner to propose my fentiments; for all that I have observed, and all that I have heard, convinces me, that fact of your misfortunes have proceeded from a want of inclination to purfue the beeffary measures, not from ignorance of them .- Let me intreat you, that, if I now speak with an unusual boldness, ye may bear it: confidering only, whether I freak truth, and with a fincere intention to advance your future intereits: for you now for, that by fome orators who itudy but

ta gain your favour, our affairs have been reduced to the extremity of diffrefs.

I think it necessary, in the first place, to recal fome late transactions to your thoughts. -You may remember, Athenians, that, about three or four years fince, you received advice that Philip was in Thrace, and had laid fiege to the fortrefs of Herwa. It was then the month of November. Great commotions and debates arofe. It was resolved to fend out forty gailies; that all citizens, under the age of five and forty, should themselves embark; and that fixty talents should be raised. Thus it was agreed; that year paffed away; then came in the months July, August, September. In this last month, with great difficulty, when the mysteries had first been celebrated, you fent out Charidemus, with just ten veffels unmanned, and five talents of filver. For when reports came of the ficknefs, and the death of Philip (both of thefe were affirmed) you laid afide your intended armament, imagining, that at fuch a juncture, there was no need of fuccours. And yet this was the very critical moment; for, had they been dispatched with the fame alacrity with which they were granted, Philip would not have then escaped, to become that formidable enemy he now appears.

But what was then done, cannot be amended. Now we have the opportunity of another war: that war I mean, which hath induced me to bring these transactions into view, that you may not once more fall into the same errors. How then shall we improve this opportunity? This is the only question. For, if you are not refolved to affift with all the force you can command, you are really ferving under Philip, you are fighting on his fide. The Olynthians are a people, whose power was thought confiderable. Thus were the circumitances of affairs: Philip could not confide in them; they looked with equal fuspicion upon Philip. We and they then entered into mutual engagements of peace and alliance: this was a grievous embarraffnent to Philip, that we should have a powerful flate confederated with us, fpies upon the incident of his fortune. It was agreed, that we should, by all means, engage this people in a war with him: and now, what we all fo carneftly defired, is effected: the manner is of no moment. What then remains for us, Athenians, but to fond immediate and effectual fuccours,

Ss I cannot

I cannot fee. For befides the difgrace that must attend us, if any of our interests are supinely diffegarded, I have no small apprehentions of the confequence, (the Thebans affected as they are towards us, and the Phocians exhaufted of their treafures) it Philip be left at full liberty to lead his armies into thefe territories, when his prefent enterprises are accomplished. If any one among you can be fo far immerfed in indolence as to fuffer this, he must chuse to be witness to the mitery of his own country, rather than to hear of that which ftrangers fuffer; and to feek allitiants for hindelf, when it is now in his power to grant affidance to others. That this mult be the confequence, if we do not exert ourselves on the present occafion, there can fearcely remain the leuft doubt among us.

But, as to the necessity of fending succours, this, it may be faid, we are agreed in; this is our refolution. But how thall we be enabled? that is the point to be explained. Be not furprified, Athenians, if my fentiments on this occasion feem repuguant to the general fenie of this atlembly. Appoint magifirates for the infacetion of your laws; not in order to enact any new laws; you have already a fufficient number; but to repeal those, whose ill effect you now experience. I mean the laws relating to the theatrical funds (thus openly I declare it) and fome about the foldiery. By the first, the foldier's pay goes as theatrical expences to the ufelels and inactive: the others forcen those from junice, who decline the fervice of the field, and thus damp the ardour of those disposed to ferve us. When you have repealed thele, and rendered it confiftent with fafety to advise you justly, then feek for some perion to propole that decree, which you all are femilile the common good requires. But, till this be done, expect not that any man will urge your true interest, when, for urging your true interest, you repay him with deftruction. Ye will never find fuch zeal; especially fince the confequence can be only this; he who offers his opimon, and moves for your concurrence, Inders fome unmerited calamity; but your affairs are not in the leaft advanced : nay, this willtiand inconvenience must arife, that for the future is will appear more dangerous to advile you, than even at prefent. And the authors of these laws that Id also be the authors of their repeal. For it is not just that the public favour thould be

beflowed on them who, in framing thefe laws, have greatly injured the community; and that the odium should fall on him, whose freedom and sincerity are of important service to us all. Until these regulations be made, you are not to think any man so great that he may violate these laws with impunity; or so devoid of reason, as to plunge himself into open and soreseen definiction.

And he not ignorant of this, Athenians, that a decree is of no fignificance, milely attended with resolution and alacrity to execute it. For were decrees of themtelves fufficient to engage you to perform your duty, could they even execute the things which they enach; fo many would not have been made to fo little, or rather to no good purpose; nor would the infolence of Philip have had so tong a date. For, if decrees can punish, he hath long fince felt ail their fury. But they have no fuch power; for, though proposing and refolving be first in order, yet in force and officacy, action is superior. Let this then be your principal concern; the others you cannot want; for you have men among you capable of adviling, and you are of all people most acute in apprehending: now, let your interest direct you, and it will be in your power to be as remarkable for aching. What feafou indeed, what opportunity do you wait for, more favourable than the prefent? Or when will you exert your vigour, if not now, my countrymen? Hath not this man feized all those places that were ours? Should be become matter of this country too, must we not fink into the lowest state of intamy? Are not they whom we have promited to affift, whenever they are engaged in war, now attacked themselves? Is he not our enemy? is he not in policition of our dominions? Is he not a barbarian? Is he not every bale thing words can express? If we are infentible to all this, if we almost aid his defigus; heavens! can we then ask to whom the confequences are owing? Yes, I know full well, we never will impute them to ourselves. Just as in the dangers of the field: not one of those who fly will accuse himfelf; he will rather blame the general, or his tellow-foldiers: yet every fingle man that fled was accessury to the defeat. He who blames others might have maintained his own polt; and, had every man maintained his, fuccefs might have enfued. Thus, then, in the prefent case, is there a man whole conside frems liable to objection? Let the next rife, and not inveigh against him, but declare his own opinion. Doth another offer some more solutary counfel? Purioe it, in the name of Heaven. But then it is not pleasing." This is not the fault of the speaker, unless in that he hash neglected to express his affection in provers and withes. To pray is easy. Atheniums; and in one petition may be collected as many instances of good fortune as we please. To determine justify, when affairs are to be considered, is not so easy. But what is most useful should ever be preferred to that which is agreeable, where both cannot be obtained.

But if there be a man who will leave us the theatrical funds, and propose other subfidies for the fervice of the war, are we not rather to attend to him? I grant it, Athemans! if that man can be found. But I thould account it wonderful, if it ever did, if it ever can happen to any man on earth, that while he lavilles his prefent pofferfons on unnecessary occasions, some future funds thould be procured to fupply his real necessities. But such proposals find a powerful advocate in the breaft of every hearer. So that nothing is fo eafy as to deceive one's felf; for what we wish, that we readily believe; but fuch expectations are oftentimes inconfiftent with our affairs. Oa this occasion, therefore, let your affairs direct you; then will you be enabled to take the field; then you will have your fell pay. And men, whose judgments are well directed, and whole fouls are great, could not support the infamy which must attend them, if obliged to defert any of the operations of a war, from the want of noney. They could not, after faatching up their arms, and marching against the Corinthians and Megareans, futler Philip bendave the flates of Greece, through the want of provisions for their forces. I fay not this wantonly, to raife the refentment of some among you. No; I am not so unhappily perverse as to fludy to be hated, when no good purpose can be answered by it: but it is my opinion, that every honeit beaker flould prefer the interest of the fate to the favour of his hearers. This I am affured, and perhaps you need not be informed) was the principle which uctrated the public conduct of those of our ascelors who fpoke in this affembly (men, whom the prefent fet of orators are ever teady to applaud, but whole example they by no means imitate:) fuch were Arithdes, Sicias, the former Demothenes, and Pericles. But fince we have had fpeakers, who, before their public appearance, aisovou, "What do you delire? What thall I "propofe? How can I oblige you?" The interest of our country has been facrificed to momentary pleafure, and popular favour. Thus have we been diffrested; thus have these men rifen to greatness, and you took into diffrace.

And here let me intreat your attention to a funimary account of the conduct of your ancestors, and of your own. I shall mention but a few things, and thefe well known, (for, if you would purfue the way to happinels, you need not look abroad for leaders); our own countrymen point it out. These our ancestors, therefore, whom the orators never courted, never treated with that indulgence with which you are flattered, held the fovereignty of Greece with general confent, five-and-forty years; depolited above ten thonfand talents in our public treatury; kept the king of this country in that Subjection, which a barbarian owes to Greeks: erected monuments of many and illuttrious actions; which they themselves atchieved by land and fea; in a word, are the only perions who have transmitted to posterity such glory as is superior to envy. Thus great do they appear in the affairs of Greece. Let us now view them within the city, both in their public and private conduct: And, first, the edifices which their administrations have given us, their decorations of our temples, and the offerings deposited by them, are fo numerous and fo maguificent, that all the efforts of posterity cannot exceed them. Then, in private life. fo exemplary was their moderation, their adherence to the ancient manners fo fcrupuloutly exact, that if any of you ever difcovered the house of Aritides, or Miltiades, or any of the illutrious men of those times, be mult know that it was not diffinguished by the least extraordinary splendor. For they did not fo conduct the public bufiness as to aggrandize thunfelves; their fole great of jeft was to exult the fixte. And thurby their faithful attachment to Greece, by their picty to the gods, and by that equality which they maintained among themfelves, they were raifed (and no wortder) to the fummit of profeerity.

Such was the flate of Athens at that time, when the men I have mentioned were inspower. But what is your condition under these indelegant ministers who now direct no? I sit the same or nearly the same?

S s 2

Other things I shall pass over, though I might expatiate on them. Let it only be observed, that we are now, as you all fee, left without competitors; the Lacedemonians loft; the Thebans engaged at home; and not one of all the other states of consequence sufficient to dispute the fovereignty with us. Yet, at a time when we might have enjoyed our own dominions in fecurity, and been the umpires in all disputes abroad; our territories have been wreited from us; we have expended above one thousand five hundred talents to no purpofe: the allies which we gained in war have been loft in time of peace; and to this degree of power have we raifed an enemy against ourselves. (For let the man fland forth who can flew, whence Philip hath derived his greatness, if not

" Well! if these affairs have but an un-" favourable aspect, yet those within the "city are much more flourithing than " ever." Where are the proofs of this? The walls which have been whitened? the ways we have repaired? the supplies of water, and fuch frittes? Furn your eyes to the men, of whose administrations these are the fruits. Some of whom, from the lowest state of poverty, have arisen suddealy to affluence; forme from meannels to senown: others have made their own private houses much more magnificent than the public editices. Juli as the ftate hath fallen, their private fortunes have been raifed.

And what cause can we assign for this? How is it that our aflurs were once fo flourishing, and now in such diforder? Because formerly, the people dared to take up arms themselves; were themselves mafters of those in employment, disposers themtelves of all emoluments; fo that every citizen thought himfelf happy to derive honours and authority, and all advantages whatever from the people. But now, on the contrary, favours are all dispensed, affairs all transacted, by the ministers; while you, quite enervated, robbed of your riches, your allies, flund in the mean rank of fervants and affiftants: happy if thefe inen grant you the theatrical appointments, and fend you leraps of the public meal. And, what is of all most fordid, -you hold yourselves obliged to them for that which is your own, while they confine you within there walls, lead you on cently to their purpoles, and foothe and taine von to obedience. Nor is it politide

that they who are engaged in low and grovelling purfuits, can entertain great and generous fentiments. No! fuch as their employments are, fo must their dispositions prove.—And now I call Heaven to witness, that it will not surprize me, if I suffer more by mentioning this your condition, than they who have involved you in it! Freedom of speech you do not allow on all occasions; and that you have now admitted it, excites my wonder.

But if you will at length be prevailed on to change your conduct; if you will take the field, and act worthy of Athenians; if these redundant sums which you receive at home be applied to the advancement of your affairs abroad; perhaps, my countrymen! perhaps fome instance of confummate good fortune may attend you. and ye may become fo happy as to despife those pittances, which are like the morfels that a phylician allows his patient. For these do not restore his vigour, but jult keep him from dying. So your diftributions cannot ferve any valuable purpole, put are just sufficient to divert your attention from all other things and thus increase the indolence of every one among

But I shall be asked, "What then! is " it your opinion that these sums should " pay our army ?"-And besides this, that the flate should be regulated in such a manner, that every one may have his fhare of public butiness, and approve himself an ufeful citizen, on what occasion soever his aid may be required. Is it in his power to live in peace? He will live here with greater dignity, while thefe fupplies preventhim from being tempted by indigence to any thing dishonourable. Is he called forth by an emergency like the present? Let him discharge that sacred duty which he owes to his country, by applying thefe fums to his support in the field. Is there m man among you past the age of fervice? Let him, by inspecting and conducting the public butiness, regularly merit his thare of the distributions which he now receives, without any duty enjoined, or any return made to the community. And thus, with fearcely any alteration, either of abolishing or innovating, all irregularities are removed, and the flate completely fettled; by appointing one general regulation, which shall entitle our citizens to receive, and at the fame time oblige them to take arms, to administer justice, to and in all cares as their time of life, and our affairs

require. But it never hath, nor could it have been moved by me, that the rewards of the diligent and active should be bestowed on the useless citizen: or that you should fit here, supine, languid, and irresolute, liftening to the exploits of some general's foreign troops (for thus it is at present—not that I would reflect on him who serves you in any instance)—but you yourselves, Atheniaus, should perform those services, for which you heap honours upon others, and not recede from that illustrious talk of virtue; the price of all the glorious toils of your ancestors, and by them bequeathed to you.

Thus have I laid before you the chief points in which I think you interested. It is your part to embrace that opinion, which the welfare of the state in general, and that of every single member, recommends to your acceptance.

Leland.

§ 4. The third Olynthiac Oration: pronounced in the same year.

INTRODUCTION.

The preceding oration had no further effect upon the Athenians, than to prevail on them to fend orders to Charidennus, who commanded for them at the Hellefpont, to make an attempt to relieve Olynthus. He accordingly led fome forces into Chalcis, which, in conjunction with the forces of Olynthus, ravaged Pullene, a peninfula of Macedon, towards Thrace and Bottia, a country on the confines of Chalcis, which among other towns contained Pella, the capital of Macedon.

But these attempts could not divert Philip from his resolution of reducing Olynthus, which he had now publicly avowed. The Olynthians, therefore, found it necessary to have once more recourse to Athens: and to request that they would send troops, composed of citizens, animated with a sincere ardour for their interest, their own glory, and the common cause.

Demosthenes, in the following oration, infits on the importance of faving Olynthus; alarms his hearers with the apprehention of the war, which actually threatened Attica, and even the capital; urges the necessity of personal service; and returns to his clarge of the misapplication of the public money; but in such a manner,

as sheweth, that his former remonstrances had not the defired effect.

I AM persuaded, Athenians! that you would account it less valuable to possess the greatest riches, than to have the true interest of the state on this emergency clearly laid before you. It is your part, therefore, readily und chearfully to attend to all who are disposed to offer their epinions. For your regards need not be confined to those, whose countels are the effect of premeditation: it is your good fortune to have men among you, who can at once suggest many points of moment. From opinions, therefore, of every kind, you may easily chuse that most conducive to your interest.

And now, Athenians, the prefent juncture calls upon us: we almost hear its voice, declaring loudly, that you yourfelves must engage in these affairs, if you have the leaft attention to your own fecurity. You entertain I know not what fentiments, on this occasion; my opinion is, that the reinforcements should be instantly decreed: that they should be raifed with all possible expedition; that fo our fuccours may be fent from this city, and all former inconventencies be avoided; and that you should fend ambafiadors to notify thefe things, and to fecure our interests by their prefence. For as he is a man of confummate policy, complete in the art of turning every incident to his own advantage, there is the utmost reason to fear, that partly by concessions, where they may be seasonable; partly by menaces (and his menaces may be believed,) and partly by rendering us, and our absence suspected; he may tear from us fornething of the last importance, and force it into his own fervice.

Those very circumflances, however, which contribute to the power of Philip, are happily the most favourable to us. For that uncontrolled command, with which he governs all transactions public and secret; his entire direction of his army, as their leader, their fovereign, and their treasurer; and his diligence, in giving life to every part of it, by his presence; these things greatly contribute to carrying on a war with expedition and fuccefs, but are powerful obstacles to that accommodation, which he would gladly make with the Olynthians: For the Olynthians for plainly, that they do not now fight for glory, or for part of their territory, but to defend their flate from diffolution and

Ss3 Bavery.

flavery. They know how he rewarded those traitors of Amphipolis, who made him master of that city; and those of Pydna, who opened their gates to him. In a word, free fates, I think, must ever look with suspicion on an absolute monarchy; but a neighbouring monarchy must double their ap-

prehentions.

Convinced of what hath now been effered, and possessed with every other just and worthy fentiment; you must be resolved, Athenians! you must exert your spirit; you must apply to the war, now, if ever; your fortunes, your perfous, your whole powers, are now demanded. There is no excuse, no protence left, for declining the performance of your duty. For that which you were all ever orging loudly, that the Olynthians should be engaged in a war with Philip, hath now happened of itself; and this in a manner most agreeable to our interest. For, if they had entered into this war at our perfusion, they must have been precarious allies, without freadiness or retolution: but, as their private injuries have made them enemies to Philip, it is probable that enmity will be Litting, both on account of what they fear, and what they have already fuffered. My countrymen! let not fo favourable an opportunity escape you: do not repeat that error which bath been fo often fatal to you. For when, at our return from affifting the Euberans, Hierax, and Stratocles, citizens of Amphipolis, mounted this gallery, and preffed you to fend out your navy, and to take their city under your protection; had we discovered that refolution in our own cause, which we exerted for the fafety of Eubara; then had Amphipolis been yours; and all those disticulties had been avoided, in which you have been fince involved. Again, when we received advice of the fleges of Pydna, Potiden, Methone, Pegalar, and other places, (for I would not detain you with a particular recital) had we ourselves marched with a due spirit and alacrity to the relief of the first of these cities, we should now find much more compliance, much more humility in Philip. But by ftill neglecting the present, and imagining our future interefts will not demand our care : we have aggrandized our enemy, we have raifed him to a degree of eminence, greater than any king of Macedon hath ever yet entoyed .-- Now we have another opportunity. That which the Olynthians, of themfelves, prefent to the flate; one no leis confiderable than any of the former.

And, in my opinion, Athenians! if a man were to bring the dealings of the gods towards us to a fair account, though many things might appear not quite agreeable to our withes, yet he would acknowledge that we had been highly favoured by them; and with great reufon; for that many places have been lott in the course of war, is truly to be clarged to our own weak conduct. But that the difficulties, arifen from hence, have not long affected us; and that an alliance now prefents ittelf to remove them, if we are disposed to make the just use of it; this I cannot but ascribe to the divine goodness. But the same thing happens in this cafe, as in the ufe of riches: if a man be careful to fave those he hath acquired, he readily acknowledges the kindness of fortune: but if by his imprudence they be once lost, with them he also lofes the fenfe of gratitude. So in political affairs, they who neglect to improve their opportunities, forget the favours which the gods have bestowed; for it is the ultimate event which generally determines men's judgment of every thing precedent. And therefore, all affairs hereafter fhould engage your firicieft care; that, by correcting our errors, we may wipe off the inglorious thain of past actions. But should we be deal to their men too, and thould be be fuffered to subvert Olynthus; fay, what can prevent him from marching his forces into whatever territory he pleafes?

Is there not a man among you, Athenians! who reflects by what fieps Philip, from a beginning fo inconsiderable, bath mounted to his height of power? First, he took Amphipolis: then he became mafter of Pydna; then Potidaa fell: then Methone: then came his inroad into Theffaly: after this, having disposed affairs at Pherie, at Pegafa, at Magnetia, entirely as he pleased, he marched into Thrace. Here, while engaged in repelling fome, and chablishing other princes, he fell fick. Apain, recovering, he never turned a moment from his course to ease or indulgence, but instantly attacked the Olynthians. His expeditions against the Illyrians, the Paconians, against Arymbas, I pass all over .-But I may be asked, why this recital, now? That you may know and fee your own error, in ever neglecting fome part of your affairs, as if beneath your regard; and that active spirit with which Philip pursueth his defigue; which ever fires him; and which never can permit him to reft fatif-

fied with those things he hath already accom-

accomplished. If then he determines firmly and invariably to purfue his conquetts: and if we are obfiniately refolved against every vigorous and effectual measure: think, what confequences may we expect! in the name of Heaven, can any man be fo weak, as not toknow, that by neglecting this war, we are transferring it from that country to our own! And thould this happen, I tear, Athenians, that as they who incentiderately borrow money upon high interest after a shortlived affluence, are deprived of their own fortunes; fo we, by this continued indolenge, by confultingonly our eafe and pleafure, may be reduced to the grievous neceffity of engaging in affairs the most thocking and difagreeable, and of expoting ourfelves in the defence of this our native territory.

To cenfure, forne one may tell me, is ealy, and in the power of every man; but the true counsellor should point out that conduct which the prefent exigence demands. - Sentible as I am, Athenians, that when your expectations have in any infrance been disappointed, your resentment frequently falls not on those who merit it, but on him who hath fpoken laft; yet I cannot, from a regard to my own fafety, suppreis what I deem of moment to lay before you. I fay then, this occasion calls for a twofold armament. Firth, we are to defend the cities of the Olynthiaus, and for this purpose to detach a body of forces: in the next place, in order to infelt his kingdom, we are to fend out our navy manned with other levies. If you neglect either of thete, I fear your expedition will be fruitlefs. For, if you content yourfelves with infelting his dominions, this he will endure, until he is mafter of Olynthus, and then he can with eafe repel the invafion; or, if you only fend fuccours to the Olynthians, when he fees his own kingdom free from danger, he will apply with confiancy and vigilance to the war, and at length weary out the belieged to a fubmission. Your levies therefore must be confiderable enough to ferve both pur-Poles.-These are my featiments with respect to our armament.

And now, as to the expence of these preparations. You are already provided for the payment of your forces better than any other people. This provision is distributed among yourselves in the manner most agreeable; but if you reftore it to the army, the supplies will be complete without any addition, if not, an addition will be necelsary, or the whole, rather, will remain to

be raifed. " How then (I may be afked) " do you move for a decree to apply those " funds to the military fervice?" means! it is my opinion indeed, that an army must be raffed; that this money really belongs to the army; and that the fame regulation which entitles our citizens to receive, thould oblige them also to act. At prefent you expend thefe forms on entertainments, without regard to your affairs. It remains then that a general contribution be railed; a great one, if a great one be required: a finall one, if fuch may be fufficient. Money must be found; without it nothing can be effected: various fehemes are proposed by various persons: do you make that choice which you think most advantageous; and while you have an opportunity, exert yourfelves in the care of your interests.

It is worthy your attention to confider, how the affairs of Philip are at this time circumitanced. For they are by no means so well disposed, so very flourishing, as an inuttentive observer would pronounce. Nor would be have engaged in this war at all, had he thought he fhould have been obliged to maintain it. He hoped that the moment he appeared, all things would fall hefore him. But thefe hopes were vain. And this difappointment, in the first place, troubles and dispirits him. Then the Thesialians alarm him; a people remarkable for their perfidy on all occasions, and to all perfons. And juit as they have ever proved. even to be finds them now. For they have refolved in council to demand the rettitution of Pegafie, and have opposed his attempt to fortify Magnefia: and I am informed, that for the luture he is to be excluded from their ports and markets, as these conveniencies belong to the states o Theffaly, and are not to be intercepted by Philip. And should be be deprived of fuch a fund of wealth, he must be greatly streightened to support his foreign troops. Befides this, we must suppose that the Paronian and the Illyrian, and all the others, would prefer freedom and independence to a flate of flavery. They are not accustomed to subjection, and the infolence of this man, it is faid, knows no bounds; nor is this improbable: for great and unexpedied faccels is apt to hurry weak minds into extravagancies, Mence it offen proves much more difficult to maintain acquifitions, than to acquire. It is your part, therefore, to regard the time of his diffrefs as your moft favourable opportunity: improve it to the 5 5 4 utmost;

utmost; fend out your embossies; take the field yourselves, and excite a general ardour abroad: ever considering how readily Philip would attack us, if he were favoured by any incident like this, if a war had broken out on our borders. And would it not be shameful to want the resolution to bring that diffress on him, which, had it been equally in his power, he certainly would have made you seel?

This too demands your attention, Athenians! that you are now to determine whether it be mak expedient to carry the war into his country, or to fight him here. If Olynthus be defended, Macedon will be the feat of war; you may harafs his kingdom, and enjoy your own territories free from apprehendions. But should that nation be fubdued by Philip, who will oppose his marching hither? will the Thebans? let it not be thought fevere when I affirm, that they will join readily in the invation. Will the Phocians? a people fearcely able to defend their own country, without your atlittance. Will any others? -" But, Sir (cries fome one,) he would " make no fuch attempt."-This would be the greatest of absurdaties; not to execute those threats, when he hathfull power, which, now when they appear so idle and evtravagant, he yet dares to utter. And I think you are not yet to learn how great would be the difference between our engaging him here and there. Were we to be only thirty days abroad, and to draw all the necessaries of the camp from our own lands, even were there no enemy to ravage them, the damage would, in my opinion, amount to more than the whole expence of the late war. Add then the prefence of an enemy, and how greatly must the calamity be increased; but, further, add the infamy; and to those who judge rightly, no diffress can be more grievous than the fenndal of misconduct.

It is incumbent, therefore, upon us all (juftly influenced by these confiderations,) to unite vigorously in the common cause, and repel the danger that threatens their erritory. Let the rich excert themselves on this occasion; that, by contributing a small portion of their affluence, they may secure the peaceful possession of the rest. Let those who are of the age for military duty; that, by learning the art of war in Philip's dominious, they may become formidable desenders of their native land. Let our crators, that they may safely submit their conduct to the public inspection.

For your judgment of their administrations will ever be determined by the event of things. And may we all contribute to render that favourable! Leland.

§ 5. Oration against Cataline.

THE ARGUMENT.

L. Sergius Cataline was of Patrician extraction, and had fided with Sylla, during the civil wars between him and Marius. Upon the expiration of his practorage, he was fent to the government of Africa; and after his return, was accused of mal-administration by P. Clodius, under the confulthip of M. Emilius Lepidus, and L. Volcatius Tullus. It is commonly believed, that the defign of the confpiracy was formed about this time, three years before the oration Cicero here pronounces against it. Cataline, after his return from Africa, had fued for the confulflip, but was rejected. The two following years he likewife flood candidate, but fill met with the fame fate. It appears that he made a fourth attempt under the confulflip of Cicero, who made use of all his credit and authority to exclude him, in which he fucceeded to his with. After the picture Sallus has drawn of Cataline, it were needless to attempt his character here; belides, that the four following orations will make the reader fufficiently acquainted with it. This first speech was pronounced in the fenate, convened in the temple of Jupiter Stator, on the eighth of November, in the fix hundred and pinth year of the city, and forty-fourth of Cicero's age. The occasion of it was as follows: Cataline and the other confpirators had met together in the house of one Marcus Lecca; where it was refolved that a general infur-, rection should be raifed through Italy. the different parts of which were affigned to different leaders; that Cataline thould put himfelf at the head of the troops in Etruria; that Rome fliould be fired in many places at once, and a muffacre begun at the fame time of the whole fenate and all their enemies, of whom none were to be spared except the fons of Pompey, who were to be kept as hofiages of their peace and reconciliation with their father; that in the confernation

of the fire and massacre, Cataline thould be ready with his Tufcan army to take the benefit of the public confusion, and make himself master of the city; where Lentulus in the meanwhile, as first in dignity, was to prefide in their general councils; Caffius to manage the affair of firing it; Cethegus to direct the maffacre. But the vigilance of Cicero being the chief obttacle to all their hopes, Cataline was very defirous to fee him taken off before he left Rome: upon which two knights of the company undertook to kill him the next morning in his bed, in an early vifit on pretence of butiness. They were both of his acquaintance, and ufed to frequent his house; and knowing his custom of giving free access to all, made no doubt of being readily admitted, as C. Cornelius, one of the two, afterwards confedled. The meeting was no fooner over, than Cicero had information of all that paffed in it: for by the intrigues of a woman named Fulvia, he had gained over Curius, ber gallant, one of the confpirators, of fenatorian rank, to fend him a punctual account of all their deliberations. He prefently imparted his intelligence to fome of the chiefs of the city, who were allembled that evening, as utual, at his house, informing them not only of the defign, but naming the men who were to execute it, and the very hour when they would be at his gate: all which fell out exactly as he foretold; for the two knights came before break of day, but had the mortification to find the house well guarded, and all admittance refused to them. Next day Cicero fummoned the fenate to the temple of Jupiter in the capitol, where it was not utually held but in times of public alarm. There had been feveral debates before this on the fame fubject of Cataline's treasons, and his defign of killing the conful; and a decree had pailed at the motion of Cicero, to offer a public reward to the first discoverer of the plot; if a flave, his liberty, and eight hundred pounds; if a citizen, his pardon, and fixteen hundred. YetCataline, by a profound diffirmulation, and the confant professions of his innocence, still deceived many of all ranks; reprefenting the whole as the fiction of his enemy Cicero, and offering to give fecurity for his behaviour, and to deliver himself to the custody of any whom the fenate would name: of M. Lepidus, of the prætor Metellus, or of Cicero himfelf; but none of them would receive him; and Cicero plainly told him, that he thould never think himself safe in the same house, when he was in danger by living in the fame city with him. Yet he still kept on the mask, and had the confidence to come to this very meeting in the capitol; which fo flocked the whole atlembly, that none even of his acquaintance durft venture to falute him : and the confular fenators quitted that part of the house in which he fat, and left the whole bench clear to him. Cicero was fo provoked by his impudence, that intread of entering upon any bufinefs, as he defigned, addrefling himfelf directly to Cataline, he broke out into the prefent most fevere invective against him; and with all the fire and force of an incenfed eloquence, laid open the whole courie of his villanies, and the notoriety of his treafens,

HOW far, O Cataline, wilt thou abuse our patience? How long shall the frantic rage hattle the efforts of justice? To what height meanest thou to carry thy daring infolence? Art thou nothing dounted by the noclurnal watch posted to secure the Palatium? nothing by the city guarda? nothing by the confernation of the people? nothing by the union of all the wife and worthy citizens? nothing by the fenate's affembling in this place of ftrength? nothing by the looks and countenances of all here prefent? Seeft thou not that all thy defigns are brought to light? that the fenators are thoroughly apprized of thy conspiracy? that they are acquainted with thy last night's practices; with the practices of the night before; with the place of meeting, the company fummoned together, and the measures concerted? Alas for our degeneracy! alas for the depravity of the times! the fenate is apprized of all this, the conful beholds it; yet the traitor lives. Lives! did I fay, he even comes into the fenate; he shares in the public deliberations; ha marks us ont with his eye for destruction. While we, bold in our country's cause, think we have fufficiently

inflicently discharged our duty to the flate, it we can but escape his rage and deadly darts. Long fince, O Cataline, ought the contacto have ordered thee for execution; and pointed upon thy own head that ruin thou half been long meditating against us all. Could that illuttrious citizen, Publius Scipio, fovereign pontiff, but invelted with no public magifiracy, kill Tiberius Gracchas for raning fome hight commotions in the commonwealth; and thall we confuls fuffer Cataline to live, who aims at laving watte the world with fire and fword? omit, as too remote, the example of Q. Servilius Ahala, who with his own hand flew Spurius Melius, for plotting a revolution in the state. Such, such was the virtue of this republic in former times, that her brave four punished more feverely a factious citizen, than the most inveterate public enemy. We have a weighty and vigorous decree of the fenate against you, Cataline: the commonwealth wants not wildom, nor this house authority : but we, the confuls, I fpeak it openly, are wanting in our duty.

A decree once passed in the fenate, enjoining the conful L. Opimius to take care that the commonwealth received no detriment. The very fame day Caius Gracchas was killed for fome flight fulpicions of treafon, though descended of a father, grandfather, and anceftors, all eminent for their fervices to the flate. Marcus Fulvius too, a man of confular dignity, with his children, underwent the fame fate. By a like decree of the fenute, the care of the commonwealth was commutted to the confuls C. Marius and L. Valerius. Was a fingle day permitted to pals, before I., Saturninus, tribune of the people, and C. Servilius the prætor, fatistied by their death the justice of their country? But we, for their twenty days, have fuffered the authority of the fenate to languish in our hands. For we too have a like decree, but it reflaamong our records like a fword in the feabbard; a decree, O Cataline, by which you ought to have fuffered immediate death. Yet fill you live ; nay more, you live, not to lay afide, but to harden yourfelf in your audacious guilt. I could with, conferint fathers, to be merciful; I could wish too not to appear remiss when my country is threatened with danger; but I now begin to reproach myfelt with negligence and want of courage. A camp is formed in Italy, upon the very borders of I trusm, againgft the commonwealth. The enemy increase daily in number. At the fame time we behold their general and leader within our walls; nay, in the fenate-house ittelt, plotting daily tome intestine milchief against the state. Should I order you, Cataline, to be infantly feized and put to death, I have reason to believe, good men would rather reproach me with flownels than cruelty. But at prefent certain reasons restrain me from this step, which indeed ought to have been taken long ago. Thou thalt then fuffer death, when not a mui is to be found, to wicked, to detperate, fo like thyfelf, as not to own it was done juilly. As long as there is one who dares to defend thee, thou fhalt live; and live fo as thou now doll, furrounded by the numerous and powerful guards which I have placed about thee, to as not to futler thee to fur a foot against the republic; whilst the eyes and ears of many thail watch thee, as they have hitherto done, when thou little thoughtest of it.

But what is it, Cataline, thou canft now have in view, if neither the obscurity of night can conceal thy traitorous affemblies, nor the walls of a private house provent the voice of thy treafon from reaching our ear? If all thy projects are difcovered and burst into public view? Quit then your deteitable purpoie, and think no more of matheres and configurations. You are befet on all hands; your most fecret councils are clear as noon-day; as you may eatily gather, from the detail I am now to give you. You may remember that on the nineteenth of October laft, I faid publicly in the fenate, that before the twenty-fifth of the fame month, C. Manlius, the confederate and creature of your guilt, would appear in arms. Was I deceived, Cataline, I fay not as to this enormous, this detetiable, this improbable attempt : but, which is full more furprizing, as to the very day on which it happened? I faid likewife, in the fenate, that you had fixed the twenty-fixth of the fame month for the maffacre of our nobles, which induced many citizens of the first rank to retire from Rome, not fo much on account of their own preservation, as with a view to baffle your deligns. Can you deny, that on that very fame day as you was fo belot by my vigilance, and the guards I placed about you, that you found it impolicie to attempt any thing against the thate; though you had given out, after the departure of the reft, that you would nevertheles nevertheless content yourfelf with the blood of those who remained? Nay, when on the first of November you considently hoped to surprize Praneste by night, did you not find that colony secured by my order, and the guards, officers, and garrifou I had appointed? There is nothing you either think, contrive, or attempt, but what I both hear, see, and plainly understand.

Call to mind only in conjunction with me, the transactions of last night. You will foon perceive, that I am much more active in watching over the prefervation than you in plotting the dettruction of the flate. I fay then, and fay it openly, that last night you went to the house of M. Lecca, in the firest called the Gladators: that you was met there by numbers of your affociates in guilt and madnets. Dare you deny this? Why are you tilent? If you disown the charge, I will prove it: for I fee fome in this very affembly, who were of your confederacy. Immortal gods! what country do we inhabit? what city do we belong to? what government do we live under? Here, here, confeript fathers, within these walls, and in this affembly, the most awful and venerable upon earth, there are men who meditate my ruin and yours, the destruction of this city, and confequently of the world itself. Myfelf, your conful, behold these men, and aik their opinions on public affairs; and infread of dooming them to immedi-Me execution, do not fo much as wound them with my tongue. You went then that night, Cataline, to the house of Lec-(a; you cantoned out all Italy; you appointed the place to which every one was to repair : you fingled out those who were to be left at Rome, and those who were to accompany you in perfon; you marked out the parts of the city defined to conflagration; you declared your purpole of leaving it foon, and faid you only waited alittle to fee me taken off. Two Roman khights undertook to cale you of that care, and attailinate me the fume night in bed before day-break. Scarce was your affembly difmitted, when I was informed of all this: I ordered an additional guard to attend, to fecure my house from affault; I refused admittance to those whom you feat to compliment me in the morning; and declared to many worthy perfors bebrehand who they were, and at what time I expected them.

Since then, Cataline, Juch is the flate of your affairs, finith what you have begun; quit the city; the gates are open; nobedy oppoles your retreat. The troops in Man-Lus's camp long to put themselves under your command. Carry with you all your confiderates; if not all, at leaft as many as possible. Purge the city. It will take greatly from my tears, to be divided from you by a wall. You cannot pretend to thay any longer with us : I will not bear, will not fuffer, will not allow of it. Great thanks are due to the immortal gods, and chiefly to thee, Jupiter Stator, the ancient protector of this city, for having already to often preferved us from this dangerous, this defiructive, this pellilent feourge of his country. The supreme fafety of the commonwealth ought not to be again and again expeled to danger for the take of a fugle man. While I was only conful elect, Cataline, I contented myfelf with guarding against your many plots, not by a punlie guard, but by my private vigilance. When at the lati election of confuls, you had refolved to affailinate me, and your competitors in the field of Mars, I defeated your wicked purpole by the aid of my friends, without diffurbing the public peace. In a word, as often as you attempted my life, I fingly opposed your fury; though I well flow, that my death would necessarily be attended with many figural calumities to the flate. But now you openly firike at the very being of the republic. The temples of the inamortal gods, the manfions of Rome, the lives of her citizens, and all the provinces of Italy, are doomed to flaughter and devastation. Since, therefore, I dare not purfue that courfe, which is most agreeable to ancient discipline, and the genius of the commonwealth, I will follow another, lefs fevere indeed as to the criminal, but more uleful in its confequences to the public. For should I order you to be immediately put to death, the commonwealth would full harbour in its botom the other confoirators; but by driving you from the city, I thall clear Rome at once of the whole baneful tribe of thy accomplices. How, Cataline! Do you belitate to do at my command, what you wasto lately about to do of your own accord? The conful orders a publie enemy to depart the city. You alk whether this be a real basithment? I fay not expressly to : but was I to advise in the cule, it is the best course you can take.

give you pleafure in this city? wherein, if we except the profligate crew of your accomplices, there is not a man but drouds and abhors you? Is there a domefile ftain from which your character is exempted? Have you not rendered yourfelf infamous by every vice that can brand private life? What feenes of luft have not your eyes beheld? What guilt has not frained your hands? What pollution has not defiled your whole body? What youth, entangled by thee in the allurements of debauchery, haft thou not prompted by arms to deeds of violence, or feduced by incentives into the fnares of fentuality? And lately, when by procuring the death of your former wife, you had made room in your house for another, did you not add to the enormity of that crime, by a new and unparalleled measure of guilt? But I pais over this, and chuse to let it remain in thence, that the memory of fo monftrous a piece of wickedness, or at least of its having been committed with impunity, may not defeend to pollerity. I puls over too the entire run of your fortunes, which you are tentible must befal you the very next month : and thall proceed to the mention of fuch particulars as regard not the infamy of your private character, nor the diffresses and turpitude of your domeine life; but fuch as concern the very being of the republic, and the lives and lafety of us all. Can the light of life, or the air you breathe, be grateful to you, Cataline: when you are confcious there is not a man here prefent but knows, that on the last of December, in the confulthip of Lepidus and Tullus, you appeared in the Comitium with a dagger? That you had got together a band of ruffians, to affaffinate the confuls, and the most considerable men in Rome? and that this execrable and frantir delign was defeated, not by any awe or remorfe in you, but by the prevailing good fortune of the people of Rome. But I pais over those things, as being already well known: there are others of a later date. How many attempts have you made upon my life, fince I was nominated conful, and tince I entered upon the actual execution of that office? How many thrufts of thine, fo well aimed that they feemed unavoidable, have I parried by an artful evalion; and, as they term it, a gentle defication of body? Yoursttempt, you contrive, you set on foot nothing of which I have not tamely information. Yet you

For what is there, Cataline, that can now we you pleafure in this city? wherein, if a except the profligate crew of your acomplices, there is not a man but drouds and abhors you? Is there a domefic than a which your character is exempted? I meamous ave you not rendered yourfelf infamous are every vice that can brand private life? That feenes of buft have not your every be-

What are we to think of your prefent fitnation and conduct? For I will now addrefs you, not with the detellation your actions deserve, but with a compassion to which you have no just claim. You came forne time ago into the fenate. Did a fingle person of this numerous affembly, not excepting your most intimate relations and friends, deign to fabute you? If there be no inflance of this kind in the memory of man, do you expect that I should embitter with reproaches, a doom confirmed by the filent deternation of all prefent?-Were not the benches where you fit forfaken, as foon as you was observed to approach them? Did not all the confular fenators, whose destruction you have so often plotted, guit immediately the part of the honfe where you thought proper to place yourfelt? How are you able to bear all this treatment? For my own part, were my flaves to discover such a dread of me, as your tellow-citizens express of you, I thould think it necellary to abandon my own house; and do you helitate about leaving the city? Was I even wrongfully Inspected, and thereby rendered obnoxious to my countrymen, I would fooner withdraw mysfelf from public view, than he beheld with looks full of reproach and indignation. And do you, whole conscience tells von that you are the object of an univerfal, a just, and a long merited hatred, delay a moment to elcape from the looks and prefence of a people, whose eves and fenfes can no longer endure you among them? Should your parents dread and hate you, and be obffinate to all your endeavours to appeale them, you would doubtlefs withdraw fornewhere from their fight. But now your country, the common parent of us all, bates and dreads you, and has long regarded you as a particide, intent upon the delign of defiroving her. And will you neither respect her authority, fubinit to her advice, nor fland in awe of her power? Thus does the reaion with you, Cataline; and thus does the, in fome meafure, address you by her filence; not an enormity has happened thefe many years, but but has had thee for its author: not a crime has been perpetrated without thee: the murder of fo many of our citizens, the eppretion and plunder of our allies, has through thee alone escaped punithment, and been exercifed with unreftrained violence; thou haft found means not only to trample upon law and justice, but even to subvert and defrey them. Though this past behaviour of thine was beyond all patience, yet have I borne with it as I could. But now, to be in continual apprehention from the alone; on every darm to tremble at the name of Cataline; to fee no deligns formed against me that speak not thee for their author, is altogether insupportable. Be gone, then, and rid me of my prefent terror; that, if just, I may avoid ruin; if groundlefs, I may at length ceale to fear,

Should your country, as I faid, address you in these terms, ought she not to find obedience, even supposing her unable to compel you to such a step? But did you not even offer to become a prifuner? Did you not fav, that, to avoid fulpicion, you would fubrait to be confined in the house of M. Lepidus? When he declined rereiving you, you had the affurance to come to me, and requelt you might be fecured at my house. When I likewife told you, that I could never think myfelf fate in the fame house, when I judged it even dangerous to be in the fame city with you, you applied to Q. Metellus the prator. Leing repulfed here too, you went to the excellent M. Marcellus, vour companion; who, no doubt, you imagined would be very watchful in contining you, very quick in differring your feeret practices, and very refolute in bringing you to justice. How juilly may we pronounce him worthy of ron and a jail, whose own conscience condenins him to reftraint? If it be fo then, Cataline, and you cannot submit to the thought of dying here, do you hefitate to letire to fome other country, and commit to flight and folitude a life, fo often and fo justly societed to thy country? But say you, put the question to the fenate (for to you affect to talk), and if it be their pleafire that I go into banithment, I am ready to obey. I will put no fuch queltion; it is contrary to my temper: yet will I give you an opportunity of knowing the fentiments of the fenate with regard to you. Leave the city, Cataline; deliver the republic from its fears; go, if you wait only in that word, into bandhment. Observe

now, Cataline; mark the filence and composure of the affembly. Does a fingle fenator remonitrate, or fo much as offer to speak? Is it needful they should confirm by their voice, what they fo expressly declare by their filence? But had I addrefled myfelt in this manner to that excellent youth P. Sextius, or to the brave M. Marcellus, the tenate would ere now have rifen up against me, and laid violent hands upon their conful in this very temple; and juitly too. But with regard to you, Cataline, their filence declares their approbation, their acquiescence amounts to a decree, and by faving nothing they proclaim their confent. Nor is this true of the fenators alone, whose authority you affect to prize, while you make no account of their lives; but of thefe brave and worthy Roman knights, and other illutrious citizens, who guard the avenues of the fenate; whose numbers you might have feen, whose fentiments you might have known, whose voices a little while ago you might have heard; and whole twords and hands I have for fome time with difficulty rettrained from your person: yet all these will I easily engage to attend you to the very gates, if you but confert to leave this city, which you have so long devoted to deftruction.

But why do I talk, as if your refolution was to be thaken, or there was any room. to hope you would reform! Can we ex-poct you will ever think of flight, or entertain the delign of going into banithment? May the immortal gods infoire you with that resolution! Though I clearly perceive, thould my threats frighten you into exile, what m florm of envy will light upon my own head; if not at prefent, whilit the memory of thy crimes is fresh, yet furely in future times. But I little regard that thought, provided the calamity falls on myfelf alone, and is not attended with any danger to my country. But to feel the flings of remorfe, to dread the rigour of the laws, to yield to the exigencies of the state, are things not to be expected from thee. Thou, O Cutaline, art none of those, whom shame reclaims from dithonourable purfuits, four from danger, or reason from madness. Begone then, as I have already often faid : and if you would fwell the measure of popular odium against me, for being, as you give out, your enemy, depart directly into banithment. By this thep you will bring upon me an infurportable load of censure;

nor shall I be able to fustuin the weight of the public indignation, mouldit thou, by order of the contai, retire into exile. But if you mean to advance my reputation and glory, march off with your abandoned crew of ruthans; repair to Manlius; roufe every desperate citizen to rebel; separate yourielf from the worthy; declare war against your country; trimiph in your improus depredations; that it may appear you was not forced by me into a foreign treafon, but voluntarily joined your affociates. But why should I urge you to this ttep, when I know you have already fent forward a body of armed men, to wait you at the Former Autelmen? When I know you have concerted and fixed a day with Minulius? When I know you have tent off the filver eagle, that domeftic thrine of your impieties, which I doubt not will bring ruin upon you and your accomplaces? Can you absent yourfelf longer from an idel to which you had reconfie in every bloody attempt? And from whose alters that impious right-hand was frequently transferred to the murder of your

countrymen? Thus will you at length repair, whither your frantic and unbridled rage has long been hurrying you. Nor does this iffue of thy plots give thee pain; but, on the contrary, fills thee with inexpreffible delight. Nature has formed you, inclination trained you, and fate referred you, for this desperate enterprite. You never took delight either in peace or war, unlefs when they were flagitious or defirmative. You have got together a band of ruffians and profligates, not only utterly abandoned of fortune, but even without hope. With what pleature will you enjoy yourfelf? how will you exult? how will you triumph? when among to great a number of your affeciates, you shall neither bear nor fee an honek man ! To attain the enjoyment of fuch a life, have you exercised yourfelf in all those toils, which are emphatically filled yours; your lying on the ground, not only in puriout of lewd amours, but of bold and hardy enterprifes; your treacherous watchindness, not only to take advantage of the humand's flumber, but to fpoil the numbered citizen. Here may you exert all that be and patience of hunger, cold, and want, by which, however, you will thorsty and yourfelf undone. So much have I gamed by excluding you from the contulthip, that you can only attack your country as an exile, not opposed

her as a conful; and your impious treases will be deemed the efforts, not of an enemy, but of a robber.

And now, confeript fathers, that I may obviate and remove a complaint, which my country might with fome appearance of justice urge against me, attend diligently to what I am about to fay, and treafure it up in your minds and hearts. flould my country, which is to me much dearer than life, should all Italy, should the whole trate thus accost me. What are you about, Marcus Tullius? Will you fuffer a man to etcape out of Rome, whom you have discovered to be a public enemy? whom you ice ready to enter upon a war against the state? whose arrival the confpirators wait with impatience, that they may put themtelves under his conduct? the prime author of the treafon; the contriver and manager of the revolt? the man who enlife all the flaves and ruined citizens he can find? will you futter him, I fay, to efcape; and appear as one rather fent against the city, than driven from it? will you not order him to be put in irons, to be dragged to execution, and to atone for his guilt by the most rigorous punishment? what refrains you on this occasion? is it the cufforn of our ancestors? But it is well known in this commonwealth, that even perions in a private flation have often put petitlent citizens to death. Do the laws relating to the panishment of Roman citizens hold youin awe? Certainly traitors against their country can have no claim to the privileges of citizens. Are you afraid of the reproaches of posterity? A noble proof indeed, of your gratitude to the Roman people, that you, a new man, who without any recommendation from your anceftors, have been raifed by them through all the degrees of honour, to fovereign digmity, thould, for the take of any danger to vourfelf, neglect the care of the public fufety. But if cenfore be that whereof you are afraid, think which is to be most apprehended, the confure incurred for having acted with firms, is and cour ... or that for having acled with floth and putillanimity? When Italy shall be laid desolate with war, her cities plundered, her dwellings on fire; can you then hope to escape the flames of public indignation?

To this most facred voice of my country, and to all those who blune me after the same manner. I shall make this short reply: That it I had thought it the most advisable to put Cataline to death. I

would

would not have allowed that gladiator the ule of one moment's life. For if, in former days, our greatest men, and most illustrious citizens, initead of fullying, have done hopour to their memories, by the detiruction of Saturninus, the Gracchi, Flaccus, and many others; there is no ground to fear, that by killing this parricide, any envy would lie upon me with potterity. Yet if the greatest was sure to befal me, it was always my perfuntion, that envy acquired by virtue was really glory, not knyy. But there are fonce of this very order, who do not either fee the dangers which hang overus, or elle diffemble what they fee; who, by the foftness of their votes, cherith Cataline's hopes, and add tirength to the confpiracy by not believing it; whose authorsty influences many, not only of the wicked, but the weak; who, if I had punithed this man as he deferved, would not have failed to charge me with aching cruelly and tyrannically. Now I am perfuaded, that when he is once gone into Manlius's camp, whither he actually defigns togo, none can be foully, us not to fee that there is a plot; none to wicked, as not to acknowledge it: whereas by taking off him alone, though this petidence would be formewhat checked, it could not be suppreffed: but when he has thrown himfelf iato rebellion, and carried out his friends along with him, and drawn together the profigate and desperate from all parts of the empire, not only this ripened plugue of the republic, but the very root and feed of all our evils, will be extirpated with him

It is now a long time, confeript fathers, that we have trud amidit the dangers and mechinations of this confpiracy : but I know not how it comes to pais, the full maturity of all those crimes, and of this log ripening rage and infolence, has now broke out during the period of my confulthip. Should be alone be removed from this powerful band of traitors, it may abate, perhaps, our fears and anxieties for a while; but the dunger will flill remain, and continue larking in the veins and vitals of the republic. For as men oppresed with a fevere fit of illness, and labowing under the raging heat of a fever, are often at first seemingly relieved by a traught of cold water, but afterwards find the difease return upon them with redoubled tury; in like manner, this differencer which has ferzed the commonwealth, essec a fittle by the punishment of this traitor, will from his furviving affociates foon allume new force. Wherefore, confeript fathers, let the wicked retire, let them feparate themselves from the honest, let them rendezvous in one place. In fine, as I have often faid, let a wall be between them and us: let them ceafe to lay frages for the comul in his own house, to befet the tribunal of the city prætor, to inveit the fenate-house with armed ruffians, and to prepare fire-balls and torches for burning the city: in thort, let every man's fentiments with regard to the public be inferibed on his torchead. This I engage for and promife, confeript fathers, that by the diligence of the confuls, the weight of your authority, the courage and firmine's of the Roman knights, and the ununimity of all the honeit, Cutaline being driven from the city, you shall behold all his treafons detected, exposed, crushed, and punished, With thefeomens, Cataline, of all profperity to the republic, but of defiruction to thyfelt, and all those who have joined themfelves with thee in all kinds of parricide, go thy way then to this impious and abominable war: whilst thou, Jupiter, whose religion was established with the foundation of this city, whom we truly call Stator, the flay and prop of this empire, will drive this man and his accomplices from thy alters and temples, from the houses and walls of the city, from the lives and fortunes of us all; and wilt defroy with eternal punithments, both living and dead, all the haters of good men, the enemies of their country, the plunderers of Italy, now confederated in this detellable league and partnerthip of villany.

Whitworth's Cicero.

§ 6. Oration against Cataline.

THE ARGUMENT.

Cataline, aftonished by the thunder of the latt speech, had little to say for himself in answer to it; yet with downcast looks, and suppliant voice, he begged of the fathers, not to believe too hattily what was faid againft him by an enemy; that his birth and past life offered every thing to him that was hopeful; and it was not to be imagined, that a man of patrician tamily, whose ancestors, as well as himfelf, had given many proofs of their affection to the Roman people, thould want to overturn the government; while Cicero, a thranger, and late

late inhabitant of Rome, was fo zealous to preferve it. But as he was going on to give foul language, the fenate interrupted him by a general outery, calling him traitor and parmeide: upon which, being furious and desperate, he declared again aloud what he had faid before to Cato, that fuice he was circumivented and driven headlong by his enemies, he would quench the flame which was raifed about him by the common ruin; and fo rufhed out of the affembly. As foon as he was come to his house, and began to reflect on what had paffed, perceiving it in vain to diffemble any longer, he refolved to enter into action immediately, before the troops of the republic were increased, or any new levies made: fo that after a thort conference with Lentulus, Cethegus, and the rest, about what had been concerted in the last meeting, having given fresh orders and affurances of his speedy return at the head of a ftrong army, he left Rome that very night with a fmall retinue, to make the best of his way towards Etruria. He no fooner disappeared, than his friends gave out that he was gone into a voluntary exile at Marfeilles, which was industriously spread through the city the next morning, to raife an odium upon Cicero, for driving an innocent maninto banithment, without any previous trial or proof of his guilt. But Cicero was too well informed of his motions, to entertain any doubt about his going to Manlius's camp, and into actual rebellion. He knew that he had fent thither already a great quantity of arms, and all the entigns of military command, with that filver eagle which housed to keep with great fuperitition in his house, for its having belonged to C. Marins, in his expedition against the Cimbri. But left the story should make an ill impresion on the city, he called the people together into the forum, to give them an account of what passed in the fenate the day before, and of Cataline's leaving Rome upon it. And this makes the fubject of the oration now before us.

AT length, Romans, have we driven, discarded, and pursued with the keenest

reproaches to the very gates of Rome, L. Cataline, intoxicated with fury, breathing mitchies, impioutly plotting the defirection of his country, and threatening to lay wafe this city with fire and fword. He is gone, he is fled, he has escaped, he has broke away. No longer shall that montler, that prodicy of mitchief, plot the ruin of this city within her very walls. We have gained a class conqueit over this chief and ringleader of domestic broils. His threatening the er is no longer pointed at our brealis, nor shall we now any more tremble in the field of Mars, the forum, the fenate-house, or within our domestic walls. In driving him from the city, we have forced his most advantageous post. We shall now, without opposition, carry on a just war against an open enemy. We have effectually ruined the man, and gained a glorious victory, by driving him from his fecret plots into open rebellion. But how do you think he is overwhelmed and crashed with regret, at carrying away his dagger unbathed in blood, at leaving the city before he had effected my death, at feeing the weapons prepared for our destruction wrested out of his hands; in a word, that Rome is ftill flanding, and her citizens fafe. He is now quite overthrown, Romans, and perceives himfelf impotent and despised, often casting back his eves upon this city, which he fees, with regret, refcued from his destructive jaws; and which feems to me to rejoice for having difgorged and rid herfelf of fo peftilent a

But if there beany here, who blameme for what I am boatting of, as you all indeed juftly may, that I did not rather feize than fend away fo capital an enemy: that is not my fault, citizens, but the fault of the times. Cataline ought long ago to have fuffered the last punishment; the cultom of our ancestors, the discipline of the empire, and the republic itself required it: but how many would there have been, who would not have believed what I charged him with? How many, who, through weakness, would never have imagined it? how many, who would even have defended him? how many, who through wickedness, would have expoused his cause? But had I judged that his death would have put a final period to all your dangers, I would long ago have ordered him to execution, at the hazard not only of public centure, but even of my life. But why a I faw, that by fentencing hun to the

all fully convinced of his guilt, I flould have drawn upon invielf fuch an odium, as would have rendered me unable to profecute his accomplices; I brought the matter to this point, that you might then openly and vigoroutly attack Cataline, when he was apparently become a public enemy. What kind of an enemy I judge him to be, and how formidable in his attempt, you may learn from hence, citizens, that I am only forry he went off with fo few to attend him. I with he had taken his whole forces along with him. He has carried off Tongillus indeed, the object of his criminal pattion when a youth; he has likewife carried off Publicies and Munatims, whose tuvern debts would never have occasioned any commotions in the state. But how important are the men he has left behind him! how oppressed with debt, how powerful, how illustrious by their delcent!

When, therefore, I think of our Gallic legions, and the levies made by Metellus in Picenum and Lombardy, together with those troops we are daily raising; I hold is after contempt that army of his, compoled of wretched old men, of debauchees from the country, of ruftic vagabonds, of fach as have fled from their bail to take fielter in his camp: men ready to run away not only at the fight of an army, but of the prator's edict. I could with he and likewife carried with him those whom I fee fluttering in the forum, fauntering about the courts of justice, and even taking their places in the fenate; men fleck with perfirmes, and thining in purple. It thefe fall remain here, mark what I fay, the deferters from the army are more to be dreaded than the army itself; and the time fo, because they know me to be infemed of all their defigns, yet are not in the least moved by it. I behold the perin to whom Applia is allotted, to whom Etroria, to whom the territory of Picenom, to whom Cifulpine Gaul. I fee the man who demanded the talk of fetting kee to the city, and filling it with flaughto. They know that I am acquainted with all the feerets of their latt nocturnal freeling: I laid them open yesterday in the fenate : Caraline himfelf was debeartened, and fled; what then can thefe others mean? They are much mistaken if they imagine I thall always use the same

I have at last gained what I have hi-

death he deferved, and before you were therto been waiting for, to make you all fentible, that a confpiracy is openly formed against the state: unless there be any one who imagines, that fuch as refemble Cataline may yet refule to enter into his defigns. There is now therefore no more room for clemency, the cafe ufelf requires feverity. Yet I will flill grant them one thing; let them quit the city, let them . follow Cataline, nor fuffer their miferable leader to languith in their abience. Nav. I will even tell them the way; it is the Aurelian road : if they make hafte, they may overtake him before night. O happy state, were it but once drained of this link of wickedness! To me the absence of Cataline alone feems to have reftored freth beauty and vigour to the commonawealth. What villany, what mitchief can be devifed or imagined, that has not entered into his thoughts? What prifoner is to be found in all Italy, what clasdiator, what robber, what affailin, what parricide, what forger of wills, what tharper, what debauchee, what fouunderer, what adulterer, what hariot, what corrupter of youth, what corrupted wretch, what abandoned criminal, who will not own an intimate familiarity with Cataline? What murder has been perpetrated of late years without him? What act of leadness freaks not him for its author? Was ever man polleffed of fuch talents for corrupting youth? To fome he protututed himself unnaturally; for others he indulged a criminal passion. Many were allured by the profpect of unbounded enjoyment, many by the promife of their parent's death; to which he not only incited them, but even contributed his affidance. What a productions number of profligate wretches has he just now drawn toucther, not only from the city, but also from the country? There is not a perion oppressed with debt, I will not fay in Rome, but in the remotest corner of all Italy, whom he has not engaged in this unparalleled contederacy of cult.

But to make you acquainted with the variety of his talents, in all the different kinds of vice; there is not a gladiator in any of our public fehoois, remarkable for being andactous in mifchief, who does not own an intimacy with Cataline : not a player of diffinguithed impatience and guilt, but openly boafts of having been his companion. Let this man, trained up in the continual exercise of lewdness and villany, while he was waiting in riot and debau-

Tt

chert

chery the means of virtue, and supplies of industry, was extelled by these his affociates for his fortitude and putience in tupporting cold, hunger, thirth, and watchings. Would his companions but follow him, would this profligate crew of defperate men but leave the city; how happy would it be for us, how fortunate for the commonwealth, how glorious for my confulfhip? It is not a moderate degree of depravity, a natural or supportable meafure of guilt that now prevails. Nothing lefs than murders, rapines, and conflagrations employ their thoughts. They have fquandered away their patrimonies, they have waited their fortunes in debauchery; they have long been without money, and now their credit begins to fail them; yet ftill they retain the same defires, though deprived of the means of enjoyment. Did they, amidit their revels and gaming, affect no other pleasures than those of lewdnels and feathing, however desperate their eale must appear, it might itil notwithflanding be borne with. But it is altogether infufferable, that the cowardly fhould pretend to plot against the brave, the foolish against the prudent, the drunken against the sober, the drowly against the vigilant; who folling at feaths, embracing mittrelles, staggering with wine, stofied with victuals, crowned with garlands, daubed with perfumes, wasted with intemperance, beich in their convertations of maffacring the honest, and firing the city. Over fach, I truit, forme dreadful fatality now hangs; and that the vengeance to long due to their villany, baseness, guilt, and crimes, is either juit breaking, or juit ready to break upon their heads. If my confulthip, fince it cannot cure, thould cut off all thefe, it would add no finall period to the duration of the republic. For there is no nation, which we have reason to fear; no king, who can make war upon the Roman people. All diffurbances abroad, both by land and fea, are quelled by the virtue of one man. But a domestic war fiell remains: the treafon, the danger, the enemy is within. We are to combut with luxury, with madness, with villany. In this war I proteis mylelf your leader, and take upon invfelf all the animolity of the desperate. Whatever can possibly be healed, I will heal; but what ought to be cut off, I will never fuffer to spread to the ruin of the city. Let them therefore dopart, or be at reft; but if they are refeived both to remain in the

city, and continue their wonted practices, let them look for the punishment they deferve.

But fome there are, Romans, who affert, that I have driven Cataline into banithment. And indeed, could words compais it, I would not fcruple to drive them into exile too. Cataline, to be fure, was fo very timorous and modeft, that he could not thand the words of the conful; but being ordered into banithment, immediately acquiesced and obeyed. Yesterday, when I ran fo great a hazard of being murdered in my own house, I affembled the fenate in the temple of Jupiter Stator. and laid the whole affair before the confcript fathers. When Cataline came this ther, did to much as one fenator accost or falute him? In fine, did they regard him. only as a desperate citizen, and not rather as an outrageous enemy? Nav, the confular fenators quitted that part of the house where he fat, and left the whole bench clear to him. Here I, that violent conful. who by a fingle word drive citizens into banishment, demanded of Cataline, whether he had not been at the nocturnal meeting in the house of M. Lecca. And when he the most audacious of men, struck dumb by felf-conviction, returned no answer, I laid open the whole to the fenate; acquainting them with the transactions of that night; where he had been, what was referred for the next, and how he had fettled the whole plan of the war. As he appeared difconcerted and fpeechlefs, I niked what handered his going upon an expedition, which he had follong prepared for; when I know that he had already fent before him arms, axes, rods, trumpets, military entigns, and that filver eagle, to which he had taited an impious altar in his own house. Can I be faid to have driven into banishment a man who had already commenced hostilities against his country? Or is it credible that Manlius, an obscure centurion, who has pitched his camp epon the plains of Fefulæ, would declare war against the Roman people in his own name: that the forces under him do not now expect Cataline for their general: or that he, submitting to a voluntary banithment, has, as fome pretend, repaired to Marfeilles, and not to the before-meationed camp?

O wretched condition! not only of governing, but even of preferring the finte. For should Cataline, discouraged and disconcerted by my councils, vigilance, and

Arenuous

frennous care of the republic, be feized with a fudden dread, change his refolution, defert his party, quit his hoftile defigns, andaiter his courte of war and guilt, into that of thight and banishment; it will not then be faid, that I have wrefled out of his hands the weapons of infolence, that I have allowified and confounded him by my diligence, and that I have driven hun from all his hopes and fchemes: but he will be confidered as a man unocent and uncondemned, who has been forced into banthment by the threats and violence of the conful. Nav there are, who in this event, would think him not wicked butunhappy; and me not a vigilant conful, but a cruel tyrant. But I little regard this ftorm of bitter and underferved centure, provided I can fereen you from the danger of this dreadful and impious war. Let him only go into banithment, and I am content it be afcribed to my threats. But believe me, he has no defign to go. My defire of avoiding public envy, Romans, shall never induce me to wish you may hear of Cutaline's being at the bead of an army, and travering, in a hoftile manner, the territories of the republic, But assuredly you will hear it in three days; and I have much greater reason to fear being centured for letting him escape, than that I forced him to quit the city, But if men are fo perverfe us to complain of his being driven away, what would they have faid if he had been put to death? let there is not one of those who talk of his going to Marfeilles, but would be forry for it if it was true; and with all the contern they express for him, they had much futher hear of his being in Manlius's ramp. As for himfelf, had he never beto thought of the project he is now enpard in, yet fuch is his particular turn of med, that he would rather fall as a robbe, than live as an exile. But now, as anthing has happened contrary to his expeciation and delire, except that I was left alive when he quitted Rome; let us tather wish he may go into banishment, then complain of it.

But why do I speak so much about one enemy? An enemy too, who has openly proclaimed himself such; and whom I no longer dread, since, as I always wished, there is now a wall between us. Shall I say nothing of those who dillemble their treason, who continue at Rome, and mingle in our assemblies? With regard to these, indeed, I am less intent upon ven-

geance, than to reclaim them, if possible, from their errors, and reconcile them to the republic. Nor do I perceive any difficulty in the undertaking, if they will but litten to my advice. For, first, I will shew you, citizens, of what different forts of men their forces confift, and then apply to each, as far as I am able, the most powerful remedies of perfusion and eloquence The first fort confists of those, who having great debts, but ftill greater poffessions, are fo passionately fond of the latter, that they cannot bear the thought of infringing them. This, in appearance, is the most honourable class, for they are rich: but their intention and aim is the most infamous of all. Art thou diftinguished by the possession of an estate, houses, money, flaves, and all the conveniencies and fuperfluities of life; and doft thou ferupla to take from thy possessions, in order to add to thy credit? For what is it thou expected? Is it war? and doft thou hope thy possessions will remain unviolated, amidft an universal invasion of property? Is it new regulations about debts thou haft in view? "Tis an error to expect this from Cataline. New regulations shall indeed be proffered by my means, but attended with public auctions, which is the only method to preferve those who have effectes from ruin. And had they confented to this expedient fooner, nor foolishly run out their citates in mortgages, they would have been at this day both richer men, and better citizens. But I have no great dread of this class of men, as believing they may be easily difengaged from the conspiracy; or, should they perfift, they feem more likely to have recourfe to imprecations than arms.

The next class confins of those, who though oppressed with debt yet hope for power, and afpire at the chief management of public affairs; imagining they shall obtain these hopours by throwing the flate into confusion, which they despair of during its tranquillity. To these I thall give the same advice as to the rest, which is, to quit all hope of fucceeding in their attempts. For, first, I myfelf am watchful, active, and attentive to the interest of the republic: then there is on the fide of the honest party, great courage, great unanimity, a vaft multitude of citizens, and very numerous forces: in fine, the immortal gods themselves will not fail to interpole in behalf of this unconsucred people, this illustrious empire, this fair Tto

city, against the daring attempts of guilty visionee. And even importing them to accomplish what they with fo much frantic rage defire, do they hope to ipring up contuis, dictators, or kings, from the athes ot a city, and blood of her citizens, which with to much treachery and facrilege they have contrared to fpill? They are ignorant of the tendency of their own delices, and that, in case of success, they must themfelves tall-a prey to fome fugitive or gladiator. The third class confits of men of advanced age, but hardened in all the exercites of war. Of this fort is Manlius, whom Cataline now fucceeds. Thefe come mostly from the colonies planted by Sylla at Fefulæ; which, I am ready to allow, confift of the best citizens, and the braveft men; but coming many of them to the fudden and unexpected policilion of great wealth, they run into all the excelles of lexery and profution. There, by building fine houles, by affluent hving, fplendid equipages, numerous attendants, and fumptuous entertainments, have plunged themselves to deeply indebt, that, in order to retrieve their affairs, they must recal Sylla from his tomb. I fay nothing of those needy indigent rufiles, whom they have gamed over to their party, by the hopes of feeing the scheme of rapine renewed; for I confider both in the fame habt of robbers, and plunderers. But I muste them to deep their frautic ambition, and think no more of dictatorthips and proferiptions. Fer to deep an imprettion have the calamities of those times made upon the frate, that not only men, but the very beans would not bear a repetition of fuch outrages.

The fourth is a mixt, motley, mutinous trate, who have been long ruined beyond hopes of recovery; and, partly through indolence, partly through ill management, partly too through extravagance, droop beneath a load of ancient debt; who, perfecuted with arrefts, judgments, and confiscations, are faid to refort in great numbers, both from city and country, to the enemy's camp. These I consider, not as brave foldiers, but dispirited bankrupts. If they cannot support themselves, let them even fall: yet fo, that neither the city nor neighbourhood may receive any thock, For I am unable to perceive why, if they cannot live with bonour, they should chuse to die with infainy: or why they thould fancy it less painful to die in company with others, than to perits by themielyes.

The fifth fort is a collection of parricides, athdins, and ruthans of all kinds; whom I atk not to abandon Catalian, as knowing them to be inseparable. Let these even peralt in their robberies, fince their number is fo great, that no prison could be found large enough to contain them. The last class, not only in this enumeration, but likewife in character and morals. are Cataline's peculiar allociates, his choice companions, and botom triends: fuch as you fee with curled locks, neat array, beardlefs, or with beards nicely trimmed; in full drefs, in flowing robes, and wearing mantles inflead of gowns; whole whole labour of life, and industry of watching, are exhaufted upon midnight entertainments. Under this clais we may rank all gametiers, whorematters, and the lewd and lutiful of every denomination. These thin, delicate youths, practited in all the arts of miting and allaving the amorous fire, not only know to ting and dance, but on occasion can aim the murdering dagger, and administer the poisonous draught. Unless these depart, unless these perish, know, that was even Cataline himfelf to fall, we shall full have a nurfery of Catalines in the flate. But what can this miferable race have in view? Do they propole to carry their wenches along with them to the camp? Indeed, how can they be without them these cold winter nights? But have they confidered of the Appennine froits and fnows? or do they imagine they will be the abler to endura the rigours of winter, for having learned to dance naked at revels? O formidable and tremendous war! where Cataline's prætorian guard confifts of fuch a diffelute, effeminate crew.

Against these gallant troops of your adverfary, prepare, O Romans, your garrifons and armies : and, first, to that battered and mained gladiator, oppole your confuls and generals: next, against that outcall milerable crew, lead forth the flower and firength of all Ituly. The walls of our colonies and free towns will cafely refift the efforts of Cataline's ruffic troops. But I ought not to run the parallel farther, or compare your other refources, preparations, and defences, to the indigence and nakedness of that robber. But if omitting all those advantages of which we are provided, and he defittute, as the fenate, the Roman knights, the people, the city, the treasury, the public revenues, ail Italy, all the provinces, foreign states; I

fay, if constling all thefe, we only compare the contending parties between themtelves, it will foon appear how very low our enemies are reduced. On the one fide modefty contends, on the other petulance; here chattity, there pollution: here integrity, there treachery : here piety, there profunencia: here resolution, there rage: here honour, there bafeness; here moderation, there unbridled licentionium's : in hort, equity, temperadoe, fortitude, prudence, firnggle with iniquity, laxury, cow-·ardice, rathrels; every virtue with every vice. Lastly, the contest lies between wealth and indigence, found and deprayed reason, thrength of understanding and trenzy; in fine, between well-grounded hope and the tuot absolute despair. In such a conslict and thruggle as this, was even human aid to fail, will not the immortal gods enable such illustrious virtue to triumph over such complicated vice?

Such, Romans, being our prefent fituetion, do you, as I have before advised, watch and keep gnard in your private houses; for as to what concerns the public tranquillity, and the defence of the city, have taken care to fecure that, without tumult or alarm. The colonies and mumeipal towns, having received notice from me of Cataline's nocturnal retreat, will be upon their guard against bim. The band of gladiators, whom Cataline always depended upon, as his bett and fureft support, though in truth they are better affected than fome part of the patricians, are netertbelefs taken care of in fuch a manner, as to be in the power of the republic. Q. Metellus the prætor, whom, forefeeing Cataline's flight, I fent into Goul and the dilinit of Picenum, will either wholly cruth the traiter, or baffle all his motions and attempts. And to fettle, ripen, and bring al other matters to a conclusion, I am juff going to lay them before the fenate, which you fee now affembling. As for those therefore who continue in the city, and were left behind by Cataline, for the defination of it and us all; though they are memies, vet as by birth they are likewife fellow-citizens, I again and again admonish them, that my lenity, which to fome may have rather appeared remittinefs, has been waiting only for an opportunity of demonstrating the certainty of the plut, As for the roft, I shall never forget that this is my country, that I am its conful, and that I think it my duty either to live with my countrymen, or die for them.

There is no guard upon the gates, none to watch the roads; it any one has a mind to withdraw hintelf, he may go wherever he pleates. But whoever makes the lead für within the city, to as to be caught not only in any overt act, but even in any plot or attempt against the republic, he shall know that there are in it vigilant contais, excellent magnificates, and a refolute senate; that there are min, and a prison, which our ancestors provided, as the avenger of manifest and attractions crimes.

. And all this thall be transacted in fucla a manner, citizens, that the greatest diforders shall be queiled without the least hurry; the greatest dangers without any tunnelt; a donreftic and intentine war, the most cruel and desperate of any in our memory, by me, your only leader and general, in my gown ; which I will manage to, that, as far as it is pullible, not one even of the guilty, thail futler punishment in the city: but if their audaciouinels and my country's danger thould necessarily drive me from this mild refolution, yet I will effect, what in to cruel and treacherons II war could hardly be hoped for, that not one honest man shall fall, but all of you be fule by the punishment of a few. This I prounfe, citizens, not from any confidence in my own prudence, or from any human countels, but from the many evident declarations of the gods, by whose impulie I am led into this perfuntion; who affift us, not as they used to do, at a diffance, against foreign and remote enemies, but by their prefent help and protection defend their temples and our houses. It is your part therefore, citizens, to worthip, implore, and pray to them, that fince all our enemies are now inbdued, both by land and fea, they would continue to preferve this city, which was deligned by them for the most beautiful, the most flourishing, and most powerful on earth, from the deteltable treatures of its own desperate citizens. B latworth's Civero,

5 7. Oration against Cataline.

THE ARGUMENT.

Cataline, as we have feen, being forced to leave Rome, Lentulus, and the reit who remained in the city, began to prepare all things for the execution of their grand delign. They folicited men of all ranks, who bestied likely to favour their cause, or to

be of any use to it; and among the reft, agreed to make an attempt on the ambaliadors of the Allobrogians, a warlike, mutinous, faithless people, inhabiting the countries now called Savoy and Dauphiny, greatly disuffested to the Roman power, and already ripe for rebellion. There ambailadora, who were preparing to return home, much out of humour with the fenate, and without any redrefs of the grievances which they were fent to complain of, received the propofal at first very greedily, and promifed to engage their nation to affit the confpirators with what they prinespally wanted, a good body of horfe, whenever they should begin the war: but reflecting afterwards, in their cooler thoughts, on the difficulty of the enterprize, and the danger of involving themselves and their country in so desperate a cause, they resolved to discover what they knew to Q. Fabius Sanga, the patron of their city, who immediately gave intelligence of it to the conful. Cicero's instructions upon it were, that the ambaffadors thould continue to feign the same seal which they had hitherto flewn, and promife every thing which was required of them, till they had got a full infight into the extent of the plot, with diffinct proofs against the particular actors in it: upon which, at their next conference with the conspirators, they insitted on having fome credentials from them to flew to their people at home, without which they would never be induced to enter into an engagement fo hagardons. This was thought reasonable, and prefently complied with, and Vultureius was appointed to go along with the ambuffadors, and introduce them to Cataline on their road, in order to confirm the agreement, and exchange affurances also with him; to whom Lentulus fent at the same time a particular letter upder his own hand and feal, though without his name. Cicero being punctually informed of all thefe facts, concerted privately with the ambaffadors the time and manner of their leaving Rome in the night, and that on the Milvian bridge, about a mile from the city, they should be arrested, with their papers and letters

about them, by two of the prators, L. Flaceus and C. Pontinius, whom he had instructed for that purpose, and ordered to lie in amouth near the place, with a ftrong guard of friends and foldiers; all which was fuccefsfully executed, and the whole company brought prifoners to Cicero's house by break of day. The rumour of this accident prefently drew a refort of Cicero's principal friends about him, who advised him to open the letters before he produced them in the fenute, left, if nothing of moment were found in them, it might be thought rash and imprudent to raise an unnecettary terror and alarm through the city. But he was too well informed of the contents, to fear any censure of that kind; and declared, that in a case of public danger, he thought it his duty to lay the matter entire before the public council. He fummoned the fenate therefore to meet immediately, and fent at the same time for Gabinius, Statilins, Cethegus, and Lentulus, who all came prefently to his house, suspecting nothing of the difcovery; and being informed also of a quantity of arms provided by Cethegus for the use of the conspiracy, he ordered C. Sulpicius, another of the prætors, to go and fearch his house, where he found a great number of fwords and daggers, with other arms, all newly cleaned, and ready for prefent fervice. With this preparation he fet out to meet the fenate in the temple of Concord, with a numerous guard of citizens, carrying the ambatiadors and the confrirators with him in cuttody; and after he had given the affembly an account of the whole affair, the feveral parties were called in and examined, and an ample difcovery made of the whole progress of the plot. After the criminals and witnesles were withdrawn, the fenate went into a debate upon the state of the republic, and came unanimously to the following refolutions: That public thanks should he decreed to Cicero in the amplet manner, by whose virtue, countel, and providence, the republic was delivered from the greatest dangers; that Flaccus and Pontinius, the prators, should be thanked likewife, for their vigorous and punctual execu-

tion of Cicero's orders: that Antonius, the other conful, thould be praifed, for having removed from his counsels all those who were concerned in the confpiracy: that Lentulus, after having abdicated the pratorfhip, and divetted himfelf of his robes; and Cethegus, Statilus, and Gabinius, with their other accomplices alfo when taken, Cathus, Caparius, Furius Chile, and Umbrenus, thould be committed to fafe cuftody; and that a public thankfgiving should be appointed in Cicero's name, for his having preferved the city from a conflagration, the citizens from a maffacre, and Italy from a war. 'I be fenate being difmitted, Cicero went directly into the Roftra; and, in the following speech, gave the people an acmade, with the refolutions of the fenate confequent the reupon.

TO-Day, Romans, you behold the commonwealth, your lives, chates, fortunes, your wives and children, the august feat of this renowned empire, this fair and flourishing city, preferved and restored to you, refcued from fire and fword, and almost snatched from the jaws of sate, by the diffinguithed love of the immortal gods towards you, and by means of my toils, counfels and dangers. And if the days in which we were preferved from ruin, be no less joyous and memorable than those of our birth; because the pleasure of deliverance is certain, the condition to which we are born uncertain; and because we enter upon life without confciousness, but are always fenfible to the joys of prefervation: furely, fince our gratitude and effeem for Romulus, the founder of this city, has induced us to rank him amongst the immortal gods, he cannot but merit bosour with you and posterity, who has preferved the fame city, with all its acceffions of firength and grandeur. For we have extinguished the flames that were diperfed on all fides, and just ready to but the temples, fanctuaries, dwellings, and walls of this city; we have blunted the fwords that were drawn against the flate; and turned afide the daggers that were pointed at your throats. And as all thefe particulars have been already explained, cleared, and fully proved by me in the fenate; I shall now, Romans, lay them briefly before you, that such as are ftrangers

to what has happened, and wait with impatience to be informed, may understand what a terrible and manifell defiruction hung over them, how it was traced out. and in what manner discovered. And first, ever fince Cataline, a few days ago, fled from Rome; as he left behind him the partners of his treuton, and the buldeft champions of this execrable war, I have always been upon the watch, Romans, and fludying how to fecure you amidft fuch dark and complicated dangers.

For at that time, when I drove Cataline from Rome (for I now dread no reproach from that word, but rather the centure of having fuffered him to escape alive) I fay, when I forced him to quit Rome, I naturally concluded, that the rest of his accomplices would either follow him, or, being deprived of his atliffance, would proceed with lefa count of the discovery that had been, vigour and firmness. But when I found that the most daring and forward of the confpirators ftill continued with us, and remained in the city, I employed myfelf night and day to unravel and fathom all their proceedings and defigns; that fince my words found less credit with you, because of the inconceivable enormity of the treafon, I might lay the whole fo clearly before you, as to compel you at length to take measures for your own fasety, when you could no longer avoid feeing the danger that threatened you. Accordingly, when I found that the ambaffadors of the Allobrogians had been folicited by P. Lentulus to kindle a war beyond the Alps, and raife commotions in Hither Gaul; that they had been fent to engage their flate in the conspiracy, with orders to conser with Cutaline by the way, to whom they had letters and inflructions; and that Vultureius was appointed to accompany them, who was likewife entruited with letters to Cataline: I thought a fair opportunity offered, not only of fatisfying myfelf with regard to the conspiracy, but likewise of clearing it up to the fenate and you, which had always appeared a matter of the greatest difficulty, and been the confiant fubject of my prayers to the immortal gods. Yesterday, therefore, I fent to the practors I.. Flaceus, and C. Pontinius, men of known courage, and diffinguithed zeal for the republic. I laid the whole matter before them, and made them acquainted with what I defigned. They, full of the nobject and most generous fentiments with regard to their country, undertook the butinel's without delay or helitation; and upon

Tta

the approach of night, privately repaired to the Milyian bridge, where they dispoted themfelves in fuch manner in the neighbouring villages, that they formed two bodies, with the river and bridges between them. They likewife carried along with them a great number of brave foldiers. without the least furnicion; and I dispatched from the professione of Reute feveral chofen youths well armed, whole affittance I had frequently used in the defence of the commonwealth. In the mean time, towards the close of the third watch, as the deputies of the Allobrogians, accompanied by Vultureius, began to rafe the bridge with a great relimit, our mencaine out against them, and fwords were drawn on 1 oth fides. The affair was known to the protect alone, none elfe being adoutted into the fecret.

Led into the learet.

Upon the coming up of Pontinius and Flacers, the conflict ceased; all the letters they carried with them were delivered feeled to the protors; and the deputies. with their whole retinue being feized, were brought before me towards the dawn of day. I then feat for Gabinius Cimber, the contriver of all their deteftable treatons, who faspected nothing of what had passed: L. Statilius was funmoned next, and then Cethegus: Lentulus came the hall of all, probably because, contrary to custom, he had been up the greatest part of the night before, making out the dispatches. Many of the greatest and most illustrious men in Rome, hearing what had paffed, crowded to my house in the morning, and advised me to open the letters before I communicated them to the fenate, left, if nothing material was found in them, I should be blamud for rathly occasioning to great an alarm in the city. But I refused to comply, that an affair which threatened public danger, might come entire before the public council of the fiate. For, citizens, had the informations given me appeared to be without foundation, I had yet little reafon to apprehend, that any cenfure would befal me for my over diligence in fo dangerous an afpect of things. I immediately affembled, as you faw, a very full fenute : and at the fame time, in confequence of a hint from the Allobrogian deputies, difpatched C. Sulpicius the prætor, a man of known courage, to fearch the house of Cethegus, where he found a great number of fwords and daggers.

I introduced Vultureius without the Gallie deputies; and by order of the house,

offered him a free pardon in the name of the public, if he would faithfully discover all that he knew : upon which, after fome heatation, he confeded that he had letters and infiredious from Lentules to Cataline, to preis him to accept the affidance of the flaves, and to lead his army with all expenition towards Rome, to the intent that when, according to the februar previously fettled and concerted among them, it fliguld be tet on fire in different places, and the general mutiacre begun, he might be at hand to intercept those who escaped, and join with his friends in the city. The ambafladors were next brought in, who declared that an oath of feetiev had been exacted from them, and that they had recrived letters to their nation from Lentulus, Cethegus, and Statilius; that thefe three, and L. Caff us alfo, required them to fend a body of horfe as foon as pollible into Italy, declaring, that they had no occation for any foot; that Lentulus had afford them from the Sibviline books, and the answers of foothfavers, that he was the third Cornelius, who was deflined to empire, and the fovereignty of Rome, which Cinna and Sylla had enjoyed before him; and that this was the fatal year marked for the defiration of the city and empire, being the tenth from the acquittal of the verial virgins, and the twentieth from the barning of the capitol: that there was fome dispute between Cethegus and the reft about the time of firing the city; because while Lentulus and the other conspirators were for fixing it on the feast of Saturn, Cethegus thought that day too remote and dilatory.

But not to be tedious, Romans, I at last ordered the letters to be produced, which were faid to be fent by the different parties. I first thewed Cethegus his scal; which he owning, I opened and read the letter. It was written with his own hand, and addreffed to the fenate and people of the Allebrogians, figuifying that he would make good what he had promited to their ambullidors, and entreating them also to perform what the ambailadors had undertaken for them. Then Cethegus, who a little before, bring interrogated about the arms that were found at his house, had answered that he was always particularly fond of neat arms; upon hearing his letter read, was fo dejected, confounded, and felf-convicted, that he could not utter a word in his own defence. Statilius was then brought in, and acknowledged his

hand and feal; and when his letter was read, to the same purpose with that of Cethegus, he confelled it to be his own. Then Leutulus's letter was produced. I asked if he knew the feal; he owned he did. It is indeed, faid I, a well-known feat; the head of your illustrious grandfather, to diffinguished for his love to his country and fellow-citizens, that it is amazing the very fight of it was not fufficient to referain you from fo black a treason. His letter, direcled to the fenate and people of the Allobroges, was of the fame import with the other two: but having leave to speak for kimfelf, he at first denied the whole charge, and began to question the ambassadors and Vultureius, what butinefs they ever had with him, and on what occasion they came to his house; to which they gave clear and diffined answers; fignifying by whom, and how often they had been introduced to him; and then asked him, in their tern, whether he had never mentioned any thing to them about the Sibylline oracles; upon which being confounded, or infatuated rather by the fenfe of his guilt, he gave a remarkable proof of the great force of conference: for not only his ufual parts and eloquence, but his impudence too, in which be outdid all men, quite failed him; fo that he confessed his crime, to the furprize of the whole affembly. Then Vulturelus defined, that the letter to Cataline, which Leatulus had fout by him, might be opened; where Lentules again, though greatly difordered, ucknowledged his hand and feel. It was written without any name. but to this effect: "You will know who I "am, from him whom I have fent to you. "Take enre to flew yourfelf a man, and " recollect in what fituation you are, and " confider what is now necessary for you. " Be fure to make use of the affiftance of "all, even of the lowest." Gabinius was then introduced, and behaved impudently for a while; but at last denied nothing of what the ambaffadors charged him with. And indeed, Romans, though their letters, feals, hands, and lattly their everal voluntary confesions, were strong tad convincing evidences of their guilt; Pathad I full clearer proofs of it from their looks, change of colour, countenances, and filence. For fuch was their amazement, fach their downcast looks, such their stolen glances one at another, that they feemed not so much convicted by the information of others, as detected by the confciousness of their own guilt,

The proofs being thus laid open and cleared, I confulted the lenate upon the measures proper to be taken for the public fafety. The most fevere and vigorous refoliations were proposed by the leading men. to which the fenate agreed without the leaft opposition. And us the decree is not yet put into writing, I shall, as tar as my memory lerves, give you an account of the whole proceeding. First of all, public thanks were decreed to me in the ampleft manner, for having by my courage, counfel, and toretight, delivered the republic from the greatest dangers: then the prætors L. Flaccus, and C. Pontanius, were likewife thanked, for their vigorous and puncthal execution of my orders. My collearne, the brave Antonius, was praifed, for having removed from his own and the countels at the republic, all those who were concerned in the contpinacy. They then came to a resolution, that P. Lentulus, after having abdicated the prætorthip, should be committed to fafe custody; that C. Cethegus, L. Statilius, P. Gabinius, all three than prefent, thould likewife remain in confinement; and that the fame fentence thould be extended to L. Callius, who had offered himfel; to the task of firing the city; to M. Ceparius, to whom, as appeared, Apulia had been affigned for raifing the shepherds; to P. Furius, who belonged to the colonies fettled by Sylla at Fetale; to Q. Magine Chilo, who had always teconded this Furns, in his application to the deputies of the Allobrogians; and to P. Umbrenus, the fon of a treedman, who was proved to have first introduced the Gauls to Gabinius. The fenate chole to proceed with this lenity, Romans, from a periusion that though the confpirary was indeed formidable, and the firength and number of our domestic enetimes very great; yet by the punishment of nine of the most desperate, they should be able to preferve the flate, and reclaim all the rest. At the same time, a public thankfgiving was decreed in my name to the immortal gods, for their fignal care of the commonwealth; the first, Romans, fince the building of Rome, that was ever decreed to any man in the gown. It was conceived in these words: " Because I had " preferved the city from a conflagration, " the citizens from a maffacre, and Italy "from a war." A thankfgiving, my countrymen, which, if compared with others of the fame kind, will be found to differ from them in this; that all others were appointed

appointed for fome particular fervices to the republic, this alone for faving it. What required our first care was first executed and dispatched. For P. Lentulus, though in confequence of the evidence brought against him, and his own contession, the fenate had adjudged him to have forfeited not only the pratorship, but the privileges of a Roman citizen, divefted himfelf of his magistracy: that the consideration of a public character, which yet had no weight with the illustrious C. Marius, when he put to death the prietor C. Glancia, against whom nothing had been expressly decreed, might not occasion any scruple to us in punishing P. Lentulus, now reduced to the condition of a private man.

And now, Romans, as the deteftable leaders of this improus and unnatural rebellion are feized and in cuftody, you may juftly conclude, that Cataline's whole firength, power, and hopes are broken, and the dangers that threatened the city difpelled. For when I was driving him met of the city, Romans, I clearly forefaw, that if he was once removed, there would be nothing to apprehend from the drowfine's of Lentulus, the fat of Cullius, or the ruthness of Cethegus. He was the alone formidable person of the whole number, yet no longer fo, than while he remained within the walls of the city. He knew every thing; he had accels in all places; he wanted neither abilities nor boldness to address, to tempt, to folicit. He had a head to contrive, a tongue to explain, and a band to execute any undertaking. He had felect and proper agents to be employed in every particular enterprize; and never took a thing to be done, because he had ordered it; but always purfued, urged, attended, and faw it done himfelf; declining neither hunger, cold, nor thirft. Had I not driven this man, so keen, so resolute, so during, so crafty, so alert in mischief, so active in desperate designs, from his secret plots within the city, into open rebellion in the fields, I could never fo easily, to fpeak my real thoughts, Romans, have delivered the republic from its dangers. He would not have fixed upon the feaft of Saturn, nor name the fatal day for our destruction fo long beforehand, nor fuffered his hand and feal to be brought against him, as manifelt proofs of his guilt. Yet all this has been fo managed in his absence, that no theft in any private home was ever more clearly detected than this whole confpiracy. But if Cataline had remained in the city till this day; though to the utmost I would have obstructed and opposed all his designs; yet, to say the least, we must have come at last to open force; nor would we have found it possible, while that traiter was in the city, to have delivered the commonwealth from such threatening dangers with so much ease, quiet, and tranquility.

Yet all these transactions, Romans, have been fo managed by me, as if the whole was the pure effect of a divine influence and forelight. This we may conjecture, not only from the events themfelves being above the reach of human conniel, but because the gods have so remarkably interpoled in them, as to shew themselves almost visibly. For not to mention the nightly ftreams of light from the western iky, the blasing of the heavens, the thunders, the earthquakes, with the other many prodigies which have happened in my confulthip, that feem like the voice of the gods predicting thefa events; furely, Romans, what I am now about to fay, ought neither to be omitted, nor pass without notice. For, doubtless, you must remember, that under the confulfhip of Cotta and Torquatus, feveral turrets of the capitol were ftruck down with lightning: that the images of the immortal gods were likewife overthrown, the fratues of ancient heroes diffilaced, and the brazen tables of the laws melted down: that even Romulus, the founder of this city, escaped not unburt; whose gilt statue, reprefenting him as an infant focking a wolf, you may remember to have feen in the capitol. At that time the foothfayers, being called together from all Etruria, declared, that fire, flaughter, the overthrow of the laws, civil war, and the rain of the city and empire, were portended, unless the gods, appealed by all forts of means, could be prevailed with to interpose, and bend in some measure the deftinies themselves. In consequence of this answer, folemn games were celebrated for ten days, nor was any method of pacifying the gods omitted. The fame foothfayers likewife ordered a larger flatue of Jupiter to be made, and placed on high, in a polition contrary to that of the former image, with its face turned towards the eaft; intimating, that if his flatue, which you now behold, looked towards the rising fun, the forum, and the fenate-boufe; then all fecret machinations against the city and empire would be detected to evidently, evidently, as to be clearly feen by the fenate and people of Rome. Accordingly the confuls of that year ordered the flatue to be placed in the manner directed: but from the flow progress of the work, neither they, nor their fuccessors, nor I myfelf, could get it finished till that very

Can any man after this be fuch an enemy to truth, fo rath, fo mad, as to deny, that all things which we fee, and above all, that this city, is governed by the power and providence of the gods? For when the footbfavers declared, that maffacres, configrations, and the entire ruin of the flate, were then devising; crimes! the enormity of whose guilt rendered the prediction to fome incredible: yet are you now fenfible, that all this has been by wicked citizens not only devited, but even attempted. Can it then be imputed to any thing but the immediate interpolition of the great Jupiter, that this morning, while the conspirators and witnesles were by my order carried through the forum to the temple of Concord, in that very moment the statue was fixed in its place? And being fixed, and turned to look upon you and the fenate, both you and the fenate faw all the treafonable deligns against the public fufety clearly detected and expoled. The conspirators, therefore, justly merited the greater punishment and detellation, for endeavouring to involve in impious fames not only your houses and habitations, but the dwellings and temples of the gods themselves; nor can I, without intolera-We vanity and prefumption, lay claim to the merit of having deteated their, attempts. It was he, it was Jupiter himfelf, who opposed them: to him the Capitol, to him the temples, to him this city, to him you are all indebted for your prefervation. It was from the immortal gods, Romans, that I derived my refolution and forefight; and by their providence, that I was enabled to make fuch important discoveries. The attempt to mgage the Allobrogians in the conspiracy, and the infatuation of Lentulus, and his Mociates, in truiting affairs and letters of such moment to men barbarous and unknown to them, can never furely be accounted for, but by supposing the gods to have confounded their understandings. And that the ambailadors of the Gauls, a nation to difuffected, and the only one at prefent that feerns both able and willing to make war upon the Roman people,

should flight the hopes of empire and dominion, and the advantageous offers of men of patrician rank, and prefer your fafety to their own interest, must need be the effect of a divine interposition; especially when they might have gained their ends, not by fighting, but by holding their tongues.

Wherefore, Romans, fince a thankfgiving has been declared at all the thrines of the gods, celebrate the same religiously with your wives and children. Many are the proofs of gratitude you have justly paid to the gods on former occasions, but never furely were more apparently due than at prefent. You have been fnatched from a most cruel and deplorable fate; and that too without flaughter, without blood, without an army, without highting. In the habit of citizens, and under me your only leader and conductor in the robe of peace, you have obtained the victory. For do but call to mind, Romans, all the civil diffenfions in which we have been involved; not those only you may have heard of, but those too within your own memory and knowledge. L. Sylla deftroyed P. Sulpicius; drove Marius, the guardian of this empire, from Rome; and partly banished, partly slaughtered, a great number of the most deferving citizens. Cn. Octavius, when conful, expelled his colleague by force of arms from the city. The forum was filled with carcalles, and flowed with the blood of the citizens. Cinna afterwards, in conjunction with Marius, prevailed; and then it was that the very lights of our country were extinguished by the flaughter of her most illustrious men-Sylla avenged this cruel victory: with what matlacre of the citizens, with what calamity to the state, it is needless to relate. M. Lepidus had a difference with Q. Catulus, a man of the most diffinguished reputation and merit. The ruin brought upon the former was not fo afflicting to the republic, as that of the reft who perifhed upon the fame occasion. Yet all these diffentions, Romans, were of fuch a nature, as tended only to a change in the government, not to a total deftruction of the state. It was not the aim of the persons concerned to extinguish the commonwealth, but to be leading men in it; they defired not to fee Rome in flames, but to rule in Rome. And yet all these civil differences, none of which tended to the overthrow of the flate, were so obstinately kept up, that they never ended in a reconciliation of the par-

ties, but in a maffacre of the citizens. But m this war, a war the fierceft and most implacable ever known, and not to be paralleled in the hiftory of the most barbarous nations; a war in which Lentulus, Cataline, Caffins, and Cethegus Lid it down as a principle, to confider all as enemies who had any interest in the well-being of the thate; I have conducted myfelf in fuch a manner, Romans, as to preferve you all. And though your enemies imagined that no more citizens would remain, than what escaped endlets mailacre; nor any more of Rome be left flanding, than was fnatched from a devouring conflagration; yet have I preferved both city and citizens from

For all thefe important fervices, Romans, I defire no other reward of my scal, no other mark of honour, no other monument of praise, but the perpetual remembrance of this day. It is in your breatts alone, that I would have all my triumphs, all my titles of honour, all the monuments of my glory, all the trophies of my renown, recorded and preferved. Lifeless statues, filent testimonies of same; in fine, whatever can be compaffed by men of interior merit, has no charms for me. In your remembrance, Romans, shall my actions be cherished, from your praises shall they derive growth and nourithment, and in your annals shall they ripen and be immortalized: nor will this day, I flatter myfelf, ever cease to be propagated to the fafety of the city, and the honour of my confulthip: but it shall eternally remain upon record, that there were two citizens living at the fame time in the republic, the one of whom was terminating the extent of the empire by the bounds of the horizon itself; the other preferving the feat and capital of that empire.

But as the fortune and circumstances of my actions are different from those of your generals abroad, inasimuch as I must live with those whom I have conquered and subdued, whereas they leave their enemies either dead or enthralled; it is your part, Romans, to take care, that if the good actions of others are beneficial to them, mine prove not detrimental to me. I have bassled the wicked and bloody purposes formed against you by the most during offenders; it belongs to you to bassle their attempts against me; though as to myself, I have in reality no cause to sear any thing, tince I shall be protected by the guard of all honest men,

whose friendthip I have for ever secured by the dignity of the republic itself, which will never cease to be my filent defender; and by the power of confcience, which all those must needs violate, who shall attempt to injure me. Such too is my fpirit, Romans, that I will never yield to the audacioufnel's of any, but even provoke and attack all the wicked and the profitgate: yet if all the rage of our domestic chemies, when repelled from the people. finall at laft turn fingly upon me, you will do well to confider, Romans, what effect this may afterwards have upon those, who are bound to expose themselves to envy and danger for your fafety. As to myfelf in particular, what have I farther to with for in life, fince both with regard to the honours you confer, and the reputation flowing from virtue, I have already reached the highest point of my ambition. This however I expreisly engage for, Romans, always to support and defend in my private condition, what I have acted in my confulthin; that if any envy be stirred up against me for preferving the flate, it may hurt the envious, but advance my glory. In thort, I thall to behave in the republic, as eyer to be mindful of my past actions, and shew that what I did was not the effect of chance, but of virtue. Do you, Romans, fince it is now night, repair to your feveral dwellings, and pray to Jupiter, the guardian of this city, and of your lives: and though the danger be now over, keep the fame watch in your houses as before. I shall take care to put a speedy period to the necesfity of thefe precautions, and to fecure you for the future in uninterrupted peace. Whitworth's Cicero.

§ 8. Oration against Cataline.

THE ARGUMENT.

Though the defign of the confpiracy was in a great measure defeated by the commitment of the most confiderable of those concerned in it, yet as they had many secret success and well-wishers within the city, the people were alarmed with the rumour of fresh plots, formed by the slaves and dependants of Leutulus and Cothegus for the rescue of their masters, which obliged Cicero to reinforce his guards; and for the prevention of all such attempts, to put an end to the whole affair, by bringing

the quettion of their punishment, without farther delay, before the fenate; which he accordingly fummioned for that purpose. The debate was of great delicacy and importance: to decide upon the lives of citizens of the first rank. Capital punishments were rare, and ever othous in Rome, whose laws were of all others the leaft fanguinary; bawithment, with confifcation of goods, being the ordinary punishment for the greatest crimes. The tenate, indeed, as has been faid above in cafes of fudden and dangerous tumults, claimed the prerogative of punithing the leaders with death, by the authority of their own decrees. But this was looked upon as a thretch of power, and an infringement of the rights of the people, which nothing could excute but the necetity of times, and the extremity of danger, For there was an old law of Porcius Luca, a tribune, which granted all criminals capitally condemned, an appeal to the people; and a later one of C. Gracchus, to probibit the taking away the life of any citizens, without a formul hearing before the people: fo that fome fenators, who had concurred in all the previous de-Lates, withdrew themselves from this, to thew their dillike of what they expected to be the iffue of it, and to have no hand in putting Roman citizens to death by a vote of the fenate. liere then was ground enough for Cicero's enemies to act upon, if extreme methods were purfued: he himfelf was aware of it, and faw, that the public interest called for the fevereft punishment, his private interest the gentleft: yet he came refolved to facrifice all regards for his own quiet, to the confideration of the pubhe fafety. As foon therefore as he had moved the question, What was to be done with the conspirators? Silunus, the conful cleat, being called upon to speak the first, advised, that those who were then in cutlody, with the refi who thould afterwards be taken, thould all be put to death. To this all who fooke after him readily affeuted, till it come to Julius Cafar, then person elect, who m an elegant and of borste forech, treated that Way, so not an orusi, the a double, he

faid, was not a punishment, but rehef to the miferable, and left no fenfe either of good or ill beyond it; but as new and illegal, and contrary to the contitution of the republic: and though the hemousness of the crime would jultify any feverity, yet the example was dangerous in a free state; and the falutary use of arbitrary power in good hands, had been the caute of fatal mitchiels when it fell into bad; of which he produced feveral inflances, both in other cities and their own; and though no danger could be apprehended from their times, or fuch a conful as Cicero; yet in other times, and under another conful, when the iword was once drawn by a decree of the fenate. no man could promife what milchief it might not do before it was theathed again: his opinion therefore was, that the ettates of the conipirators thould be confifcated, and their persons closely confined in the firong towns of Italy; and that it thould be criminal iorany one to move the fenate or the people for any favour towards them. Their two contrary opinions being proposed, the next quettion was, which of them should take place: Cadar's had made a great impression on the affembly, and flaggered even Silanus, who began to excuse and mitigate the severity of his vote; and Cicero's friends were going forwardly into it. as likely to create the leaft trouble to Cicero himfelf, for whole future peace and fafety they began to be folicitous: when Cicero, observing the inclination of the house, and riting up to put the question, made his fourth speech on the subject of this confpiracy; in which he delivers his tentiments with all the (kill both of the orator and statesman; and while he feems to thew a pertect neutrality. and to give equal commendation to both the opinions, artfully labours all the while to turn the scale in favour of Silanus's, which he confidered as a necellary example of feventy in the prefent circumitances of the repub-

I PERCEIVE, conferring fathers, that every look, that every eye is fixed uponsure. I fee you to held upon to only the years.

015.3

own and your country's danger, but was that repelled, for mine alfo. This proof of your affection is grateful to me in forrow, and pleating in diffress: but by the immortal gods I conjure you! lay it all afide; and without any regard to my fafety, think only of yourfelves, and of your families. For thould the condition of my confulfhip be such as to subject me to all manner of pains, hardfhips, and fufferings; I will bear them not only resolutely but chearfully, it by my labours I can secure your dignity and fafety, with that of the people of Rome. Such, conferred fathers, has been the fortune of my confulfhip, that neither the forum, that centre of all equity, nor the field of Mars, confecrated by confular auspices, nor the senate-house, the principal refuge of all nations, nor domestic walls, the common afylum of all men; nor the bed, detlined to repose; nay, nor even this honourable feat, this chair of flate, have been free from perils and the fnares of death. Many things have I diffembled, many have I fuffered, many have I yielded to, and many struggled with in silence, for your quiet. But if the immortal gods would grant that itine to my confulthin, of faving you, conferred fathers, and the people of Rome, from a maffacre; your wives, your children, and the vettal virgins, from the bitterest projecution; the temples and altars of the gods, with this our fair country, from facrilegious flames; and all Italy from war and defolation; let what fate foever attend me. I will be content with it. For if P. Lentulus, upon the report of foothfavers, thought his name portended the ruin of the state; why should not I rejoice, that my confulthip has been as it were referved by fate for its prefervation.

Wherefore, confeript fathers, think of your own fafety, turn your whole care upon the flate, secure yourselves, your wives, your children, your fortunes; guard the lives and dignity of the people of Rome, and cease your concern and anxiety for me. For first, I have reason to hope, that all the gods, the protectors of this city, will reward me according to my deferts. Then, should any thing extraordinary happen, I am prepared to die with an even and constant mind. For death can never be dishonourable to the brave, nor premature to one who has reached the dignity of conful, nor afflicting to the wife. Not that I am fo hardened against

all the imprefions of humanity, as to remain indifferent to the grief of a dear and affectionate brother, here prefent, and the tears of all those by whom you fee me furrounded. Nor can I forbear to own, that an afflicted wife, a daughter dispirited with fear, an infant fon, whom my country feems to embrace as the pledge of my contulthip, and a fon-in-law, whom I behold waiting with anxiety the iffue of this day, often recal my thoughts homewards. All these objects affect me, yet in such a manner, that I am chiefly concerned for their prefervation and yours, and feruple not to expole mytelf to any hazard, rather than that they and all of us should be involved in one general ruin. Wherefore, confcript fathers, apply yourfelves wholly to the fafety of the ftate, guard against the florms that threaten us on every fide, and which it will require your utmost circumspection to avert. It is not a Tiberius Gracchus, caballing for a fecond tribuneship; nor a Caius Gracchus, stirring up the people in favour of his Agrarian law; nor a Lucius Saturninus, the murderer of Caius Memmius, who is now in judgment before you, and exposed to the severity of the law; but traitors, who remained at Rome to fire the city, to maffacre the fenate, and to receive Cataline, Their letters, their feals, their hands; in thort, their feveral confessions, are in your custody; and clearly convict them of foliciting the Allobrogians, spiriting up the slaves, and fending tor Cataline. The fcheme proposed was, to put all, without exception, to the fword, that not a foul might remain to lament the fate of the commonwealth, and the overthrow of fo mighty an empire.

All this has been proved by witneffes, the criminals themselves have confessed, and you have already condemned them by feveral previous acls. First, by returning thanks to me in the most honourable terms, and declaring that by my virtue and vigilance, a conspiracy of desperate men has been laid open. Next, by depofing Lentulus from the pratorihip, and committing him, with the reft of the confpirators, to cuftody. But chiefly by decreeing a thankfgiving in my name, an honour which was never before conferred upon any maninthe gown. Laftly, you yefterday voted ample rewards to the deputies of the Allobrogians, and Titus Vulturcius; all which proceedings are of fuch a nature.

555

in plainly to make it appear, that you already without feruple condemn those, whom you have by name ordered into cuftody. But I have refolved, conferred inthers, to propose to you anew the question both of the fact and punishment, having ark premifed what I think proper to tay as conful. I have long observed a spirit of diforder working in the fiate, new projects deviling, and pernicious schemes fet on foot: but never could I imagine, that a confpiracy fo dreadful and destructive, had entered into the minds of citizens. Now whatever you do, or whichever way your thoughts and voices shall incline, you must come to a refolution before night. You fee the beinous nature of the crime laid before you; and if you think that but few are concerned in it, you are greatly miftaken. The muchief is spread wider than most people imagine, and has not only infetted Italy, but croffed the Alps, and, imperceptibly creeping along, fetzed many provinces. You can never hope to supprefs it by delay and irrefolution. Whatever courie you take, you must proceed with' vigour and expedition.

There are two opinions now before you; the first, of D. Silanus, who thinks the projectors of fo defiructive a conspiracy worthy of death; the second of C. Cæsar, who, excepting death, is for every other the most rigorous method of punishing. Each, agreeably to his dignity, and the importance of the caule, is for treating them with the last severity. The one thinks, that those who have attempted to deprive us and the Roman people of life, to abolith this empire, and extinguish the very name of Rome, ought not to enjoy a moment's life, or breathe the vital air : and bath thewed withul, that this punithment has often been inflicted by this flate on feditious citizens. The other maintuns, that death was not designed by the immortal gods as a punishment, but either a necellary law of our nature, or a celfation of our toils and uniferies : fo that the wife pever fuffer it unwillingly, the brave often feek it voluntarily : that bonds and imprisonment, especially if perpetual, are contrived for the punishment of detestable crimes : that therefore the criminals boold be diffributed among the municipal towns. In this proposal, there feems to be some injustice, if you impose it upon the towns; or fome difficulty, if you only delire it. Yet decree fo, if you think fit. I will endeavour, and I hope I shall be

able to find those, who will not think it unfuitable to their dignity, to comply with whatever you shall judge necessary for the common fafety. He udds a heavy penalty on the municipal towns, if any of the eriminals thould cfcape; he inveits them with formidable guards; and, as the enormity of their guilt deterves, forbids, under fevere penalties, all application to the fenate or people, for a mitigation of their punithments. He even deprives them of hope, the only comfort of unhappy mortals. He orders their estates also to be conficated, and leaves them nothing but, life; which, if he had taken away, he would, by one momentary pang, have eafed them of much anguish both of mind and body, and all the fufferings due to their crimes. For it was on this account that the ancients invented those infernal punishments of the dead; to keep the wicked under fome awe in this life, who without them would have no dread of death itself.

Now, confeript fathers, I see how much my interest is concerned in the present debate. If you follow the opinion of C. Cæfar, who has always purfued those meafures in the state, which favour most of popularity; I shall perhaps be less expoted to the arrows of public hatred, when he is known for the author and advifer of this vote. But if you fall in with the motion of D. Silanus, I know not what difficulties it may bring me under. However, let the fervice of the commonwealth superfede all confiderations of my danger. Cæfar, agreeable to his own dignity, and the merits of his illustrious ancestors, hus by this propofal given us a perpetual pledgeof his affection to the state, and shewed the difference between the affected lenity of bufy declaimers, and a mind truly popular, which feeks nothing but the real good of the people. I observe that one of those, who affects the character of popularity, has absented himself from this day's debate, that he may not give a vote upon the life of a Roman citizen. Yet but the other day he concurred in fending the criminals to prifon, voted me a thankigiving, and yesterday decreed ample rewards to the informers. Now no one can doubt what his fentiments are on the merits of the cause, who votes imprisonment to the accused, thanks to the discoverer of the conspiracy, and rewards to the informers. But C. Carlar urges the Sempronian law, forbidding to put Roman citizens to death. Yet bere it ought to be remembered,

that those who are adjudged enemies to the tiste, can no longer be confidered as citizens; and that the author of that law himfelf fullered death by the order of the people. Neither does Catar think that the profuse and produgal Lentulus, who has concerted to many cruel and bloody fchemes for the destruction of the Roman people, and the ruin of the city, can becalled a popular man. Accordingly this mild and merciful fenator makes no feruple of condemning P. Lentulus to perpetual boods and impriforment; and provides that no one thall hencetorward have it in his power to boatt of having procured a mitigation of this punithment, or made himfelf popular by a flep to defiructive to the quiet of his fellow-citizens. He likewife adds the confifcation of their goods, that want and beggary may attend every torment of mind and body.

If therefore you decree according to this opinion, you will give me a partner and companion to the affembly, who is dear and agreeable to the Roman people. Or, if you prefer that of Silanus, it will be easy still to defend both you and myself from any imputation of cruelty; nay, and to make appear, that it is much the gentler punishment of the two. And yet, confcript fathers, what cruelty can be committed in the punithment of fo enormous a crime? I fpeak according to my real fenfe of the matter. For may I never enjoy, in conjunction with you, the benefit of my country's fafety, if the eagerness which I thew in this cause proceeds from any severity of temper (for no mun has lefs of it,) but from pure humanity and clemency. For I feem to behold this city, the light of the universe, and the citadel of all mations, fuddenly involved in flames. I figure to myfelf my country in runs, and the miferable bodies of flaughtered citizens, lying in heaps without burial. The image of Cethegus, furioutly revelling in your blood, is now before my eyes. But when I represent to my imagination Lentuins on the throne, as he owns the fates encouraged him to hope; Gabinius clothed an army : then am I firmek with horror children, and the violation of the votal virgins. And because these calematies appear to me in the highest degree deplorable and dreadish, therefore am lievers and on-

to bring them upon us. For let me alle, thould a matter of a family, finding his children hutchered, his wife murdered, and his house burnt by a flave, indict upon the offender a punishment that fell thort of the highest degree of vigour; would be be accounted mild and merciful, or inhuman and cruel? For my own part, I thould look upon him as hard-hearted and infentible, if he did not endeavour to allay his own anguish and torment, by the tormest and anguish of the guilty cause. It is the fame with us in respect of those men who intended to murder us with our wives and children; who endeavoured to defiroy our feveral dwellings, and this city, the general feat of the commonwealth; who contpired to fettle the Allobrogians upon the ruins of this flate, and raife them from the athes of our empire. If we punish them with the utmost feverity, we shall be accounted compationate; but if we are remils in the execution of justice, we may defervedly be charged with the greatest cruelty, in expoting the republic and our fellow-citizens to ruin. Unless anvone will pretend to fay, that L. Cafar, a brave man, and zealous for the interest of his country, acted a cruel part the other day, when he declared that the bufband of his fifter, a lady of diffinguithed merit, and that too in his own prefence and hearing, deferved to fuffer death; alledging the example of his grandfather, tlain by order of the conful; who likewife commanded his fon, a mere youth, to be executed in prison, for bringing him a message from his father. And yet, what was their crime compared with that now before us? had they formed any conspiracy to destroy their country? A partition of lands was then indeed proposed, and a spirit of faction began to prevail in the flate: at which time the grandfather of this very Lentulifs, an illustrious patriot, attacked Gracclass in arms; and in defence of the honour and dignity of the commonwealth, received a cruel wound. This his unworthy delicendant, to overthrow the very foundations of the flate, fends for the Gauls, firs up the flaves, invites Cataline, in purple; and Cataline approaching with affigus the murdering of the fenators to Cethegus, the muffacre of the reft of the at the fliricks of mothers, the flight of citizens to Gabinius, the care of fetting the city on fire to Cassins, and the devastation and plunder of Italy to Cataline. Is it possible you should be afiaid of being thought too fevere in the ponishment of to selenting towards there who endeatoned unnatural and monarous a treaton? when dread the charge of cruelty to your country for your too great lenity, than the imputation of feverity for proceeding in an exemplary manner against such implacable

But I cannot, confeript fathers, conceal what I hear. Reports are ipread through the city, and have reached my ears, tending to intinuate, that we have not a fufficient force to support and execute what you shall this day decree. But be affored, confeript fathers, that every thing is concerted, regulated, and fettled, partly through my extreme care and diligence; but fill more by the indefatigable zeal of the Roman people, to support themselves in the possession of empire, and preserve their common fortunes. The whole body of the people is affembled for your defence: the forum, the temples round the forum, and all the avenues of the fenate are pollelled by your friends. This, indeed, is the only cause since the building of Rome, in which all men have been ununimous, those only excepted, who, finding their own ruin unavoidable, chofe rather to perith in the general wreck of their country, thou fall by themselves. These willingly except, and feparate from the ten; for I confider them not so much in the light of bad citizens, as of implacable enemies. But then as to the reft, immortal gods! in what crowds, with what zeal, and with what courage do they all unite in defence of the public welfare and digbity? What occasion is there to speak here of the Roman knights? who without disputing your precedency in rank, and the administration of affairs, vie with you in their zeal for the republic; whom, after adiffention of many years, this day's caute as entirely reconciled, and united with 700. And if this union, which my contalthip has confirmed, be preferved and perpetuated, I am confident that no civil or domestic evil can ever again ditturb this flate. The like zeal for the common case uppears among the tribunes of the exchequer, and the whole body of the knibes: who happening to affemble the day at the treasury, have dropped all consideration of their private assairs, and turned their whole attention upon the pubhe facety. The whole body of free-born ritizens, even the meanest, offer us their affiliance. For where is the man, to whom these temples, the face of the city, the posfollow of liberty; in thort, this very light,

in reality you have much more cause to and this parent foil, are not both dear and delightful?

> And here, confcript fathers, let me recommend to your notice the zeal of those freedmen, who, having by their merit obtained the privilege of citizens, confider this as their real country; whereas fome born within the city, and born too of an illustrious race, treat it not as a motherfoil, but as a hofule city. But why do I fpeak of men, whom private interest, whom the good of the public, whom, in fine, the love of liberty, that dearest of all human blefings, have routed to the defence of their country? There is not a flave in any tolerable condition of life, who does not look with horror on this daring attempt of profligate citizens, who is not anxious for the preservation of the state; in fine, who does not contribute all in his power to promote the common fafety. If any of you, therefore, are flocked by the report of Lentulus's agents running up and down the fireets, and foliciting the needy and thoughtiefs to make fome effort for his refere: the fact indeed is true, and the thing has been attempted; but not a man was found to desperate in his fortune, fo abandoned in his inclinations, who did not prefer the flied in which he worked and carned his daily bread, his little hut and had in which he flept, and the eafy peaceful courte of life he enjoyed, to all the propotals make by their enemies of the finte. For the greatest part of those who live in thops, or to fpeak indeed more truly, all of them, are of nothing to fond as peace: for their whole flock, their whole industry and sublistence, depends upon the peace and fulnels of the city; and if their gain would be interrupted by flutting up their thops, how much more would it be fo, by burning them? Since then, conferred fathers, the Roman people are not wanting in their zeal and duty towards you, it is your part not to be wanting to the Roman people.

You have a contui fnatched from various fnares and dangers, and the laws of death. not for the prefervation of his own life, but for your fecurity. All orders unite in opinion, inclination, zeal, courage, and a professed concern to fecure the commonwealth. Your common country, befet with the brands and weapons of an impious conforracy, firetches out her fuppliant hands to you for relief, recommends herfelf to your care, and befeeches you to take under your protection the lives of the citi-

Rens,

zens, the citadel, the capitol, the altars of dometic worthip, the everlating tire of Verta, the thrines and temples of the cold, the walls of the city, and the hours or the critizens. Contider likewife, that you are this day to pals judgment on your coun lives, on those of vous waves and children, on the fortunes of all the citizens, on your houses and properties. You have a lead or, freh as you will not always have, watchful for yen, regardlets of hitafelf. You have likewife, what was never known infore in a case of this kind, all orders, all ranks of men, the whole body of the Reman people, of one and the time mind. Reflect how this mighty empire, resaid with fo much toil, this liberty chaldined with fo much bravery, and this promion of wealth improved and laightened by fuch favour and kindnels of the gods, were like in one night to have been for ever dethroyed. You are this day to provinc, that the fame thing not only thall never be uttempted, but not for much as thought of again by any citizen. All this I have faid, not with a view to animate your zeal. in which you almost surpais me; but that my voice, which ought to lead in what it lates to the commonwealth, may not fall

thort of my duty as conful, But before I-declare my fentiments farther, confeript fathers, fader no to drop a word with regard to nivieli. I am feafible I have drawn upon invielt as many on one s. as there are perfors concerned in the requfpiracy, whose number you for to be view great; but I look upon them as a base, all good eithers. ubject, impotent, contemptible fortier, line if, through the madnels of any, it thall rife again, fo as to prevui against the femate and the republic; yet mever, confeript tathers, thall I repent of my prefent conduct and counfels. For death, with which perhaps they will threaten me, is prepared for all men; but none ever acquired that glory of lite, which you have conserred upon me by your decrees. For to others you have decreed thanks for ferving the republic facefsfully; to me alone, for having taxed it. Let Scipio be celebrated, by whose conduct and valour Hannibal was forced to abandon Italy, and return into Airles : let the other A.c.cames be crowned with the labelt prais. who delire, of Carthage and Amanna. two cities at process. lable county with Rome: for ever removed be intended, wi - fe c actiot was graced by the captivity

memoral immortal honour be the lot o Marios, who twice delivered trais from its vation, and the dread of fervatude; above all others, let Pompey's name be renown ed, whose great actions and virtues know no other limits than those dust regulate the centered the fan. Let, threev, among to many larges, form place will be left too my pratie; unless it be thought m greater murit to open a way into new provinces, whence we may retine at pleafure, then to take care that our comprehas have have a home to return to. In one circumtance, indeed, the condition of a foreign victory is better than that of a dometic one; becaufe a foreign enemy, when conquered, is either quite crufted and reduced to fldvery, or, obtaining favourable terms, hecomes a friend; but when profligate citirous once turn reliefs, and are bailed in their plots, you can neither keep them quiet by force, norohige them by tayours, I therefore fee invielf engaged in an eternal war with all traitmens citizens; but am comident I shall easily sevel it trem me and name, throw in your sand every worthy men's uffillance, banen to the remembrance of the mighty dangers we have element; a remembrance that will not only jublit among the people belivered from them, but which mutt for ever cleave to the minds and tongues of all natures, Nor, I trutt, will may torrebe found fixing enough to everpower or weaken the prefent union between you and the Roman knights, and this general continuously of

Therefore, confessed fathers, infead or the command of senies and provinces, which I have declared; infend of a tisumph, and other intractions of lanceer, which, for your preferration, and that of this city, I have rejected; indicad of attachments and dependences in the provinces, which, by means of my authority and credit in the city, I labour no lefs to support than acquire; for all their iervices, I hay, joined to my tangular real for your interest, and that the earlied diligence you has me exert to preserve the flate; I require nothing more of you than the perpotent recombrance of this juncture, and of my whole containing. While that comtimes fixed in your mads, I thall think maynit infrommed with an imposerable wall. But finaled the violence of the factions ever disappoint and get the better of nov house, I recommend to you my imama. of Perios, a once powerful and classifiers four and trust that it will be a influence in

dignity to have it remembered, that he is the ion of one who, at the hazard of his own life, preserved you all. Therefore, contript fathers, let me exhort you to proceed with vigour and refolution in an ptair that regards your very being, and that of the people of Rome; your wives und children; your religion and propertes; your altars and temples; the houses, and dwellings of this city; your empire; your liberty; the fatety of Italy; and the while tytiem of the commonwealth. For you have a contul, who will not only obey your fecrees without hefitation, but while he livs, will support and execute in per-Am wlutever you thall order.

Whitworth's Cicero.

4 9. Pration for the Poet Archium.

THE ARGUMENT.

A. Licenin Archias was a native of Antinch, and a very celebrated poet, He came to Rome when Cicero was annot five years old, and was courted the men of the greatest eminence in E, on account of his learning, genius, and politerels. Among others, Lucollas was very foud of him, took lum into his family; and gave him the liberty of energing a school in it, to which many of the young nobility and gentry of Home were lent for the r education. In the confulthip of M. Pavies Pulo and M. Vulerius Meffals, one Gracchus, a person of obfeme birth, accused Archias upon the law, by which those who were made free of any of the confederated cities, and at the time of patling the law dwelt in study, were obliged to claim their privilege before the prætor within fixty days. Cicero, in his oration, endeavours to prove, that Archins was a Roman citizen in the fatile of that law; but dwells chiefly a the praifes of poetry in general, and the talents and genius of the defendant, which be displays with great beauty, elegance, and iprit. The oration was made in the forty-fixth year of Cicero's age, and the fix hundred and ninety-lecond of Rome.

IF, my lords, I have any abilities, and I m fensible they are but finall; if, by Demang often, I have acquired any merit

guard, not only of his fafety, but of his as a speaker; if I have derived any knowledge from the findy of the liberal arts. which have ever been my delight, A. Licinius may jufily claim the fruit of all. For looking back upon past scenes, and calling to remembrance the earliest part of my life, I find it was he who prompted me first to engage in a courfe of study, and directed me in it. If my tongue, then formed and animated by hom, has ever been the means of faving any, I am certainly bound by all the ties of gratitude to employ it in the defence of him, who has taught it to affill and defend others. And though his genius and conrie of fludy are very different from mine, let moone be furprized at what I advance: for I have not beflowed the whole of my time on the fludy of eloquence, and belides, all the liberal arts are nearly allied to each other, and have, as it were, one common bond of union,

But left it should appear strange, that, in a legal proceeding, and a public cause, before an excellent prator, the most impartial judges, and fo crowded an affembly, I lay alide the ufual flyle of trials, and intraduce one very different from that of the bar; I must beg to be indulged in this liberty, which, I hope, will not be difagreeable to you, and which feems indeed to be due to the defendant : that whilft I am pleading for an excellent poet, and a . . man of great eradition, before fo learned an audience, such difunguished patrons of the liberal arts, and fo eminent a prætor. you would allow me to enlarge with fome freedom on learning and liberal findies; and to employ an almost unprecedented language for one, who, by reason of a fludious and unactive life, has been little conversant in dangers and public trials. If this, my lords, is granted me, I shall not only prove that A. Licinius ought not, as he is a citizen, to be deprived of his privileges, but that, if he were not, he ought to be admitted.

For no fooner had Archias got beyond the years of childhood, and applied himfelt to poetry, after finithing those studies by which the minds of youth are utually formed to a take for polite learning, than his gentus thewed itfelt superior to any et Antioch, the place where he was born, of a noble family; once indeed a rich and renowned city, but full famous for liberal arts. and tertile in learned men. He was afterwards received with fuch applause in the other cities of Alia, and all over Greece, that though they expected more than fame

Cu a

had promifed concerning him, even thefe ed; and if they declared their enrolment expectations were exceeded, and their adnuration of him greatly increased. Italy was, at that time, full of the arts and ferences of Greece, which were then cultivated with more care among the Latins than now they are, and were not even neglected at Rome, the public tranquillity being favourable to them. Accordingly, the inhabitants of Tarentum, Rhegium, and Naples, made him free of their respective cities, and conferred other honours upon him; and all those who had any taire, reckoned him worthy of their acquaintance and friendthip. Being thus known by fame to those who were itrangers to his person, he came to Rome in the consulthip of Marius and Catulus; the first of whom had, by his glorious deeds, furnuhedout a noble subject for a poet; and the other, betstes his memorable actions, was both a judge and a lover of poetry. Though he had not yet reached his feventeenth year, yet no fooner was be arrived than the Luculi: took him into their family; which, as it was the first that received him in his youth, fo it affected him the adoin of accefs even in old age; nor wa this owing to his great genius and learning alone, but likewite to his annable temper and virtuous disposition. At that time, too, Q. Metallus Numidicus, and his fon Paus, were delighted with his convertation; M. Almilius was one of his hearers; O. Catulus, both the elder and vounger, honoured him with their intimacy; L. Craifus courted him; and being united by the greatest familiarity to the Lucuili, Drufus, the Ociavii, Cato, and the whole Hortentian family: it was no finall honour to him to receive marks of the highest regard, not only from those who were really delirous of hearing him, and of being infirurted by him, but even from those who affected to be

A confiderable time after, he went with L. Lucidlus into Sicily, and leaving that province in company with the fame Lucullus, came to licraclea, which being joined with Rome by the closest bunds of alliance, he was defirous of being made free of it; and obtained his requell, both on account of his own merit, and the intereft and authority of Lucullus. Strangers were admitted to the freedom of Itome, according to the law of Salvanes and Carho, upon the following conditions : if they were enrolled by five cities; if they had a discling in Italy, when the law pag-

before the prator within the space of fisty days. Agreeable to this law, Archias, who had relided at Rome for many years, made his declaration before the prator Q. Metellus, who was his intimate friend. If the right of citizenthip and the law is all I have to prove, I have done; the cause is ended. For which of thefe things, Gratchus, can you deny? Will you fay that he was not made a citizen of Heracles at that time? Why, here is Lucullus, a man of the greatest credit, honour, and integrity, who affirms it; and that not as a thing he believes, but as what he knows; not as what he heard of, but as what be faw; not as what he was pretent 4t, but as what he transacted. Here are likewise deputies from Heraclea, who affirm the fame; men of the greatest quality come hither on purpose to give public testimony in this cause. But here you'll delire to see the public register of Heraclea, which we all know was burnt in the Italian war, together with the office wherein it was kept. Now, is it not rediculous to fay nothing to the evidences which we have, and to defire those which we cannot have; to be filent as to the testimony of men, and to detiand the testimony of registers; to pay no regard to what is affirmed by a perion of great dignity, nor to the outh and integrity of a free city of the ftricteft honour, evidences which are incapable of being corrupted, and to require thate of registers which you allow to be frequently vitinted. But he did not relide at Rome, what he, who for fo many years before Silvanus's law made Rome the feat of all his hopes and fortune. But he did not declare; fo far is this from being true, that his declaration is to be feen in that register, which by that very act, and its being in the cuftody of the college of prætors, is the only authentic one.

For the negligence of Appius, the corruption of Gabinius before his condemnation, and his difgrace after, having destroyed the credit of public records; Metellus, a man of the greatest honour and modefty, was fo very exact, that he came before Lentulus the prætor and the other judges, and declared that he was unedy at the erazure of a fingle name. name of A. Licinius therefore is fill to be feen; and as this is the cafe, why thould you doubt of his being a citizen of Roma especially as he was eurolled likewise in other free cities? For when Greece be-

flowed the freedom of its cities, without the recommendation of merit, upon perfors of little confideration, and those who had either no employment at all, or very mean ones, is it to be imagined that the inhabitants of Rhegium, Locris, Nuples, or Tarentum, would deny to a man fo highly celebrated for his genius what they conferred even upon contedians? When others, not only after Sahanus's law, but even after the Papian law, thall have found means to creep into the regulers of the municipal cities, thall he be rejected, who, because he was always delirous of palling for an Heraclean, never availed himfelf of his being enrolled in other cities? But you defire to fee the enrolment of our chate; as if it were not well known, that under the last censorship the defendant was with the army commanded by that renowned general L. Lucullus; that under the cenforthip immediately preceding, he was with the fame Lucuilus then quæfter in Afia; and that, when Julius and Craffus wire cenfors, there was no enrolment made? But, as an enrolment in the cenfors books does not confirm the right of citizenthip, and only flews that the perfor enrolled affumed the character of a citizen, I muti tell you that Archias made a will according to our laws, fucceeded to the estates of Ruman citizens, and was recommended to the treasury by L. Lucalles, both when prætor and conful, as one who deferved well of the flate, at the very time when you alledge that, by his oun confession, he had no right to the freedom of Rome.

Find out whatever arguments you can, Atthias will never be convicted for his oun conduct, nor that of his friends. Lint you'll no doubt ask the reason, Gracelius, of my being fo highly delighted with this man? Why, it is because he furnishes me with what relieves my mind, and charms my ears, after the fatigue and notic of the forms. Do you imagine that I could poffibly plead every day on such a variety of subjects, if my mind was not cultivated with science; or that it could bear being firstelled to fuch a degree, if it were not femetimes unbent by the amufements of learning. I am fond of these studies, I owa: let those be athamed who have buried themselves in learning so as to be of poule to fociety, nor able to produce any thing to public view; but why should I be alliamed, who for fo many years, my letds, have never been prevented by in-

dolence, feduced by pleafure, nor diverted by thep, from doing good offices toothers? Who then can centure me, or in julice be augiv with me, if those hours which others employ in bufinels, in pleatures, in celebrating public tolemnities, in retrefling the body and unbending the mind; if the time which is frent by tome in midnight banquetings, indivertions, and in gaming, I employ in reviewing thete findles? And this application is the percexcuable, as I derive no finali advantages from it in my proteffion, in which, who were abilities I poliefs, they have always been employed when the dangers of my then is called for their allitunce. If they thould appear to any to be but finall, there are will other advantages of a much higher nature, and I am very femible whence I derive them. For had I not been convinced from my youth, Ly much intiruction and much Rudy, that nothing is greatly definable in life but glory and virtue, and that, in the purfeit of their, all bodily tortures, and the perils of death and exile, are to be nighted and defpited, never thould I have expoted myfelt to fo many and lo great conflicts for your prefervation, nor to the daily rage and violence of the most worthless of men, But on this head books are full, the voice of the wife is full, antiquity is full; all which, were it not for the lamp of learning, would be involved in thick obtenity. How many pictures of the braveft of men have the Greek and Latin writers left us, not only to contemplate, but likewife to imitate? These illustrous models (always fet before me in the government of the flate, and formed my conduct by contemplating their virtues.

But were those great men, it will be asked, who are celebrated in history, difflinguithed for that kind of learning, which you extol to highly? It were difficult, indeed, to prove this of them all; but what I thall answer is, however, very certain, I own, then, that there have been many men of excellent dispositions and diffusguithed virtue, who, without learning, and by the almost divine sorce of nature hertelf, have been wife and moderate; nav. farther, that nature without learning is of greater efficiev towards the attainment of glory and virtue, than learning without nature; but then, I affirm, that when to an excellent natural difuotition the enbellishments of learning are added, there refults from this union fomething great and extraordinary. Such was that divine

Uus

man Africanus, whom our fathers faw; formed by the plaftic hand of nature herfuch were C. Lælius and L. Furius, perfons of the greatest temperance and noderation; tuch was old Cato, a man of great bravery, and, for the times, of great learning; who, furely, would never have applied to the fludy of learning, had they thought it of no fervice towards the acquifition and improvement of virtue. But were pleasure only to be derived from learning, without the advantages we have mentioned, you must still, I imagine, atlow it to be a very liberal and polite amusement. For other findies are not fuited to every time, to every age, and to every place; but these give trength in youth, and joy in old age; adorn profperity, and are the support and consolation of advertity; at home they are delightful, and abroad they are early; at night they are company to us; when we travel they attend us; and, in our rural retirements, they do not forfake us. Though we omifelves were incapable of them, and had no relith for their charms, full we should admire them when we fee them in others.

Was there any of us to void of talte, and of fo unfeeling a termer, as not to be missied lately with the death of Rofeius? For though he died in an advanced a .e. yet fuch was the excellence and inimitable beauty of his art, that we thought bun worthy of living for ever. Was he then to great a favourite with us all on account of the graceful motions of his body; and fhall we be intentible to the furprizing energy of the mind, and the forightly falhes of genius? How often have I feen this Archias, my lords, (for I will prefume on your goodsels, as you are pleafed to favour me with fo much attention in this unufual manner of pleading) how often, I fay, have I for a him, without using his pen, and without any labour of thick, make a great munber of excellent vertes on occasional subjects? How often, when a littject was returned, bave Isheard him give it a different turn of thought and exprelion, while those compositions which he finitied with care and exactness were as highly approved as the most celebrated writers of antiquity. And shall not I love this man? Shall I not a haire him? Sha'l I not defend him to the utmest of my power? For men of the greatest emimore and learning have taught us, that other branches of frience require education, art, and precept; but thut a peet is

felf, is quickened by the native fire of genius, and animated as it were by a kind of divine enthuliaim. It is with juffice, therefore, that our Ennius believes upon poets the enthet of renerable, breadle they feem to have fome peculiar gifts of the gods to reconnected them to us. Let the grone of post then, which the most barbarnes nations have never prophaned, be revered by you, my lords, who are to great admirers of polite learning. Rocks and defarts re-erho founds; favage beats are often foothed by mufic, and litten to its charms; and thall we, with all the advantages of the best education, be unatfected with the voice of poetry? The Calophonians give out that Homer is their countryman, the Chians declare that he is theirs, the Salaminians lay claim to him, the people of Smyrna affirm that Smyrna gave him breath, and have accordingly dedicated a temple to him in their city; belides thefe, many other nations contend warmly for this honour.

Do they then lay claim to a firanger even after his death, on account of his being a poet; and thall we reject this living poet, who is a Roman both by inclination and the laws of Rome; especially as he has employed the utmost efforts of his genius to celebrate the glory and grandent of the Roman people? For, in his youth, he fong the triumphs of C. Marius over the Cimbri, and even pleafed that great general, who had but little relith for the enarms of poetry. Nor is there any perion io great un enemy to the Mules, as not readily to allow the poet to blazen his fame, and confecrate his actions to immortality. Themiforles, that celebrated Atheniae, upon being aiked what maic, or whole voice was most agreeable to him, is reported to have answered, that man's who could beft celebrate his virtues. The fame Marius too had a very high regard for L. Plotius, whose grains, he thought, was capable of doing justice to his actions. But Archias has deforthed the whole Mithridatic war; a war of fuch danger and importance, and fo very menouslic for the great v. nety of its events both by fee and land. Nor does his poem reflect henour only on L. Lucullus, that very brave and renowned man, but likewik adds latire to the Roman name. For, under Lucidius, the Roman people penitrated into Pontus, imprognable till then by means of its fitention and the arms

of its monarchs; under him, the Romans, with no very confiderable force, routed the numberless troops of the Armenians; under his conduct too, Rome has the glory of delivering Cyzicium, the city of our faithful ailies, from the rage of a monarch, and referring it from the devouring jaws of a mighty war. The praifes of our fleet fail ever be recorded and celebrated, for the wonders performed at Tenedos, where the enemy's thips were funk, and their commanders flain: fuch are our tropides, tach our monuments, fuch our triumphs. Those, therefore, whose genius describes their exploits, celebrate likewife the praises of the Romanname. Our Ennics was greatly beloved by the elder Africams, and accordingly he is thought to have a marble flatue amongst the monuments of the Scipio's. But there praires are not appropriated to the immediate fubjects of them; the whole Roman people have a there in them. Cate, the ancefor of the judge here prefent, is highly celebrated for his virtues, and from this the Romans themselves derive great honoor; in a word, the Maximi, the Maredli, the Fulvii, cannot be praifed without praising every Roman.

Didour ancestors then confer the freedore of Rome on him who tong the praifes ofher beroes, on a native of Rudie; and thall we thruft this Heracleanout of Rome, who has been courted by many cities, and whom our laws have made a Roman? For if any one magines that lets glory is derived from the Greek, than from the latin poet, he is greatly millaken; the Greek language is underflood in almost every nation, whereas the Latin is confinal to Latin territories, territories exitemely narrow. If our exploits, therebre, have reached the utmost limits of the earth, we ought to be delirous that our glory and fame thall extend as far as terarnis; for as their operate powerfully on the people whose actions are recorded; fo to those who expose their lives for the take of glory, they are the grand motives to toils and dangers. How many persons is Alexander the Great reported to have carried along with him, to write his hillory! And yet, when he flood by the tomb of Achilles at Sigarum, "Happy youth," he cried, " who could find a Homer to blazon thy fame!" And what he fuld was true; for had it not been for the Iliad, his aftes and fame had been buried in the fame tomb. Did not Pompey the

Great, whose virtues were equal to his fortune, confer the freedom of Rome, in the prefence of a military affembly, upon Theophanes of Mitylene, who fung his trumphs? And these Romans of ours. men brave indeed, but unpolified and mere foldiers, moved with the charms of glory, gave thouts of applaufe, as if they had thared in the honour of their leader. Is it to be supposed then, that Archias, if our laws had not made him a citizen of Rome, could not have obtained his freedom from fome general? Would Sylla, who conferred the rights of citizenthip on Gauls and Spaniards, have refused the fait of Archias? That Sylla, whom we faw in an atlembly, when a bad poet, of obfour e birth, prefented him a petition upon the merit of having written an epigram in his praife of unequal hobbling veries, order him to be inflantly rewarded out of an effate he was felling at the time, on condition he should write no more verses. Would be, who even thought the industry of a bad poet worthy of fome reward, not have been fond of the genius, the spirit, and chaquence of Archias? Could our poet, neither by his own interest, nor that of the Luculii, have obtained from his intimate friend Q. Metellus Pins the freedom of Rome, which he beltowed fo frequently upon others? Especially as Metellus was fo very defirous of having his actions celobented, that he was even fornewhat pleafed with the dull and barbarous verfes of the poets born at Corduba.

Nor ought we to diffemble this truth, which cannot be concealed, but declare it openly; we are all influenced by the love of praife, and the greatest minds have the greatest pathon for glory. The philofophers themselves prefix their names to those books which they write upon the contempt of glory; by which they thew that they are delirous of praife and fame, while they affect to despite them. Decimus Brutus, that great commander and excellent mun, adorned the monuments of his family and the gates of his temples, with the verses of his intimate friend Attius: and Fulvius, who made war with the Etolians attended by Ennius, did not feruple to confecrate the spoils of Mars to the Mufes. In that city, therefore, where generals, with their arms almost in their hands, have : everenced the fhrines of the mufes and the name of poets, furely magiffra.es in their robes, and in times of place, ought not to be averfe to honour-

Cu4

ing the one, or protecting the other. And to engage you the more readily to this, my lords, I will lay open the very fentimenta of my eart before you, and freely conclamy pathon for blory, which, though too keen, perhaps, is however victuous. For what I did in conjunction with you during in confulthip, for the fatety of this city and empire, for the lives of my fellow-citizens, and for the interests of the ftan. Archias inc. aus to relebrate in verfe, and has a tually begun his polar. Upon reading what he has wrote, it appeared to me to tuchane, and gave me to much pleasure, that I encouraged han to go on will it. For virtue denies no other reward for her tolls and cong as, but praife and hory: take but this away, my loads, and what is mere left in this mort, this feating career of human life, that can tempt us to engage in to many and to great labours? Surely, if the mind had no thought or futurity, if the confined all her views within those limits which bound our pretent existence, the would neither watte her fireigth in fo great toils, nor baruls herfelt with fo many cares and reatchings, nor thruggle to often for life ittelf : but there is a certain principle in the breau of every good man, which both day and night getekens him to the purfuit of clory, and puts him in mind that his fame is not to be measured by the extent of his pretent life, but that it runs parallel with the line of posterity.

Can we, who are engaged in the affairs of the frate, and in to many toils and dangers, think to meanly as to imagine that, after a life of uninterropted care and trouble, nothing thall remain of as after death? If many of the greatest men have been careful to leave their fiatues and pictures, their reprefentations not of their minds but of their bodies; ought not we to be much more defirous of leaving the portraits of our enterprizes and virtues diawn and finished by the most eminent artis? As for me, I have always imagined, whillt I was engaged in doing whatever I have done, that I was foreading my actions over the whole earth, and that they would be held in eternal remembrance. But whether I shall lose my confrientness of this at death, or whether, as the wifeft men have thought, I shalt retain it after, at present the thought delights me, and my mind is filled with pleafing hopes. Do not then deprive us, my lords, of a man, whem modelly, a graceful manner, engag-

ing behaviour, and the affections of his friends, fo firongly recommended; the greatness of whose genius may be elimated from this, that he is courted by the mok emittent men of Rome; and whole pleads fuch, that it has the law in its layour, the authority of a municipal towns, the tellimony of Lucullus, and the register of Motellas. This being the case, we beg of you, my lords, fince in matters of tuch importance, not only the intercellon of men, but of gods, is necessary, that the man, who has always celebrated you vittues, those of your generals, and the vittories of the Roman people; who declares that he will mife eternal monuments of your praise and mone for our conduct in our late dometiic dangers; and who is to the number of those that have ever been accounted and pronounced divine, may be fo protected by you, as to have greater reason to applaud your generosity, than to complain of your rigour. What I have faid, my lords, concerning this caute, with my usual brevity and simplicity, is, I am confident, approved by all: what there advanced upon poetry in general, and the genius of the defendant, contrary to the uiage of the forum and the bar, will, I hope, he taken in good part by you; by him who prefides upon the bench, I am convinced it will.

Whitworth's Cicero.

§ 10. Oration for T. Annius Milo.

THE ARGUMENT.

This beautiful oration was made in the 55th year of Cicero's age, upon the following occasion: In the year of Rome 701, T. Annius Milo, Q. Metellus Scipio, and P. Plautius Hype fams, flood candidates for the contalthip; and, according to Plutach. puthed on their feveral interests with fuch open violence and bribery, as if it had been to be carried only by money or arms. P. Clodius, Milo's professed enemy, flood at the ame time for the pra-torthip, and used all his interest to disappoint Mile, by whose obtaining the consulting he was fure to be controuled in the exercite of his magnitracy. The fenate and the better fort were generally in Milo's interest; and Cicero, in particular, ferved him with diffinguithed zeal: three of the tribunes were violent against him, the other feven were

his full friends; above all M. Corlius, who, out if report to Cicero, was very active in this tervice. But whillt matters were proceeding in a very favourable train for him, and nothing feemed wanting to crown his fuccels, but to bring on the election, which las advertaries, for that reason, endeavoured to keep back; all his hopes and fortuges were blatted at once, by an unhappy rencounter with Clodius, in which Ciolius was killed by his fervants, and by his command. His body was lett in the Appian road, where it feil, but was taken up foon after by Tedius, a fenator, who bappened to come by, and brought to Rome; where it was exposed, all covered with blood and wounds, to the view of the populace, who flocked about in crowds to lament the miferable fate of their leader. The next day, Sextus Ciodius, a kinfman of the deceated, and one of his chief incendiaries, together with the three tribunes, Milo's enemies, employed all the arts of party and faction to inflame the mob, which they did to fuch a height of fury, that, inatching up the body, they ran away with it into the fenate-house, and tearing up the benches, tables, and every thing combustible, dressed up a funeral pile upon the fpot; and, together with the body, burnt the house utelf, with a bahlica or public hall adjoining. Several other outrages were committed, fo that the fenate were obliged to pais a decree, that the inter-rex, affifted by the tribunes and Pompey, should take care that the republic received no detennent; and that Pompey in particular, thould raife a body of trosps for the common fecurity, which he prefently drew together from all parts of Italy. Amidt this confusion, the rumour of a dictator being industriously foread, and alarming the fenate, they refolved prefently to create Pompey the fingle conful, whose election was accordingly declared by the inter-rex, after an inter-regnum of near two months. Pompey applied himself immediately to quiet the public diforders, and published several new laws, prepared by him for that pprpole; one of them was, to appoint a special commission to inquire into Clodius's death, ere, and to appoint

an extraordinary judge, of confular rank, to preside in it. He attended Milo's trial hantelt with a strong guard, to preferve prace. The neculors were young Appres, the nephew of Clodius, M. Antunius, and P. Valeitus. Cicero was the only advocate on Milo's fide; but as foon as he role up to fpoak, he was received with fo rude a clamour by the Clodians, that he was much discomposed and daunted at his first tetting out : he recovered fpirit enough, however, to go through his speech, which was taken down in writing, and published as it was delivered; though the conv of it now extant, is supposed to have been retouched, and corrected by him afterwards, for a prefent to Milo, who was condemned, and went into exila at Marfeilles, a few days after his condemnation.

THOUGH I am apprehensive, my lords, it may feem a reflection on a perfon's character to difcover any figus of fear, when he is entering on the defence or fo brave a man, and particularly unbecoming in me, that when T. Annies Milo himfelf is more concerned for the fafety of the flate than his own, I thould not beable to maintain an equal greatness of mind in pleading his cause; yet I must own, the unufual manner in which this new kind of trial is conducted, flinkes mewith a kind of terror, while I am looking around me in vain, for the ancient ulages of the forum, and the forms that have been hitherto obfe, ved in our courts of judicature. Your bench is not furrounded with the utual circle; nor is the crowd fuch as used to throng us. For those guards you fee planted before all the temples, however intended to prevent all violence, yet thrike the orator with terror; fo that even in the forum and during a trial, though attended with an ufeful and necessary guard, I cannot help being under tome apprehenfions, at the tame time I am fentilile they are without foundation. Indeed, if I imagined it was flationed there in opposition to Milo, I thould give way, my lords, to the times; and conclude there was no room for an orator in the midft of fuch an armed force. But the prudence of l'ompey, a man of fuch diffinguified wildom and equity, both cheers and relieves me; whofe justice will never fusier him to leave a perfon exposed to the rage of the foldiery,

whom he has delivered up to a legal trial; nor his wildow, to give the function of public authority to the outrages of a furioes mab. Wherefore those arms, those centurious and cohorts, are fo far from threatening me with danger, limit they affire me of protection; they not only banish my fears, but inspire me with conrage; und promife that I final be heard not merely with fafety, but with thence and attention. As to the neit of the mientbly, those, at least, that are Roman citizens, they are all on our fule; nor is there a finale perion of all that meltitude of spectators, whom you see on all lates of us, as far as any part of the formin can be dulin authed, waiting the event of the trial, who, while he favours Milo, do s not think his own rate, that of his police rity, his country, and his property, likewith at finke.

There is in lead one fot of men our inveterals enemies; they are those whom the maducis of P. Clodius has trained up. and fopported by plunder, firing of houses, undevery frecies of public milehief; who were frinted up by the freeclus of vetters day, to dichite to you what fentence you flooded parts. If there thould chance to raife any clamour, it will only make you c. athers how you part with a citizen who nivay- defilled thaterew, and their lou on threatenings, where your fifety was concomed. Act with foirit then, my fords, and if you ever entertained any lears, difmile theor all. For it ever you had it in vour power to determine in his our of brave and worthy mea, or of deferving citizens; in a word, if ever any occasion was prefeated to a rumber of perions felected from the most illustrious orders, of declaring, by their actions and their votes, that regood for the brave and virtuous, which they had often expressed by their looks and words; now is the time for you to exert this power in determining whether we, who have ever been divoted to your authority, thall frend the remainder of our days in grief and mifery, or after having been to long infulted by the most aboutdo ed citizens, thall at latt, through your means, by your fidelity, virtue and wifdon, recover our wonted life and vigour. For what, my looks, can be mentioned or conceived more grievous to us both, what more vexations or trying, than that we who entered ato the tervice of our country from the hopes of the highest honours, cannot even be free from the apprehen- it not fo, P. Africanus muit be reckoned

tions of the feverest punishments? For my own part, I always took it for granted. that the other forms and tempelts which me utually raised in popular turnults would best upon Milo, because he has constantly approved littlelt the friend of good men in position to the bad; but in a public trial, where the most illustrious perions of all the orders of the flate were to ht as judges, I never amagined that Milo's onemies could have entertained the leaft hope not only of detroxing his fafety, while fuch perious were upon the bench, but even of giving the leaft thain to his honour. In this cause, my lords, I thail take no advautage of Anoms's tribunethip, nor of his important fervices to the flute during the whole of his life, in order to make out his defence, unless you thall fee that Clodius himself actually lay in wait for him: nor final I entreat you to grant a pardon for one rath action, in confideration of the no ny glorious things he has performed for his country; nor require that if Clodiss's death prove a bleffing to you, you thould afcribe it rather to Milo's virtue. than the fortune of Rome: but if it fhould appear clearer than the day, that Clodins did really lie in wait, then I must beleech and adjure you, my lords, that if we have loft every thing elfe, we may at leaft be allowed, without fear of punithment, to defend our lives against the intolent attacks of our enemies,

But before I enter upon that which is the proper fubject of our present inquiry, it will be necessary to confute those notions which have been often advanced by our enem es in the fenate, often by a fet of worthless fellows, and even lately by our acculers before an affembly, that having thus removed all ground of mittake, you may have a cleaver view of the matter that is to come before you. They fay, that a man who confesses he has killed another, ought not to be fuffered to live. But where, pray, do thele funid people ufe this argument? Why truly, in that very city where the first person that was ever tried for a capital crime was the brave M. Horatius; who before the flate was in path-flion of its liberty, was acquitted by the comitin of the Roman people, though he confessed he had killed his fitter with his own hand. Can any one be fo ignoright as not to know, that in cases of bloodthed the fact is either absolutely denied, or maintained to be just and lawful? Were

out of his fenfes, who, when he was asked in a feditions manner by the tribine Carbo before all the people, what he thought of Gracehus's death ? faid, that he deferved to die. Nor cau Ahala Servilius, P. Natica, L. Opimius, C. Marins, or the fenate itteli, during my confulate, be acquitted of the moti enormous guilt, if it be a crime to put wicked citizens to death. It is not without reason therefore, my lords, that learned men have informed us, though in a fabulous manner, how that, when a difference arose in regard to the man who had killed his mother in revenge for his father's death, he was acquitted by a divine decree, nav, by a decree of the goddels of Wildom herfelf. And if the twelve tables allow a man, without fear of punishment, to take away the life of a thief in the night, in whatever fituation he finds him; and, in the day-time, if he uses a weapon in his defence; who can imagine that a person must universally deterve punithment for killing another, when he cannot but fee that the laws themfelves, in fome cafes, put a fword into our hands for this very purpote?

But if any circumstance can be alledged, and undoubtedly there are many luch, in which the putting a man to death can be visidented, that in which a person has acted upon the principle of felt-defence, must certainly be allowed sufficient to render the action not only just, but necessary. When a military tribune, a relation of C. Marius, made an unnatural attempt upon the body of a foldier in that general's army, he was killed by the man to whom be offered violence; for the virtuous youth those rather to expose his life to hazard, than fubruit to fuch dithonourable treatment; and he was acquitted by that great man, and delivered from all apprehentions of danger. But what death can be deemed unjuit, that is inflicted on one who lies in wait for another, on one who is a pubhe robber? To what purpose have we a train of attendants? or why are they furnified with arms? It would certainly be talawful to wear them at all, if the use of then was absolutely forbid : for this, my erds, is not a written, but an innate law. We have not been taught it by the learned, we have not received it from our ancestors, we have not taken it from books; but it is derived from, it is forced upon us by nature, and ftamped in indelible characters upon our very frame; it was not conteyed to us by instruction, but wrought

into our constitution; it is the dictate, not of education, but inftinct, that if our lives thould be at any time in danger from concealed or more open affaults of robbers or private enemies, every honourable method thould be taken for our fecurity. Laws, my lords, are filent amulit arms; nor do they require us to wait their decifions, when by fuch a delay one must suffer un undeferved punishment himself, rather than inflict it juttly on another. Even the law itlelf, very wifely, and in fome meafure tacitly, allows of felf-defence, as it does not forbid the killing of a man, but the carrying a weapon in order to kill him: tince then the firefs is laid not upon the weapon but the end for which it was carried, he that makes ufe of a weapon only to defend himfelf, can never be condemned as wearing it with an intention to take away a man's life. Therefore, my lords, let this principle be laid down as the foundation of our plea: for I don't doubt but I thall make out my defence to your fatisfaction, if you only keep in mind what I think it is impossible for you to forget, that a man who lies in wait for another may be lawfully killed,

I come now to confider what is frequently intitled upon by Milos's enemies : that the killing of P. Clodius has been declared by the fenate a dangerous attack upon the flate. But the fenate has declared their appprobation of it, not only by their fuffrages, but by the warmest tettimonies in favour of Milo. For how often have I pleaded that very cause before them? How great was the fansfaction of the whole order! How loudly, how publicly did they applaud me! In the fulleit house, when were there found four, at most five. who did not approve of Milo's conduct? This appears plainly from the lifelets harangues of that finged tribune, in which he was continually inveighing against my power, and alledging that the fenate, in their decree, did not follow their own judgment, but were merely under my direction and influence. Which, if it must be called power, rather than a moderate thare of authority in just and lawful cases. to which one may be entitled by fervices to his country; or fome degree of interest with the worthy part of mankind, on account of my readine's to exert myfelf in defence of the innocent; let it be called fo. provided it is employed for the protection of the virtuous against the fury of ruffians. But as for this extraordinary

trial.

trial, though I do not blame it, yet the fenate never thought of granting it; because we had laws and precedents already, but in regard to murder and violence; nor did Clodius's death give them fo much concern as to occasion an extraordinary commission. For if the fenute was deprived of the power of palling fentence upon him for an incestious debauch, who can imagine they would think a necessary togrant any extraordinary trial for inquiring into his death! Why then did the fenate decice that burning the court, the abault upon M. Lepidus's house, and even the death of this man, were actions injurious to the republic? because every act of violence committed in a free state by one citizen against another, is an act against the state. For even force in one's own defence is never defirable, though it is sometimes necessary; unless indeed it be pretended that no wound was given the flate, on the day when the Gracchi were flain, and the armed force of Saturninus crushed.

When it appeared, therefore, that a man had been killed upon the Appian way, I was of opinion that the party who acted in his own defence should not be deemed an enemy to the state; but as both contrivance and force had been employed in the atlair, I referred the merits of the cause to a trial, and admitted of the fact. And if that frantic tribune would have permit ed the fen ite to follow their own judgment, we fhould at this time have had no new commission for a trial: for the fenate was coming to a refolution, that the caute flould be tried upon the old laws, only not according to theufual forms. A divifrom was made in the vote, at whose request I know not; for it is not necessary to expose the crimes of every one. Thus the remainder of the female's authority was defirayed by a mercenary interpolition. But, it is faid, that Pompey, by the bill which he brought in, decided both upon the nature of the fact in general, and the merits of this caule in particular. For he published a law concerning this encounter in the Appian way, in which P. Clodius was killed. But what was the law? why. that inquiry should be made into it. And what was to be inquired into? whether the fact was committed? But that is not difputed. By whom? that too is clear. For Pompey faw, though the fact was conte Ted, that the justice of it might be defeaded. If he had not feen that a person

might be acquitted, after making his confellion, he would never have directed any inquiry to be made, nor have put into your hands, my lords, an acquitting as well as a favourable letter. But Cn. Pompey feems to me not only to have determined nothing fevere against Milo, but even to have pointed out what you are to have in view in the coarse of the trial. For he who did not punish the confesion of the fact, but allowed of a defence, was furely of opinion that the cause of the bloodiled was to be inquired into, and not the fact itfelf. I refer it to Pompey himfelf, who ther the part he acted in this affair prococcled from his regard to the memory of P. Clodius, or from his regard to the

M. Drufus, a man of the highest quality, the defender, and in those times almost the patron, of the senate, uncle to that brave man M. Cato, now upon the bench, and tribune of the people, was killed in his own house. And yet the people were not confulted upon his death, nor was any committion for a trial granted by the femate on account of it. What cap diffress is taid to have thread ove the whole city, when P. Mineatta . finated in the night time own bed! What breati day . in a, h, what heart was not protocolated, a efthat a perion, on whom the wines of all men would have conferred mimortality, could withes have done it, should be cut off by fo early a fate! was no decree made then for an inquiry into Africanus's death? None. And why? Because the crime is the fame, whether the character of the persons that futler be illustrious or obleure. Grant that there is a difference, as to the dignity of their lives, yet their deaths, when they are the effect of villany, are judged by the fame laws, and attended by the fame punishments: unless it he more a hemous parricide for a man to kill his father if he be of a confular dignity, than if he were in a private station; or the guilt of Clodine's death be aggravated by his being killed among the monuments of his ancestors; for that too has been urged; as if the great Appins Cacus had paved that road, not for the convenience of his country, but that his posterity might have the privilege of committing acts of violence with inpunity. And accordingly when P. Clodins had killed M. Papirius, a most accomplished person of the Equelirian order, on this Apptan way,

his crime must pass unpunished; for a nobleman had only killed a Roman knight amongst the monuments of his own fapuly. Now the very name of this Appian way, what a ftir does it make? what was never mentioned while it was flained with the blood of a worthy and innocent man, is in every one's mouth, now it is dyed with that of a robber and a murderer. But why do I mention these things? one of Clodius's flaves was feized in the temple of Castor, where he was placed by his mailer on purpole to affailinate Pompey: he confessed it, as they were wretting the dagger out of his hands. Pompey ablented from the forum upon it, he abiented from the fenate, he absented from the public. He had recourse, for his security, to the gates and walls of his own house, and not to the authority of laws, or courts of judicature. Was any law passed at that time? was any extraordinary committion granted? And yet, if any circumstance, ifany person, if any juncture, ever merited fuch a dittinction, it was certainly upon this occasion. An affaffin was placed in the forum, and in the very porch of the fenate-house, with a delign to murder the man, on whose life depended the fafety of the flate; and at fo critical a juncture of the republic, that if he had fallen, not this city alone, but the whole empire must have fallen with him. But pollibly you may imagine he ought not to be punished, because his design did not succeed; as if the fuccels of a crime, and not the intention of the criminal, was cognizable by the laws. There was less reason indeed for grief, as the attempt did not facceed; but certainly not at all the less for punishment. How often, my lords, have I myfelf escaped the threatening dagger, and bloody hands of Clodius? From which, if neither my own good fortune, nor that of the republic had preferred me, who would ever have procured an extraordinary trial upon my

But it is weak in one to prefume to compare Drufus, Africanus, Fompey, or myfelf with Clodius. Their lives could be dispensed with; but as to the death of P.Clodius, no one can hear it with any dagree of patience. The senate mourns, the Equestrian order is tilled with diffress, the whole city is in the deepest affliction, the corporate towns are all in mourning the colonies are overwhelmed with forrow; in a word, even the fields themselves lameat the loss of so generous, so useful, and

fo humane a citizen. But this, my lords, is by no means the reason why Pompey thought himfelf obliged to appoint a commission for a trial; being a man of great wifdom, of deep and almost divine penetration, he took a great variety of things into his view. He confidered that Clodies had been his enemy, that Milo was his intimate friend, and was afraid that, if he took his part in the general joy, it would render the fincerity of his reconciliation fuspected. Many other things he law. and particularly this, that though he had made a fevere law, you would act with becoming rejolution on the trial. And accordingly, in appointing judges, he felected the greatest ornaments of the most illufirious orders of the finte: nor in making his choice, did he, as fome have pretended, fet afide my friends. For neither had this perfon, so eminent for his justice, any such defign, nor was it possible for him to have made fuch a diffinction, if only worthy men were chosen, if he had been defirous of doing it. My influence is not confined to my particular friends, my lords, the number of whom cannot be very large, because the intimacies of friendship can extend but to a few. If I have any intereth, it is owing to this, that the attairs of the flate have connected me with the virtuous and worthy members of it; out of whom when he chose the most deferving, to which he would think himfelf bound in honour, he could not fail of nominating those who had an affection for me. But in fixing upon you, L. Domitius, to prefide at this trial, he had no other motive than a regard to juffice, difinterestedness, humanity, and bonour. He enacted that the president should be of consular rank; because I suppose he was of opinion that men of diffinction ought to be proof against the levity of the populace, and the railiness of the abandoned; and he gave you the preference to all others of the fame rank, because you had from your youth, given the ftrongest proofs of your contempt of popular rage.

Therefore, my lords, to come at last to the caste itself, and the accusation brought against us; if it be not unusual in some cases to confess the fact; if the senate has decreed nothing with relation to our cause, but what we ourselves could have wished; if he who enacted the law, though there was no dispute about the matter of fact, was willing that the lawfulness of it should be delated; if a number of judges have

lucen

been chosen, and a person appointed to premie at the trud, who might canvads the affair with widom and equity; the only remaining fubject of your inquiry is, which of their two parties way-laid the other. And that you may be able the more easily to determine this point, I thall beg the favour of an attentive hearing, while, in a few words, I lay open the whole affair before you. P. Clodius being determined, when created prætor, to harals his country with every species of opprestion, and finding the comitta had been delaved to long the year before, that he could not hold his office many months; not regarding, like the reft, the dignity of the flution, but being folicitous both to avoid having L. Paulus, a man of exemplary virtue, for his colleague, and to obtains whole year for opprelling the fate; all on a fudden threw up his own year, and referved lamifelf to the next; not from any religious feruple, but that he might have, as he faid himfelf, a full, entire year, for exercifing his pratorthip; that is, for overturning the commonwealth. He was fentible he must be controuled and cramps d in the exercise of his pratorian authority under Milo, who, he plainly faw, would be chosen conful by the unanimous confent of the Roman people. Accordingly he joined the candidates that opposed Millo, but in fuch a manner, that he overroled them in every thing, had the fole management of the election, and as he used often to boast, bore all the comitia upon his own thoulders. He affembled the tribes; he thrult himfelf into their counfels, and formed a new Colliman tribe of the most abandoned of the citizens. The more contintion and diffurbance he made, the more Milo prevailed. When this wretch, who was bent upon all manner of wickedness, faw that so brave a man, and his moft inveterate encury, would certainly be conful; when he perceived this, not only by the discourses, but by the votes of the Roman people, he began to throw off all difguife, and to declare openly that Milo mult be killed. He fent for that rude and barbarous crew of flaves from the Appennines, whom you have feen, with whom he used to ravage the public forefis, and harafs Etruria. The thing was not in the leaft a fecret; for he used openly to say, that though Milo could not be deprived of the confulate, he might of his life. He often internated this in the tenate, and de-

clared it expressly before the people; intonuch that when Favonius, that brave those, asked him what prospect he could have of carrying on his formus delipies, while Milo was alive; he replied, that is three or four days at most be thould be taken out of the way; which reply Inventus immediately communicated to M. Cato.

In the mean time, as foon as Clodins knew (nor indeed was there any difficulty to come at the intelligence) that Malo was obliged by the eighteenth of January to be at Lanuvium, where he was dictator, in order to nommate a prieft, a duty which the laws rendered necessary to be performed every year; he went indienly from Rome the day before, in order as appears by the event, to way-lay Malo, in his own grounds; and this at a time when he was obliged to leave a tumultuous afembly, which he had tennmoned that very day, where his prefence was necessary, to carry on his mad deligns; a thing he never would have done, if he had not been defirous to take advantage of that particular time and place for perpetrating lasvillany. But Milo, after having flaid in the fenate that day till the house was broke up, went home, changed his flaces and cloaths, waited awhile, as ulual, till his wife had got ready to attend him, and then fet forward about the time that Clodius, if he had propofed to come back to Rome that day, might have returned, Clodins meets him, equipped for an engagement, on horleback, without either charmt or baggage, without his Grecian fervants; and what was more extraordinary, without his wife. While this lierin-wait, who had contrived the journey on purpole for an adiglication, was in a chariot with his wife, muffied up in his clouk, encumbered with a crowd of fervants, and with a feeble and timid train of women and boys; he meets Clodins near his own effate, a little before fun-let. and is immediately attacked by a body of men, who throw their darts at him from an eminence, and kill his coachman. Upon which he threw oil his cloak, leaped from his chariot, and desended himfelf with great bravery. In the mean time Clodue's attendants drawing their fwords, fome of them ran back to the chariot in order to attack Milo in the rear, whilst others, thinking that he was already killed, fell upon his tervants who were behind . thefe, being rejolute and faithful to their maker, were, fome of them, flain; whilst the rest, seeing a warm engagement near the chariot, being prevented from going to their master's assistance, hearing besides from Clodiushimsels' that Milo was killed, and believing it to be fact, acted upon this escasion! I mention it not with a view to clude the accusation, but because it was the true state of the case) without the orders, without the knowledge, without the presence of their master, as every man would wish his own servant should act in the like circumstances.

This, my lords, is a faithful account of the matter of fact ; the perion who lay in wait was himfeli overcome, and force subdued by force, or rather, audiciously chanifed by true valour. I fay nothing of the advantage which accrues to the thate in general, to yourselves in particutar, and to all good men; I am content to wave the argument I might draw from hence in favour of my client, whole deling was to peculiar, that he could not fecure his own talety, without fecuring yours and that of the republic at the feare time. If he could not do it lawfully, there is no room for attempting his defence. But it reason teaches the learned, neceslity the barbarian, common cultom all nations in general, and even nature itfelf intiructs the brutes to defend their bodies, limbs, and lives, when attacked, by all possible methods, you cannot pronounce this action criminal, without determining at the same time that wheever falls into the hands of a high-wavman, must of necellity perith either by the tword or your decitions. Had Milo been of this opition, he would certainly have choten to have fallen by the hand of Ciodius, who had more than once before this male an attempt upon his life, rather than be executed by your order, because Le had not tamely yielded himfelf a victim to his rage. But if none of you are of this opinion, the proper a eltion is, not whether Clodius was killed; for that we grant; but whether juilly or unjuftly, an Beary of which many precedents are to be found. That a plot was laid, is very Oldent; and this is what the femate decred to be injurious to the fiate; but by which of them laid, is uncertain. This than is the point which the law due'ls us to esquire into. Thus, what the icn-ite decreed, related to the action, not the many and Pompey enacted not upon the matter of fact but of law.

Is nothing elfe therefore to be determined but this fingle question, which of them wav-laid the other? Nothing, certainly. If it uppear that Milowas the aggrehor, we ask no favour; but if Clodius, you will then acquit us of the crime that has been laid to our charge. What methad then can we take to prove that Clodies lay in wait for Milo? It is fufficient, confidering what an audacious abandoned wretch he was, to thew that he lay under a firong temptation to it, that he formed great hopps, and proposed to himself great advantages from Milo's death. Let that quettion of Callius therefore, whose interest was it? be applied to the prefent cafe. For though no confideration can prevail upon a good man to be guilty of a base action, yet to a bad man the least prospect of advantage will often be fufficient. By Mile's death, Clodius not only gained his point of being prætor, without that refiraint which his adverfary's power as conful would have laid upon his wicked deligns, but likewife that of being prator taider those consuls, by whose connivance at leaft, if not affifiance, he hoped he should be able to betray the state into the mad schemes he had been forming; perfuading himfelf, that as they thought thenselves under to great an obligation to him, they would have no inclination to oppose any of his attempts, even if they flould have it in their power; and that if they were inclined to do it, they would perhaps be fearer able to controll the most profligate of all men, who had been contirmed and hardened in his audaciousness by a long feries of villanies. Are you then, my lords, alone ignorant? are you frangers in this city? Has the report, which to generally obtains in the town, of those laws (if they are to be called laws, and not rather the fcourges of the city, and the plagues of the republic) which he intended to have imposed and fixed as a brand of infamy upon us all, never reached your ears? Shew us, I beg of you, Sextus Clodius, thew us, that regitter of your laws; which, they fay, you refeued out of his house, and carried oil, like another Palladium, in the midt of an armed force and a midnight nob; that you might have an honourable legacy, and ample infiractions for forme tuture tribune, who thould hold his office under your direction. if fuch a tribute you could find. Now he casts a look at me, like that he used to atiome when he threatened universal YULE.

ruin. I am indeed ftruck with that light harvest of glory, but that which every of the fenate.

What, Sextus, do you imagine I am angry with you, who have treated my greatest enemy with more severity than the humanity of my temper could have allowed me to have required? You threw the bloody body of P. Clodius out of his house, you exposed it to public view in the firects, you left it by night a prey to the dogs, half confumed with unhallowed wood, ftript of its images, and deprived of the ufual encomiums and funeral pomp. This, though it is true you did it out of mere necessity, I cannot commend: yet as my enemy was the object of your cruelty, I ought not certainly to be angry with you. You faw there was the greatest reason to dread a revolution in the flate from the prætorship of Clodius, unless the man who had both courage and power to controll him, were choten conful. When all the Roman people were convinced that Milo was the man, what citizen could have belitated a moment about giving him his vote, when by that vote he at once relieved his own tears, and delivered the republic from the utmost danger? But now Clodius is taken off, it requires extraordinary efforts in Milo to support his dignity. That fingular honour by which he was diffinguithed, and which daily increased by his reprefling the outrages of the Clodian faction, vanished with the death of Clodius. You have gained this advantage, that there is now no citizen you have to fear; while Milo has lott a sine field for difplaying his valour, the interest that Supported his election, and a perpetual fource of glory. Accordingly, Milo's election to the confulate, which could never have been hurt while Clodius was living, begins now upon his death to be difputed. Milo, therefore, is to far from receiving any benefit from Clodius's death, that he is really a fufferer by it. But it may be faid that hatred prevailed, that anger and refentment urged him on, that he avenged his own wrongs, and redreffed his own grievances. Now if all thefe particulars may be applied not merely with greater propriety to Clodina than to Mile, but with the utmost propriety to the one, and not the least to the other; what more can you delire? For why floudd Milo bear any other hatred to Clodius, who furnished him with such a rich

patriot mult bear to all bad flea? As to Cloding, he had motives enough for bearing ili-will to Milo; firth, as my protector and guardian; then as the oppofer of his mad fehemes, and the controller of his armed force; and laftly, as his accuser. For while he lived, he was hable to be convicted by Milo upon the Plotian Law. With what patience, do you imagine, fuch an imperious spirit could bear this? How high must his refentment have rifen, and with what juffice too, in fo great an enemy to justice ?

It remains now to confider what arguments their natural temper and behaviour will furnish out in defence of the one, and for the conviction of the other. Clodius never made use of any violence, Milo never carried any point without it. What then, my lords, when I retired from this city, leaving you in tears for my departure, did I fear flanding a trial; and not rather the infults of Clodow's flaves, the force of arms, and open violence? What reason could there be for restoring me, if he was not guilty of injuffice in banithing me? He had fummoned me, I know be had, to appear upon my trial; had let a fine upon me, had brought an action of treafon against me, and I had reafon to fear the event of a trial in a cause that was neither glorious for you, nor very henourable for myfelf. No, my lords, this was not the cafe; I was unwilling to expofe my countrymen whom I had faved by my counfels and at the hazard of my life, to the fwords of flaves, indigent citizens, and a crew of ruffians. For I faw, yes, I myfelf beheld this very Q. Hortenflus, the light and ornament of the repubhe, almost murdered by the hands of slaves while he waited on me : and it was in the fame tumult, that C. Vibienus, a fenator of great worth, who was in his company, was handled fo roughly, that it coft him his life. When, therefore, has that dagger which Clodius received from Cataline, refled in its theath? it has been aimed at me; but I would not fuffer you to expose yourfelves to its rage on my account; with it he lay in wait for Pompey, and stained the Appian way, that monument of the Clodian family, with the blood of Papirius. The fame, the very fame weapon was, after a long diffance of time, agua turned against me; and you know how narrowly I escaped being destroyed by it

flate from the violence of Clodins, when he could not be brought to a trial. Had he been inclined to kill him, how often had he the fairest opportunities of doing it? Might be not legally have revenged himtelt upon him, when he was defending his house and household gods against his asfault? might be not, when that exectlent citizen and brave man, P. Sextos, his colleague, was wounded? might be not, when Q. Fabricius, that worthy man, was abated, and a most barbarous flangliter made in the forum, upon his propoling the law for my reftoration? might be not, when the house of L. Carrilles, that upreht and brave prator, was attacked? taight he not on that day when the law paded in relation to me? when a vaft cononele of people from all parts of Italy, monated with a concern for my falety, would, with joyful voice, have celebrated the glory of the action, and the whole city have claimed the honour of what was performed by Milo alone?

At that time P. Lentullus, a man of distinguished worth and bravery, was conful; the projetfed enemy of Chadius, the avenger of his crimes, the guardian of the brate, the defender of your decrees, the apporter of that public union, and the leitorer of my falety: there were feven patters, and eight tribunes of the people in av interest, in opposition to him. Pompey, the first mover and patron of my return, was his enemy; whole important and illutirious decree for my reftoration was feronded by the whole fenate; who racouraged the Roman people, and when be pailed a decree in my favour at Capua, gave the figural to all Italy, folicitous for by fafety, and imploring his affiftance in by behalf, to repair in a body to Rome to have my pentence neverfed. In a word, the citizens were then to inflamed with rage against him from their assection to me, that had he been killed at that juncbreathey would not have thought to much of sequitting as of rewarding the periop by whose hand he fell. And yet Malo fo is governed his temper, that though he profecuted him twice in a court of judicathe, he never is idrecourfe to violent meafores account him. But what do I fay? Thile Miloway a private perion, and food accused by Clodius before the people, ben Pumpey was affanited in the midit

lately at the palace. What now of this of a forch he was making in Milo's fakind can be laid to Milo's charge? whole wour, what a fair opportunity, and I will force has only been employed to fave the even add, fufficient reason was there for difpatching him? Again, when Mark Antony had, on a late occasion, raised in the munds of all good man the most lively hopes of feeing the state in a happier cond tion; when that noble you hhadbravely undertaken the defence of his country in a non dangerous quarter, and had acheally focused that wild beaft in the toils of jultice, which be endeavoured to avoid: Immortal gods! how invourable was the time and place for defiroving him? When Clodius concealed himfelf beneath a dark fluireafe, how cafily could Malo have defreeved that plague of his country, and thus have her blened the glory of Antony, without incurring the hatred of any? How often was it in his power, while the comitia were held in the field of Mars? when Clodius had forced his way within the inclosure, and his party began, by his direction, to draw their fwords and throw franes; and then on a fudden, being firuck with terror at the fight of Mile, fled to the Tiber, how carnetly did you and every good man with that Milo had then difplayed his valour?

Can you imagine then that Milo would chuse to meer the ill-will of any, by an action which he forbore when it would have gained him the applause of all? Would be make no fcruple of killing him at the hazard of his own life, without any provocation, at the most improper time and place, whom he did not venture to attack when he had justice on his side, and so convenient an opportunity, and would laive run no rifque? especially, my lords, when his ftruggle for the tupreme office in the flate, and the day of his election was at hand; at which critical feafon (for I know by experience how timprous ambition is, and what a folicitous concern the e is alway the confulate) we dread not only the charges that may openly be brought against us, but even the most fecret whifpers and hidden furnifes; when we tremble at every romour, every falle, forged, and frivolous flory; when we explore the features, and watch the looks of every one we meet. For nothing is to changeable, fo tieldish, to trail, and fo flexible, as the inclinations and fentiments of our fellowcitizens upon fach occasions; they are not only displeased with the differentiable conduct of a candidate, but are often difgatied with his most worthy attions. Shall Milo

then be supposed, on the very day of election, a day which he had long wifted for and impatiently expected, to prefent himfelt before that august affembly of the centuries, having his hands flumed with blood, publicly acknowledging and proclaiming his guilt? Who can believe this of the man? yet who can doubt, but that Clodins imagined he should reign without controul, were Milo murdered? What thall we fay, my lords, to that which is the fource of all audaciousuels? Does not every one know, that the hope of impunity is the grand temptation to the commission of crimes? Now which of these two was the most exposed to this? Milo, who is now upon his trial for an action which must be deemed at least necessary, if not glorious; or Clodius, who had fo thorough a contempt for the authority of the magnitrate, and for penalties, that he took delight in nothing that was either agreeable to nature or confiftent with law? But why should I labour this point so much, why dispute any longer? I appeal to you, Q. Petilius, who are a most worthy and excellent citizen; I call you, Marcus Cato, to witness; both of you placed on that tribunal by a kind of supernatural direction. You were told by M. Favonius, that Cludius declared to him, and you were told it in Clodius's lifetime, that Milo fhould not live three days longer. In three days time he attempted what he had threatened: if he then made no fcruple of publishing his defign, can you entertain any doubt of it when it was actually carried into execution?

But how could Clodius be certain as to the day? This I have already accounted for. There was no difficulty in knowing when the dictator of Lannvium was to perform his flated facrifices. He faw that Mile was obliged to fet out for Lanuvium on that very day. Accordingly he was beforehand with him. But on what day? that day, on which, as I mentioned before, a mad affembly was held by his mercenary tribune; which day, which affembly, which tumult, he would never have left, if he had not been eager to execute his meditated villany. So that he had not the least pretence for undertaking the journey, but a frong reason for flaving at home: while Milo, on the contrary, could not pollibly flay, and had not only a fufficient reason for leaving the city, but was under an absolute necessity of doing it. Now what if it appear that, as Clodius certainly

knew Milo would be on the road that day, Mile could not fo much as suspect the fame of Clodius? First then, I atk which way he could come at the knowledge of it? A question which you cannot put, with respect to Clodius. For had he applied to nobody elfe, T. Patinas, his intimate friend, could have informed him, that Milo, as being dictator of Lanuvium, was oblined to create a priest there on that very day. Belides, there were many other perions, all the inhabitants of Lanuvium indeed, from whom he might have very easily had this piece of intelligence. But of whom did Milo enquire of Clodius's return? I fhall allow, however, that he did enquire; nay, I thall grant farther, with my friend Arrius, fo liberal am I in my concellions, that he corrupted a flave. Read the evidence that is before you; C. Caffinius, of the Interanma, furnamed Scola, an intimate friend and companion of P. Clodius, who fwore on a former occasion that Clodius was at Interanna and at Rome at the fame hour, tells you that P. Clodius intended to have fpent that day at his lest near Alba, but that hearing very unexpectedly of the death of Cyrus the architech, he determined immediately to return to Rome. The fame evidence is given in by C. Clodius, another companion of P. Clodius.

Observe, my lords, how much this evidence makes for us. In the first place, it plainly appears, that Milo did not undertake his journey with a defign to way-lay Clodius, as he could not have the least prospect of meeting him. In the next place (for I fee no reason why I should not likewife fpeak for myfelf) you know, my lords, there were perfous who in their zeal for carrying on this profecution did not feruple to fay, that though the murder was committed by the hand of Milo, the plot was laid by a more eminent perion. In a word, those worthless and abandoned wretches reprefented me as a robber and affaffin. But this calumny is confuted by their own witnesses, who deny that Clodius would have returned to Rome that day, if he had not heard of the death of Cyrus. Thus I recover my fourits; I am acquitted, and am under no apprehensions, left I thould feem to have contrived what I could not fo much as have suspected. Proceed I now to their other objections; Clodius, fay they, had not the least thought of way-laying Milo, because he was to have remained at Albanum, and would

commit a murder. But I plainly perceive that the person, who is pretended to have informed him of Cyrus's death, only informed him of Milo's approach. For why inform him of the death of Cyrus, whom Clodius, when he went from Rome, left expiring? I was with him, and feeled up his will along with Clodius; for he had publicly made his will, and appointed Clodius and me his heirs. Was a meffenger fant him then by four o'clock the next day to acquaint him with the death of a person, whom but the day before, about nine in the morning, be had left breathing his laft?

Allowing it however to be fo, what reason was there for hurrying back to Rome? For what did he travel in the night-time? what occasioned all this difpatch? was it because he was the heir? In the first place, this required no harry; and, in the next, if it had, what could be have got that night, which he must have lot, had he come to Home only next morning? And as a journey to town in the night was rather to be avoided than defired by Clodius, to if Milo had formed ear plot against his enemy, and had known that he was to return to town that evening, he would have fropped and waited for him. He might have killed him by night in a firspicious place, infeffed with robbers. Nobedy could have difbelieved him if he had denied the fact, fince even after lie has confessed it, every one is concerned for his fafety. First of all, the place itfelf would have been charged with it, being a haunt and retreat for robbers; while the filent folitude and fhades of night must have concealed Milo: and then as fuch numbers have been affaulted and plundered by Clodius, and fo many others were apprehentive of the like treatment, the hispicion must naturally have fallen upon them; and, in short, all Etruria might have been profecuted. But it is certain that Clodius, in his return that day from Aricia, called at Albanum. Now though Mile had known that Cledius had left Ancia, yet he had reason to suspect that he would call at his feat which lies upon the road, even though he was that day to return to Rome. Why then did he not either meet him fooner and prevent histracking it, or post himself where he was fire Clodius was topals in the night-time? Thus far, my lords, every circumstance to:curs to prove that it was for Milo's

never have fone from his country-feat to interest Clodius shoold live; that, on the contrary, Mile's death was a most detirable event for aniwering the purpoles of Clodius; that on one tide there was a most implacable hatred, on the other not the least; that the one had been continually employing himfelt in acts of violence, the other only in opposing them; that the life of Milo was threatened, and his death publicly foretold by Clodius, whereas nothing of that kind was ever heard from Milo; that the day fixed for Milo's journey was well known to his adverfary, while Milo knew nothing when Clodius was to return; that Milo's journey was necessary, but that of Clodius rather the contrary; that the one openly declared his intention of leaving Rome that day, while the other concealed his intention of returning; that Milo made no alteration in his measures, but that Clodius seigned an excuse for altering his; that if Milo had defigned to way-lay Clodius, he would have waited for him near the city till it was dark, but that Clodius, even if he had been under no apprehensions from Milo, ought to have been afraid of coming to town fo late at night.

> Let us now confider the principal point, whether the place where they encountered was most favourable to Milo, or to Clodius. But can there, my lords, he any room for doubt, or for any farther deliberation upon that? It was near the clinte of Clodius, where at least a thousand ablebodied men were employed in his mad schemes of building. Did Milo think he fliould have an advantage by attacking him from an eminence, and did he for this reason pitch upon that spot for the engagement? or was he not rather expected in that place by his adversary, who hoped the fituation would favour his affault? The thing, my lords, speaks for itfelf, which muit be allowed to be of the greatest importance in determining a queition. Were the affair to be reprefented only by painting, inflead of being expressed by words, it would even then clearly appear which was the traitor, and which was free from all mischievous defigns. When the one was fitting in his chariot muttled up in his cloak, and his wife along with him-Which of thefe circumitances was not a very great incumbrance? the drefs, the chariot, or the companion! How could be be worfe equipped for an engagement, . hen he was wrapt up in a cloak, embarraffed with a

> > X x 2

chariot,

chariet, and almost settered by his wise? Observe the other now, in the first place, salling out on a sudden from his seat; for what reason? in the evening; what used has? Lites to what purpose, especially at that seaton? He calls at Pompey's feat; with what view? To see Pompey? He knew he was at Album. To see his house? He had been in it a thousand times. What then could be the reason of this hisrogen and shifting about? He wanted to be upon the spot when Milo came up.

Now pleafe to compare the travelling equipate of a determined rubber with that of Mile. Clodies, before that day, always trayelled with his wife; he was then without her; he never used to travel but in his chariot; he was then on horfeback: he was attended with Grocks wherever be went, even when he was hurrying to the Tofcan camp; at that time he had nothing informicant in his retinue. Milo, contrans to his utual manner, happened then to take with him his wife's ingers, and a whole train of her women: Clothus, who never failed to carry his whores, his catamites, and his bawds along with him, was then attended by none but those who formed to be picked out by one another, How came he then to be overcome? Because the traveller is not always killed by the robber, but fometimes the robber by the traveller; because, though Clodins was prepared, and fell upon those who were imprepared, yet Clodins was but a woman, and they were men. Nor indeed was Milo ever to little imprepared, as not to be a match for him almost at any time. He was always fentible how much it was Clothus's intentit to ged rid of him, what un involvente hatred he bove to him, and what tenlacious attempts he was capable of ; and therefore as he know that a price was fet upon his life, and that it was in a numner devoted to definition, he never exe posed it to any danger without a guard. Add to this effect of accidents, the uncertain iffice of all combuts, and the common chance of war, which often turns ug and the victor, even when ready to plender and trimmels over the vareputhed. Add the untidialists of a gluttenous, donnken, thapid leader, who when he had furrounded his advertise, never thought of hes attendents that were behind; from alican, fired with race, and defpareing of their matter's life, he buttered the punithment which there faithful flaves inflicted in revenge for their mafter's death. Why then did be give them their freedom! He was attaid, I happofe, left they flould betray hom, left they should not be able to endure pain, left the torture flould oblige them to conters that P. Clodius was alloh by Milo's fervants on the Appian way. But what occasion for torture? what way ou to extort? If Clodius was killed? it was; but whether hawfully or unlawfully, can never be determined by torture. When the question relates to the matter of fad, we may have recourfe to the executioner; but when to a point of equity, the judge must decide.

Let us then here examine into what is to be the fubiect of enquiry in the prefent cate; for as to what you would extort by torture, we confefs it all. But if you ak why he gave them their freedom, rather than why he beltowed to finall a reward upon them, it thews that you do not even know how to find fault with this action of your adversary. For M. Cato, who sits on this bench, and who always fpeaks with the utmit refolution and fiendinels, faid, and faid it in a tunnituous affembly, which however was quelled by his authority, that those who had defended their master's life, well deferved not only their liberty, but the highest rewards. For what reward can be great enough for fuch aftertionate, fuch worthy and faithful fervants to whom their mafter is indebted for his life? And which is yet a higher obligation, to whom he owes it, that his moli inveterate enemy has not leasted his eyes. and fatiated his withen with the fight of his mangled bloody corfe. Who, it they had not been made free, thefe deliverers of their matter, their avengers of guilt, thefe defenders of innocent blood, mult have been put to the torture. It is mutter, however, of no fault fatisfaction to him, under his prefent misfortunes, to reflect, that whatever becomes of himfelf. he has hadit in his power to reward them as they deferved. But the torture that is now inflicting in the porch of the temple of Liberty, bears hard upon Milo. 4 poll whole flaves is it inflicted? do you also on thole of P. Clodins. Who demanded them? Appius. Who produced them? Appins. From whence came they? from Appins. Good gods! can any thing be more fevere? Servants are never exhibited against their matters but in cases of invest, as in the utiance of Clodies, who now appronches nearer the gods, than when be milde

made his way into their vory prefence; for the fame enquiry is made into his death, as if their facred mytheries had been violated. But our ancestors would not allow a flave to be put to the tosture for what affected his mafter, not because the truth could not thus be discovered, but because their matters thought it dithonourable and wo; ie then death itself. Can the truth be difcovered when the flaves of the profecutor are brought as witheline against the person accused? Let us hear now what kind if an examination this was. Call in Rote to, call in Catea. Did Clodas way-lay Milo? Hedid. Drug them infantly to execution; he did not. Let them have their liberty. What can be more fatisfactory than this method of examination? They are harried away on a fudden to the rack, but are confined feparately, and thrown into dongeons, that no perion may have air opportunity of speaking to them: At laik, after having been, for a hundred days in the hands of the profecutor, he himfelt produces them. What can be more fair and impartial than inch an examination?

But if, my lords, you are not yet con-Unced, though the thing thines out with foch firring and full evidence, that Milo, telumed to Rome with an innocent mind. manned with guilt, undiffurhed by fear, andfree from the acculations of conference; call to mind, I befeech you by the immortal gods, the expedition with which he came back, his entrunce into the forum while the fenate house was in flames, the greatness of foul he discovered, the look be affumed, the speech he made on the organism. He delivered himfelf up, not only to the people, but even to the fenate; 201 to the femate alone, but even to guards appointed for the public fecurity; nor merely to them, but even to the authority of hua whom the fenate had intrutted with the care of the whole republic, all the youth of Italy, and all the military torre of Rome; to whom he would never have delivered himself, if he had not been confident of the goodness of his cause; escender as that person heard every reint was apprehensive of very great dan-"T had many intpicions, and gave creof the some flories. Great, my lords, is theforce of conference; great both in the morent and the guilty; the first have no bur, while the other imagine their pudifferent is continually before their evenher mixed is it without good reason that

Milo's cause has ever been approved by the fenate; for those wife men perceived the juttice of his cause, his presence of mind, and the refolution with which he made his defence. Have you forgot, my lords, when the news of Clodius's death ' had reached us, what were the reports and opinions that prevailed, not only amongst. the elemies of Milo, but even amongit fome other weak perions, who affirmed that Mile would not return to Rome? For .. if he committed the fact in the heat of paffion, from a principle of refentment, they imagined he would-look upon the death of P. Clodius as of tuch cinnequence, that he could be content to go into banithment, after having fitiated his revenge with the blood of his enemy; or a he put him to death with a view to the bufety of his country, they were of opinion that the fame brave man, after he had haved the frate by exporing his own life to danger, would cheerfully fabrut to the Liws, and leaving us to enjoy the blellings be had preferved, be fatisfied himfelf with unmortal glory. Others talked in a more frightful manner, and called him a Cataline; he will break out, faid they, he will feize fome throng place, he will make war upon his country. How wretched is often the fate of those citizens who have done the moth important tervices to their country! their noblett actions are not only torget, but they are even fulpected of the most impions. Thefe fuggettions therefore were groundlefs; yet they must have proved too well founded, had Milo done any thing that could not be detended with truth and juffice.

Why should I mention the calumnies that were afterwards heaped upon him? And though they were fuch as would have filled any breatt with terror that had the leaft confeioufness of guilt, yet how he hore them! Immortal gods! bore them, did I fay? Nay, how he despifed and fet them at nought! Though a guilty perfon even of the greatest counties, nor un innocent person, unless endued with the greatest fortitude, could never have neglected them. It was whilpered about, that a vaft number of fhields, fwords, bridles, durts, and javelins might be found; that there was not a firest nor lane in the city, where Milo had not hired a honfe; that arms were conveyed down the Tiber to his feat at Occiculum; that his house on the Capitoline hill was filled with thields; and that every other place was full ofhand-granades for firing the city. Their Corics

flories were not only reported, but almost believed; nor were they looked upon as groundleis till after fearch was made. I could not indeed but applaud the wanderful diligence of Pompey upon the occasion: but to tell you freely, my lords, what I think : those who are charged with the care of the whole republic, are obliged to hear too many flories; nor indeed is it in their power to avoid it. He could not refute an audience to a paltry tellow of a prieft, Licinius I think he is called, who gave information that Mile's flaves, having got drunk at his house, contested to him a plot they had formed to murder Pompey, and that afterwards one of them had flabbed him, to prevent his discovering it: Pompey received this intelligence at his gardens. I was fent for immediately; and by the advice of his friends theaffair was laid before the fenate. I could not help being in the greatest consternation, to fee the guardian both of me and my country under in great an apprehenfion; yet I could not help wondering, that fuch credit was given to a butcher; that the confessions of a parcel of drunken flaves should be read; and that a wound in the fide, which feemed to be the prick only of a needle, should be taken for the thrust of a gladiator. But, as I understand, Pompey was thewing his caution, rather than his fear; and was disposed to be suspicious of every thing, that you might have reason to sear nothing. There was a rumour alfo, that the boule of C. Cæfar, fo eminent for his rank and courage, was uttacked for feveral hours in the night. Nobody heard, nobody perceived any thing of it, though the place was fo public: yet the uffair was thought fit to be enquired into. I could never suspect a man of Pompey's diffinguithed valour, of being timorous; nor yet think any caution too great in one, who has taken upon himfelf the defence of the whole republic. A fenator too, in a full house, affirmed lately in the capitol, that Milo had a dagger under his gown at that very time: upon which he tiript himself in that most facred temple, that, fince his life and manners could not gain him credit, the thing itself might fpeak for him.

These stories were all discovered to be false malicious forgeries: but is, after all, Milo must still be feared; it is no longer the affair of Clodius, but your suspicious, Pompey, which we dread: your, your suspicious, I say, and speak it so, that you

may hear he. If you are afraid of Milo, if you imagine that he is either now forming, or has ever before contrived, any wicked delign against your life; if the forces of Italy, as tome of your agents allege, if this armed force, if the Capitoline troops, if their fentries and guards, if the choien band of young men that coard your perton and your house, are armed against the silaults of Milo; if all their precautions are taken and pointed against him, great undoubtedly must be his firength, and incredible his valour, far furpaffing the forces and power of a fingle mun, fince the most emment of all our generals is fixed upon, and the whole republic armed to resit him. But who does not know, that all the infirm and feeble parts of the state are committed to your care, to be reitored and firengtheard by this armed force? Could Mile have found an opportunity, we would immudiately have convinced you, that no man ever had a stronger affection for another than be has for you; that he never declined any danger, where your dignity was concerned; that, to raife your glory, he often encountered that moniter Clodius; that his tribunate was employed, under your direction, in fecuring my tafety, which you had then fo much at heart; that you afterwards protected him, when his life was in danger, and uted your interest for him, when he flood for the prætorship; that there were two perions whose warmelt friendthip he hoped he might always depend upon; yourielf, on account of the obligations you laid him under, and me on account of the favours I received from him. It he had failed in the proof of all this; if your furpicions had been to deeply rooted as not to be removed; if Italy, in a word, must never have been free from new levies, nor the city from arms, without Milo's definition, he would not have ferupled, such is his nature and principles, to bid adieu to his country: but first he would have called upon thee, O thou great one, as he now does.

great one, as he now does.

Consider how uncertain and variable the condition of life is, how unfettled and unconstant a thing fortune; what unfaithfulness is to be found amongst friends; what difguises suited to times and circumstances; what defertion, what cowardice in our dangers, even of those who are dearest to us. There will, there will, I say, be a time, and the day will certainly come, when you, with safety still, I hope, to your ortunes.

though

though changed perhaps by some turn of matrons discovered even in the most sucred the common times, which, as experience thews, will often happen to us all, may want the affection of the friendlieft, the fidelity of the worthieft, and the courage of the bravett man living. Though who can believe that Pompey, fo well skilled in the laws of Rome, in ancient utages, and the conflitution of his country, when the fenate had given it him in charge, to we that the republic received no detronent; a featence always fufficient for arming the confuls without alligning them an armed force; that he, I lay, when an army and a chosen band of foldiers were affigued him, should wait the event of this trial, and defend the conduct of the man who wanted to abolifh trials? It was fufficient. that Punipey cleared Milo from those tharges that were advanced against him, by enacting a law, according to which, in my opinion, Milo ought, and by the confestion of all, might hawfully be acquitted, But by fitting in that place, attended by a numerous guard affigued him by public authority, he fufficiently declared his intention is not to overswe (for what can be more unworthy a man of his character, than to oblige you to condemn a person, whom, from numerous precedents, and by virtue of his own authority, he might have punithed himself), but to protect you: be means only to convince you that, notwithflanding yesterday's riotous atlembly, you are at full liberty to pass sentence according to your own judgments.

But, my lords, the Clodian accuration gives the no concern; for I am not fo finpid, to void of all experience, or to ignorant of your fentiments, as not to know your opiwice in relation to the death of Clodius. And though I had not refuted the charge, as I have done, yet Milo might, with farety, have made the following glorious declamation in public, though a false one ; I bave fluin, I have fluin, not a Sp. Mælius, who was inspected of airning at the regal power, because he courted the favour of the people by lowering the price of corn, and believing extravagant prefents to the win of his own effate; not a Tiberius Gracchus, who feditiously deposed his rolleague from his mugiffracy; though even their deftroyers have filled the world with the glory of their exploits: but I have flain the man (for he had a right to we this language, who had faved his country at the hagard of his own life) whole aleminable adulteries our nobleft

revelles of the immortal gods; the mun, by whole punithment the fenate frequently determined to atone for the violation of our religious rites: the man whole incest with his own titier. Lucullus fwore he had difcovered, by due examination: the man who, by the violence of his flaves, expelled n perion eleemed by the fenate, the prople, and all nations, as the preferver of the city and the lives of the citizens: the man, who gave and took away kingdoms, and parcelled out the world to whom he pleafed: the man who, after having committed feveral murders in the forum, by torce of arms obliged a citizen of illuftrious virtue and character to confine himfelf within the walls of bis own house: the man, who thought no inflance of villany or luft unlawful: the man, who fired the table of the Nymphs, in order to deftroy the public regitier, which contained the centure of his crimes: in a word, the man who governed himself by no law, difregarded all civil inflitutions, and obferved no bounds in the division of property; who never attempted to feize the estate of another by quirks of law, suborned evidence, or falle oaths, but employed the more effectual means of regular troops, encampments, and flandards; who by his armed forces endeavoured to drive from their polletlions, not only the Tuscung (for them he utterly despised) but Q. Varius, one of our judges, that brave man and worthy citizen; who with bis architects and measurem traversed the estates and gardens of a great many citizens, and grained in his own imagination all that lies between Janiculum and the Alps; who when he could not perfunde Titus Pecavius, an illustrious and brave Roman knight, to fell an island upon the Pretian lake, immediately conveyed timber, flone, mortar and fand, into the ifland in boats, and made no scruple of building a house on another perfon settate, even while the proprietor was viewing him from the opposite bank; who had the impudence, immortal gods! to declare to fuch a man as Titus Furfanius (for I shall omit the affair relating to the widow Scantin, and the young Apronius, both of whom he threatened with death, if they did not yield to him the poffelli-tt of their gardens); who had the impudence, I fay, to declare to Titus Furfanies, that if he did not give him the fum of money he demanded, he would convey XXA

a dead body into its house, in order to expose so can next a man to the public odum; who disposeded his brother Appres of his chate in his abbluce, a man united to me in the clotest friendship; who attempted to ran a wall through a court-yard belonging to his after, and to bubblis in such a manner as net only to re der the court-yard uteless, but to despote her of all entrance and accets to her house.

Let all these violences were tolerated. though committed no lef- against the commonwealth than against private perfous, against the remotest as well as the nearest, Brangers as well as relations; but the um zing patience of Rome was become, I know not how, perjectly hardened and callous. Yet by what means could you have ward doff thefe dangers that were more immediate and threatening, or how could you have tubinitted to his government, if he had obtained it? I pats by our athes, foreign nations, kings and | riners; for it was your ardent prever that he would turn himielf loote upon those rather than ugan your edates, your bonies, and your money, Your money d.d I tay? By heavens, he had never retirained his unb. dled but from violating your wives and chi dren. Do you imagine that there things are mere betions? are they not evitient? not publicly known? not remembered by all? Is it not peterious that he attempted to nuic an army of thives, firm, especia to make him matter of the whole republic, and of the property of every Reman? Wheretore if Milu, holding the bloody dagger in his hand, had eried aloud, Citizens, I befeech von draw near and attend: I have killed Publius Clockus; with this right-hand, with this dagger I have fived your lives from that fury, which no laws, no government could retrain; to me alone it is owing, that juftice, equity, laws, liberty, modelly, and dicency, have yet a being in Rome : could there be any room for Mile to fear how his country would take it? Who is there now that loss not approve and appland it? Where is the man that does not think and declace it as his ommon, that Milo has done the greatest possible service to his country; that he has far ed joy amongit the inhabitants of Rome, of all Italy, and the whole world? I cannot indeed determine how high the transports of the Bonnan people may have ariten in former times, this prefent age however has been

witness to many figual victories of the bravelt generals; but none of them ever occasional tuch real and latting joy, Comnot this, my lords, to your memories. I hope that you and your children will eninv many bleftings in the republic, and that each of them will be attended with this reflection, that it P. Clouius had fived, von would have enjoyed none of them. We as we entertain the highest, and, I trust, the best grounded hopes, that to excellent a perforbeing conful, the licentionine's of men being curbed, their ichemes broke, law and juttice established, the present will be a most fortunate year to Rome. But who is to tupid as to imagine this would have been the case had Clodus hved? How could you pollibly have been fecure in the possession of what belongs to you, of your own private property, under the tyranny of fuch a fury ?

I am not afraid, my lords, that | fhould from to let my refentment for perfonal injunes rife to high, as to charge their things boon him with more freedom than truth. For though it might be expected this thould be the principal motive, yet to common an enemy was he to all mankind, that nov averion to him was tearcely greater thou that of the whole world. It is impossible to express, or indeed to imagine, what a villain, what a permicious montler he was. Put, my lords, attend to this; the prefent trial relates to the death of Cloding; from now in your minds for our thoughts are tree, and represent what they pleafe just in the fame manner as we perceive what we ice) form, I tay, in your minds the picture of what I shall now defembe. Suppose I rould perfuade you to acquit Mile, on condition that Ciodius should revive. Why do your countenances betray those marks of fear? how would be affect you when hying, if the bare imagination of him, though he is dead, to powerfully firikes you? what I if Pompey hunfelt, a man proficiled of that merit and fortune which enable him to effect what no one belides can; if he, I say, had it in his power either to appoint Cledius's death to be enquired into, or to raile him from the dead, which do you think he would chafe? Though from a principle of friendship he might be inclined to raite him from the dead, yet a regard to his country would prevent him.) on therefore fit as the avengers of that man's death, whom you would not recall to life if you were able; and enquiry is made into his death by a law which would

would not have pailed if it could have brought him to life. If his detirover then thould coulefs the fact, need he lear to be punished by those whom he had dolivered? The Greeks render divine hos nous to those who put tyrants to death. What have I feen at Athens? what in other cities of Greece What ceremonies were inflituted for fuch heroes?, what hymns? what fongs? The honours paid then were almost equal to those paid to the immortal gods. And will you not only refute to pay any honours to the preferver of to great a people, and the avenger of fuch execrable villanies, but even lutter him to be dragged to publifument? He would have contaited, I fav, had he done the action; he would have bravely and freely confelled that he did it for the common good; and, indeed, he ought not only to have confeiled, but to have proclaimed it.

For it he does not deny an action for which he delires nothing but pardon, is it likely that he would feruple to confess what he might hope to be rewarded for ? untefs he thinks it is more agreeable to you, that he should defend his own life, than the lives of your order; especially, As by fach a contession, if you were inclined to be grateful, he might expect to ebtain the nobleft honours. But if you last not approved of the action (though how is it possible that a person can ditapprove of his own fafety!) if the courage of the braveft man alive had not been agreeable to his countrymen; he would have departed with fleadiness and resolu-Iton from to ungrateful a city. For what can thew greater ingratitude, than that all fould rejoice, while he alone remained disconsolate, who was the cause of all the joy? Yet, in deliroying the enemies of our country, this has been our constant permation, that as the glory would be turs, to we should expect our share of odum and danger. For what praife bad tem due to me, when in my confuinte f made to many hazardous attempts for you and your potherity, if I could have propaid to carry my designs into execution without the greatest struggles and difficulby? what woman would not dure to kill the mon villanous and outrageous citizen, if the bad no danger to fear? But the firm who bravely detends his country with the prospect of public adium, danger, and death, is a man indeed. It is the dity of a grateful people to befrow diffin-

guithed honours upon diftinguished patriots, and it is the part of a brave man, not to be induced by the greatest sufferings to repent of having boldly difcharged his duty. Milo therefore might have made the confeilion which Ahala, Nafica, Opimius, Marius, and I myfelf, formerly mode. And had his country been grateful, he might have rejoiced; if ungrateful, his confeience must tall have supported him under ingratitude. But that gratitude is due to him for this favour, my lords, the fortune of Rome, your own orefervation, and the immortal gods, all declare. Nor is it possible that any man can think otherwise, but he who denies the existence of an overruling power or divine providence; who is unaffected by the majetty of your empire, the fun itfelf, the revolutions of the heavenly bodies. the changes and laws of nature, and, above all, the wildom of our ancestors, who religioutly observed the facred rites, ceremonies, and auspices, and carefully transmitted them to their posterity.

Thereis, there certainly is fuch a Power; nor can this grand and beautiful fabric of nature be without an animating principle, when these bodies and seeble frames of ours are endowed with life and perception, Unleis perhaps men think otherwife, because it is not immediately discerned by them; as if we could difcern that principle of wildom and forefight by which we act and speak, or even could discover the manner and place of its existence. This, this is the very power which has often, in a wonderful manner, crowned Rome with glory and prosperity; which has defroved and removed this plague; which inspired him with prefumption to irritate by violence, and provoke by the fword, the bravest of men, in order to be conquered by him; a victory over whom would have procured him eternal impunity, and full fcope to his audacionineis. This, my lords, was not effected by human prudence, nor even by the common care of the immortalgods. Our facred places themfelves, by heavens, which faw this moniter fall, feemed to be interested in his fate, and to vindicate their rights in his defiruction. For you, ye Alban mounts and groves, I implore and attest, ye demolished altars of the Albans, the companions and partners of the Roman rites, which his fury, after having demolished the sacred groves, buried under the extravagant piles of his building. Upon his fall, your alters,

your rites flourished, your power prevailed, which he had debled with all manner of yillany. And you," O venerable Juniter! from your lofty Latian mount, whole lakes, Whose woods and burders, he politiced with the most abominable lust, and every species of guilt, at last opened your eyes to behold his descruction : to you, and in your prefence, was the late, but just and deferved penalty paid. For furely it can never be alleged that in his encounter with Milo before the chapel of the Bons Dea, which tlands upon the effate of that worthy and accomplified youth, P. Sextius Gullus, it was by chance he received that first wound, which delivered him up to a fliameful death, I may fay under the eye of the goddefs berfelf: no; it was that he might appear not acquitted by the infamous deeree, but referved only for this figural puhifhment.

Nor can it be denied that the anger of the gods inspired his followers with such traducis, as to commit to the flames his exposed body, without pageants, without boging, without fliews, without pomp, without lamentations, without any oration in his praise, without the rites of burial, belimeared with gore and dirt, and deprived of that funeral folemnity which is always granted even to enemica. It was mennfittent with piety, I imagine, that the images of fuch illustrious persons shouldgrace fo monthrous a parricide; nor could be be torn by the dogs, when dead, in a more proper place than that where he had been to often condemned while alive. Truly, the fortune of the Roman people feemed to me hard and cruel, which faw and suffered him to insult the state for fo many years. He defiled with luft our moft facred rites; violated the most solema detrees of the fenate; openly corrupted his Judges; harafied the fenate in his tribunethip; abolithed those acts which were passed with the concurrence of every order for the fafety of the ftate; drove me from any tountry; plundered my goods; fired my house; perfecuted my wite and chiltiren; declared an execuble war against Pompey; affaffinated magistrates and citizens; burnt my brother's house; laid Tufeany waite; drove many from their habitations and chates; was very eager and furious; neither Rome, Italy, provinces nor kingdoms, could couline his frenzy. In his house, laws were hatched, which were to subject us to our own slaves; there was nothing belonging to any one, which

he coveted, that this year he did not think would be his own. None but Milo upposed his detigns; he looked upon Poupey, the man who was best able to oppose him, as firmly attached to his interest, by their late reconciliation. The power of Ladar he called his own; and my fall had thught him to despite the sentiments of all good men; Milo alone retiited him.

In this fituation, the immortal gods, as I before observed, inspired that fursous mucrount with a defign to way-lay Milo. No otherwise could the moniter have been defiroyetl; the finte could never have avenged its own cause. In it to be imagined, that the fenate could have reftrained him when he was practor, after having effected nothing while he was only in a private station? Could the contuls have been firong enough to check their prætor? In the first place, had Milo been killed, the two confuls must have been of his faction; in the next place, what conful would have had courage to oppose him when prætor, whom he remembered, while tribune, to have grievously haratled a person of consular dignity? He might have opprefled, feized, and obtained every thing; by a new law which was found among the other Clodian laws, he would have made our flaves his freed-men. In thort, had not the unmortal gods inspired him, effemissate as he was, with the frantic refolution of attempting to kill the braveft of men, you would this day have had no republic. Had he been prætor, had he been conful, if indeed we can suppose that these temples and these walls could have flood till his confulthip; in fhort, had he been alive, would be have committed no mischief; who, when dead, by the direction of Sextas Clodius, one of his dependants, fet the femate house on fire? Was ever light more dreadful, more shocking, and more miserable? That the temple of holinefs, dignity, wifdom, public counsel, the head of this city, the fanctuary of her allies, the refuge of all nations, the feat granted to this order by the unanimous voice of the Roman penple, should be fired, eraled, and detiled? And not by a giddy mob, though even that would have been dreadful, but by one man; who, if he dared to commit fuch havor for his deceased friend us a revenger, what would be not, as a leader, have done for him when living? He choic to throw the body of Clodius into the fenatehouse, that, when dead, he might burn

what he had fobverted when living. Are there any who complain of the Appian way, and yet are filent as to the fenatehouse? Can we imagine that the forum could have been defended against that man, when living, whole lifeless corfe defroved the fenate-house? Raife, raife him if you can from the dead; will you break the force of the living man, when you can fearce futtain the rage occationed by his unburied body? Unless you pretend that you fetlained the attacks of those who ran to the fenate-house with torches, to the temple of Castor with feythes, and flew all over the forum with fwords. You faw the Roman people maffacred, an attembly. attacked with arms, while they were uttentively hearing Marcus Coelius, the tribune of the people; a man undaunted in the fervice of the republic; most refolute in whatever caute he undertakes; devoted to good men, and to the authority of the fenate; and who has differented a divine and amazing fidelity to Milo under his prefent circumstances; to which he was reduced either by the force of envy, or a lingular turn of fortune.

But now I have faid enough in relation to the cause, and perhaps taken too much liberty in digreffing from the main subject. What then remains, but to befeech and adjure you, my lords, to extend that computton to a brave man, which he difdains to implore, but which I, even against his cordent, implore and earneftly intreat. Though you have not feen him shed a fingle tear while all are weeping around him, though he has preferved the same flendy countenance, the fame firmnels of voice and language, do not on this account withhold it from him; indeed I know not whether thefe circumftances ought not to plead with you in his favour. If is the combats of gladiators, where perfens of the lowest rank, the very drags of the people, are engaged, we look with fo much contempt on cowards, on those who meanly beg their lives, and are to fond of faving the brave, the intrepid, and those who cheerfully offer their breaks to the fword; if, I fay, we feel morepity for those who feem above asking our pity, than for those who with earnettness intreat it, how much more ought we to be thus affected where the interests of our bravest citizens are concerned? The words of Milo, my lords, which he frequently utters, and which I daily hear, kill and confound me. May my fellow-citizens, fays he, flourith,

may they be fafe, may they be glorious, may they be happy! May this renowned city prosper, and my country, which shall ever be dear to me, in whattoever manner the thall pleafe to treat me: fince I must not live with my fellow-citizens, let them enjoy peace and tranquillity without me; but then, to me, let them owe their happinefs. I will withdraw, and retire into exile: if I cannot be a member-of a vire tuous commonwealth, it will be fome fatisfaction not to live in a bad one; and as foon as I fet foot within a well-regulated and free state, there will I fix my abode, Alas, cries he, my fruitless toils I my fallacious hopes! my vain and empty fehemes! Could I, who in my tritunethip, when the flate was under oppression, gave myfelf up wholly to the fervice of the fenate, which I found almost destroyed; to the service of the Roman knights, whose strength was fo much weakened; to the fervice of all good citizens, from whom the oppreflive arms of Clodius had wretted their due authority; could I ever have imagined I thould want a guard of honest men to defend me? When I restored you to your country, (for we frequently discourse together) could I ever have thought that I thould be driven myfelf into banithment? Where is now that fenate, to whose interest we devoted ourselves? Where, where, favs be, are those Roman knights of yours? What is become of that warm affection the municipal towns formerly testified in your favour? What is become of the acclamations of all Italy? What is become of thy art, of thy eloquence, my Tully, which have so often been employed to preferve your fellow-citizens? Am I the only person, to whom alone they can give no affiftance; I, who have to often engaged my life in your defence?

Nor does he utter fuch fentiments as thefe, my lords, as I do now, with tears, but with the fame intrepid countemance you now behold. For he denies, he abfolutely denies, that his fellow-citizens have repaid his fervices with ingratitude; but he confesses they have been too timorous, too apprehensive of danger. He declares, that, in order to infure your fafety, he gained over the common people, all the foum of the populace, to his interest, when under their leader Clodius they threatened your property and your lives; that he not only curbed them by his refolution, but foothed their rage at the expence of his three inheritances. And while, by his liberality,

liberality, he appeales the ferv of the people, he entert cas not the least doubt but that his extraordinary fervices to the facts will progure him your affection and favour. Repeated prints of the fenate's effects, he acknowledges that he has received, even muon the present occation; and declares, that, wherever fortune may convey him, the can never deprive him of those maths et hunour, regard, and affection, conferred when him by you and the people of Rome. He recoilects too, that he was declared cossul in the surverful tollrage of the perpie, the only thing he valued or denred; and that in order to his being suvefied with that office, the voice of the other was only wanting a matter, in his opinion, of very little importance. But now if thefe soms are to be turned against him, at last, his a fatisfaction to him that it is not owing to his guilt, but to the fulpicion of it. He adds likewife, what is unqueftionably true, that the brave and wife perform great actions, not to much on account of the rewards attending them, as on account of their own intrimic excellence : that through his whole courie of life. whatever he has done has been nobly done, have nothing can be more truly a reat than for a man to a fone his country from impending dangers : that they are without coult happy, whom their fellow-citizens have repeated with their due reward of homone; but that writher are those to be entremed unhappy, whole fervices have excreded their rewards. Yet, thould we in the postnits of virtue have any of its rewards in view, he is convinced that the noblett or all is glory; that this alone compenbeing the diertness of life, by the immortahiv of fairle; that by this we are fill prefent, when able at from the world, and forvive even after death; and that by the keps of glory, in thort, mortals feem to mount to heaven. Of me, favs he, the people of Rome, all the nations of the earth, shall talk, and my name thall be known to the latest potterity. Nav. at this very tune, when all my enemies combine to undame an universal odium against me, yet breceive the thanks, congratulations, and applantes of every attembly. Not to mention the Tufean fellivals instituted in honour of tag, it is now about an hundred days more the death of Clodius, and vet, I am perimaked, not only the fame of this action, but the joy ariting from it, bas reached beyond the remotest bounds of the Roman empire. It is therefore, con-

tinues he, of little importance to me, how this body of mine is disposed of, tince the glory of my name already fills, and shall ever possess, every region of the earth.

This, Milo, is what you have often taiked to me, while there were absent; and now that they are prefent, I repeat it to you. Your fortitude I cannot lufficiently applied, but the more noble and divine your virtue appears to me, the more directs I feel in being torn from you. Nor when you are leparated from me, Stall I have the poor contolation of being augry with those who give the wound. For the toparation is not made by my enemies, but by my friends; not by thole who have at any time treated me injuryonly, but by those to whom I have been always highly obliged. Load me, my lords, with as fevere afflictions as you pleate, even with that I have juit mentioned, (and none furely can be more fevere) yet fluil I ever retain a grateful fends of your former favours. But if you have lost the remembrance of these, or if I have tallen under your difpleafore, why do not ye avenge yourfelves rather open mo, than Mila? Long and happily enough thall I have lived, could I but die betore fuch a calamity betall me. Now I have only one confolation to support no, the confcionfacts of having performed for thee, my Milo, every good office of love and friendthip, it was in my power to perform. For thee, I have dared the refentment of the great and powerful; for thee I have aften expoled my life to the fwords of thy enemies; for thee, I have often profirated myfelt as a suppliant: I have embarked my own and my family's effate on the fame bottom with thine; and at this very hour, if you are threatened with any violence, if your life runs any hazard, I demand a there in your danger. What now remains? what can I fav? what can I do to repay the obligations I um under to you, but embrace your fortune, whatever it thall be, as my own? I will not refute; I accept my there in it : and, my lords, I intreat you either to crown the favours you have conferred upon me by the prefervation of my friend, or cancel them by his dettruction.

Milo, I perceive, behelds my tears without the Jean emotion. Incredible firmness of foul! hethink-himself inexile there, where virtue has no place; and looks upon death, not as a punishment, but as the period of our lives. Let him then

then retain that nobleness of foul, which is natural to him; but how, my lords, are you to determine? Will ye fill preferve the perion of Milo, and yetdrive his perton into banithment? And thall there be found on earth a place more worthy the refidence of fuch virtue, than that which gave it birth? On you, on you I call, ye befoes, who have loft to much blood in the fervice of your country; to you, ye centurious, ye foldiers, I appeal in this hour of danger to the belt of men, and braveft of citizens; while you are looking on, while you fland here with arms in your hands, and guard this tribanal, thall virtue like this be expelled. exterminated, cast out with dishonour? Unhappy, wretched man that I am! could you, Milo, by thele recall me to my comtry; and by thefe thall I not be able to keep you in yours? What unfwer thall I make to my children, who look on you as another father? What to you, Quintus, my abient brother, the kind partner of all my misfortunes i that I could not preferve Mile by those very instruments which he employed in my prefervation? in what cause could I not preserve him? a cause approved of by all. Who have put it out of my power to preferve him? Those who guined most by the death of Clodius. And who folicited for Milo? I myfelf. What crime, what horrid villany was I quilty of, when those plots that were conceived for our common dettruction were all, by my industry, traced out, fully discovered, had upon before you, and crashed at once? From that cornous fource flow all the calumities which befall me and mine. Why did you defire my return from hanithment? Was it that I might fee those very persons who were inftrumental in my reftoration banished before my face? Make not, I conjuse you, my return a greater affliction. to me, than was my banishment. For how can I think mytelf truly reflored to my country, if those friends who reftored Die are to be torn from me ?

By the immortal gods I with (pardon the O my country I for I fear what I shall by out of a process regard for Mile may be deemed impiety against thee) that Clodins not only lived, but were practor, confusar, dictator, rather than be witness to such a feene as this. Immortal gods! how brave a man is that, and how worthy of being preferred by you! By no means, he cries: the raffian met with the punishment he deserved; and let me, if it must be to,

fuller the punishment I have not deferred. Shall this man then, who was boon to fave his country, die my where but in his country? Shall be not at lead die in the fervice of his country? Will you retain the memorials of his guilant foul, and deny his body a grave in Italy? Wall any perion give his voice for bendhing a man from this city, whom every city on earth would be proud to receive within its walls? Happy the country that fluil receive him! ungrateful this, if it thail baunth hou! wretched, if it thould lofe him! But I must conclude; my tears will not allow me to proceed, and Mile forbids teats to be employed in his defence. You, my lords, I befeech and adjure, that, in your decition, you would dare act as you thank, Truft me, your fortitude, your julice, your fidelity, will more especially be approved of by him, who, in his choice of judges, has raifed to the bench the bravelt, the witeh, and the best of men.

Hadworth's Cicero.

§ 11. Part of Cicano's Oration against VLEMES.

The time is come, l'athers, when that which has long been willed for, towards allaving the cuvy your order has been fubject to, and removing the imputations against trials, is (not by human contrivance but fuperior direction) effectually put in our nower. All opinion has long prevailed, not only here at home, but likewife in foreign countries, both dangerous to you, and pernicious to the frate, viz. that in profecutions, men of wealth are" always fate, however clearly convicted, There is now to be brought upon his trial before you, to the confusion, I hope, of the propagators of this flanderous imputation, one whose life and actions condema him in the opinion of all impartial perions, but who, according to his own reckoning, and declared dependence upon his riches, is already acquitted; I mean Caius Verres. If that fentence is pafied upon him which his crimes deferve, your authority, Fathers, will be venerable and facred in the eyes of the public; but if his great riches thould bias you in his favour, I fluil faill gain one point, vist to make it apparent to all the world, that what was wanting in this cale was not a criminal nor a profeouter, but justice and adequate punishment.

To pass over the manufal are gularities of his youth, what does his quarterflip,

Dir

the first public employment be held, what does it exhibit, but one continued icensof villanies? Cneius Carbo plundered of the public money by his own treasurer, a conful ftripped and betrayed, an army deferted and reduced to want, a province robbed, the civil and religious rights of a people violated. The employment he held in Atia Minor and Pamphilia, what did it produce but the ruin of those countries? in which houses, cities, and temples, were robbed by him. What was his conduct in his prætorthip here at home? Let the plundered temples, and public works neglected, that he height embezzle the money intended for carrying them on, bear witness. But his prætorihip in Sicily crowns all his works of wickedness, and finithes a lasting monument to his infamy. The mulchiefs done by him in that country during the three years of his iniquitous administration, are fuch, that many years, under the wifeft and belt of prætors, will not be futheient to refore things to the condition in which he found them. For it is notorious, that, during the time of his tyranny, the Sicilians neither enjoyed the protection of their own original laws, of the regulations made for their benefit by the Roman fenate upon their coming under the protection of the commonwealth, nor of the natural and analienable rights of men. His nod has decided all causes in Sicily for these three years; and his decision's have broke all law, all precedent, all right. The forms he has, by arbitrary taxes and unheard-of impositions, extorted from the induffrious poor, are not to be computed. The most faithful allies of the commonwealth have been treated as enemies. Roman citizens have, like flaves, been put to death with tortures. The most atrocious criminals, for money, have been exempted from the deferved punishments; and men of the most unexceptionable characters condemned and banithed, unheard. The hurbours, though fufficiently fortified, and the gates of ftrong towns, opened to pirates and ravagers: the foldiery and failurs belonging to a province under the protection of the commonwealth. flurved to death : whole fleets, to the great detriment of the province, fuffered to perith; the ancient monuments of either Sicilian or Roman greatness, the flatues of heroes and princes, carried off; and the temples stripped of the images. The infamy of his leadness has been such as decency forbids to deferibe; nor will I, by mentioning particulars, put those un-

fortunate persons to fresh pain who have not been able to fave their wives and daughters from his impurity. And these his atrocious crimes have been committed in fo public a manner, that there is no one who has heard of his name, but could reckon up his actions. Having, by his iniquitous fentences, tilled the prisons with the most industrious and deterving of the people, he then proceeded to order munhera of Roman citizens to be firangled in the gaols; fo that the exclamation, "I am a citizen of Rome!" which has often, in the most distant regions, and among the most barbarous people, been a protection, was of no fervice to them, but, on the contrary, brought a speedier and more fevere punishment upon them.

I ask now, Verres, what you have to advance against this charge? Will you pretend to deny it? Will you pretend that any thing falle, that even any thing aggravated, is alleged against you? Had any prince, or any flate, committed the fame outrage against the privilege of Roman citizens, should we not think we had fufficient ground for declaring immediate war against them? What punishment ought then to be inflicted upon a tyranutcal and wicked pretor, who dared, at no greater diflance than Sicily, within fight of the Italian coalt, to put to the infamous death of crucifixion that unfortunate and innocent citizen Publics Gavius Cofanus, only for his having afferted his privilege of citizenship, and declared his intention of appealing to the juffice of his country against a cruel oppressor, who had unjustly confined him in a prison at Syrucuse, from whence he had just made his escape? The unhappy mun, arrefied as he was going to embark for his native country, is brought before the wicked prætor. With eyes darting fury, and a countenance difforted with cruelty, he orders the helpless victim of his rage to be thripped, and rods to be brought; accusing bim, but without the least shadow of evidence, or even of sufpicion, of having come to Sicily as a fpy. It was in vain that the unhappy man cried out, "I am a Roman citizen; I bave " ferved under Lucius Pretius, who is now " at Panormus, and will atteft my inno-" cence." The blood-thirtly prætor, deaf to all he could urge in his own detence, ordered the infamous punishment to be inflicted. Thus, Fathers, was an innocent Roman citizen publicly mangled with fcourging; whilst the only words he uttered tered amidst his cruel sufferings, were, " I am a Roman citizen!" With these he hoped to defend himfelf from violence and infamy; but of fo little fervice was this privilege to him, that while he was thus afferting his citizenship, the order was given for his execution-for his execution upon the cross !

Oliberty !- O found once delightful to every Roman car !- O facred privilege of Roman citizenship !- once facred !- now trampled upon !- But what then? Is it come to this! Shall an inferior magifirste, a governor who holds his whole power of the Roman people, in a Roman province, within fight of Italy, bind, frouge, toxture with fire and red-hot plates of iron, and at the last put to the infamous death of the crofs, a Roman citizen? Shall neither the cries of innucence expiring in agony, northetears of pitying fpeciators, nor the majerry of the Roman commonwealth, nor the fear of the justice of his country, refrain the licentious and wanton cruelty of a monfter, who, in conadence of his riches, frikes at the root of liberty, and fets mankind at defiance?

I conclude with expressing my hopes, that your wildom and julice, Fathers, will not, by futlering the atrocious and unexampled infolence of Caius Verres to escape the due punishment, leave room to apprehend the danger of a total subvertion of authority, and introduction of general anarchy and confusion.

Cicero's Orations.

\$ 12. The Oration which was spoken by Pericues, at the public Funeral of those ATHENIANS, who had been first killed in the PELOPONNESIAN Har.

Many of those who have spoken before me on occasions of this kind, have commended the author of that law which we are now obeying, for baving inflituted an pration to the honour of those who sacrifice their lives in fighting for their country. For my part, I think it sufficient for men who have approved their virtue in action, by action to be honoured for it -by feeh his you fee the public gratitude how performing about this funeral; and that the virtues of many ought not to be endangered by the management of any one person, when their credit must precarioully depend on his oration, which may be good, and may be bad. Difficult indeed it is, judiciously to handle a subject,

where even probable truth will hardly gain aftent. The heaver, enlightened by a long acquaintance, and warm in his affections, may quickly pronounce every thing unfavourably expressed, in respect to what he withes and what he knows; whilst the firanger pronounceth all exaggerated, through envy of those deeds which he is confejous are above his own achievement, For the praifes bestowed on others are then only to be endured, when men imagine they can do those feats they hear to have been done; they envy what they cannot equal, and immediately pronounce it falle. Yet, as this folemuity has received its function from the authority of our ancestors, it is my duty also to phey the law, and to endeavour to procure, in far as I am able, the goodwill and appro-

bation of all my audience,

I thall therefore begin first with our forefathers, fince both juffice and decency require we thould, on this occasion, bestow on them an honourable remembrance, In this our country they kept themielves always firmly fettled; and, through their valour, handed it down free to every fince fucceeding generation .- Worthy, indeed, of praife are they, and yet more worthy are our immediate fathers; fince, enlarge ing their own inheritance into the extenfive empire which we now poffels, they bequeathed that, their work of toil, to us their fons. Yet even thefe fuceshes, we ourfelves, here prefent, we who are yet in the ftrength and vigour of our days, have nobly improved, and have made fuch provitions for this our Athens, that now it is all-fufficient in itself to answer every exigence of war and of peace. I mean not here to recite those martial exploits by which there ends were accomplished, or the refolute detences we ourfelves and our forefathers have made against the formie dable invafions of Barbarians and Greeks. Your own knowledge of these will excuse the long detail. But by what methods we have rufe to this height of glory and power; by what polity, and by what conduct, we are thus aggrandized; I thall first endeavour to thew, and then proceed to the praise of the deceased. These, in my opinion, can be no impertinent topics on this occasion; the discussion of them must be beneficial to this numerous company of Athenians and of strangers,

We are happy in a form of government which cannot envy the laws of our neigh-

bours; for it hath ferved as a model to others, but is original at Athens. And this our form, as committed not to the few, but to the whole body of the people, is called a democracy. How different toever in a private capacity, we all enjoy the fame general equality our laws are fitted to preferve; and function honours, just as we excel. The public administration is not confined to a particular family, but is attamable only by merit. Poverty is not an hundrance, fince whoever is able to ferve his country meets with no obflacle to preferment from his first obscurity. The offices of the flate we go through without obtinictions from one another; and live together in the mutual endearments of private life without fulpicions; not augry with a neighbour for following the bent of his own humour, nor putting on that countenance of discontent, which pains, though it cannot punish; fo that in private life we converfe together without dittidence or damage, whilit we dare not, on any account, offend against the public, through the reverence we bear to the magiffrates and the laws, chiefly to those enacted for redress of the injured, and to those unwritten, a breach of which is allowed difgrace. Our laws have further provided for the mind most frequent inpublic recreations and facritices throughout the year, elegantly performed with a peculiar pomp, the daily delight of which is a charm that puts melancholy to flight. The grandeur of this our Athens canfes the produce of the whole earth to be imported here, by which we reap a familiar enjoyment, not more of the delicacies of our own growth, than of thise of other mations.

our enemies, who adhere to methods onposite to our own; for we lay open Athens that does not be adde in state affairs -- not to general refort, nor ever drive any indolent, but good for nothing. And yet thranger from us, whom either improve- we pass the boundest judgment, and are ment or curiofity bath brought annough quick at catching the right apprehendions us, left any enemy thould furtus by feeing of things, not thinking that words are what is never concealed; we place not for great a confidence in the preparatives and artifices of war as in the native warmth of our fouls impelling us to action. In point of education, the youth of fome peo- excellence, that in the bour of action we ple are inured, by a courfe of laborious they the greatest courage, and yet debute exercife, to furnort tell and hardfhip like heforehand the expediency of our menmen; but we, notwithfranding our call fures. The courage of others is the result and elegant way of life, face all the dan- of ignorance; deliberation in kes them gers of war as intreptily as they. This cowards. And those undoubtedly must

may be proved by facts, fince the Laccdemonians never invade our territories, barely with their own, but with the united tirength of all their contederates. hat when we invade the dominions of our neighbours, for the most part we conquer without difficulty, in an enemy's country, those who fight in detence of their own habitations. The firength of our whole force, no enemy buth yetever experienced, because it is divided by our mayal expeditions, or engaged in the different quarters of our tervice by land. But it any where they engage and detent a finall party of our forces, they boattingly give it out a total defeat; and, if they are heat, they were certainly overpowered by our united firength. What though from a state of inactivity, rather than laborious exercise, or with a natural, rather than an acquired valour, we learn to encounter danger; this good at least we receive from if, that we never droop under the appreheafion of positible misfortunes, and when we hazard the danger, are found no lets courageous than those who are centinually inured to it. In thefe respects, our whole community deferves justly to be admired, and in many we have yet to mention.

In our manner of living we shew an termillions of care, by the appointment of elegance tempered with fragality, and as cultivate philosophy, without enervating the tand. We difplay our wealth in the featon of beneticence, and not in the vanity of discourse. A consellion of poverty is diffrage to no man; no chor; to avoid it. . difgrace indeed. There is viably, in the fame perions, an attention to their own private concerns, and thok of the public; and in others, engaged a the labours of life, there is a competent In the affairs of war we excel those of skill in the affairs of government. For w. are the only people who think him projudicted to actions; but rather the act being duly propored by previous debute. before we are obliged to proceed to ever cution. Herein contris our datinguithing

he owned to have the greatest fouls, who, have more at stake than men whose public most acutely tentible of the miferies of war in the least deterred from facing danger.

In acts of beneficence, farther, we diffor from the many. We preferve friends, not by receiving, but by conferring oblirations. For he who does a kindness, Eath the advantage over him who, by the law of gratitude, becomes a debtor to his benefictor. The perion obliged is compeiled to act the more infinid part, confeious that a return of kindnels is merely a payment, and not an obligation. And we alone are tplendidly beneficent to others, not to much from interested motives, as for the credit of pure liberality. I thail furn up what yet remains, by only adding, that our Athens, in general, is the school of Greece; and that every lingle Athenian among us is excellently formed, by his performal qualifications, for all the various feenes of active life, acting with a most graceful demeanor, and a most ready babit of dupatch.

That I have not, on this occasion, made tle of a ponip of words, but the truth of face, that height to which, by fuch a conduct, this frate bath role, is an undeniable proof. For we are now the only people 4) the world, who are found by experience to be greater than in report; the only people who, repelling the attacks of an tavading enemy, exempts their defeat from the bluth of indignation, and to their tubutaries no discontent, as if subject to ties numerthy to command. That we winte our jower, we need no evidence to manifek; we have great and tignal proofs of this, which entitle us to the aduncation of the prefent and of future ages. We want to Homer to be the herald of our praife; no poet to deck off a hillory with the charms of verfe, where the opinion of exploits must fuster by a strict ichtion. Every fea hath been opened by our fleets, and every land been penetrated by our armies, which have every where left behind them eternal monuments of our enguty and our friendthip.

In the just defence of juch a flate, thefe victims of their own valour, fourning the ruin threatened to it, have valiantly tought and bravely died. And every one of those who furvive as ready, I am parfladed, to facrifice life in luch a cause. And for this reason have I enlarged for

advantages are not fo valuable; and to and the tweets of peace, are not hence illufrate by actual evidence, how great a commendation is due to them who are now my fubjects, and the greatest hart of which they have already received. For the encomiums with which I have celebrated the finte, have been carned for it." by the brayery of thefe, and of men like thefe. And such compliments might be thought too high and exaggerated, if patied on any Greciens, but them alone, The fatal period to which there gailant fouls are now reduced, is the furett evidence of their merit - an evidence begun in their lives, and completed by their deaths: for it is a debt of inflice to pay superior honours to men, who have devoted their lives in fighting for their country, though interior to others in every virtue but that of valour. Their last fervice effaceth all former demonts-it extends to the public; their private demeanors reached only to a few. Yet not one of thefe was at all induced to thrink from danger, through fundnels of those delights which the peaceful adduct life betinws: not one was the lefs lavish of his life, though that flattering hope attendant upon want, that poverty at length might be excharged for affluence. One pathon there was in their minds much fironger than thefe, the delire of vengeance on their enemies. Regarding this as the most honourable prize of dangers, they boldly ruffied towards the mark, to feek revenge, and then to fatisfy those secondary pathons. The uncertain event they had already fecured in hope; what their eyes thewed plainly must be done, they truited their own valour to accomplish, thinking it more glorious to defend themfelves, and die in the attempt, than to yield and live. From the reproach of cowardice, indeed, they fied, but prefented their bodies to the flock of battle; when, infentible of fear, but triumphing in hope, in the doubtful charge they infantly drop; and thus discharged the duty which brave men owe to their country.

As for you, who now furvive them, it is your butinefs to gray for a better fatebut to think it your duty also to preserve the fame spirit and warmth of courage against your enemies; not judging the empediency of this from a mere hurangue -- where any man, indulging a flow of much an national points, to give the weeds, may tell you, what you yourfelves Shared | pol, that in the prefent war we know as well-us he, how many advantages

there are in fighting valiantly against your enemies -but rather making the daily increasing grandeur of this community the object of your thoughts, and growing quite chamoured of it. And, when it really appears great to your apprehenhone, think again, that this grandeur was acquired by brave and valiant men; by men who knew their duty, and in the moments of action were fentible of shame; who, whenever their attempts were unsuccessful, thought it dithonourable their country should stand in need of any thing their valour could do for it, and fo made it the most glorious present. Bellowing thus their lives on the public, they have every one received a praife that will never dreay, a fepulchre that will be most illuftrions .- Not that in which their bones he mouldering, but that in which their fame is preferred, to be on every occasion, when honour is the employ of either word or act, eternally remembered. This whole earth is the fepulchre of illustrious men; nor is it the inteription on the columns in their native foil that alone flews their merit, but the memorial of them, better than all inferiptions, in every foreign nation, repolited more durably in univerfal femembrance than on their own tomb. From this very moment, emulating thefe noble patterns, placing your happiness in liberty, and liberty in valour, be prepared to encounter all the dangers of war. For, to be lavish of life is not so noble in those whom misfortunes have reduced to mifery and defpair, as in men who hazard the lofs of a comfortable substittence, and the enjoyment of all the bleflings this world affords, by an unfuccefsful enterprize. Adverfity, after a feries of eafe and affluence, finks deeper into the heart of a man of spirit, than the stroke of death intentibly received in the vigour of life and public hope.

For this reason, the parents of those who are now gone, whoever of them may be attending here, I do not bewail;— I shall rather comfort. It is well known to what unhappy necidents they were liable from the moment of their birth; and that happiness belongs to men who have reached the most glorious period of life, as these now have who are to you the source of forrow; those, whose life high received its ample measure, happy in its continuance, and equally happy in its conclusion. I know it in truth a difficult task to fix comfort in those breatts which

will have frequent remembrances, in feeing the happinets of others, of what they once themselves enjoyed. And forrow flows not from the ablence of those good things we have never yet experienced, but from the loss of those to which we have been accustomed. They, who are not yet by age exempted from thife, thould be comforted in the hope of having more. The children yet to be born will be a private benefit to fome, in cauting them to forget such as no longer are, and will be a double benefit to their country, in preventing its defolation. and providing for its fecurity. For thefe perfores cannot in common juffice be regarded as members of equal value to the public, who have no children to expose to danger for its fafety. But you, whose age is already far advanced, compute the greater there of happinels your longer time hath afforded for fo much gain, perfuaded in yourfelves the remainder will be but fort, and enlighten that space by the glory gained by these. It is greatness of foul alone that never grows old; nor is it wealth that delights in the latter stage of life, as fome give out, fo much as honour.

To you, the ions and brothers of the deceased, whatever number of you are here, a field of hardy contention is opened. For him, who no longer is, every one is ready to commend, so that to whatever height you push your deferts, you will scarce ever be thought to equal, but to be somewhat interior, to these. Envy will exert itself against a competitor whill life remains; but when death stops the competition, asfection will appland without restraint.

If, after this, it be expected from me to fay any thing to you, who are now reduced to a flate of widowhood, about female virtue, I shall express it all in one short admonition:—It is your greatest glory not to be deficient in the virtue peculiar to your fex, and to give the men as little handle as possible to talk of your behaviour, whether well or ill.

I have now discharged the province allotted me by the laws, and faid what I thought most pertinent to this atlembly. Our departed friends have by facts been already honoured. Their children, from this day till they arrive at manhood, shall be educated at the public expence of the frate *, which hath appointed is benchetal

a meed

The law was, that they should be instructed at the public expence, and when come to age pretented with a complete fair of armour, and honeured with the first feats in all public places.

a meed for these, and all suture relies of the public contests. For wherever the greatest rewards are proposed for virtue, there the best of patriots are ever to be found.—Now, let every one respectively indulge the decent greef for his departed triends, and then reure. Thucydides.

6 13. HAMLET to the Players.

Speak the fpeech, I pray you, as I pronounced it to you, trippingly on the tongue. But if you mouth it, as many of our players do, I had as heve the town crier had spoke my lines. And do not faw the air too much with your hand; but use all gently: for in the very torrent, tempeft, and, as I may fay, whirlwind of your pathon, you mult acquire and beget a temperance that may give it fmoothnefs. Oh! it offends me to the foul, to hear a robultious periwig-pated tellow tear a paifion to tatters, to very rags, to fplit the ears of the groundlings; who (for the moft part) are capable of nothing, but inexplicable domb shews and notie. Pray you, avoid it.

Be not too tame neither: but let your own discretion be your tutor. Suit the action to the word, the word to the action; with this special observance, that you o'erfrep not the modelty of nature; for any thing fo overdone, is from the purpofe of playing; whose end is-to hold, as 'twere, the mirror up to nature; to thew Virtue her own feature, Scorn her own image, and the very age and body of the time his form and preffure. Now, this overdone, or come tardy off, though it make the unfkilful laugh, cannot but make the judicious grieve; the censure of one of which mutt, in your allowance, o'erweigh a whole theatre of others. Oh! there be players that I have feen play, and heard others praife, and that highly, that, neither having the accent of Christian, nor the gait of Christian, Pagan, nor man, have fo firsted and bellowed, that I have thought fome of nature's journeymen had made them, and not made them well; they imitated humanity fo abeminably.

And let those that play your clowns, freak no more than is set down for them: for there be of them that will themselves laugh, to set on some quantity of barren specifiators to laugh too; though, in the meantime, some necessary question of the play be then to be considered:—that's villanous, and shews a most pitiful ambition in the sool that uses it. Shakespeare.

§ 14. The Character of MARIUS.

The birth of Marius was obscure, though fome call it equalizian, and his edocation wholly in camps; where he learnt the first rudiments of war, under the greatest master of that age, the vounger Scipio, who destroyed Carthage; till by long fervice, dittinguished valour, and a peculiar bardiness and nationce of discipline, he advanced brinfeld gradually through all the freps of military honour, with the reputation of a brave and complete foldier. The obscurity of his extraction, which depretfed him with the nobil ty, made him the greater favourite of the people; who, on all occasions of danger, thought him the only man fit to be trufted with their lives and fortunes; or to have the command of a difficult and desperate war: and, in truth, he twice delivered them from the most desperate, with which they had ever been threatened by a foreign enemy. Scipio, from the observation of his martial talents, while he had yet but an inferior command in the army, gave a kind of prophetic teftimony of his future glory; for being afked by some of his officers, who were supping with him at Numantia, what general the republic would have, in case of any accident to himfelf? That man, replied he, pointing to Marius at the bottom of the table. In the field he was cautious and provident; and while he was watching the most favourable opportunities of action, affected to take all his meafures from augurs and diviners; nor ever gave battle, till by pretended omens and divine admonitions he had infpired his foldiers with a confidence of victory ; fo that his enemies dreaded him as fomething more than mortal; and both friends and foes believed him to acl always by a peculiar impulfe and direction from the gods. His merit however was wholly military, void of every accomplishment of learning, which he openly affected to despite; so that Arpinum had the fingular felicity to produce the most glorious contemner, as well as the most illustrious improver, of the arts and eloquence of Rome . He made no figure, therefore, in the govin, nor had any other way of fuftaining his authority in the city, than by cherithing the natural jealoufy between the fenate and the people; that by this declared enmity to the one has might always be at the head of the other;

* Arpinum was also the native city of Cicero.

Y y 2 whose

whole favour he managed, not with any view to the public good, for he had nothing in him of the flatefluan or the patrint, but to the advancement of his private interest and glory. In thort, he was erafty, crnel, covetous, and perfidious; et a temper and talents greatly fervice rile abroad, but turbulent and dangerous at home; an implacable enemy to the nobles, ever feeking occasions to mortify them, and ready to hierince the republic, which he had haved to his ambition and revenge. After a life fount in the perpetual toils of foreign or domestic wars, he died at laft in his lood, in a good old age, and in his terratic confulling; on bonour that to L'union la fore long ever attained.

Madh ton.

§ 15. Rome two to the People of Rome, after building the City.

If all the fivenath of cities lay in the bright of their numparts, or the depth of the or ditches, we should have great reason to be in true for that which we have now built. But are there in eachty any walls too his hato be to air diev a valignat enem. y? and no what one are comparts in intention dividions? They may ferve for a defence against redden menrhous from abroad; but it is by courage and prodence chiefly, that the invalous of ferena enemies are repelled; and to amminity, briety, and judice, that dometic feditions are prevented. Cities fortified by the firongest bulwarks have been often from to yield to force from without, or to tumalts from within. An exact military diferpline, and a fleady obles vance of civil polity, are the furett harrier sagninit thele evils.

But there is will another point of great importance to be confidered. The profperity of force titing colonies, and the foredy ruin of others, have in a great meature been owing to their form of governingert. Were those but one manner of radius flates and cities that could make them happy, the choice would not be difficult; but I have bornt, that of the Various forms of government among the Graks and Bathariaus, there are three which are highly extolled by those who have experienced them; and vet, that no one of there is in all respects period, but each of them has fome innate and incurable defect. Chufe you, then, in what mather this city thall by governed. Si. If it he by one man? thall it be by a felect number of the wifelt among us? or

shall the legislative power be in the people! As for me, I shall submit to whatever form of administration you shall please to enablish. As I think invited not unworthy to consumed, so wither am I unwilling to obey. Your having chosen me to be the leader of this colony, and your calling the city after my name, are honours believed to content me; benours of which, living or dead, I never can be deprived.

Hoale.

& 16. The Character of SYLLS.

Sells died after be had laid down the dictatorship, and reflored liberty to the republic, and, with an uncommon greatnot of mind, lived many months as a private former, and with perfect feculty, in that city where he but exercited the moti bloody tyranny; but nothing was thought to be greater in his character, than that, during the three years in which the Mannas were matters of Italy, he menther datembled his resolution of purfuing them by arms, nor neglected the war which he had upon his lands; but thought it his dete, first to chashife a foreign enemy, before he took his sever to upon citizens. His family was noble and patrician, which yet, through the indohency of his anceftors, but a made no favra in the republic for namy repetations, and was almost took into obscurity, tall he produced it again into light, by orgining to the honours of the finte. He was a lover and patron of polite letters, have: been carefully infittited bimielf in all the learning of Greece and Rome; but from a peculiar galety of temper, and tenders for the company of mimies and planers, was drawn, when your, into a life of luxury and pleature; to that when he was fent quartor to Marins, in the Jogurthine war, Marius complained, that in fo row, h and definerate a fervice chance had given hum to lost and delicate a quartor. But, whether souled by the example, or flung he the representative general, he behaved henfelt in that charge with the greatest viewer and contract, fullering no man to centdo him in may part of mulctury duty of labour, making himfelt equal and familiar even to the lawett of the folders, and obliging them by all his good offices and his money: In that he from acquired the favour of his army, with the character of a brave and falful commander; and lived to drive Morins land If, barathed and protected, into that very province where

he had been contemned by him at first as his quartor. He had a wonderful faculty of concealing his pattions and purpotes; and was to different from bungelt in disferent circumitances, that he feetned as it were to be two men in one; no man was ever more full and moderate before victory; none more bloody and cruel after it. In war, he practifed the fame art that he had feen to fuggetsful to Marius, of raiting a kind of enthusiafin and contempt of danger in his army, by the forgery of aufpices and divine admonitions; for which end, be carried always about with him a little flatue of Apollo, taken from the temple of Delphi; and whenever he had resolved to give battle, used to embrace it in fight of the foldiers, and beg the speedy confirmation of its promites to him. From an uninterrupted courte of fuccels and profuerity, he affumed a furname, unknown before to the Romans, of Felix, or the Fortunate; and would have been fortunate indeed, fays Velleius, if his life had ended with his victories. Phny calls it a wicked title, drawn from the blood and opprellion of his country; for which pofterity would think him more unfortunate, even than those whom he had put to death. He had one felicity, however, peculiar to himfelf, of being the only man in history, in whom the odium of the most barbarous cruclties was exunguithed by the glory of his great acls. Cicero, though he had a good opinion of his cause, yet detested the inhumanity of his victory, and never fpeaks of him with respect, nor of his government but as a proper tyranny; calling him, " a " maker of three molt pettilent vices, " luxury, avarice, cruelty." He was the but of his family whose dead body was burnt; for, having ordered Marius's remains to be taken out of his grave, and thrown into the river Anio, he was upprehentive of the fame infult upon his own, if left to the usual way of burial. A little before his death, he made his own epitagh, the fum of which was, " that no man had ever gone beyond him, in do-"ing good to his friends, or hurt to his "encinies." Middleton.

17. HANNIBAL to SCIPIO APRICA-NUS, at their Interview preceding the Buttle of Zama.

Since fate has fo ordained it, that I, who began the war, and who have been to often on the point of ending it by a

complete conquest, should now come of my own motion to ask a peace; I am glad that it is of you, Scipio, I have the fortune to ask it. Nor will this be among the least of your glories, that Hannibal, victorious over to many Roman generals, submitted at last to you.

I could with, that our fathers and we had confined our umbition within the limits which nature feems to have preferibed to it; the thores of Africa, and the thores of Italy. The gods did not give us that mind. On both fides we have been to eager after foreign postessions, as to put our own to the hazard of war. Rome and Carthage have had, cách in her turn, the enemy at her gates. But finecerrors pail may be more early blamed than corrected, let it now be the work of you and me to put an end, if possible, to the obttinate contention. For my own part, my years, and the experience I have had of the inflability of fortune, inclines me to louve nothing to her determination, which reason can decide. But much I fear, Scipio, that your youth, your want of the like experience, your uninterrupted fuccels, may render you averse from the thoughts of peace. He whom fortune has never failed, rarely reflects upon her inconfiancy. Yet, without recurring to former examples, my own may perhaps fuffice to teach you moderation. I am that fame Hannibal, who after my victory at Canna, became mafter of the greatest part of your country, and deliberated with myfelt what fate I thoulddecree to Italy and Rome. And nowfee the change! Here, in Africa, I am come to treat with a Roman, for my own prefervation and my country's. are the sports of fortune. Is the then to be truited because the smiles! An advantageous peace is preferable to the hope of victory. The one is in your own power, the other at the pleasure of the gods. Should you prove victorious, it would add little to your own glory, or the glory of your country; if variquithed, you lofe in one hour all the honour and reputation you have been fo many years acquiring. But what is my aim inull this! -that you should content yourself with our cellion of Spain, Sicily, Sardinia, and all the islands between Italy and Africa. A peace on these conditions will, in my opinion, not only fecure the future tranquility of Carthage, but be sufficiently glorious for you, and for the Roman name.

Y y 3

And

And do not tell me, that fome of our citizens dealt fraudulently with you in the late treaty—it is I, Hannibal, that now ufk a peace: lask it, because I think it expedient for my country; and, thinking it expedient, I will inviolably maintain it.

Hooke.

§ 18. Scipio's An/wer.

I knew very well, Hannibal, that it was the hope of your return which emboldened the Carthaginians to break the truce with us, and to lay afide all thoughts of a. peace, when it was just upon the point of being concluded; and your prefent propofal is a proof of it. You retrench from their concessions every thing but what we are, and have been long poffelled of. But as it is your care that your fellowcitizens thould have the obligations to you, of being eafed from a great part of their burden, fo it ought to be mine that they draw no advantage from their pertidioutnefs. Nobody is more featible than I am of the weakness of man, and the power of fortune, and that whatever we enterprize is subject to a thousand chances. If, before the Romans palled into Africa, you itad of your own accord quitted Italy, and made the offers you now make, I believe they would not have been rejected. But as you have been forced out of Italy, and we aremaiters here of the open country, the fituation of things is much altered. And, what is chiefly to be considered, the Carthaginians, by the late treaty, which we entered into at their request, were, over and above what you offer, to have reflored to us our prifoners without ranfom, delivered up their thips of war, paid us five thousand talents, and to have given hottages for the performance of all. The fenate acepted their conditions, but Carthage failed on her part; Cartiage deceived us. What then is to be done? Are the Carthaginians to be releafed from the most important articles of the treaty, as a reward of their breach of faith? No. certainly. If, to the conditions before agreed upon, you had added fome new articles to our advantage, there would have been matter of reference to the Roman people; but when, initead of adding, you retrench, there is no room for deliberation. The Cartingmans therefore must submit to us at diferetion, or must vanquith us in battle.

Horke.

§ 10. The Character of POMPET.

Pompey had early acquired the forname of the Great, by that fort of merit which, from the contiitution of the republic, necessarily made him great; a fame and foccess in war, superior to what Rome had ever known in the most celebrated of her generals. He had triumphed, at three feveral times, over the three different parts of the known world. Europe, Alia, Africa: and by his victories had almost doubled the extent, as well as the revenues of the Roman dominion; for, as he declared to the people on his return from the Mithridatic war, he had found the leffer Afia the boundary, but left it the middle of their empire. He was about fix years older than Caefar; and while Crefar, immerfed in pleatures, oppressed with debts, and suspected by all heneft men, was hardly able to thew his head. Pompey was flourishing in the height of power and glory; and, by the content of all parties, placed at the head of the republic. This was the post that his ambition feemed to aim at, to be the firth man in Rome; the leader, not the tyrant of his country; for he more than once had it in his power to have made himfelf the matier of it without any rik, it his virtue, or his phlegm at leaft, had not reftrained him : but he lived in a pernetual expectation of receiving from the gitt of the people, what he did not care to feize by force; and, by fomenting the diforders of the city, hoped to drive them to the necessity of creating him dictator. It is an objervation of all the hillorians, that while Cafar made no difference of power, whether it was conferred or ulurped, whether over those who loved, or those who teared him; Pampey feemed to value none but what was offered; nor to have any delire to govern, but with the good-will of the governed. What leifure he found from his wars, he employed in the flury of polite letters, and especially of eloquence, in which he would have acquired great fame, if his genius had not drawn him to the more dazzling glory of arms; yet he pleaded feveral causes with applicate, in the defence of his friends and clients; and fome of them in conjunction with Cicero. His language was copious and elevated; his fentiments just; his voice (weet; his action noble, and full of dignity. But his talents were better formed for arms than the gown; for. though in both he observed the same ditcipline,

tiplint, a perpetual modesty, temperance, and gravity of outward behaviour; yet in the licence of camps the example was more rare and firiking. His perton was extremely graceful, and imprinting respect; yet with an air of reserved haughtines, which became the general better than the citizen. His parts were plaufole, rather than great; fpecious, ruther than penetrating; and his views of politics but narrow; for his chief inftrument of governing was diffimulation; yet he had notalways the art to conceal his real fentiments. As he was a better foldier than a fixtelman, fo what he gained in the camp he usually lost in the city; and though adored when abroad, was often afronted and mortified at home, till the improdent opposition of the fenate drove him to that alliance with Craffus and Catar, which proved tatal both to himself and the republic. He took in these two, not as the partners, but the ministers rather of his power; that by giving them some there with him, he might make his own authority uncontrollable; he had no reason to apprehend that they could ever prove his rivals; fince neither of them had any credit or character of that kind, which alone could raife them above the laws; a superior same and experience in war, with the inilitia of the empire at their devotion: all this was purely his own; till, by cherithing Cafar, and throwing into his hands the only thing which be wanted, arms, and military command, be made him at lait too firong for himfelf, and never began to fear him till it was too late. Cicero warmly diffunded both his union and his breach with Cadar; and after the rupture, as warmly full, the thought of giving him battle; if any of their counfels had been followed, Pompey and preferved his life and honour, and the mblic its liberty. But he was urged to his fate by a natural superfittion, and attention to those vain auguries, with which he was flattered by all the Harufpices: he had feen the fame temper in Marius and Sylla, and observed the happy effects of it : but they affurned it only out of policy, he out of principle: they uted it to animate their foldiers, when they had bund a probable opportunity of fighting: but he, against all prudence and probability, was encouraged by it to fight to his own rum. He faw his mistakes at last, when it was out of his power to correct them; and in his wretched flight from

Pharfalia, was forced to confess, that he had truffed too much to his hopes; and that Cicero had judged better, and feen further into things than he. The resolution of seeking reluge in Egypt finished the fad catatirophe of this great man; the father of the reigning prince had been highly obliged to him for his protection at livine, and rettoration to his kingdom; and the fon had tent a confiderable fleet to his atfittance in the prefent war; but in this ruin of his fortunes, what gratitude was there to be expected from a court governed by eunuchs and mercenary Greeks? all whole politics turned, not on the honour of the king, but the eliablishment of their own power; which was likely to be eclipsed by the admission of Pompey. How happy had it been for him to have died in that fickness, when all' Italy was putting up vows and prayers for his fafety! or, if he had fallen by the chance of war, on the plains of Pharfalia, in the detence of his country's liberty, he haddied flill glorious, though unfortunate; but, as if he had been referved for an example of the inftability of human greatness, he, who a few days before commanded kings and confuls, and all the noblett of Rome, was fentenced to die by a council of slaves; murdered by a base deferter; cast out naked and headless on the Egyptian firand; and when the whole earth, as Velleius fays, had fearce been fufficient for his victories, could not find a fpot upon it at last for a grave. His body was burnt on the shore by one of his freed-men, with the planks of an old fifting-boat; and his athes, being conveyed to Rome, were depolited privately, by his wife Cornelia, in a vault by his alban villa. The Egyptians however raifed a monument to him on the place, and adorned it with figures of brafs, which being defaced afterwards by time, and buried almost in fand and rubbith, was fought out, and reitored by the emperor Adrian. Middleton.

§ 20. Submission; Complaint; Intreating -The Speech of Seneca, the Philosopher. to News, complaining of the Enry of his Enemics, and requelling the Emperor to reduce him back to his former narrows Circumstances, that he might no longer be an Object of their Malignity.

May it pleafe the imperial majefty of. Crefar, favourably to ancest the humble fub autho sami grateful acknowledgments 154

of the weak though faithful guide of his youth.

It is now a great many years fince I first had the honour of attending your imperial majefly as preceptor. And your bounty has rewarded my labours with tuch atiluence, as has drawn upon me, what I had reason to expect, the envy of many of those persons, who are always ready to preferibe to their prince where to beliew, and where to withhold his favours. It is well known, that your illuttrious ancestor, Augustus, bestowed on his deferving tavourites, Agrippa and Mæcenas, honours and emoluments, furtable to the dignity of the benefactor, and to the fervices of the receivers: nor has his conduct been blamed. My employment about your imperial majefty has, indeed, been purely domeftic: I have neither headed your armies, nor affitted at your councils. But you know, Sir. (though there are some who do not feem to attend to it) that a prince may be ferved in different ways, fome more, others less compicuous; and that the latter may be to him as valuable as the former.

" But what!" fay my enemies, " shall " a private person, of equestrian rank, " and a provincial by birth, be advanced " to an equality with the patricians? Shall " an upflart, of no name nor family, rank " with those who can, by the statues which " make the ornament of their palaces, " reckon backward a line of ancestors, " long enough to tire out the faiti? Shall 44 a philosopher who has written for others " precepts of moderation, and contempt " of all that is external, himself live in " affluence and luxury? Shall be purchase " effates and lay out money at intereft? "Shall he build palaces, plant gardens, " and adorn a country at his own expence. " and for his own pleafure?"

Casar has given royally, as became imperial magnificence. Seneca has received what his prince bestowed; nor did he ever ask: he is only guilty of—not retaing. Casar's rank places, bin above the reach of invidious malignity. Seneca is not, nor can be, high enough to despite the envious. As the overleaded foldier, or traveller, would be glad to be relieved of his burden, so I, in this last stage of the journey of life, now that I find myfelf unequal to the lightest cares, beg, that Casar

would kindly ease me of the trouble of inv unwieldy wealth. I befeech him to reffore to the imperial treatury, from whence it came, what is to me superstooms and cumbrous. The time and the attention, which I am now obliged to bestow upon my villa and my gardens, I shall be glad to apply to the regulation of my mind. Cæfar is in the flower of lite; long may be be equal to the toils of government! His goodness will grant to his worn-out fervant leave to retire. It will not be derogatory from Catar's greatness to have it faid, that he beltowed favours on fome, who, to far from being intoxicated with them, thewedthat they could be happy, when (at their own requeit) diveited of them.

Corn. Tacit.

§ 21. Speech of Charidenus an Athenian Exic at the Court of Darius, on being afked his Opinion of the wartike Preparations making by that Prince against Alexanden.

Perhaps your Majetty may not bear the truth from the mouth of a Grecian, and an exile; and if I do not declare it now, I never will, perhaps I may never have another opportunity. Your Majesty's numerous army, drawn from various nations, and which unpeoples the east, may feein formioable to the neighbouring countries. The gold, the purple, and the iplendour of arms, which firike the eyes of beholders, make a thow which furpufies the imagination of all who have not feen it. The Macedon:anarmy, with which your Majesty's forces are going to contend, is, on the contrary, grim, and horrid of alpect, and clad in iron. The irretitible phalanx is a body of men who, in the field of battle, fear no onfet, being prace tifed to hold together, man to man, thield to fineld, and ipear to fpear; to that a bruzen wall might as foon be broke through. In advancing, in wheeling to right or left, in attacking, in every exercife of arms, they act as one man. They answer the flighted flyn from the communder, as if his foul animated the whole Every foldier has a knowledge of war fufficient for a general. And this difcipline, by which the Mucedonian army is become to formidable, was first ettablithed, and has been all along kept he. by a fixed contempt of what your Majesty's troops are so vain of, I mean gold and filver, the bare earth ferves them for bods. Whatever will fatisfy nature,

The falli, or calendars, or, if you plenfe, almanacks, of the ancients, had, as our almanacks, tables of kings, commerces.

a their luxury. Their repose is always thorter than the night. Your Majetty may, therefore, judge, whether the Theifalsan Acarmanian and Actolian cavalry, and the Macedonian phalanx-un army that has, in frite of all opposition, overrun half the world—are to be repelled by a multitude (however numerous) armed with tlings, and flakes hardened at the points by fire. To be upon equal terms with Alexander, your Majetty ought to have an army composed of the fame fort of troops: and they are no where to be had, but in the fame countries which produced these conquerors of the world .- It is therefore my opinion, that, if your Majefty were to apply the gold and filver, which now to inpertinoutly adorns your men, to the purpole of hiring an army from Greece, to contend with Greeks, you wife I fee no reason to expect any thing elfe, than that your army should be defeated, as all the others have been who have encountered the irrelifible Macedo-Q. Curtius. mans.

\$22. The Character of Julius Casar.

Cafar was endowed with every great and noble quality, that could exalt human nature, and give a man the atcendant in fotiety; formed to excel in peace, as well as war : provident in council: fearlefs in action; and executing what he had refolved with an amazing celerity; generous beyond menfure to his friends; placable to his enemies; and for parts, learnmg, eloquence, fcarce interior to any man. His orations were admired for two qualities, which are feldom found together, frength and elegance; Cicero ranks him among the greatest orators that Rome ever bred; and Quinctilian fays that he looke with the fame force with which he fought; and if he had devoted himfelf to the bar, would have been the only man capable of rivalling Cicero. Nor was he a matter only of the politer arts; but conversant also with the most abstrate and critical parts of learning; and, among other works which he published, addressed two books to Cicero, on the analogy of language, or the art of speaking and writing correctly. He was a most liberal pation of wit and learning, wherefoever they were found; and out of his love of those talents, would readily pardon those who had employed them against himself; rightly judging, that by making such men

his friends, he foould draw praifes from the lame fountain from which be had been atserted. His capital pattions were ambit on, and love of pleafare; which he indanged in their turns to the createst exceis; yet the first was always predominant; to which he could easily farritize all the charms of the fecond, and draw pleafure even from toils and dangers, when they manu ered to his glory. For he thought Tyranav, as Cicero lays, the greater of goddelles ; and had frequently in his mouth a verte of Euripides, which exprelled the image of his foul, that if right and juities were ever to be violated, they were to be violated for the take of reigning. This was the chief end and purpose of his life; the scheme that he had formed from his early youth; fo that, as Cato truly declared of him, he came with fobriety and memight have forme chancefor fuccels; other-, ditation to the fubrention of the republic. He used to fay, that there were two things necessary, to acquire and to support power -foldiers and money; which yet depended mutually upon each other; with money therefore he provided foldiers, and with foldiers extorted money; and was, of all men, the most rapacious in plundering both friends and foes; fparing neither prince, nor flate, nor temple, nor even private persons, who were known to posfels any there of treasure. His great abilities would necessarily have made him out of the first citizens of Rome; but, difdaining the condition of a fubject, he could never reft, till he made himfelf a monarch. In adding this laft part, his ufual prindence feemed to fail him: as if the height to which he was mounted had turned das head, and made him giddy: for, by a vain oftentation of his power, he defiroved the flability of it; and as men thorten life by living too fatt, fo by an intemperance of reigning, he brought his reign to a violent end. Middleton.

> § 23. CALISTHENES'S Reproof of CLEun's Flattery to ALENANDER, on whom he had proposed to confer Divinity by Tate.

> If the king were prefent, Cleon, there would be no need of my answering to what you have just proposed; he would hauself reprove you for endeavouring to draw him into an imitation of foreign abfurdities, and for bringing envy upon him by fuch unmanly flattery. As he is abfent, I take upon me to tell you, in his name, that no pracis.

praise is laking, but what is rational; and that you do what you can to lesion his glory, instead of adding to it. Heroes have never, among us, been deified, till-after their death; and, whatever may be your way of thanking, Cleon, for my part I with the king may not, for many years to come, obtain that honour.

You have mentioned, as precedents of what you propote, Hercules and Bacchus. Do you imagine, Cleon, that they were deified over a cup of wine; and are you and I qualified to make gods? is the king, our fovereign, to receive his divinity from you and me who are his subjects? First try your yower, whether you can make a king. It is, furely, eafter to make a king thun a god; to give an earthly dominion, than a throne in heaven. I only with that the gods may have heard, without offence, the arrogant propolal you have made of adding one to their number; and that they may full be so propitious to us, as to grant the continuance of that fucceis to our allairs with which they have hitherto favoured us. For my part, I am not alhamed of my country; nor do I approve of our adopting the rites of foreign nations, or learning from them how we ought to reverence our kings. To receive laws or rules of conduct from them, what is it but to confess ourselves Q. Curtius. interior to them?

\$ 24. The Character of CATO.

If we consider the character of Cato without prejudice, he was certainly a great and worthy man; a friend to truth, virtue, liberty; yet, falfely measuring all duty by the abfurd rigour of the floreal rule, he was generally disappointed of the end which he fought by it, the happiness both of his private and public life. In his private conduct he was fevere, morofe, inexorable; banishing all the fofter affections, as natural enquies to juffice, and as fuggefting falle motives of acting, from favour, elemency, and compatition: in public affairs he was the fame; had but one rule of policy, to adhere to what was right, without regard to time or circumflances, or even to a force that could control him; for, instead of managing the power of the great, fo as to mitigate the ill, or extract any good from it, he was urging it always to acts of violence by a perpetual defiance; to that, with the best intentions in the world, he often did great

harm to the republic. This was his general behaviour; vet from fome particular facts, it appears that his thrength of mind was not always impregnable, but had its weak places of pride, ambition, and party geal: which, when managed and flattered to a certain point, would betray him fometimes into measures contrary to his ordinary rule of right and truth. The last act of his hie was agreeable to his nature and philotophy: when he could no longer be what he had been; or when the ills of life overbalanced the good; which, by the principles of his fect, was a just cause for dying; he put an end to his life with a spirit and refolition which would make one imagine, that he was glad to have found an occation of dying in his proper character. On the whole, his life was rather admirable than amiable; fit to be praifed, rather than imitated. Middleton.

§ 25. BRUTUS'S Speech in Vindication of CESAR'S Murder.

Romans, countrymen, and lovers !-Hear me, for my caute; and be filent that
you may hear. Believe me, for mine honour; and have respect to mine honour,
that you may believe. Censure me, in
your wisdom; and awake your senses,
that you may the better judge.

If there be any in this affembly, any dear friend of Carlar's, to him I fay, that Brutus's love to Carfar was no lets than his. If, then, that friend demand why Brutus rofe against Cæfar? this is my anfwer-Not that I loved Cuefar teis, but that I loved Rome more. I ad you rather Czefar were, and die all flaves; than that Carfar were dead, to live all freemen? As Carfar loved me, I weep for him; as he was fortunate, I rejoice at it; as he was valiant, I honour him; but as he was ambitious, I flew him. There are tears for his love, joy for his fortune, honour for his valour, and death for his ambition, Who's here fo base, that would be a bond-man?-If any, speak; for him have I offended. Who's here to rude, that would not be a Roman ?-It any, fpeak; for him have I offended. Who's here for vile, that will not love his country?-- If any, speak, for him have I offended .-I naufe for a reply.-

None?—Then none have I offended. I have done no more to Carfar, than you should do to Bratus. The question of his death is enrolled in the capitol; his glary

nor his offences intorced, for which he intered death.

Here comes his body mourned by Mark Antony; who, though he had no hand in his death, shall receive the benefit or his dving, a place in the commonwealth; as, which of you shall not? With this I depart -That, as I flew my bett lover for the good of Rome, I have the fame dagger for myfelf, when it shall pleafe my country to need my death. Shake/peare.

\$ 26. A Comparison of CESAR with CATO.

As to their extraction, years, and eloquence, they were pretty nigh equal. Both of them had the tame greatness of mind, both the same degree of glory, but in dif-Frent ways: Cartar was celebrated for his great bounty and generofity; Cato tor his unfolled integrity: the former became renowned by his humanity and compassion; an authere teverity beightened the dignity of the latter. Casiar acquired glory by a liberal, compassionate, and forgiving temper; as did Cato, by never bellowing any thing. In the one, the iniferable found a functuary; in the other, the guilty met with a certain destruction. Castar was admired for an easy yielding temper; Cato for his immoveable firmnely; Catar, in a word, had formed himself for a laborious aftive life; was intent upon promoting the interest of his friends, to the neglect of his own; and refused to grant nothing that was worth accepting; what he defired for himfelf, was to have fovereign command, to be at the head of armies, and engaged in new wars, in order to display his military talents. As for Cato, his only fludy was moderation, regular conduct, and, above all, rigorous feverity: he did not vie with the rich in riches, nor in faction with the fathous; but, taking a nobler aim, he contended in bravery with the brave, in modeliv with the modell, in integrity with the wpright; and was more definous to be virtuous, than appear to: fo that the lefs he courted fame, the more it followed him. Salluft, by Mr. Rofe.

1 27. Carus Marius to the Romans, thewing the Abjurdity of their hejitating to confer on him the Rank of General, merely on account of his Extraction.

It is but too common, gay countrymen, to observe a protestal difference between the believiour of those who fund candidates for places of power and truit, before and

not extenuated, wherein he was worthy; after their obtaining them. They folicit them in one manner, and execute them in another. They let out with a great appearance of activity, humility, and moderation; and they quickly fall into floth, pride, and avarice.-it is, undoubtedly, no early matter to discharge, to the general fattifaction, the duty of a tupreme commander. in troublefome times. I am, I hope, duly tentible of the importance of the other I propole to take upon me for the fervice of my country. To carry on, with effect, an expensive war, and yet be frugal of the public money; to oblige those to serve, whom it may be delicate to offend; to conduct, at the same time, a complicated variety of operations; to concert measures at home, answerable to the state of things abroad; and to gain every valuable end_ in fpite of opposition from the envious, the factious, and the ditaffected-to do all this, my countrymen, is more difficult than is generally thought.

But betides the difadvantages which are common to me with all others in eminent flations, my case is, in this respect, peculiarly hard-that whereas a commander of Patrician rank, if he is guilty of a neglect or breach of duty, has his great connections, the antiquity of his family, the important fervices of his ancefrom, and the multitudes he has, by power, engaged in his interest, to screen him from condign punithment, my whole fafety depends upon myfelf; which renders it the more indifpenfably necessary for me to take cure that my conduct be clear and unexceptionable. Befides, I am well aware, my countrymen, that the eye of the public is upon me; and that, though the impartial, who prefer the real advantage of the commonwealth to all other confiderations, favour my pretentions, the Patricians want nothing fo much as an occasion against nie. It is, therefore, my fixed refolution, to use niv befrendeavours, that you be not difappointed in me, and that their indirect de-

I have, from my youth, been familiar with toils and with dangers. I was faithful to your interest, my countrymen, when I ferved you for no reward, but that of honour. It is not my defign to betray you, now that you have conferred upon me a place of profit. You have committed to my conduct the war against Jugurtha. The Patricians are offended at this. But where would be the wildom of giving fuch a command to one of their honourable

figus against me may be defeated.

body? a person of illustrious birth, of ancient family, of innumerable statues, but -of no experience! What fervice would his long line of dead anceffors, or his multitude of motionless statues, do his country in the day of battle? What could fuch a general do, but in his trepidation and inexperience, have recourfe to tome interior commander, for direction in difficulties to which he was not himfelf equal? Thus your Patrician general would, in tact, have a general over bim; fo that the acting commander would ftill be a Plebeian. So true is this, my countrymen, that I have myfelf known those who have been choten confuls, begin then to read the history of their own country, of which, till that time, they were totally ignorant; that is, they first obtained the employment, and then bethought themselves of the qualifications necessary for the proper discharge mf it.

I submit to your judgment, Romans, on which fide the advantage lies, when a comparison is made between Patrician haughtiness and Plebeian experience. The very actions, which they have only read, I have partly feen, and partly myfelf achieved. What they know by reading, I know by action. They are pleased to flight my mean birth; I defpife their mean characters. Want of birth and fortune is the objection against me; want of personal worth against them. But are not all men of the fame frecies? What can make a difference between one man and another. but the endowments of the mind? For my part, I shall always look upon the bravett man as the nobleft man. Suppose it were enquired of the fathers of fuch Patricians as Albinus and Betha, whether, if they had their choice, they would defire fone of their character, or of mine; what would they unfwer but that they should wish the worthier to be their fons? If the Patrienans have reason to despife me, let them likewife despite their ancestors; whose nobulity was the fruit of their virtue. Do they envy the honours befrowed upon me? let them envy likewife, my labours, my abftinence, and the dangers I have undergone for my country, by which I have acquired them. But those worthless men lead tuch a hie of inactivity, as if they despifed any konours you can bellow, whilit they afpure to honours as if they had deferred them by the most indultrious virtue. They lay claim to the rewards of activity, for their having enjoyed the pleafures of luxmry; yet none can be more lavish than they

are in praise of their ancestors; and they imagine they honour themselves by celebrating their forefathers; whereas they do the very contrary; for, as much as their ancestors were distinguished for their virtues, so much are they distraced by their vices. The glory of ancestors cast a light, indeed, upon their posterity; but it only serves to thew what the descendants are. It alike exhibits to public view their degeneracy and their worth. I own, I cannot boost of the decis of my foresathers; but I hope I may answer the cavils of the Patricians, by standing up in desence of what I have nivies done.

Observe now, my countrymen, the injustice of the Patricians. They arrogate to themselves honours, on account of the exploits done by their forefathers; whilit they will not allow me the due praife, for performing the very fame fort of actions in my own perion. He has no fiatues, they cry, of his family. He can trace no venerable line of ancekors .-- What theu? Is it matter of more praife to difgrace one's illutirious ancellors, than to become illuttrious by one's own good behaviour? What if I can show no fintues of my family? I can thew the standards, the armour, and the trappings, which I have myfelf taken from the vanguithed: I can thew the lears of those wounds which I have received by facing the enemies of my country. There are my flatues. There are the honours I boait of. Not left me by inheritance, as theirs: but earned by toil, by abitinence, by valour; amidit clouds of duft, and teas of blood; teenes of action, where those effeminate l'atricians, who endeavour by indirect means to depreciate me in your effeem, have never dared to Salluk. thew their faces.

§ 28. The Character of CATALINE.

Lucius Cataline was defeended of an illuftrious family: he was a man of great vigour, both of body and mind, but of a disposition extremely profligate and deprayed. From his youth he took pleafure in civil wars, maffacres, depredations, and inteffine broils; and in thefe he employed his youn, or days. His hody was formed for embring cold, hunger, and want of reft, to a degree indeed incredible : his fpirit was daring, felale, and chanceable : he was expert as all the arts of familiation and difficulation; coverses of what belanged to others, lavith of his own; violent in his pullions; he had cloquence enough, but a famili there of wildom. His boundless

boundless feed was constantly engaged in and disputes between the fenate and the extravariant and resonants projects, two people are the fole cause of our mission-bi-like to be attempted.

While we will fet no bounds to our

After bellu's ufurgation, he was fixed with a violent defire of feizing the government; and provided he could but carry his point, he was not at all folicitous by what means. The fairt, naturally violent, was daily in really direct hurried onto the execution of his defau, by his poverty, and the conferondness at his cranes; both which exils be had beightened by the produces above mentioned. He was encouraged to it by the wasked is of the fate, thereon his debanched to luxury and avorice; vices equally fatal, though of contrary partures. Sallati, by Mr. Roje.

\$20. Speech of Trees Quincrius to the Romans, when the Agust and Vouber, taking advantage of their interine commotions, rayaged their Country to the Gates of Rome.

Though I am not confeient, O Romans, of any crime by me committed, it is yet with the utmost than o and contains that I appear in your affembly. You have feen it-poterity will know it! in the fourth embliship of Titles Quincties, the A'qui and Volter (fearce a toutch for the Hernici clone; came in agms to the very gates of Rome, and went away again unchaftifed! The courle of our manners, indeed, and the time of one affilies, have long been fich, that I had no reason to prefage much good; but, could I have imagined that for great an ignoming would have befallen me this year, I would, by banishment or death fitall other means had failed) have avoided the flation I am now in. What! might Rome then have been taken, if those nom who were at our gates had not wanted tourage for the attempt?-Rome taken, whilft I was centri! - Of honours I had fofficient-of life enough-nore than tuen; h-I should have died in my third rosininte.

But who are they that our datardly energies thus despite he the confuls, or you, licensus? If we are in facilit, depose us, or punish us yet more feverely. If you are to blame—many neither gods nor man punish your facility only may you repent! No. Remans, the confidence of our enemies is not owing to their course, or to they belief of your covarilies; they have but too often variantilled, not to know both themselves, and you. Defected, defeated, at the rejue of this cita! The ever-

people are the tole caute of our misfortones. While we will fet no bounds to our dominion, nor you to your liberty; while you impatiently endure Patrician magithrates, and we Phylician; our enemies take heart, raps clated, and prefemptions. In the name of the immortal gods, what is it, Remais, you would have? You defired Tubunes; for the fake of peace, we granted them. You were eager to have Decemvirs; we confented to their crestion. You grew wearv of these Decemvirs; we obliged them to abdicate. Your batted purfued them when reduced to private men; and we fuffered you to put to death, or banith, Patricians of the first rank in the republic. You infifted upon the reitoration of the Tribunethip; wa violded: we quietly faw Confuls of your fown taction elected. You have the protection of your Tribunes, and the privilege of appeal; the Patricians are fuljected to the decrees of the Commons. Under pretence of equal and impartial laws, you have invaded our rights; and we have futtered it, and we will tuffer it. When thad we fee an end of differed? When thalf we have one interest, and one common country? Victorious and triumphant, you thew lefs temper than we under defeat. When you are to contend with us, you can feize the Aventine hill, you can poffels vourfelves of the Mons Sucer,

The enemy is at our gutes, the .F.fquiline is near being taken, and nebody ftirs to hinder it. But against us you are valiant, againthus you can arm with diligence. Come on then, believe the fenare-house, make a camp of the forum, fill the jails with our chief nobles; and when you have achieved their glurious exploits, then, at laft, fully out at the Alfquiline gate, with the same fierce spirits, against the enemy. Does your refolution fail you for this? Go tien, and behold from our walls your lands ravaged, your houses plundered and in Sames, the whole country baid waste with fire and fword. Have you any thing here to repair thefe damages? Will the Trie, bones make up your lotles to you? They will give you words as many as you pleafe; being impeachments in abundance againft the prime men in the flate; liear laws upon laws; allemblies you thall have witheat end: but will any of you return the richer them those attemblies? Extineutith; C Rumons, thefe fatal divisions; sensreadly break this curfed enchantment,

The fall of the

which keeps you buried in a feandalous inaction. Open your eyes, and confider the management of those ambitious men, who to make themselves powerful in their party. fludy nothing but how they may foment divitions in the commonwealth .- If you can but fummon up your former courage, if you will now march out of Rome with Your confuls, there is no punishment you can indict which I will not submit to, if I do not in a few days drive those pillagers out of our territory. This terror of war, with which you feem to grievously struck. shall quickly be removed from Rome to their own cities. Hooke.

§ 30. MICIPSA to JUGURTHA.

You know, Jugurtha, that I received you under my protection in your early youth, when left a helpless and hopeless orphan. I advanced you to high honours in my kingdom, in the full affurance that you would prove grateful for my kindness to you; and that, if I came to have childrea of my own, you would fludy to repay to them what you owed to me. Hitherto I have had no reason to repeat of my fayours to you. For, to omit all former inftances of your extraordinary merit, your late behaviour in the Numantian war has reflected upon me, and my kingdom, a new and diffinguifhed glory. You have, by your valour, rendered the Roman commonwealth, which before was well affected to our interest, much more friendly. In Spain, you have raifed the honour of my name and crown. And you have furmounted what is justly reckoned one of the greatest dissignities; baving, by your merit, filenced envy. My diffolution feems now to be fast approaching. I therefore befeech and conjure you, my dear Jugurtha! by this right hand; by the remembrance of my past kindness to you: by the bonour of my kingdom; and by the majetty of the gods; be kind to my two fons, whom my favour to you has made your brothers; and do not think of forming a connexion with any ftranger, to the prejudice of your relations. It is not by aring, nor by treasures, that a kingdom is secured, but by well affected fubjects and allies. And it is by faithful and important fervices, that friendship (which neither gold will purchale, nor arms extort) is fecured, But what friendship is more perfect, than that which ought to obtain between brothere? What fidelity can be expected among Reangers, if it is wanting among

relations? The kingdom I leave you is in good condition, if you govern it properly; if otherwife, it is weak. For by agreement a finall frate increases: by division a great one talls into ruin. 'It will be upon you, Jugurtha, who are come to riper years than your brothers, to provide that no misconduct produce any bad effect. And, if any difference thould arise between you and your brothers (which may the gods avert!) the public will charge you. however innocent you may be, as the aggreifor, because your years and abilities give you the superiority. But I firmly perfuade myfelf, that you will treat them with kindness, and that they will hopour and effects you, as your diffinguished virtue deferves.

§ 31. Speech of Publius Scipio to the Roman Army, before the Buttle of the Ticin.

Were you, foldiers, the fame army which I had with me in Gaul, I might well turbear faying any thing to you at this time : for what occasion could there be to use exhortation to a cavalry that had fo fignally vanquilhed the fquadrons of the chemy upon the Rhone; or to legions, by whom that fame enemy, flying before them to avoid a battle, did in effect confels themselves conquered? But, as thefe troops, having been enrolled for Spain, are there with my brother Cnews, making war under my aufpices (as was the will of the fenate and people of Rome) I, that you might have a conful for your captain, against Hannibal and the Carthagimans, have treely offered invielf for this war. You, then, have a new general; and I a new army. On this account, a few words from me to you will be neither improper nor unteafon, bie,

That you may not be unapprifed of what fort of enemies your are going to encounter, or of what is to be feared from them, they are the very fame whom, in a former war, you vanquished both by land and fea; the fame from whom you took Sicily and Surdinia, and who have been their twenty years your tributaries. You will not, I prefunie, march against these men, with only that courage with which you are wont to face other enemies; but with a certain anger and indignation, such as you would feel if you faw your flaves on a fudden rife up in arms against you. Conquered and enflaved, it is not boldness, but necessity, that urges them to battle, unless you can believe.

Digitized by Google

believe that those who avoided fighting when their army was entire, have acquired better hope by the loss of twothirds of their horse and soot in the pas-

fage of the Alps.

But you have heard, perhaps, that, though they are few in number, they are men of front hearts and robult bodies; heroes of fuch tiren, the and vigour, as nothing is able to relift .- Mere effigies! may, thadows of men! wretches, enactated with hunger and benumbed with cold! bruited and battered to pieces among the rocks and cruggy cliffs! their weapons broken, and their hories weak and foundered! buch are the cavalry, and fuch the intantry, with which you are going to contend; not enemies, but the fragments of enemies. There is nothing which I more apprehend, than that it will be thought Hannibal was vanquithed by the Alps, before we had any conflict with him. But, perhaps, it was fitting it should be to; and that, with a people and a leader who had violated leagues and covenants, the gods themselves, without man's help, should begin the war, and bring it to a near conclusion; and that we, who, next to the gods, have been injured and offended, thould happily finith what they have begun.

I need not be in any fear that you fould fulpect me of laying thele things merely to encourage you, while inwardly I have different tentiments. What hin-4ered me from going into Spain? That was my province, where I should have had the less dreaded Aidrubal, not Hunmital, to deal with. But hearing, as I patied along the coast of Gual, of this enemy's murch, I landed my troops, fent the horie forward, and pitched my camp spon the Rhope. A part of my cavalry encountered, and detented that of the memy. My infantry not being able to Overtake theirs, which fled before us, I returned to my fleet; and, with all the expedition I could use in so long a voyage by fea and land, am come to meet them at the foot of the Alps. Was it then, invinthration to avoid a contest with this tremendous Hannibal? and have I met with him only by accident and unawares? or am I come on purpose to challenge hun to the combat? I would gladly try whether the earth, within their twenty years, has brought forth a new kind of Carthagimans; or whether they be the fame fort of men who tought at the Æastes, and whom, at Eryn, you fuffered to redeem

themfelves at eighteen denarii per head : whether this Hannibal, for labours and journies, be, as he would be thought, the rival of Hercules; or, whether he be, what his father left him, a tributary, a vadal, a: flave of the Roman people. Did not the confcioutness of his wicked deed at Saguntum torment him and make him deiperate, he would have some regard, if not to his conquered country, yet furely to his own family, to his father's memory, to the treaty written with Hamilear's own hand. We might have thrived him in Eryx; we might have patted into Africa with our victorious fleet; and, in a few days, have deftroyed Carthage. At their humble fupplication, we purdoned them; we released them, when they were closely that up. without a pollibility of escaping; we made peace with them, when they were conquered. When they were diffrested by the African war, we confidered them, we treated them as a people under our protection. And what is the return they make us for all these favours? Under the conduct of a hair-brained young man, they come hither to overturn our finte, and lay waite our country. I could with, indeed, that it were not to; and that the war we are now engaged in concerned only our own glory, and not our prefervation. But the contest at prefent is not for the possession of Sicily and Sardinia. but of Italy itself: nor is there behind us another army, which, if we flould not prove the conquerors, may make head against our victorious enemies. There are no more Alps for them to pass, which might give us leifure to raife new forces. No. foldiers; here you must make your stand, as if you were just now before the walls of Rome. Let every one reflect, that he is now to defend, not his own perion only, but his wife, his children, his helplets infants. Yet, let not private confiderations alone policis our minds: let us remember that the eyes of the fenate and people of Rome are upon us; and that, as our force and courage shall now prove, such will be the fortune of that city, and of the Roman empire.

Hooke.

§ 32. Speech of HANNIBAL to the CAR-THAGINIAN Army, on the fame Occupion.

I know not, foldiers, whether you or your prifoners be encompafied by fortune with the firster bonds and accellines. Two fees include you on the right and

left; not a flip to fly to for escaping. Before you is the Po, a river broader and more rapid than the Rhone; behind you are the Alps; over which, even when your numbers were undiamined, you were hardly able to force a pallage. Here then, soldiers, you must either conquer or die, the very first hour you meet the enemy.

But the fame fortune which has thus laid you under the necessity of fighting, has fet before your eyes those rewards of victory, than which no men are ever wont to with for greater from the immortal 20ds. Should we, by our valour, recover only Sicriy and Sardmin, which were ravithed from our fathers, those would be no inconfiderable prizes. Let, what are thole? The wealth of Rome; whatever riches the has heard to wither in the moils. of nations; all to to with the matters of them, will be yours. You have been long enough employed in driving the cattle upon the vait mountains of Lantania and Celtiberat; you have intherto met with to reward worthy of the labours and dangers you have undergone. The time is now come, to reap the full recompense of your to home marches over to many mountains, and rivers, and through to meny nations, all of them in arms. This is the place which fortune has appointed to be the limits of your labour; it is bern that you will finish your glorious warrare, and receive an ample recompence of your completed irrvice. For I would not have you magine, that victory will be as direculting the mome of a Roman war is great and founding. It has often happened, that a despited enemy has given a bloody battle; and the most renowned kings and nations have by a finall force been overthrown. And if you but take away the glitter of the Roman name, what is there wherein they may fland in competition with your For, (to fay nothing of your fervice in war, for twenty years together, with fo much valour and fuccefs) from the very pillars of Hercules, from the ocean, from the utmost bounds of the earth, through to many warlike nations of Spain and Gaul, are you not come lather victorious? And with whom are you now to fight? With raw foldiers, an endifciplined army, beaten, vanquithed, belieged by the Gauls the very late funimer; an army, unknown to their leader, and unacquainted with him.

Or shall I, who was born, I might elmost fay, but certainly brought up, in the tent of any father, that made excellent

general; shall I, the conqueror of Spain and Gaul; and not only of the Alpine nations, but which a greater mil, of the Ales themtelves; that I commare nixtelf with this balt-year captain! a captain, before whom thould one place the two arnues, without their entigns, I am perfinaded he would not know to which of them he is conful. I effect it no imail advantage, foldiers, that there is not one among you, who has not often bren an eve-witness of my exploits in war; not one of whose valour I myter have not been a spectator, so as to be able to name the times and places of, his noble achievements; that with foldiers, whom I have a thunland times practed and rewarded, and whole punt I was before I because their general, I thail march against an are vot men thrangers to one another.

On what fide foever I turn my eyes, I behold all full of courage and thrength. A veteran infantry : a most gallant cavalry: you my allies, most faithful and vohant ; you, Carthaginians, whom not only your country's caute, but the juited ar impels to battle. The hope, the course, of affiglants, is always greater than of those who accupon the detentive. With homle banners displayed, you are come down upon Italy: you bring the war. Greet, injuries, indignities, the your minds, and four you forward to revenge .-- First, they demanded me; that I your general, should be delivered up to them; next all of you who had fou lit at the fiege of Saguntum; and we were to be put to death by the extremeli tortures. Proud and civel nation! every thing must be yours. and at your disposal! you are to preferice to us with whom we thall make war, with whom we thall make peace. You are to fet us bounds: to that us up within h.l.s and rivers; but you, you are not to obferve the limits which yourselves have fixed! " Pais not the Iberus." What next? " Touch not the Saguntanes. Sa-" guntum is upon the theras, move not a " frep towards that city." Is it a finall matter then that you have deprived us of our ancient postellion, Sicily and Sardinia? you would have Spain too, Well, we thall virld Spain, and then-you will pass into Africa. Will pats, did I fax? - this very year they ordered one of their contals into Africa, the other into Spain. No. 101diers; there is nothing left for us, but what we can vindicate with our twords. Come on, then. Le men. The Romantia may, with more falety, be cowered, that y hare their own country behind them, have places of refuge to fly to, and are fecure from danger in the roads thither; but for you, there is no middle fortune between death and victory. Let this he but well fixed in your minds; and once again, I fay, you are conquerors.

Hooke.

§ 33. The Character of HANNIBAL.

Hannihal being fent to Spain, on his arrival there attracted the eyes of the whole army. The veterans believed Hamilcar was revived and reflored to them: they law the fame vigorous countenance, the fame piercing eye, the fame complexmand features. But in athort time his behaviour occasioned this relemblance of his father to contribute the leaft towards his gaining their favour. And, in truth, never was there a genius more happily formed for two things, most manifestly contrary to each other-to obey and to command. This made it difficult to determine, whether the general or foldiers loved him most. Where any enterprize required vigour and valour in the performance, Aldrubal always chole him to command at the executing it : nor were the troops ever more confident of fuccels, or more intrepid, than when he was at their head. None ever shewed greater bravery in undertaking hazardous attempts, er more presence of mind and conduct in the exocution of them. No hardthip could fatigue his body, or daunt his courage : he toold equally bear cold and heat. The secessary refection of nature, not the pleafure of his palate, he folely regarded in his meals. He made no diffinction of day and night in his watching, or taking reft; and appropriated no time to fleep, but what remained after he had compleated hisduty; he never fought for a foft or retired place of repole; but was often feen lyingon the bare ground, wrapt in a foldier's cloak, amongst the centinels and guards. He did not diftinguish himself from his companions by the magnificence of his drefs, but by the quality of his horse and arms. At the same time, he was by far the best foot and horse soldier in the army; ever the foremoft in a charge, and the last who left the field after the battle was begun. These thining qualities were however balanced by great vices; inhuman cruelty; more than Carthaginian treachery; no respect for truth or honour, no fear of the gods, no regard for the fanctity of oaths, no fense of religion. With a disposition thus chequered with virtues and vices, he served three years under Aldrubal, without neglecting to pry into, or perform any thing that could contribute to make him hereafter a complete general.

Livy.

§ 34. The Seventian Ambuffudors to Alexander, on his making Preparations to attack their Country.

If your person were as gigantic as your defires, the world would not contain you. Your righthand would touch the east, and your left the west at the same time : you grafp at more than you are equal to. From Europe you reach Alia; from Alia you lay hold on Europe. And if you thould conquer all mankind, you feem disposed to wage war with woodsand fnows, with rivers and wild beafts, and to attempt to Subdue nature. But have you confidered the ufual course of things? have you reflected, that great trees are many years in growing to their height, and are cut down in an hour? it is foolish to think of the fruit only, without confidering the height you have to climb to come at it. Take care left, while you firive to reach the top, you fall to the ground with the branches you have laid hold on.

Beides, what have you to do with the Scythians, or the Scythians with you? We have never invaded Macedon; why fhould you attack Scythia? You pretend to be the punisher of robbers; and are yourfulf the general robber of mankind. You have taken Lydin; you have feized Syria; youare matter of Perfia; you have fubdued the Bactrians, and attacked India; all this will not fatisfy you, unless you lay your greedy and infatiable hands upon our flocks and our herds. How imprudent is your conduct! you grafp at riches, the postellion of which only increafes your avarice. You increase your hunger, by whatthould produce fatiety; fo that the more you have, the more you defire. But have you furgot how long the conquefisof the Bactrians detained you! while you were fubduing them the Sogdiansrevolted. Your victories serve to no other purposethantofind you employment by producing new wars; for the bufine sof every conquett is twofold, to win, and to preferve: and though you may be the greateitof warriors, you muft expect that the nations you conquer will endeavour to thake off the yoke as fast as possible: for what people chufe to be under foreign domimion?

If you will cross the Tanais, you may travel over Scythia, and obferve how extenfive a territory we inhabit. But to conquer us is quite another bufinels: you will find us at one time, too nimble for your purfuit; and at another time, when you think we are fled far enough from you, you will have us farprife you in your camp : for the Seytmans attack with no less vigour than they fly. It will there- . Yes, noble lady, I fwear by this blood fore be your wildom to keep with ftrich attention what you have gained; catching at more, you may lofe what you have. We have a proverbial faying in Scythia, That Fortune has no feet, and is furnished only with hands to difficiente her capricious, favours, and with fins to elude the grafp of those to whom she has been bountiful.-You give yourfeif out to be a god, the found Jupiter Ammons it fuits the characterofagod to beflow favourson mortals, nottodeprive them of what they have. But if you are no god, reflect on the precarious condition of humanity. You will thus thew more wifdom, than by dwelling on those fubiects which have puffed up your pride and made you forget yourfelf.

You fee how little you are likely to gain by attempting the conquett of Scythia. On the other hand, you may, if you pleafe, have in us a valuable alliance. We command the borders of both Europe and Airs. There is nothing between us and Bastria but the river Tanais; and our territory extends to Thrace, which, as we have heard, borders on Macedon. If you decline attacking us in a hoftile manner, you may have our friendship. Nations which have never been at war are on an equal footing; but it is in vain that confidence is repoied in a conquered people: there can be no fincere friendthip between the oppressors and the oppressed; evening peace, the latter think themselves entitled to the rights of war against the former. We will, if you think good, enter into a treaty with you, according toom manner, which is not by figning, fealing, and taking the gods to wituels, as is the Greeian cufion; but by doing actual fervices. The Scythians are not used to promife, but perform without promining. And they think an appeal to the gods tuperfluous; for that those who have no regard for the efteem of men will not helitate to

offend the gods by perjury .- You may therefore confider with yourfelf, whether you had better have a people of foch a character, and fo fituated as to have it in their power either to ferve you or to annoy you, according as you treat them, for allies or for enemies. Q. Curtius.

35. JUNIUS BRUTUS over the dead Body of Lucarria, who had Rubbed herself in consequence of the Rape of TARQUIN.

which was once so pure, and which nothing but royal villainy could have polluted, that I will puriue Lucius Tarquinius the Proud, his wicked wife, and their children, with fireand (word; nor will I fuffer any of that family, or of any other whatfoever, to be king in Rome. - Ye gods, I call you to witness this my oath!

There, Romans, turn your even to that fad spectacle! -- the daughter of Lucretius, Collatinus's wife-she died by her own hand! See there a noble lady, whom the luft of a Tarquin reduced to the necessity of being her own executioner, to atteft her innocence. Hospitably entertained by her as a kinfman of her hufband, Sextus the perfidious guest became her brutal ravisher. The chatte, the generous Lucretia could not furvive the infult. Glorious woman! but once only treated as a flave, the thought life no longer to be endured. Lucretia, a woman, difdained a life that depended on a tyrant's wiil; and fhall we, fhall men, with fuch an example before our eyes, and after five-andtwenty years of ignominious fervitude, shall we, through a fear of dving, defer one fingle inftant to affert our liberty? No. Romans; now is the time; the favourable moment we have fo long waited for is come. Tarquin is not at Rome; the Patricians are at the head of the enterprize: the city is abundantly provided with men, arms, and all things necessary. There is nothing wanting to feeure the fuccels, if our own courage does not fail us. And shall those warriors who have ever been to brave when foreign enemies were to be fubdued, or when conquetts were to be made to gratify the ambition and avarice of Tarquin, be then only cowards, when they are to deliver themfelves from flavery?

Some of you are perhaps intimidated by the army which Tarquin now com-

mands; the foldiers, you imagine, will take the part of their general. Banith fuch a groundless fear: the love of liberty is natural to all men. Your fellow citizensin the camp feel the weight of oppreffon with as quick a fenfe as you that are in Rome; they will as cagerly feize the occasion of throwing off the voke. But let us grant there may be fome among them who, through bafeness of hirrit, or a bad elecation, will be dispoted to favour the tyrant; the number of thele can be but finall, and we have means inflicient in our hands to reduce them to reulon. They have left us holinges more dear to them manlife; their wives, their children, their fathers, their mothers, are here in the city. Courage, Romans, the gods are for us; thole gods, whose temples and alters the impious Tarquin has profused by facrifices, and libations made with polluted hands, polluted with blood, and with mmberlefeunexpiated crimes committed against his subjects.

Yegods, who protected our forefathers! yegoni, who watch for the prefervation and glory of Rome! do you infpire us with courage and unanimity in this glorious caufe, and we will to our lait breath defendyour worthip from ail profanation.

§ 36. Speech of Admental to the Ro-MAN SENATE, imploring their Affiltance against Je Gurtha.

Fathers !

It is known to you that king Micipla, metather, on his death-bed, left in charge to Jugurtha, his adopted fon, conjunctly with my unfortunate brother. Hiempful and myfelf, the children of his own body, the administration of the kingdom of Nutheralministration of the kingdom of Nutheralministration of the kingdom of Nutheralministration of the kingdom of nich death in the charge of us to use our best endeavours to be ferviceable to the Roman commonwealth, in prace and war; assuring us, lost your protection would prove to us a defence against all enemies, and mould be is allead of armies, sortifications, and treafares.

Whilemy brother and I were thinking of adding but how to regulate our felves according to the directions of our deceased taker, Jugurtha—the molt infamous of makind! breaking through all ties of gratude and of common humanity, and tampling on the authority of the Roman commonwealth—procured the murder of

my unfortunate brother, and has driven me from my throne and native country, though he knows I inherit, from my grandlather Mathiriffa, and my father Micipia, the friendship and alliance of the Romans.

For a prince to be reduced, by villainy, to my difficisful circumftances, is calamity enough; but my misfortunes are heightened by the confideration, that I find nevfelf othiged to folicit your alldance. Fathers, for the fervices done you by my anceitors, not for any I have been able to render you in my own perion. Jugurtha has put it out of my power to deferve any thing at your hands, and has forced me to be burdenfome before I could be ufeful to you. And yet, if I had no plea but my undeferved milcry, who, from a powerful prince, the defeendant of a race of illutireons monarchs, find mylelf without any fault of my own, deftitute of every fupport, and reduced to the necessity of begging foreign affiliance against an enemy who has feized my throne and kingdom; if my unequalled diffreffes were all I had to plead, it would become the greatness of the Roman common wealth, the arbitrela of the world, to protect the injured, and to check the triumph of daring wickedness overhelplefsinnocence. But, to provoke your vengeance to the utusoft, Jugurtha has driven me from the very dominions whichthefenate, and people of Rome gave tomy anceftors, and from which my grandfather and my father, under your umbrage, expelled Syphax, and the Carthaginians. Thus, fathers, your kindness to our family is defeated; and Jugurtha, in injuring me, throws contempt on you.

Owretched prince! O cruel reverte of fortune! O father Micipla! is this fire confequence of your generofity, that he whom your goodnels raifed to an equality with your own children, flould be the murdererofvourchildren? Muttigenthe royal house of Numidia asways be a scene of havock and blood? While Carthage remained, we fuffered, as was to be expected, all firts of harddings from their holdile attacks; ourenemy near; our only powerfulally, the Roman common wealth, at a diffance; white we were fo circumflanced, we were always in arms, and in action. When that four goof Africa was no more, we congratulated ourfelves on the prospect of established peace. But inflead of peace, behold the kingdom of Numidia dreached with royal blood, and

222

al.

the only furviving fon of its late king flying from an adopted murderer, and lecking that fatety in foreign parts, which he cannot command in his own kingdom.

Whither-O whither shall I fly! If I return to the royal palace of my auceftors, my father's throne is feized by the murderer of my brother. What can I there expect, but that Jugurtha should hasten to imbrue in my blood those hands which are now recking with my brother's? If I were to fly for refuge, or for affillance, to any other courts, from what prince can I hope for protection, if the Roman commonwealth gives me up? From my own family or friends I have no expectations. My royal father is no more: he is beyond the reach of violence, and out of hearing of the complaints of his unhappy fon. Were my brother alive, our mutual fympathy would be some alleviation: but he is hurried out of life in his early youth, by the very hand which flould have been the last to injure any of the royal family of Numidia. The bloody Jugurtha has butchered all whom he tufpected to be in my interest. Some have been deliroyed by the lingering torment of the croft? others have been given a prey to wild beatts, and their anguith made the sport of men more cruelthan wild beafts. If there be any vetalive, they are that up in dungeons, there to drag out a life more intolerable than death itfelf.

Look down, illustrious fenators of Rome! from that height of power to which you are raifed, on the unexampled diffresses of a prince, who is, by the cruelty of a wicked intruder, become an outcaft from all mankind. Let not the crafty intinuations of him who returns murder for adoption, prejudice your judgment. Do not litten to the wretch who has butchered the fon and relations of a king, who gave him power to fit on the fame throne with his own fons .- I have been informed that he labours by his emiffaries to prevent your determining any thing against him in his ablence, pretending that I magnify my diffress, and might for him have fluid in peace in my own kingdom. But, if ever the time comes when the due vengeance from above shall overtake him, he will then diffemble as I do. Then he who now, hardened in wickedness, triumphs over those whom his violence has laid low, will in his turn feel diffres, and fuffer for his impious ingratitude to my father, and his blood-thirtly cruelty to my brother.

O murdered, butchered, brother! O dearest to my heart-now gone for ever from my fight!- But why should I lament his death? He is indeed deprived of the bletled light of heaven, of life, and kingdom, at once, by the very perion who ought to have been the first to hazard his own life in defence of any one of Micipfa's family? Butasthingsare, my brother is not fo much deprived of thefe comforts, andelivered from terror, from flight, from exile, and the endless train of miseries which render life to meaburden. Helies full low, gored with wounds, and feltering in his own blood; but he lies in peace: he feels none of the miferies which rend my foul with agony and diffraction, whilit I am fet up a spectacle to all mankind, of the uncertainty of human affairs. So far from having it in my power to revenge his death, I am not mafter of the means of fecuring my own life: fo far from being in a condition to defend my kingdom from the violence of the usurper, I am obliged to apply for foreign protection for my own perion.

Fathers! Senators of Rome! the arbiters of the world!—to you I fly for refuge from the murderous fury of Jugurtha.—By your affection for your children, by your love for your country, by your own virtues, by the majefty of the Roman commonwealth, by all that is facred, and all that is dear to you—deliver a wretched prince from undeferved, unprovoked injury, and fave the kingdom of Numidia, which is your own property, from being the prey of violence, ufurpation, and cruelty.

Salluf.

37. Speech of Canulaus, a Roman Tribune, to the Conjuls; in which he demands that the Piebeians may be admitted into the Confulship, and that the Law prohibiting Patricians and Plebeiaus from intermarrying, may be repealed.

What an infult upon us is this! If we are not fo rich as the patricians, are we not citizens of Rome as well as they? inhabitants of the fame country? members of the fame community? The nations bordering upon Rome, and even firangers more remote, are admitted not only to marriages with us, but to what is of much greater importance, the freedom of the city. Are we, because we are commoners, to be worsetreated than strangers?—And, when we demand that the people may be freeto bestow their offices and dignities a whom

whom they please, do we ask any thing unreasonable or new? do we claim more than their original inherent right? What occasion then for all this uproar, as if the universe were falling to ruin!—They were just going to lay violent hands upon me in the senate-house.

What! must this empire then be unavoidably overturned? must Rome of necedity fink at once, if a plebeian, worthy of the office, should be raised to the confulthip? The patricians, I am perfooded, if they could, would deprive you of the common light. It certainly offends them that you breathe, that you fpeak, that you have the shapes of men. Nay, but to make a commoner a conful, would be, fay they, a most enormous thing. Numa Pompilius, however, without being to much as a Roman citizen, was made king of Rome: the elder Tarquin, by birth not even an Italian, was neverthelefs placed upon the throne: Servius Tullius, the fon of a captive woman (nobody knows who his father was) obtained the kingdom as the reward of his wifdom and virtue. In those days, no man in whom virtue thone conspicuous was rejected, or despited, on account of his race and defcent. And did the state prosper less for that? were not thefe firangers the very bet of all our kings? And supposing now, that a plebeian Chould have their talents and merit, must not be be suffered to go-

but, " we find that, upon the abolition "of the regal power, no commoner was "thosen to the consulate." And what of that! Before Numa's time there were no pontiffs in Rome. Before Servius Tulline's days there was no Cenfus, no division of the people into classes and centuries. Who ever heard of confuls before the expulsion of Tarquin the Proud? Dictators, we all know, are of modern invention; and fo are the offices of tribunes, rediles, quadtors. Within those ten years we have made decemvirs, and we have unmade them. Is nothing to be done but what has been done before? That very law forbidding marriages of patricians with plebeians, is not that a new thing? was there any fuch law before the decemvirs enacted it? and a most shameful one it is in a free effate. Such marriages, it feems, will taint the pure blood of the nobility! why, if they think fo, let them take care to match their fifters and daughters with men of their own fort. No plebeian will do violence to the daughter of a patrician; those are exploits for our prime nobles. There is no need to fear, that we shall force any body into a contract of marriage. But, to make an express law to prohibit marriages of patricians with plebeians, what is this but to shew the utmost contempt of us, and to declare one part of the community to be impure and unclean?

They talk to us of the confusion there will be in families, if this statute should be repealed. I wonder they do not make a law against a commoner's living near a nobleman, or going the same road that he is going, or being prefent at the fame feaft, or appearing in the fame marketplace: they might as well pretend, that thefe things make confusion in families, as that intermarriages will do it. Does not every one know, that the child will be ranked according to the quality of his father, let him be a patrician or a pleheian? In thort, it is manifelt enough, that we have nothing in view but to be treated as men and citizens; nor can they who oppofe our demand, have any motive to do it, but the love of domineering. I would fain know of you, confuls and patricians, is the fovereign power in the people of Rome, or in you? I hope you will allow, that the people can, at their pleature, either make a law or repeal one. And will you then, astoonasany law is propoted to the he, pretend to lift them immediately for the war, and hinder them from giving their fuffrages, by leading them into the field?

Hear me, confuls: whether the news of the war you talk of by true, or whether it he only a falle rumour, foread abroad for nothing but a colour to fend the people out of the city, I declare, astribune, that this people, who have already to often fpilt their blood in our country's caufe, are again ready to arm for its defence and its glory, if they may be reftored to their natural rights, and you will no longer treat us like ftrangers in our own country: but if you account us unworthy of your alliance by intermarriages; If you will not fuffer the entrance to the chief offices in the thate to be open to all perfons of merit indifferently, but will confine your choice of magittrates to the fenate alone -- talk of wars as much as ever you pleafe; paint, in your ordinary discourses, the league and power of our enemies ten times more dreadful than you do now-I declare that this people, whom you fo much despite, and to whom you are nevertheless indelited

223

SUE

for all your victories, shall never more inlift themselves; not a man of them shall take arms; not a man of them shall expote his life for imperious lords, with whom he can neither share the dignities of the state, nor in private life have any alliance by marriage.

Hooke.

§ 38. Life of Circho.

The flory of Cicero's death continued freth on the minds of the Romans formany ages after it; and was delivered down to potterity, with all its circumttances, asone of the most affecting and memorable events of their history : fo that the spot on which thappened, feems to have been vitited by travellers with a kind of religious reverence. The odium of it fell chiefly on Antony; yet it left a ftain of perfidy and ingratitude also on Augustus; which explains the realons of that filence, which is observed about him, by the writers of that age; and why his name is not fo much as mentioned either by Horace or Virgil. For though his character would have furnified a glorious fubject for many noble lines, vet he was no subject for court poets, finer the very mention of him mud have been a fatire on the prince, especially while Antony lived; among the fycophants of whose court it was fushionable to infulthismemory, by all the methods of ealumny that wit and malice could invent: nay, Virgil, on an occation that could hardly fail of bringing him to his mind, inflead of doing justice to his merit, chefe to do an injuffice rather to Rome itfelt, by vielding the inperiority of eloquence to the Greeks, which they themselves had been forced to vield to Cicero.

Livy, however, whose candour made Augustus call him a Pompeian, while, out of complaifance to the times, he feems to extenuate the crime of Cicero's murder, yet after a high encomium of his virtues, declares, that to praye him as he deferred, required the eloquence of Cicero himfelf. Auguitus too, as Plutarch tells us, happening one day to catch his grandfon reading one of Cicero's books, which, for fear of the emperor's difpleafure, the boy endeavoured to hide under his gown, took the book into his hands, and turning over a great part of it, gave it back again, and faid, "This was a learned man, my child, " and a lover of his country."

In the fucceeding generations, as the particular envy to Cicero fublided, by the

death of those whose private interests and perfonal quarrels had engaged to hate when living, and detame him when dead, fo his name and memory began to finne out in its proper luftre; and in the reign even of l'iberius, when an eminent fenator and hilforian, Cremutius Cordus, was condemned to die for praifing Brutus, yet Paterculus could not forbear breakingout into the following warm expotulation with Antony on the fubject of Cicero's death: "Thou haft done nothing, Antony; " hall done nothing, I fay, by fetting a " price on that divine and illustrious head, " and by a detettable reward procuring the " death of fo great a conful and preferver " of the republic. Thou halt furtched " from Cicero a troublesome being, a de-" chaing age, a life more mife rable under " thy dominion than death itfelf; but fo " far from diminishing the glory of his " deeds and favings, thou hall increased " it. He lives, and will live in the me-" more of all ages; and as long as this " lyttem of nature, whether by chance or " providence, or what way to ever form-" ed, which he alone of all the Romans " comprehended in his mind, and illuf-" trated by his eloquence, thalkremain in-" tire, it will draw the praifes of Cicero " along with it: and all pofterity will " admire his writings againft thee, curle " thy act against him -- ."

From this period, all the Roman writers, whether poets or hillorians, feem to vie with each other in celebrating the praifes of Cicero, as the most illustrious of all their patriots, and the perent of the Roman un and cloquence; who had done more honour to his country by his writings than all their conquerors by their urms, and extended the bounds of his learning beyond those of their empire. So that their very emperors, near three centuries after his death, began to reverence him in the class of their inferior deities; a rank which he would have preferved to this day, if he had happened to live in papal Rome, where he could not have failed, as kratinus fays, from the innocence of his life, of obtaining the bonour and title of a jaint.

As to his person, he was tall and stender, with a neck particularly long; yet his seatures were regular and manly; preserving a comeline is and dignity to the last, with a certain air of cheerfulacis and serving that imprinted both affection and respect. His constitution was naturally weak, yet was so construed by his management of

it, as to enable him to support all the fatigues of the most active, as well as the most studious life, with perpetual health and vigour. The care that he employed upon his body, confifted chiefly in bathing and rubbing, with a few turns every day in his gardens, for the refreshment of his voice from the labour of the bar: yet in thelummer, he generally gave hindelf the exercise of a journey, to visit his several estates and villasin different parts of Italy. But his principal instrument of health was dietand temperance: by thefe he preferved hunfelf from all violent ditiempers : and when he happened to be attacked by any flight indifposition, used to enforce the feverity of his abstinence, and starve it prefently by faiting.

In his cloaths and drefs, which the wife have utually confidered as an Index of the mind, he observed, what he prescribes in his book of Mices, a modesty and decency adapted to his rank and character; a perpetual cleanlines, without the appearance of pains; free from the affectation of fingularity, and avoiding the extremes of a ruttic negligence and soppish delicacy; both of which are equally contrary to true dignity; the one implying an ignorance, or illiberal contempt of it, the other a childish pride and oftentation of proclaiming our pretensions to it.

In his domestic and focial life his behaviour was very amiable : he was a most indulgent parent, a fincere and zealous friend, a kind and generous matter. His etters are full of the tenderest expressions of love for his children; in whose endearing convertation, as he often tell us, he uled to drop all his cares, and relieve himfelf from all his flruggles in the fenate and the forum. The fame affection, in an inferior degree, was extended affo to his faves, when by their fidelity and fervices they had recommended themselves to his favour. We have feen a remarkable infrance of it in Tiro, whose case was no otherwife different from the refl, than as it was diffinguished by the superiority of his merit. In one of his letters to Atticus, " I have nothing more," favs he, "towrite: and my mind indeed is fome-" what ruffled at prefent; for Socitheus, " my sender, is dead : a hopeful youth ; " which was afflicted me more than one "would imagine the death of a flave " ought to do."

he entertained very high notions of friendly p, and of its excellent use and

benefit to human life; which he has beautitully illuftrated in his entertaining treatile on that fubject; where he lays down no other rules than what he exemplified by his practice. For in all the variety of friendships in which his cminent rankengaged him, he never was charged with deceiving, deferting, or even flighting any one whom behad once called instriend, or effeemed an honeit man. It was his delighttoadvancetheir prosperity, torelieve their advertity; the lame friend to both fortunes; but more zealous only in the bad, where his help was most wanted, and his fervices the mondimuterefied; looking upon it not as a friendship, but a fordid traffic and merchandize of benefits, where good offices are to be weighed by a nice estimate of gain and loss. He calls gratitude the mother of virtues; reckons it the most capital of all duties; and uses the words grateful and good as terms fynonymous, and inseparably united in the same character. His writings abound with fentiments of this fort, as his life did with the examples of them; fo that one of his friends, in apologizing for the importunity of a request, observes to him with great truth, that the tenor of his life would be a fufficient excuse for it; fince he had establithed fuch a cuttom, of doing every thing for his friends, that they no longer requested, but claimed a right to command

Yet he was not more generous to his friends, than placable to his enemies; readily pardoning the greatlest injuries, upon the flightest subministion; and though no man ever had greater abilities or opportunities of revenging himfelf, yet when it was in his power to burt, he fought out reasons to forgive; and whenever he was invited to it, never declined a reconciliation with his most inveterate enemies; of which there are numerous infrauce: in his hittory. He declared nothing to be more laudable and worthy of a great man than placebility; and faid down for a natural duty, to moderate our revenge, and objerve a temper in punishing ; and held repentance to be a futherent ground for remitting it : and it was one of his favings, delivered to a public aftembly, that his cumities were mortal, his fr endining immortal.

His manner of living was agreeable to the dignity of bis character, splendid and noble; his houte was open to all the learned frangers and philosophers of Greece and Asia; severalos whom were constants.

entertained in it as a part of his family, and front their whole fives with him. His levee was perpetually crouded with multitudes of all ranks; even Pompey himfelf nor diffaining to frequent it. The great-(ii part came not only to pay their compliments but to attend him on days of butinels to the fenate or the forum; where, upon any debate or transaction of moment they confiantly waited to conduct him home again: but on ordinary days, when thefe morning vifits were over, as they ufually were before ten, he retired to his books, and that himfelf up in his library without feeking any other divertion, but what his children afforded to the thort intervals of his leifure. His topper was the greatest meal; and the usual featon with all the great of enjoying their friends at table, which was frequently prolonged to a late hour of the night, yet he was out of his bed every morning before it was light; and never used to sleep again at noon, avail others generally did, and as it is commonly practifed in Rome to this

But though he was fo temperate and findious, yet when he was engaged to fup with others, either at home or abroad, he laid ande his rules, and forgot the invalid; and was gay and forightly, and the very foul of the company. When friends were met together, to heighten the comfortsof focial life, he thought it inhospitable not to contribute his there to their common mirch, or todamp it by a churlithrefervednels. But he was really a lover of chearful entertainments, being of a nature remarkably facetious, and tingularly turned to raillery; a talent which was of great fervice to him at the bar, to correct the petulance of an adversary; relieve the futiety of a tedious cause; divert the minds of the judges; and mitigate the rigour of a fentence, by making both the brach and andience merry at the expense of the accufer.

The use of it was always thought fair, and greatly applauded in public trials: but in private conversations, he was charged sometimes with pushing his raillery too far; and through a conscious less of his superior wit, exerting it often in temperately without reflecting what cruel wounds his lastices inflicted. Yet of all his sarcatical jokes, which are transmitted to us by antiquity, we shall not observe any but what were pointed against characters, either ridiculous or profligate; such as he despifed

for their follies, or hated for their vices; and though he might provoke the fpleen, and quicken the malice of his enemies more than was confittent with a regard to his own rafe, yet he nover appears to have hurt or lott a friend, or any one whom he valued, by the levity of jefting.

It is certain, that the fame of his wit was as celebrated as that of his eloquence, and that feveral spurious collections of his favings were handed about in Rome in his life-time, till his friend Trebonius, after he had been conful, thought it worth while to publish an authentic edition of them, in a volume which he addressed to Cicero himfelf. Carfar likewife, in the height of his power, having taken a fancy to collect the Apophthegus, or memorable favings of eminent men, gave frict orders to all his friends who used to frequent Cicero, to bring him every thing of that fort, which happened to drop from him in their company. But Tiro, Ciccro's freedman, who ferved him chiefly in his fludies and literary affairs, published after his death the most perfect collection of his Sayings, in three books; where Quintilian however withes that he had been more sparing in the numher, and judicious in the choice of them. None of thele books are now remaining, nor any other specimen of the jefts, but what are incidently feattered in different parts of his own and other people's writings; which, as the fame judicious critic observes, through the change of take in different ages, and the want of that action or genuce, which gave the chief fpirit to many of them, could never be explained to udvantage, though feveral had attempted it. How much more cold then and infipid mult they needs appear to us, who are unacquainted with the particular characternand flories to which they relate, as well as the peculiar fathious, humour, and taite of wit in that age? Yet even in thefe, as Quintilian also tells us, as well as in his other compositions, people would fooner find what they might reject, than what they could add to them.

He had a great number of fine houses in different parts of Italy; some writers reckon up eighteen; which, excepting the samily seatat Arpinum, seem to have been all purchassed, or built by himself. They were fituated generally near to the sea, and placed at proper distances along the lower coast, between Rome and Pompeii, which was about four leagues beyond Naples; and for the elegance of structure, and

the delights of their fituation, are called by him the eyes, or the beauties of Italy. Those in which he took the most pleasure, and usually spent some part of every year, were his Tufculum, Antium, Aftura, Arpinum; his Formian, Cuman, Puteolan, and Pompeian villas; all of them large enough for the reception not only of his own family, but of his friends and numerom gueits; many of whom, of the first quality, used to pais several days with him in their excursions from Rome. But befides thefe that may properly be reckoned feats, with large plantations and gardens around them, he had feveral little inns, as he calls them, or baiting-places on the road, built for his accommodation in palling from one house to another.

His Tufculum house had been Sylla's, the dictator; and in one of its apartments. had a painting of his memorable victory near Nota, in the Marke war, in which Cicero had ferved under him as a voluntter: it was about four leagues from Rome, on the top of a beautiful hill covered with the villar of the nobility, and affording an agreeable prospect of the city, and the country around it, with plenty of water flowing through his grounds in a large fream or canal, for which he paid a rent to the corporation of Tufculum. Its neighbourhood to Rome gave him the opportunity of a retreat at any hour from the fatigues of the bar or the fenate, to breathe a little fresh air, and divert himfelf with his friends or family: fo that this was the place in which he took the book delight, and spent the greatest thare of his leifure; and for that reaton improved and adorned it beyond all his other houses.

When a greater fatiety of the city, or 2 longer vacation in the forum, dispused him to feek a calmer scene, and more undiffurbed retirement, he used to remove to Antium or Affura. At Antium he placed his best collection of books, and as it was totabove thirty miles from Rome, he could have daily intelligence there of every thing that passed in the city. Astura was a liale island, at the month of a river of the hase name, about two leagues farther towardsthe fouth, between the promontories of Antium and Circaum, and in the view of them both; a place peculiarly adapted to the purposes of solitude, and a severe retreat; covered with a thick wood cut out intofady walks, in which he used to spend

the gloomy and iplenetic moments of his

In the height of fummer, the mantionhouse at Arpinum, and the little island adjoining, by the advantage of its groves and cafeades, atforded the best defence against the inconvenience of the heats; where, in the greatest that he had ever remembered. we find him refeething himfelf, as he writes to his brother, with the utmost pleasure, in the cool fiream of his Fibreaux. His other villas were fituated in the more public parts of Italy, where all the best company of Rome had their houses of pleafure. He had two at Formice, a lower and upper villa; the one near to the port of Cajeta, the other upon the mountains adjoining. He had a third on the thore of l'uice, between the lake Avernus and Putcoli, which he calls his Putcolan: a fourth on the hills of Old Cumæ, called his Cuman villa; and a fifth at Pompeii, four leagues beyond Naples, in a country famed for the purity of itsair, fertility of its foil, and delicacy of its fruits. His Puteolan house was built after the plan of the Academy of Athens, and called by that name; being adorned with a portico and a grove, for the fame use of pintologobical conterences. Some time after his death, it fell into the bands of Antiffus Vetus, who repaired and improved it; when a fpring of warm water which happened to burit out in one part of it, gave occation to the following epigram, made by Laurea Tulitus, one of Cicero's freedmen.

Quo tua Romana vindez clariffime lingua Sylva loco metius intgere juffa viret, Atque Academin celebratam nomine villain Nunc reparat cultu fub potiore Vetus, Hic rtiam apparent lympha non ante reperte. Languid a quas intulo lumina rore levant, Nigurum focus ipfe fui Ciceronis bonore Hoe dedit, hae foutes cum patefecit ope. Ut quomiam totum legitur fine per orbem, Sint plures, occulis que mediantur, aque. Park, Hitt. Nat. 1, 31. 2.

[&]quot; Where groves, once thine, now with fresh ver-" dure bloom,

[&]quot; Great Parent of the eloquence of Rome,

[&]quot; And where thy Academy, favourite feat,

[&]quot; Now to Antifines sields its fweet retreat. " A guthing stream burits out, of wond ross power,

[&]quot;To beal the eyes, and weaken'd fight reftore,

[&]quot;The place, which all its pride from Cicero drew,

[&]quot; Repays this honour to his memory due,

[&]quot; That fince has works throughout the world ago " Spread,

[&]quot;And with fuch eagerness by all are read,

[&]quot; New springs of beating quality shall rife, "To case the increase of labour to the eyes."

The furniture of his houses was fuitable to the elegance of his tafte, and the magnificence of his buildings; his galleries were adorned with flatues and paintings of the belt Grecian matters; and his vettels and moveables were of the best work and choicest materials. There was a cedar tuble of his remaining in Pliny's time, faid to be the first which was ever feen in Rome, and to have coft him eighty pounds. He thought it the part of an eminent citizen to preforwan uniformity of character in every article of his conduct, and to illustrate his dignity by the fplendor of his life. This was the reason of the great variety of his houses, and of their fituation in the most confinences parts of Italy, along the coorfe of the Appian road; that they might occur at every frage to the observation of travellers, and lie commodious for the reception and entertainment of his friends.

The reader, perhaps, when he reflects on what the old writers have faid on the mediocrity of his paternal effate, will be at a loss to conceive whence all his revenues flowed, that enabled him to fuftain the vall expence of building and maintaining fuch a number of noble houles; but the folution will be eafy, when we recollect the great opportunities that he had of improving his original fortunes. The two principal funds of wealth to the leading men of Rome, were first, the public magiftracies, and provincial commands; lecondly, the prefents of kings, princes, and foreign states, whom they had obliged by their fervices and protection; and though no man was more moderate in the use of thefe advantages than Cicero, yet to one of his prudence, economy, and contempt of vicious pleafores, thele were abundantly fufficient to answer all his expences: for in his province of Cilicia, after all the memorable inflances of his generotity, by which he faved to the public a full million fterling, which all other governorshad applied to their private ule, yet at the expiration of his year, he left in the hands of the publicans in Atia near twenty thousand pounds, referved from the trict dues of his government, and remitted to him afterwards at Rome. But there was another way of acquiring money, effected the mod reputable of any, which brought large and frequent supplies to him, the legacies of deveated friends. It was the peculiar cultom of Rome, for the clients and dependants of families, to bequeath at their death to their pations, fome confide able

part of their cflates, as the most effectual tellimony of their respect and gratitude: and the more a man received in this way, the more it redounded to his credit. Thus Cicero mentions it to the honour of Lucullus, that while he governed Afia as proconful, many great chates were left to him by will: and Nepos tells us in praise of Atticus, that he succeeded to many inheritances of the fame kind, bequeathed tohin on no other account than on his friendly and amiable temper. Cicere had his full there of these testamentary donations; as we fee from the many infrances of them mentioned in his letters; and when he was falfely reproached by Antony, with being neglected on these occasions, he declared in his reply, that he had gained from this fingle article about two hundred thousand pounds, by the free and voluntary gifts of dying friends; not the forged wills of perfons unknown to him, with which he charged Antony.

His moral character was never blemished by the frain of any habitual vice; but was a thining pattern of virtue to an age, of all others the most licentious and profligate. His mind was superior to all the fordid paffions which engrefs little fouls; avarice, cavy, malice, luit. If we lift his familiar letters, we cannot discover in them the leaft hint of any thing bale, immodel, fpiteful, or perfidious, but an uniform principle of henevolence, strice, love of his friends and country, flowing through the whole, and infpiring all his thoughts and actions. Though no man ever felt the effects of other people's envy more feverely than he, yet no man was ever more free from it: this is allowed to him by all the old writers, and is evident indeed from his works; where we find him perpenually praiting and recommending whatever was laudable, even in a rival or an adversary; celebrating merit wherever it was found, whether in the ancients or his contemporaries; whether in Greeks or Romans; and verifying a maxim, which he had declared in a speech to the fenate, that no man could be envious of unother's virtue, who was confeious of his own.

His forightly wit would naturally have recommended him to the favour of the ladies, whose company he used to frequent when young, and with many of whom of the first quality, he was oft engaged in his riper years to confer about the interests of their husbands, brothers, or relations, who were absent from Rome; yet we meet with

no trace of any criminal gallantry or intrigue with any of them. In a letter to Patus towards the end of his life, he gives a peofe account of his supping with their friend Volumnius, an epicurian wit of the bill class, when the famed courtelan, Cvtheris, who had been Volumnius's flave, and was then his mittrefs, made one of the company at table: where, after feveral jokes on that incident, he fays, that he never suspected she would have been of the party: and though he was always a lover of cheerful entertainments, yet nothing of that fort had ever pleafed him when young, much less now, when he was old. There was one lady, however, called Casfellia, with whom he kept up a particular familiarity and correspondence of letters; on which Dio abfurdly grounds fome little feandal, though he owns her to have been Screnty years old. She is frequently mentioned in Cicero's letters as a lover of books and philosophy, and on that account as fond of his company and writings: but while out of complaifance to her fex, and a regard to her uncommon talents, he treated her always with respect; yet by the hints which he drops of her to Attirus, it appears that the had no thare of his affections, or any real authority with him.

His failings were as few as were ever found in any eminent genius; fuch as flowed from his contritution, not his will; and were chargeable rather to the condition of hishumanity, than to the fault of the man. He was thought to be too singuine in profperity, too defponding in advertity; and apt to perfuade himfelf in each fortune, that a would never have an end. This is Pollio's account of him, which feems in general to be true; Brutus touches the first part of it in one of his letters to him; and when things were going profperously against Antony, put him gently in mind, that he feemed to trust too much to his hopes; and he bimielf allows the fecond, and fass that if any overous timorous in great and day serious. tients, apprehen ling always the weigh, ruther then hoping the best, he rous the man; and if that was a fault, confeiles himfelf not to be free from it: yet in explaining afterwards the nature of this timidity, it was fuch, he tells us, as shewed itself rather in forefreing dangers, than in encountering them: an explication which the latter part of his life fully confirmed, and above all his death, which no man could futtain with greater courage and refolution.

But the most conspicuous and glaring pation of his foul was the love of glory and

thirft of praise: a passion that he not only avowed, but freely indulged; and fometimes, as he himfelf confelles, to a degree even of vanity. This often gave his enemies a plautible handle of ridiculing his pride and arrogance; while the forwardnels that he thewed to celebrate his own merits in all his public speeches, seemed to innify their cenfores; and fince this is generally confidered as the grand foible of his life, and has been handed down implicitly from ageto age, without ever being fairly examined, or rightly underflood, it will be proper to lay open the fource from which the passion itself slowed, and explain the nature of that glory, of which he proteffes himfelf to fond.

True glory then, according to his own definition of it, is a wide and illustrious fame of many and great benefits conferred upon our friends, our country, or the whole ruce of mankind: it is not, he fays, the empty blast of popular farour, or the applante of a giddy multitude, which all wife men had ever delpifed, and none more than himfelf; but the confenting praise of all honest men, and the incorrupt tellimony of those who can judge of excellent merit, which refounds always to virtue, as the ceho to the voice; and fince it is the general companion of good actions, ought not to be rejected by good men. That those who aspired to this glory were not to expect eate or pleasure, or tranquillity of life for their pains; but muft give up their own pence, to fecure the peace of others; must expose themselves to storms and dangers for the public good: figlain many buttles with the unducious and the wicked. and some even with the powerful: in short muit behave themselves so, as to give their citizens cause to rejoice that they had ever been born. This is the notion that he inculcatesevery whereof trueglory; which is forely one of the nobleft principles that can infipire a human break; implanted by God in our nature, to dignity and exalt it: and always found the ftrongeft in the best and most elevated minds; and to which we owe every thing great and laudable, that hiftory has to offer us through all the ages of the heathen world. There is not an inflance, favs Cicero, of a man's exerting himfelf ever with praise and virtue in the dangers of his country, who was not drawn to it by the hopes of glory, and a regard to posterity. Give me a bou, fays Quintilian, whom proife excites, whom story warmer for fuch a scholar was fure to answer all his hopes, and do credit to his discipline. "Whether potterity will have any respect for me," says Pliny, "I know not, but I am sure that I "have deserved some from it; I will not say by my wit, for that would be arrow gant; but by the seal, by the pains, by the reverence which I have always paid to its"

It will not feem strange, toobserve the wifeft of the ancients puthing this principle to fo greata length, and confidering giory as the ampletere ward of a well-spent life, when we reflect, that the greaten part of them had no notion of any other reward orfuturity; and even those who believed a flate of happiness to the good, yet entertained it with fo much diffidence, that they indulged it rather as a with than a well-grounded hope, and were glad therefore to lay hold on that which feemed to be within their reach; a futurity of their own creating; an immortality of fame and glory from the applaufe of polierity. This, by a pleafing fiction, they looked upon as a propagation of life, and an eternity of existence; and had no small comfort in imagining, that though the fente of it thould not reach to themselves, it would extend at leaft to others; and that they thould be doing good ftill when dead, by leaving the example of their virtues to the imitation of mankind. Thus Cicero, as he often declares, never looked upon that to be his life, which was confined to this narrow circle on earth, but confidered his acts as feeds fown in the immenfe univerfe, to raife up the fruit of glory and immortality to him through a fucceilion of infinite ages; nor has he been fruttrated of his hope, or disappointed of his end; but as long as the name of Rome fublitis, or as long as learning, virtue, and liberty preferve any credit in the world, he will be great and glorious in the memory of all posterity.

As to the other part of the charge, or the proof of his vanity, drawn from his boughing fo frequently of himself in his fpeeches both to the fenate and the people, though it may appear to a common reader to be abundantly confirmed by his writings; yet if we attend to the circumftances of the times, and the part which he acted in them, we thall find it not only excusable, but in some degree even necessary. The fate of Rome was now brought to a criss, and the contending parties were making their last efforts either to oppress or preferve it: Cicero

was the head of those who stood up for its liberty, which entirely depended on the influences of his counfels; he had many years, therefore, been the common mark of the rage and malice of all who were aiming at illegal powers, or a tyranny in the state; and while thefe were generally supported by the military power of the empire, he had no other arms, or means of defeating them but his authority with the fenate and people, grounded on the experience of his fervices, and the perfuation of his integrity; fo that to obviate the perpetual calumnies of the factions, he was obliged to inculcate the merit and good effects of his counfels, in order to confirm people in their union and adherence to them, against the intrigues of those who were employing all arts to subvert them. "The frequent commemora-" tion of his acts," fays Quintilian, "was not made fo much for glory as fer defence; to repelcalumny, and vindicate his measures when they were at-" tacked:" and this is what Cicero himfelf declared in all his speeches, "That no man ever heard him speak of himself but when he was forced to it: that when he was urged with fictitious crimes, it was his custom to answer them with " his real fervices: and if ever he faid " any thing glorious of himfelf, it was not " through a fonducts of praise, but to repel an accufation; that no man who " had been converfant in great affairs, and treated with particular envy, could refute the contumely of an enemy, without touching upon his own prailes; and after all his labours for the common fafety, if a just indignation had drawn " from him, at any time, what might feem to be vain-glorious, it might reafonably be forgiven to him: that when others were filent about him, if he could not then forbear to speak of himself, " that indeed would be thameful; but " when he was injured, accufed, expoted " to popular odium, he must certainly be " allowed to affert his liberty, if they " would not fuffer him to retain his dig-" nity."

This then was the true flate of the cafe, as it is evident from the facts of his history; he had an ardent love of glory, and an eager thirst of praise: was pleased, when living to hear his acts applauded; yet more still with imagining, that they would ever be celebrated when he was dead: a pallion which, for the reasons al-

ready

readyhinted, had always the greatest force on the greatest fouls; but it must needs taileour contempt and indignation, to fee every conceited pedant, and trifling declaimer, who knew little of Cicero's real character, and still less of their own, prefusing to call him the valuest of mortula.

But there is no point of light in which we can view him with more advantage or fatisfaction to ourfelves, than in the contemplation of his learning, and the furpriting extent of his knowledge. This thines to confricuous in all the monuments which remain of him, that it even leffens the dignity of his general character: while the idea of the scholar absorbs that of the fenator; and by confidering him as the greatest writer, we are apt to forget. that he was the greatelt maguitrate also of Rome. We learn our Latin from him at fehool; our ftile and fentiments at the college; here the generality take their leave of him, and feldom think of him more but as of an orator, a moralift, or philosopher of antiquity. But it is with characters as with pictures: we cannot judge well of a fingle part, without furveying the whole, fince the perfection of each depends on its proportion and relation to the reft; while in viewing them all together, they mutually reflect an additional grace upon each other. His learning, confidered leparately, will appear admirable; yet much more fo, when it is found in the pollethon of the first statesman of a mighty empire. His abilities as a matefinan are glorious; yet furprife us fill more when they are observed in the ableit scholar and philosopher of his age; but an union of both these characters exhibits that fublime specimen of perfection, to which the best parts, with the best culture, can exait human nature.

No man, whose life had been wholly fpent in ftudy, ever left more numerous, or more valuable fruits of his learning in every branch of science, and the politer arts; in oratory, poetry, philosophy, law, history, criticism, politics, ethics; in each of which he equalled the greatest masters of his time; in fonc of them excelled all men of all times. His remaining works, as voluminous as they appear, are but a fmall part of what he really published; and though many of these are come down to us maimed by time, and the barbarity of the intermediate ages, yet they are juttly efteemed the most precious remains of all antiquity, and, like the Subilline books, if

more of them had perified, would have been equal ttill to any price.

His industry was incredible, beyond the example, oreven conception of our days: this was the fecret by which he performed fuch wonders, and reconciled perpetual thudy with perpetual allairs. He fuffered no part of his leiture to be idle, or the leaft interval of it to be loft: But what other people gave to the public thows, to pleafures, to fearls, may even to jicep, und the ordinary refreshments of nature, he generally gave to his books, and the enlargement of his knowledge. On days of butiness, when he had any thing particular to compole, he . had no other time formeditating but when he was taking a few turns in his walks, where he used to dictate his thoughts to his feribes who attended him. We find many of his letters dated before day-light; and fome from the jenute; others from his meals; and the crowd of his morning levee.

No compositions afford more pleasure than the epities of great men: they touch the heart of the reader by laying open time. of the writer. The letters of eminent with, eminent scholars, eminent statelmen, are all esteemed in their several kinds: but there never was a collection that excelled fo much in every kind as Cicero's, for the purity of file, the importance of the matter, or the dignity of the persons concerned in them. We have above a thoujand ftill remaining, all written after he was forty years old; which are a fmall bart not only of what he wrote, but of what were actually published after his death by his fervant Tiro. For we fee many volumes of them quoted by the ancients, which are utterly lott; as the high book of his Letters to Licinius Calvas; the first also to Q. Axius; a second book to his fon; a second also to Corn. Nepos; a third book to J. Crefar a third to Octavius; a third also to Pansa; an eighth book to M. Brutus; and a ninth to A. Hirtins. Of all which, excepting a few to J. Cæfar and Brutus, we have nothing more left than fome leattered phrases and lentences, gathered from the citations of the old critics and grammarians. What makes thefe letters full more estimable is, that he had never deligned them for the public, nor kept any copies of them; for the year before his death, when Atticus was making fome enquiry about them, he fent him word, that he had made no collection; and that Tiro had preferred only about feventy. Here then we may expect to fee the genuine man, without difguife or affectation; especially in his letters to Atticus, to whom he talked with the fame franknels as to himfelf; opened the rife and progress of each thought, and never entered into any affair without his particular advice: fo that these may be confidered as the memoirs of his times; containing the most authentic materials for the history of that age, and laying open the grounds and motives of all the great events that happened in it; and it is the want of attention to them that makes the generality of writers on those times so fuperficial, as well aserroneous; while they chuse to transcribe the dry and imperfect relations of the later Greek kistorians, rather than take the pains to extract the original account of facts from one who was

a principal after in them. In his familiar letters he affected no particular elegance or choice of words, but took the first that occurred from common uje, and the language of convertition. Whenever he was disposed to joke, his wit was eafy and natural; flowing always from the fubject, and throwing out what cameuppermolt; nordifdaining even a pun, when it ferved to make his friends laugh. In letters of compliment, fome of which were addressed to the greatest men who ever lived, his inclination to pleafe is exprefled in a manner agrecable to nature and reafon, with the atmost delicacy both of fentiment and diction, yet without any of those pompous titles and lofty epithets, which modern cultom has introduced into our commerce with the great, and fallely framped with the name of politeness; though they are the real offspring of barbarifm, and the effects of degeneracy both in tafte and manners. In his political letters, all his maxims are drawn from an intimate knowledge of men and things: he always touches the point on which the pilair turns; forfees the danger, and fortells the mischief, which never failed to follow upon the neglect of his counfels; of which there were fo many intranecs, that as an eminent writer of his own time observed to him, his prudence seemed to be a hind of divination, which foretold every thing that afterwards happened, with the verneity of a prophet. But none of his fetters do him more credit than those of the recommendatory kind : the others thew his wit and his parts, thefe his benevolence and his probity. he folicits the interest of his friends, with all the warmth and force of words of which he was mafter; and alleges generally fome perfonal reason for his peculiar zeal in the case, and that his own honour was concerned in the forcess of it.

But his letters are not more valuableon any account, than for their being the only monuments of that fort, which remain to us from free Rome. They breathe the last wordsof expiring liberty; a great part of them having been written in the very critis of its ruin, to roufe up all the virtue that was left in the honest and the brave. to the defence of their country. The advantage which they derive from this circumitance, will eafily be observed by comparing them with the epubles of the belt and greateft, who flourithed afterwards in Imperial Rome. Pliny's letters are juilly admired by men of take : they flew the scholar, the wit, the fine gentleman; yet we cannot but observe a poverty and barrenness through the whole, that betrays the awe of a matter. All his forces and reflections terminate in private life; there is nothing important in politics; no great affairs explained; no account of the motives of public counfels: he had borne all the fame offices with Ciceto, whom in all points he affected to emulate; yet his honours were in effect nominal, conferred by a superior power, and administered by a superior will; and with the old titles of conful and proconful, we want fail the flatefman, the politician, and the magittrate. In his provincial command, where Cicero governed all things with topreme authority, and had kings attendant on his orders, Pliny duck not venture to repair a bath, or to punish a fugitive flave, or incorporate a company of majons, till he had first confulted and obtained the leave of Trajan.

His hiftorical works are all loft; the Commentaries of his Confulthip in Greek; the Hittory of his own Affairs, to his return from exile, in Latin verfe; and his Anecdotes; as well as the pieces that he published on Natural History, of which Pliny quotes one upon the wonders of Nature, and another on Perfumes. He was meditating likewilea general Hiftory of Rome, to which he was frequently orged by his friends, as the only man capable of adding that glory also to his country, of excelling the Greeks in a fprcies of writing, which of all others was at that time the leaft cultivated by the Romans. But he never found leifure to execute fo great a taik; yet he has tketched

feetched out a plan of it, which, thort as it is, feems to be the best that can be formed for the design of a perfect history.

" He declares it to be the first and "fundamental law of history, that it " should neither dare to fay any thing that " was falle, or fear to fay any thing that " was true, nor give any just suspicion ei-" ther of favour or ditaffection; that in the " relation of things, the writer thould ob-"ferre the order of time, and add alfo "the description of places: that in all " great and memorable transactions, he "thould first explain the councils, then " the acts, lattly the events; that in coun-" cils he thould interpose his own judg-" ment, or the merit of them; in the acts, " flouid relate not only what was done, "but how it was done; in the events, " foodd thew what there chance, or rath-" nefs, or prudence had in them; that in " regard to perfons, he should describe " not only their particular actions, but the " lives and characters of all those who " bear an eminent part in the flory; that " he thould illustrate the whole in a clear, " eafy, natural ttile, flowing with a per-" petual finoothness and equability, free " from the affectation of points and fen-"tences, or the roughness of judicial "pleadings."

We have no remains likewife of his poetry, except fome fragments occasionally interfperfed through his other writmgs; yet thefe, as I have before observed, are fullicient to convince us, that his poetical genius, if a had been cultivated with the fame care, would not have been inferior to his oratorical. The two arts are fo nearly altizd, that an excellence in the one feems to imply a cupacity for the other, the have qualities being effential to them. both; a sprightly fancy, fertile invention, flowing and numerous diction. It was in Cicero's time, that the old rufficity of the Latin muse first began to be polished by the ornaments of drefs, and the harmony of numbers; but the height of perfection to which it was carried after his death by the forceeding generation, as it left no from for a mediocrity in poetry, fo it quite eclipsed the same of Cicero. For the world always judges of things by comparison, and because he was not so great a Poet as Virgil and Horace, he was decried as none at all; especially in the courts of Autony and Augustus, where it was a compliment to the lovereign, and a fashion confequently among their flatterers, to

make his character ridiculous wherever it lay open to them; hence flowed that perpetual raillery which fublifts to this day, on his famous verfes:

Cedant arma togæ concedat laurea lingue, O fortunatam matam me Confule Romam.

And two bad lines picked out by the malice of enemies, and transmitted to posterity as a specimen of the rest, have served to damn many thousands of good ones. For Plutarch reckons him among the most eminent of the Roman Poets; and Pliny the younger was proud of emulating him in his poetic character; and Quintilian feems to charge the cavils of his cenfurers to a principle of malignity. But his own vertes carry the furest proof of his merit, being written in the best manner of that age in which he lived, and in the ftile of Lycretius, whose poem he is faid to have revised and corneted for its publication, after Lucation's death. This however is certain, that he was the confiant friend and generous patron of all the celebrated poets of his time; of Accius, Archias, Chilius, Lucretius, Catullus, who pays his thanks to him in the following lines, for fome favour that he had received from him:-

Tully, most eloquent by far
Of all, who have been or who are,
Or who in ages full to come
Shall ric of all the fons of Rome,
To thee Cataline grateful fends
His warnest thanks, and recommends
His hamble made, as much below
All other parents dost excel,
In power of words and speaking well.

Catully 47.

But poetry was the amusement only, and relief of his other studies; cloquence was his diffinguished talent, his fovereign attribute: to this he devoted all the facultie of his foul, and attained to a degree of perfection in it, that no mortal ever furpaffed a fo that, as a polite hittorian observes, Rome had but few orators before him, whom it could praife; none whom it could admire. Demulthenes was the pattern by which he formed himfelf; whom he emulated with fuch fuccels, as to merit what Sr. Jerom calls that beautiful eloge: Demothenes has fnatched from thee the glory of being the first: thou from Demosthenes, that of being the only orator. The genius, the capacity, the ftile and manner of them both, were much the fume; their eloquence of that great, fuh-

lime,

lime, and comprehensive kind which dignified every subject, and gave it all the force and beauty of which it was capable; it was that roundness of speaking, as the ancients call it, where there was nothing either redundant or deficient; nothing'eitherto be added or retrenched : their perfections were in all points to transcendent, and yet fo fimilar, that the critics are not agreed on which fide to give the preference. Quintilian indeed, the most judicious of them, has given it on the whole to Cicero; but if, as others have thought, Cicerohadnot all the nerves, the energy, or, as he himself calls it, the thunder of Demoglhenes, he excelled him in the copiouthefs and elegance of his diction, the variety of his fentiments, and, above all in the vivacity of his wit, and imartness of his ruillery. Demosthenes had nothing jocofe or facctions in him; yet, by attempting fometimes to jeft, flewed, that the thing it/clf did not displease, but did not belong to him; for, as Longinus lavs, wherever he affected to be pleafant, he made himfelfridiculous; and if he happened to raile a laugh, it was chiefly upon him/elf. Whereas Cicero, from a perpetual fund of wit, and ridicule, had the power always to pleafe, when he found himfelf unable to convince, and could put his judges into good humour, when he had cause to be afraid of their feverity; fo that, by the opportunity of a well-timed joke, he is laid to have preferred many of his clients from manifest rain.

Yet in all this height and fame of his eloquence, there was another fet of orators at the fame time in Rome, men of parts and learning, and of the first quality; who while they acknowledged the fuperiority of his genius, yet centured his diction, as not truly attic or classical; fome calling it loofe and languid, others imidand exuberant. Thefe men affected a minute and fattidious correctnels, pointed fentences, thort and concife periods, without a fyllable to spare in them, as if the perfection of oratory confilted in a fragality of words, and in crowding our featiments into the narrowest compass. The chief patrons of thistafte were M. Brutus, Licinius, Calvus, Afinius, Pollio, and Salluft, whom Seneca feemstotreat as the author of the obscure, abrupt, and fententious stile. Cicero often ridicules thefe pretenders to attic elegance as judging of eloquence not by the force of the art, but their own weakness; and refolving todecry what they could not attain, and to admire nothing but what they could imitate; and though their way of speaking, he says, might please the curof a critic or a scholar, yet it was not of that subtime and sonorouskind, whose end was not only to instruct, but to more an audience; an eloquence, born for the multitude; whose merit was always shown by itsessees of exciting admiration, and extoring shouts of applaye; and on which there never was any difference of judgment between the learned and the populace.

This was the genuine eloquence that prevailed in Rome as long as Cicerolived: his were the only speeches that were relithed or admired by the city; while those attic orators, as they called themselves, were generally despised, and frequently deferted by the audience, in the midit of their harangues. But after Cicero's death, and the ruin of the republic, the Roman oratory funk of course with its liberty, and atalfetpeciesuniverfally prevailed; when infread of that elate, copious, and flowing eloquence, which launched out freely into every subject, there succeeded a guarded, dry, fententious kind, full of laboured turns and ftudied points; and proper only for the occasion on which it was employed, the making panegyrics and fervile compliments to their tyrants. This change of thile may be observed in all their writers, from Cicero's time to the younger Pliny; who carried it to its utmost perfection, in his celebrated panegyric on the emperor Trajan; which, as it is juitly admired for the elegance of diction, the beauty of fentiments and the delicacy of its compliments, fo it is become in a manner the standard of fine speaking to moderntimes, where it is common to hear the pretenders to criticism, descanting on the tedious length and spiritless exuberance of the Ciceronian periods. But the superiority of Cicero's eloquence, as it was acknowledged by the politelt age of free Rome, to it has received the most authentic confirmation that the nature of things can admit, from the concurrent fenfe of nations; which neglecting the productions of his rivals and contemporaries have preferred to us his inettimable remains, as a specimen of the mott perfect manner of speaking, to which the language of mortals can be exalted : fo that, as Quintilian declared of him even in that early age, he has acquired fuch fame with polterity, that Cicero is not reckoned fo much the name of a man, as of elequence

But we have hitherto been confidering the exterior part of Cicero's character, and thall now attempt to penetrate the recettes of his mind, and difcover the real fource and principle of his actions, from a view of that philotophy which he profelled to follow, as the general rule of his life. This, as he often declares, was drawn from the gendemic feet; which derives its origin from Socrates, and its name from a celebrated gymnalium, or place of exercise in the suburbs of Atheus, called the Academy, where the profellors of that school used to hold their lectures and philosophical disputations. Socrates was the first who banished physics out of philosophy, which till his time had been the fole object of it, and drew it off from the obscure and intricate inquiries into pature, and the conflitution of the heavenly bodies, to questions of morality; of more immediate use and importance to the happinels of man, concerning the true notions of virtue and vice, and the natural difference of good and ill; and as he found theworld generally prepolicifed with falle notions on those subjects, so his method was not to affert any opinion of his own, but to refute the opinions of others, and attack theerrors in vogue; as the first step towards preparing men for the reception of. truth, or what came the nearest to it, probability. While he himfelf therefore profelled to know mothing, he nied to lift out the several doctrines of all the pretenders to Gience and thenteaze themwith a feries of questions, so contrived as to reduce them, by the course of their answers, to an evident abfurdity, and the impossibility of defending what they had at first affirmed.

But Plato did not frictly adhere to the method of his mafter Socrates, and his followers wholly deferted it: for inflead of the Socratic modelly of athrning nothing, and examining every thing, they turned philosophy, as it were, into an art, and formed a fythem of opinions, which they delivered to their disciples, as the peculiar tenets of their fect. Plato's nephew Spenippus, who was left the heir of his school, continued his lectures, as his faccellors alto did in the academy, and preferved the name of academies: while Arithotle, the most connent of Plato's scholars, retired to another gymnofium, called the Lyceum; where, from a cuftom which he and his followers observed, of teaching and disputing as they walked in the porticus of the place, they obtained

the name of Peripatetics, or the Walking Philosophers. These two seets, though differing in name, agreed generally in things, or in all the principal points of their philosophy: they placed the chief happiness of man in virtue, with a competency of external goods: taught the cidence of a God, a providence, the immentality of the soul, and a fature state of rewards and punshments.

This was the flate of the academic febool under five faccessive matters, who governed it after Plato: Speningus, Xomerates, Polemo, Crates, Crantor; till Arcefilas, the fixth, difearded at once all the fythems of his predecellors, and tovived the Socratic way, of affirming nothing. doubting of all things, and exposing the vanity of the reigning opinions. He alledged the necessity of making this reformation, from that objeurity of things, which had reduced Socrates, and all the ancients before him. to a confession of their ignorance: he observed, as they had all like wife done, that the fenies were narrow, region infirm, life thort, truth immeried in the deep, opinion and cultom every where predominant, and all things involved in darkness. He taught therefore, "That there was no certain "knowledge or perception of any thing " in nature, nor any infallable criterion of " truth and fallehood; that nothing was " fo detertable as rathness, nothing fo " feandalous to a philosopher, as to pro-" fels what was either falle or unknown " to him; that we dught to affert nothing " dogmatically, but in all cases to sui-" pendour allent; and inflead of pretend-" ing to certainty, content ourfelves with "opinion, grounded on probability, " which was all that a rational mind had " to acquiesce in." This was called the new academy, in distinction from the Platonic, or the old: which maintained its credit down to Cicero's time, by a fuccellion of able malters; the chief of whom was Carneades, the fourth from Accelilas, who carried it to its utmoth height of glory, and is greatly celebrated by antiquity for the vivacity of his wit, and force of his elequence.

We muit not however imagine, that these academics continued doubting and fluctuating all their lives in scepticism, and irresolution, without any precise opinions or settled principle of judging and acting: no; their rule was as certain and condition as that of any other set, as it is frequently explained by Ciccro, immany parts of his works. "We are not of that fort,"

3 A

fays he, "whose mind is perpetually "wandering in error, without any parti-" cular end probject of its purfuit: forwhat " would fuch a mind or fuch a life indeed " be worth, which had no determinate " rule or method of thinking and acting? " But the difference between us and the " reft is, that whereas they call fome " things certain, and others uncertain; we " call the one probable, the other improba-" ble. For what reason then, thould not "Ipurfue the probable, reject the contrary, " and, declining the arrogance of aftirm-"ing, avoid the imputation of raffinels, " which of all things is the fartheft re-"moved from wifdom?" Again; "we do " not pretend to fay that there is no fuch " thing as truth; but that all truths have " fome falfehood annexed to them, of " fo near a refemblance and fimilitude, as " to afford no certain note of diffinction, "wherebytodetermineour judgment and " affent: whence it follows also of course, "that there are many things probable; " which though not perfectly compre-"hended, vetonaccount of their attractive " and specious appearance, are sufficient to " govern the life of a wife man," In another place, "there is no difference," favs he, "between us, and those who pretend " to know things; but that they never " doubt of the truth of what they main-" tain: whereas we have many probabili-" ties, which we readily embrace, but dare " not affirm. By this we preferve our " judgment free and unprejudiced, and " are under nonecessity of defending what "isprescribed and enjoined to us; where-" as in other feets, men are tied down to of certain doctrines, before they are capa-" ble of judging what is the best, and in "the most infirm part of life, drawn ei-"ther by the authority of a friend, or " charmed with the first master whom " they happen to hear, they form a judg-" ment of things unknown to them; and " to whatever school they chance to be " driven by the tide, cleave to it as fast " as the oyfter to the rock." Thus the academy held the proper me-

Thus the academy held the proper medium between the rigid froic and the indifference of the feeptic: the froics embraced all their doctrines, as fo many fixed and immutable truths, from which it was infamous to depart; and by making this their point of honour, held all their difeiples in an inviolable attachment to them. The freptics, on the other hand, observed a periect neutrality towards all opinions:

maintaining all of them to be equally uncertain; and that we could not aftirm of any thing, that it was this or that, lince there was as much reason to take it for the one us for the other, or for neither of them; and wholly indifferent which of them we thought it to be: thus they lived, without ever engaging themfelves on any fide of a quettion, directing their lives in the meantime by natural affections, and the laws and cultoms of their country. But the academics, by adopting the probable inflead of the certain, kept the balance in an equal poile between the two extremes, making it their general principle to observe a moderation in all their opinions; and as Plutarch who was one of them, tells us, pasing a great regard always to that old maxim,

Madio ayao ; - ne quid nimis.

As this school then was in no particular opposition to any, but an equal adverfary to all, or rather to dogmatical philifophy in general, fo every other feet, next to itself, readily gave it the preference to the rest; which universal concesfion of the second place, is commonly thought to infer a right to the first; and if we reflect on the state of the heathen world, and what they themselves so often complain of the dark neisthat formunded them, and the infinite differnions of the bett and wifett on the fundamental questions of religion and morality, we must necessare ly allow, that the academic manner of philolophizing was of all others the maft rational and modeft, and the befradapted to the difcovery of truth, whole peculiar character it was to encourage inquiry: to fift every question to the bottom: 10 try the force of every argument, till it had found its real moment, or the precife quantity of its weight.

This it was that induced Cicero, in his advanced life and ripened judgment, to defert theold academy, and declareforthed new; when, from a long experience of the vanity of those feets who called themselves the proprietors of truth, and the sole guides of life, and through a despair of linding any thing certain, he was glad, after all his pains, to take up with the probable. But the genius and general climater of both the academies was in some measure till the same: for the old, though it professed to teach a peculiar system of doctrines, yet it was ever distinct and cautious of affirming; and the new, only

the more ferupulous and feeptical of the two; this appears from the writings of Plato, the first master of the old, in which, as Cicero observes, nothing is absolutely affirmed, nothing delivered for certain, but all things freely inquired into, and both bles of the question impartially discussed. Yet there was another reason that recommended this philosophy in a peculiarmanper to Cicero, its being of all others, the best suited to the profession of an orator: face by its practice of disputing for and against every opinion of the other feets, it gave him the best opportunity of perfectinghis oratorical faculty, and acquiring a habit of speaking readily upon all subjects. He calls it therefore the parent of elegance and cop. oufnefa; and declares, that he owed all the fame of his eloquence, not to the mechanic rules of the rhetoricians, but to the inlarged and generous principles of the aca-

This school, however, was almost deferted in Greece, and had but few disciples 21 Rome, when Cicero undertook its patronage, and endeavoured to revive its drooping credit. The reason is obvious: it impeled a hard talk upon its scholars, of disputing against every fect, and on every question in philosophy; and if it was difficult, as Cicero fays, to be matter of any one, how much more of them all? which was iscumbent on those who professed themfelresacademics. Towonderthenthat it bikground every where, in proportion as wand luxury prevailed, which naturally disposed people to the doctrine of Epicuin relation to which there is a fmart faying recorded of Arcefilas, who being alled, why to many of all fects went over to the Epicureuns, but none ever came back from them, replied, that men might be made cunnels, but eunuchs could never be made men again.

This general view of Cicero's philofophy, will help us to account, in fome meafore, for that difficulty which people frequently complain of in difcovering his real fentiments, as well as for the miftakes which they are apt to fall into in that fearch; fince it was the diffing uithing printiple of the academy to refute the opinions Tothers, rather than declare any of their Yet the chief difficulty does not lie here; for Cicero was not ferupulous on that head, nor affected any obscurity in the delivery of his thoughts, when it was veral writings, that perplexes the generality of his readers: for wherever they dip into his works, they are apt to funcy themfelves potleffed of his fentiments, and to quote them indifferently as fuch, whether from his Orations, his Dialogues, or his Letters, without attending to the peculiar nature of the work, or the different person that he assumes in it.

His orations are generally of the judicial kind; or the pleadings of an advocate, whole bufinels it was tomake the bett of his cause; and to deliver, not so much what wastrue, as what was ufeful to his client; the patronage of truth belonging in fuch cases to the judge, and not to the pleader. It would be abfurd therefore to require a ferupulous veracity, orthret declaration of his fentiments in them: the thing does not admit of it; and he himfelf forbidsusto expectit; and in one of those orations frankly declares the true nature of themall.-"That man," fayshe, "ismuch " mittaken, who thinks, that in thefe yo-" dicial pleadings, he has an authentic " specimen of our opinions; they are the " speeches of the causes and the times; " not of the men or the advocates; if the " causes could speak of themselves, no " body would employ an orator; but we " are employed to speak, not what we " would undertake to affirm upon our au-" thority, but what is suggested by the " cause and the thing itself." Agreeably to this notion, Quintilian tells us, " that " those who are truly wife, and have spent " their time in public affairs, and not in " idledifputes, though they have refolved " with themselves to be strict and honest " in all their actions, yet will not fcruple " to use every argument that can be of " fervice to the cause which they have " undertaken to defend." In his oratrons, therefore, where we often meet with the fentences and maxims of philosophy, we cannot always take them for his own, but as topics applied to move his audience, or add an air of gravity and probability to his speech.

His letters indeed to familiar friends, and especially those to Atticus, place the real man before us, and lay open his very heart: yet in these some distinction must necessarily be observed; for in letters of compliment, condolence, or recommendation, or were he is foliciting any point of importance, he adapts his arguments his bulinels to explain them; but it is the to the occasion; and uses such as would Pariety and different characters of his fe- induce his friend the most readily to grant what he defired. But as his letters in general feldom touch upon any quellous of philolophy, except flightly and incideutally, fother will afford very little help to us in the difcovery of his Philosophical Opinious, which are the subject of the prefeat inquiry, and for which we must wholly recur to his philosophical works,

Now the general purpole of thefeworks, was to give a hikory rather of the uncient philosophy, then any account of his own, and to explain to his fellow-citizens in their own language, whatever the phibelophers of all feets, and all ages, had taughton every important queltion, in order to enlarge their minds, and reform their morals; and to employ himfelf moft ulcfully to his country, at a time when arms and a superior force had deprived him of the power of ferving it in any other way. This he declares in his treatife called de Finibus, or on the Chief Good or Ill of Man; in that upon the Nature of elections; in his Tulentan Disputations; and in hishook outlie Academic Philosophy; in all which beforectimes takes upon himfelf the part of a Stoic; formtimes of an Epicarcan: fometimes of the Perspatetic; for the take of explaining with more authority the different doctrines of each feet; and as he attumes the perfonoi theone to confute the other, to in his proper character. of an Academic, he fumetimes diffrutes againfithemail; whiletheunwary reader. not reflecting on the nature of dialognes, takes Circro full for the perpetual fpeaker; and under that miliake, often quotes a fentiment for his, that was delivered by him only inorder to be confuted. But in thefe dialogues, as in althis other works, wherever he treats any fubject professedly, or gives a judgment upon it deliberate- fitness to certain ends, objereable in the Ty, either in his own perion, or that of an Academic, there he delivers his own opinions; and where he himfelf does not appear in the feene, he takes care ufually to inform us, to which of the characters he has affigued the patronage of hisown fentimeats: who was generally the principal fpeaker of the dialogue; as Craffus in his treatife on the Orator; Scipio, in that of de Republic; Cato, in his piece on Old Age. This key will let us into his real thoughts; and quable unto trace his genuine notions through every part of his writings, from which I thall now proceed to give a thort abfract of them.

As to Phylics, or Natural Philosophy, he feems to have find the fame notion

with Socrates, that a minute and particufar attention to it, and the making it the fole end and object of our inquiries, was a frady rather curious than profitable, and contributing but little to the improvement of human life. For though he was perfectly acquainted with the variouslyftems of all the philosophers of any mane, from the earliest antiquity, and has explained them all in his works; yet hedid not think it worth while either to form any diffinct opinions of his own, or at leaft to declare them. From his account, however, of those systems we may obferre, that feveral of the fundamental principles of modern philosophy, whah pass for the original discoveries of thete later times, are the revival rather of ancient notions maintained by fome of the first philosophers, of whom we have any notice in hittory; as the Motion of the Earth; the Antipodes: a Vacuum; ander univertal Gravitation, or attractive 200lity of Matter, which holds the World is its prejent form and order.

But in all the great points of religion and morality, which are of more anordiate relation to the happiness of man, the being of a God: a providence; the immortality of the foul: a future flate of rewards and punishments; and the eternal difference of good and ill; he has largely and clearly declared hismind in many parts of his writings. He maintained that there was one God, or Supreme Being; incorpored, eternal, felf-eighent, who ereated the world by his power, and futtuined it by his providence. This he inferred from the content of all nations; the order and beauty of the heavenly bodies; the evident marks of counfel, wildow, and a whole, and in every part of the visible world; and declares that perfor months of the name of a man, who can believe all this to have been made by chance; when with the utmost piretch of human wildom, we cannot penetrate the depth of that wifdow which contrived it.

He believed also a Divine Providence. conflantly prefiding over the whole fytiens, and extending its care to all the principal members of it, with a peculiar attention to the conduct and actions of men, but leaving the minute and inferior parts to the courfe of his general laws. This he collected from the nature and attributes of the Deity; his omnificience, omniprejence, and infinite goodness; that could never de-

fertor neglect what he had once produced into being; and declares, that without this belief, there could be no such thing as piety or religion in the world.

He held likewife the immortality of the ford, and its separate existence after death in a state of happiness or milery. This he inferred from that arden thisp of immortality, which was always the most conspicuous in the best and most exalted minds: from which the truet fpecimen of their nature must needs be drawn, from its unwised and indivisible essence, which had nothing feparable or perithable in it; from its wonderful powers and faculties; its principle of felf-motion; its memory, incention, wit, comprehention; which were all incompatible with fluggish matter. The Stoics fancied that the foul was a fubtilized, fiery Inbliance, which furvived the body after death, and fublified a long time, yet not eternally, but was to perithat laft in the geperal conflagration; in which they allowed, as Civero fays, the only thing that was hard to conceive, its leparate exilence from the body; wet denied what was not only eatly to imagine, but a confequence of the other; its eternal duration. Aritiotle taught, that befiles the four elements of the material world, whence all other things were supposed to drawtheir being, there was a fifth effence or nature, peculiar to God and the foul, which had nothing in it that was common to any of the reft. This opinion Cicero followed, and illustrated with his usual perspicuity in the following passage:

"The origin of the human foul," fays he, " is not to be found any where on "earth; there is nothing mixed, concrete, "or earthly; nothing of water, air, or fire "in it. For these natures are not suf-" teptible of memory, intelligence, or " thought; have nothing that can retain "the pair, forefee the future, lay hold on "the prefent; which faculties are purely divine, and could not possibly be de-"rived to man, except from God; the na-" ture of the foul therefore is of a fingu-" lar kind, diftinet from thefe known and "obvious natures; and whatever it be "that feels and taites, that lives and moves "in us, it must be heavenly and divine, "and for that reason eternal. Nor is God " indeed himfelf, whose existence we can " clearly differer to be comprehended "by us in any other manner, but as a " free and pure mind, clear from all mor-"talconcretion; observing and moving all "things; and indeed with an eternal prin"ciple of felf-motion: of this kind, and "of the fame nature, is the human foul."

As to a future knie of remards and punithments, he countered it as a confequence of the foul's immortality, deducible from the auribuses of God, and the condition of man's life on earth; and thought it to highly probable, that we could hardly doubt of it, be tays, milet it should happen to our minds, when they book into the miches, as it dues to our eyes, when they look too intenfely at the fun, that finding their fight duzzled, they give over looking at all. In this opinion he followed Socrates and Plato, for whole judgment he profeiled to great a reverence, that if they had given no reasons, where yet they had given many, he should have been persuaded, he fays, by their fole authority. Socrates, therefore, as he tells us, declared in his dving speech. "That there were two ways appointed " to the human fools at their departure " from the human body; that those who " had been immerfed in feutual pleatures " and lufts, and had poliuted themfelses " with private vices, or public crimes " against their country, took an obscure " and devices read, remote from the feat " and attembly of the gods; whilit there " who had preferved their integrity, and " received little or no contagion from " the body, from which they had cou-" tiantly abtiracted themselves, and in the " bodies of men imitated the life of the " gods, had an easy ascent lying open be-" fore them to thole gods from whom " they derived their being."

From what has already been faid, the reader will eatily imagine what Cicero's opinion must have been concerning the religion of his country: for a mind onlightened by the noble principles juli flated, could not pollibly harbour a thought or the truth or divinity of fo abfurd a west thip: and the liberty which not only he, but all the old writers take, in ridiculing the characters of their gods, and the fittions of their infernal torments, thews, that there was not a man of liberal education, who did not consider it as an engine of fate, or political lyttem; contrived for the ulesof government, and tokeep the people inorder; in this light Cicero always commends it as a wife inflitation, fingularly adapted to the genius of Rome, and confuntly inculcates an adherence to its rights as the duty of all good citizens.

Their religion confited of two princepal branches; the elgerration of the aufpices, and the worthip of the gods: the first was inftituted by Romulus; the fecond by his fuccessor, Numa; who drew up a ritual, or order of ceremonies, to be observed in the different facrifices of their feveral deities; to thefe a third part was afterwardsadded, relating to divinead monitions from portents; memfirous births; the entruits of beafts in facrifice; and the prophecies of the fybils. The College of Augurs prefided over the auspices, as the supreme interpreters of the will of Tore; and determined what figns were propitious, and what not: the other prietts were the judges of all the other cafes relating to religion, as well of what concerned the public worthip, as that of private families.

Now the pricits of all denominations were of the first nobility of Rome, and the augurs especially were commonly fenators of confular rank, who had paffed through all the dignities of the republic, and by their power over the autpiers, could put an immediate ftop to all proceedings, and diffolve at once all the affemblies of the people convened for public bufinefal The interpretation of the fybil's prophecies was veited in the decembiri, or guardians of the fybiline books, ten perfons of diffinguithed rank, chosen usually from the priefts. And the province of interpreting prodigies, and infocting the entrails, belonged to the harnspices; who were the fervants of the public, hired to attend the magistrates in all their facrifices; and who never failed to accommodate their aniwers to the views of those who employed them, and to whose protection they owed their credit and their livelihood.

This conflitution of a religion among a people naturally superstitious, necessarily threw the chief influence of affairs into the hands of the fenate, and the better fort; who by this advantage frequently checked the violences of the populace, and the factious attempts of the tribunes : to that it is perpetually applauded by Cicero as the main bulwark of the republic: though confidered all the while by men of fende as merely political, and of human invention. The only part that admitted any dispute concerning its origin was augury, or their method of divining by ampices. The Stoics held that God, out of his guodness to men, had imprinted on the nature of things certain marks or notices of future events; as on the entrails of bealts, the Right of birds, thunder, and other celeptial jugas, which, by long observation,

and the experience of ages, were reduced into an art, by which the meaning of each fign might be determined, and applied to the event that was fignified by it. This they called artificial divination, in diffinction from the natural, which they supposed to flow from an inflinit, or name power, implanted in the foul, which itexerted always with the greatest efficacy, when it was the most free and difengaged from the body, as in dreams and madneti-But this notion was generally ridiculed by the other philosophers; and of all the College of Augurs, there was but one who at this time maintained it, Appius Claudius, who was laught dat for hispains by the reft, and called the Pifidian: it occafioned however a finant controverly between him and his colleague Marcellus, who feverally published books on each fide of thequetrion; wherein Marcellus affeited the whole atlair to be the contrivance of flatefmen: Appius, on the contrary, that there was a real art and power of divining fublishing in the augurul discipline, and taught by the augural books. Appins dedicated this treatife to Cicero, who, though he preferred Marcellus's notion, yet did not wholly agree with either, but believed that augury might probably be infitted at first upon a perfugion of its dirinity; and when, by the improvements of arts and learning, that opinion was esploded in Incceeding ages, yet the thing itself was wifely retained for the fake of its use to the re-

But whatever was the origin of the religion of Rome, Cicero's religion was undoubtedly of heavenly extraction, built, as we have feen, on the foundation of a God; a providence; an immortality. He confidered this fhort period of our life on earth as a state of trial, or a kind of fchool, in which we were to improve and prepare ourielyes for that eternity of exillence which was provided for us hereafter; that we were placed therefore here by our Creator, not formuch to inhabit the earth, us to contemplate the heavens; on which were imprinted, in legible characters, all the duties of that nature which was given to us. He observed, that this spectucle belonged to no other animal but man; to whom God, for that reason had given an erect and upright form, with eyes not prone or fixed upon the ground, like those of other animals, but placed on high and fublime, in a fituation the most proper for this celeptial contemplation, to remind

him perpetually of his talk, and to acquaint him with the place on which he fprong, and for which he was finally defigned. He took the fyftem of the world, or the viable works of God, to be the promulgation of God's law, or the declaration of his will to mankind; whence, as we might collect his being, nature, and attributes, fo we could trace the reasons also and motives of his acting; till, by objerving what he had done, we might learn that we ought to do, and, by the operations of the divine reason, be instructed how to perfect our own; fince the perfection of man confided in the imitation of God.

From this fource he deduced the origin of all duty, or moral obligation; from the vill of God manifested in his works; or from that eternal reason, sitness and relation of things, which is displayed in every part of the creation. This he calls the original, immutable law; the criterion of good and ill, of just and unjust; imprinted on the nature of things, as the rule by which all human laws are formed; which, wheneverthey deviate from this pattern, ought, he fays, to be called any thing rather than laws, and are in effect nothing but acts of force, violence, and tyranny. That to imagine the distinction of good and ill not to be founded in nature, but in cuftom, opicion, or human institution, is mere folly and madness; which would overthrow all fociety, and confound all right and justice amongst men: that this was the constant minion of the wifelt of all ages; who held, that the mind of God, governing all things by eternal reason, was the principle and jovereign law; whose substitute on earth was the reason or mind of the wife: to which purpose there are many strong and beautiful patiages feattered occasionally through every part of his works.

"The true law," fayshe, " is right rea-"lon, conformable to the nature of things; "confrant, eternal, diffused through all; "which calls us to duty by command-"ing; deters us from in by forbidding; "which never loses its influence with the "good, nor ever preferves it with the "wicked. This cannot possibly be over-"ruled by any other law, nor abrogated "in the whole, or in part: nor can we be "absolved from it either by the senate or "the people; nor are we to feek any "itself: nor can there be one law at "Rome, another at Athens; one now, "another hereafter; but the fame eter-

"nal, immutable law, comprehends all " nations, at all times, under one common "Mafter and Governor of all, GOD. "He is the inventor, propounder, enactor "of this law; and whofoever will not "obey it, must first renounce himself, and " throw off the nature of man; by doing "which, he will fuffer the greatest pu-"nithment, though he should escape all "the other torments which are com-"monly believed to be prepared for the

" wicked." In another place he tells us, that the fludy of this law was the only thing which could teach us that most important of all lessons, said to be prescribed by the Pythian oracle, TO KNOW OURSELVES; that is, to know our true nature and rank in the univerfal fythem, the relation that we bear to all other things, and the purpofes for which we were fent into the world. "When a man," fays he, " has atten-" tively furveyed the heavens, the earth, "the fea, and all things in them, ob-" ferved whence they fprung, and whior ther they all tend; when and how they " are to end; what part is mortal and pe-" rithable, what divine and eternal; when " he has almost reached and touched, as " it were, the Governor and Ruler of them " all, and discovered himself not to be " confined to the walls of any certain " place, but a citizen of the world, as of " one common city; in this magnificent " view of things, in this enlarged prof-" pect and knowledge of nature, good " gods! how will he learn to know him-" felf? How will he contenin, despite, and " fet at nought all those things which " the sulgar effeem the most splendid and " glorious i"

Thefewere the principles on which Cicero built his religion and morality, which thine indeed through all his writings, but were largely and explicitly illustrated by him in his Treatifes on Government and on Laws; to which he added afterwards his book of Offices, to make the scheme complete: volumes which, as the elder Pliny favs to the emperor Titus, ought not only to be read, but to be got by heart. The first and greatest of these works is lost, except a few fragments, in which he had delivered his real thoughts fo professedly, that in a letter to Atticus, he calis thefe "other comment or interpreter of it but fix books on the republic, fo many pledges given to his country for the integrity of his life; from which, if ever he sweeved, be could never have the face to look into them

again. In his book of Laws, he purfued the fame argument, and deduced the origin of law from the will of the Jupreme God. These two pieces therefore contain his belief, and the book of Offices, his practice: where he has traced out all the duties of man, or a rule of life conformable to the divine principles, which he had ethablished in the other two; to which he often refers, as to the foundation of his whole fyfiem. This work was one of the laft that he finished, for the ufe of his fon, to whom he addressed it; being defirous, in the decline of a glorious life, to explain to him the maxims by which he had governed it, and teach him the way of paffing through the world with innocence, vimue, and true glory, to an immortality of happiness: where the strictness of his morals, adapted to all the various cafes and circumftances of human life, will ferve, if not to infiruct, yet to reproach the practice of most Christians. This was that law, which is mentioned by St. Paul, to be taught by nature, and written on the hearts of the Gentiles, to guide them through that thate of ignorance and darknels, of which they themselves complained, till they flould be bleffed with a more perfect revelation of the divine will; and this feheme of it, proteffed by Cicero, was certainly the most complete that the Gentile world had ever been acquainted with; the utmost effort that human nature could make towards attaining its proper end, or that fupreme good for which the Creator had deligned it: upon the contemplation of which fublime truths, as delivered by a heathen, Eraimus could not help perfuading himfelf, that the breuft from which they flowed, mist needs have been inspired by the Deity.

But after all these glorious sentiments that we have been afcribing to Cicero. and collecting from his writings, fome have been apt to confider them as the flourithes rather of his cloquence, than the conclusions of his reason, since in other parts of his works he feems to intimate not only a diffidence, but a diffielief of the immortality of the foul, and a future Rate of rewards and punishments; and especially in his letters, where he is supposed to declare his mind with the greatest frankness. But in all the passages, brought to support this objection, where he is imagined to speak of deuta as the end of all things to man, as they are addressed to friends in diffres by way of complation; fo fome

commentators take them to mean nothing more, and that death is the end of all things here below, and without any farther lense of what is done upon carth; yet thould they be underflood to relate, as perhaps they may, to an utter extinction of our being: it must be observed, that he was writing in ali probability to Epicureans, and arcommodating his arguments to the men; by offering fuch topics of comfort to them from their own philolophy, as they themfelves held to be the most effectual. But if this also should seem precarious, we must remember always, that Cicerowasus acadewic; and although he believed after tiere Rute, was foud of the opinion, and declares himself relolved never to part with it; yet he believed it as probable only, not ascertain; and asprobability implies fome mixture of doubt, and admits the degrees of more and lefs, fo it admits also some variety in the flability of our perfusion; thus, in a melancholy hour, when his fpirits were deprefled, the fame argument will not appear to him with the fame force; but doubts and difficulties get the afcendant, and what remoured his prefent chagrin, find the readiest admittion.

The parriages alledged were all of this kind, and written in the feafon of his dejection, when all things were going with him, in the height of Casfar's power; and though we allow them to have all the force that they can possibly bear, and to express what Cicero really meant at that time; yet they prove at laft nothing more, than that, agreeably to the characters and principles of the Academy, he fometimes doubted of what he generally believed But, after all, whatever be the fenfe of them, it cannot furely be thought reasonable to oppose a few feattered hints, accidentally thrown out, when he was not confidering the fubicit, to the volumes that he had deliberately written on the

that he had deliberately written on the other fide of the question.

As to his political conduct, no man was ever a more determined patriot, or a warm-

erlover of his country than he; his whole character, natural temper, choice of his and principles, made itstrue interest infeparable from his own. His general view, therefore, was always one and the same; to support the peace and liberty of the republic in that form and constitution of it,

which their ancestors had delivered down to them. He looked upon that as the only foundation on which it could be supported, and used to quote a verse of old Emmisas the dictate of an oracle, which derived all the grory of Rome from an adherence to its ancient manners and discipline.

Monthus antaquis flat irs I omana viritque. Fragin. de Repub. I. 5.

It is one of his maxims, which he inculcates in his writings, that as the end of a paot is a proper sus cogage; of a physician, ine hearth of his patient; of a general, victory, to that of a stateman is, to make his carrons happy; to make them arm in preser, rich in wealth, Intended in glory, emment in virtue, which he declares to be the greatell and belt of all works among men; and as this cannot be effected but by the concord and harmony of the contituent members of a city; fo it was his conflant aim to unite the different orders of the fiate into one common interest, and to inspire them. with a mutual confidence in each other; fo as to balance the supremacy of the people by the authority of the fenate; that the one should enact, but the other advise; the one have the lift rejort, the other the chief influence. This was the old conflituton of Rome, by which it had been raifed to all its grandeur; whilit all its misfortunes were owing to the contrary principle of diffruit and diffention between thefe two rival powers: it was the great object, therefore, of his policy, to throw the afcondant in all affairs into the hands of the toute and the magnifestes, as far as it was conditiont with the rights and liberties of the people; which will always be the geveral view of the wife and honelt in all popular governments.

This was the principle which he espoufed from the beginning, and purfued to the end of his life; and though in lome pallages of his hiftory, he may be thought perhaps to have deviated from it, yet upon an impartial view of the cafe, we thall hud that his end was always the fame, though he had changed his measures of pariting it, when compelled to it by the violence of the times, and an over-ruling force, and a necessary regard to his own fafety: fo that he might fay, with great troth, what an Athenian orator once find in excuse of his inconttancy; that he is id acted indeed on some occupious contrary to himself, but never to the republic : and here allohis academic philolophy feeths to have thewed its superior ale in practical as well as in speculative life, by indulging that liberty of acting which nature and reason require; and when the times and things

themselves are changed, allowing a change of conduct, and a recourse to new means for the attainment of the same end.

The three feets, which at this time chiefly enground the philosophical part of Rome, we rethe Stoie the Epicurean, and the deadenic; and the chie fornaments of cach were Cato. Attiens, and Cicero, who lived together in their twendship, and a mutual effeem of each other's virtue; but the different behaviour of their three will flew by fact and example, the different merit of their feveral principles, and which of them was the belt adapted to promote the good of fociety. The Stoics were the bigots or enthugiants in philosophy, who held none to be truly wife but themselves; placed perfect happiness in virtue, though fripped of every other good; affirmed all fins to be equal; all deviations from right coually wicked : to kill a daughill cock without reufon, the same crime us to kill a parent; a wife man could never forgive, never by moved by anger, favour or pity; never be deceived; never repent; never change his mind. With thefe principles Cato entered into public life, and acted in it, as Cicero favs, as if he had lived in the polity of Plato, not in the dregs of Romulus. He made no diffinction of times or things; no allowance for the weakness of the republic, and the power of those who oppreffed it: it was his maxim to combat all power, not built upon the laws, or to defy it at least if he could not controul it: he knew no way to this end but the direct, and whateverobirructions he met with,refolved ftill to puth on, and either furmount them or perith in the attempt; taking it for baleness and confeshon of being conquered to decline a tittle from the true road. In an age, therefore, of the atmost libertinilm, when the public difcipline was loft, and the government itself tottering, he irruggled with the same zeal against all corruption, and waged a perpetual was with a superior force; whilst the rigon of his principles tended rather to alienate friends, than reconcile enemies; and by provoking the power that he could not fubdue, helped to haften that ruin which he was firiting to avert; fo that after a perpetual course of disappointments and reputtes, finding himfelf unable to purfue his o in way any farther, inflead of taking a new one he was driven by his philotophy to put an end to his life.

But as the Stoics exalted human nature too high, so the Epicureans depressed it

Bead

too low; as those raised to the heroic, these debased it to the brutal state; they held pleasure to be the chief good of a man; death the extinction of his being; and placed their happiness confequently in the fecure enjoyment of a pleafurable life, effeeming virtue on no other account, than as it was a hand-maid to pleafure; and helped to enfure the poffession of it, by preferving health and conciliating friends. Their wife man had therefore no other duty, but to provide for his own eafe; to decline all firuggles; to retire from public affairs, and to imitate the life of their gods; by passing his days in a calm, contemplative, undiffurbed repose; in the midst of rural thades and pleafant gardens. This was the fcheme that Atticus followed: he had all the talents that could qualify a man to be useful to society; great parts, learning, judgment, candour, benevolence, generofity; the fame love of his country, and the fame featiments in politics with Cicero: whom he was always adviting and orgingto act, yet determined never to act himfelf; or never at least so far as to disturb his case, or endanger his safety. For though he was fo firitly united with Cicero, and valued him above all men, yet he managed an intercft all the while with the oppolite party faction, and a friendthip even with his mortal enemies, Clodius and Antony; that he might fecure against all events the grand point which he had in view, the peace and tranquillity of his life.

Thus two excellent men, by their miftaken notion of virtue, drawn from the principles of their philosophy, were made utelefein a manner to their country, each in a different extreme of life; the one alwaysacting and expoling himfelf to dangers, without the prospect of doing good; the other without attempting to do any, refolving never to act at all. Cicero chole the middle way between the obstinacy of Cato, and the indolence of Atticus: he preferred always the readieft road to what was right, if it lay open to him: if not, took the next; and in politics as in morality when he could not arrive at the true, contented himfelf with the probable. He often compares the flatefman to the pilot, whose art consists in managing every turn of the winds, and applying even the most perverse to the progress of his voyage; fo that by changing his course, and ensarging his circuit of failing, to arrive with fafety at his deffined port. He mentions

likewife an observation, which long experience had confirmed to him, that none of the popular and ambitious, who afpired to extruordinary commands, and to be leuders in the republic, ever chose to obtain their ends from the people, till they had first been repulfed by the fenate. This was verified by all their civil diffentions, from the Gracchi down to Cæfar: fo that when he faw men of this fpirit at the head of the government, who by the splendour of their lives and actions had acquired an ascendant over the populace; it was his confrant advice to the fenate, to gain them by gentle compliances, and to gratify their thirtifor power by a voluntary grant of it, as the best way to moderate their ambition, and reclaim them from desperate counsels. He declared contention to be no longer prudent, than while it either did ferrice, or at leuft not hart; but when faction was grown too frong to be withflood, that it was time to give over fighting, and nothing left but to extract some good out of the ill, by mitigating that power by patience, which they could not reduce by force, and conciliating it, if pullible, to the interest of the flate. This was what he advised, and what he practifed; and it will account, in a great measure, for those parts of his conduct which are the most liable to exception, on the account of that complacence, which he is supposed to have paid. at different times, to the feveral usurpers of illegal power.

He made a just distinction between bearing what we cannot help, and approxing what we ought to condemn; and fuhmitted therefore, yet never confented to those ulurpations; and when he was forced to comply with them, did it always with a reluctance, that he expressed very keeply in his letters to his friends. But whenever that force was removed, and he was at liberty to purfue his principles and aft without controul, as in his confulfhip, in his province, and after Caefar's death, the only periods of his life in which he was truly master of himself; there we see him thining out in his genuine character, of an excellent citizen; a great magitirate; a glorious patriot: there we fee the man who could declare of himfelf with truth, in an appeal to Attieus, as to the best witness of his confeience, that he had always done the grentest service to his country, when it was in his power; or when it was not, had never harboured a thought of it, but what was divine. If we must needs compare him

therefore with Cato, as fome writers affect to do; it is certain, that it Cato's virtue feems more fplendid in theory, Cicero's will be found fuperior in practice; the one was romantic, the other rational; the one drawn from the relinements of the fehools, the other from nature and focial life; the one always unfuccefsful, often hurtful; the otheralways beneficial, often falutary to the republic.

To conclude: Cicero's death, though violent, cannot be called untimely: but was the proper end of fuch a life, which must have been rendered less glorious, if it had owed its prefervation to Antony. It was therefore what he not only expected, but in the circumstances to which he was reduced, what he feems even to have wifted. For he, who had before been timid in danzers, and dejponding in diffrejs, yet from the time of Carlar's death, rouled by the desperate state of the republic, assumed the fortitude of a bero: difearded all fear; despiled all danger; and when he could not free his country from a tyranny, provoked the tyrants to take that life, which he no longercared to preferve. Thus, like a great ador on the stage, he referved himself as n were for the last act; and after he had played his part with dignity, relolved to huith it with glory. Middleton's Cicero.

§ 39. The Character of Martin Luther.

While appearances of danger daily increated, and the tempest which had been lo long a-guthering, was ready to break forth in all its violence against the protestantchurch, Luther was faved by a feafonable death, from feeling or beholding its deliructive rage. Having gone, though in a declining trate of health, and during a rigorous fealon, to his native city of Eitleben, in order to compole, by hisauthority, a diffension among the counts of Manifield, he was feized with a violent inflammation in his flomach, which in a few days put an end to his life, in the fixtythird year of his age. - As he was raifed up by Providence to be the author of one of the greatest and most interesting revolutions recorded in history, there is not any perion, perhaps, whote character has been drawn with fuch opposite colours. In his own age, one party, ftruck with horror, and inflamed with rage, when they faw with what a daring hand he overturned every thing which they held to be facted, or valued as beneficial, imputed to him not only all the defects and vices of

a man, but the qualities of a dæmon. The other, warmed with admiration and gratitude, which they thought he merited, as the reflorer of light and liberty to the Chritian church, aferibed to him perfections above the condition of humanity, and viewed all his actions with a veneration bordering on that which thould be paid only to those who are guided by the immediate inspiration of Heaven. It is his own conduct, not the undiffinguilling centure, nor the exaggerated praise of his contemporaries, which ought to regulate the opinions of the prefentage concerning him. Zeal for what he regarded as truth, undaunted intrepidity to maintain it, abilities both natural and acquired to defend it, and unwcaried industry to propagate it, are virtues which thine to confpicuoutly in every part of his behaviour, that even his enemies must allow him to have posfelled them in an eminent degree. To thefe may be added, with equal juffice, fuch purity, and even authority of manners, as became one who allumed the character of a reformer; fuch fanctity of life as fuited the doctrine which he delivered; and fuch perfect difintereftedness, as affords nothight prefumption of his fincerity. Superior to all feltith contiderations, a ftranger to the elegancies of life, and despiting its pleafures, he left the honours and emoluments of the church to his disciples; remaining fatisfied himfelf in his original flate of profesior in the university, and pastor to the town of Wittemberg, with the moderate appointments annexed to these offices. His extraordinary qualities were alloyed with no inconfiderable mixture of human frailty, and human pattions. Thefe, however, were of fuch a nature, that they cannot be imputed to malevolence or corruption of heart, but feem to have taken their rife from the same fource with many of his virtues. His mind, forcible and vehement in all its operations, roused by great objects, oragitated by violent pattions, broke out, on many occasions, with an impetuofity which altonithes men of feebler fpirits, or such as are placed in a more tranquil fituation. By carrying fome praifeworthy dispositions to excess, he bordered fometimes on what was culpable, and was often betrayed into actions which exposed him to censure. His confidence that his own opinions were well founded, approached to arrogance; his courage in afferting them, to raikness; his firmness in adhering to them, to obitmacy; and his

zeal in confuting his advertaries, to rage and four flity. Accultomed himfelf to confider every thing as fullordinate to truth, he experted the fame deference for it from other men; and, without making any ailowances for their timidity or prejudices, he poured forth, against those who disappointed him in this particular, a torrent of invective mingled with contempt. Regardlets of any diffinction of rank or character, when his doctrines were attacked, be chattifed all his advertaries, indiferininately, with the fame rough hand; neither the royal dignity of Henry VIII, nor the eminent learning and ability of Eralinus, fereened them from the fame abuse with which he treated Tetzel or Eccius.

But these indecencies of which Luther was guilty, must not be imputed wholly to the violence of his temper. They ought to be charged in part on the manners of the age. Among a rude people, unacquainted with thole maxims, which, by putting continual restraint on the passions of individuals, have polithed fociety, and rendered it agreeable, difinites of every kind were managed with heat, and throng smotions were uttered in their natural language, without referve or delicacy. At the lame time, the works of learned men wereall composed in Latin; and they were not only authorized, by the example of eminent writers in that language, to use their antagonitis with the most illiberal feurrility: but, in a dead tongue, indecencies of every kind appear tels thocking than in a living language, whose idioms and phrases seem gross, because they are

In patting judgment upon the characters of men, we ought to try them by the principles and maxims of their own age, not by those of another. For although virtue and vice are at all times the fame, manners and cufforms vary continually. Some parts of Luther's behaviour, which to us appear most culpable, gave no disgust to his contemporaries. It was even by fome of those qualities which we are now apt to blame, that he was fitted for accomplishing the great work which he undertook. Toroufemankind, when funk in ignorance or superfittion, and to encounter the rage of bigotry, armed with power, required the utmost vehemence of zeal, and a temper during to excess. A gentle call would neither have reached, nor have excited those to whom it was addressed. A spirit, more amable, but left vigorous than Lu-

ther's would have thrunk back from the dangers which he braved and turmounted. Towards the close of Luther's life, though without a perceptible declention of hiszerl or abilities, the infirmities of his temper increated upon him, to that he daily grew more pecvish, more iradeible, and more impatient of contradiction. Having lived to be witness of his own amazing fuerel; to fee a great part of Europe embrace his doctrines; and to thake the foundation of the Papalthrone, before which the mightietimonarchs had trembled, bedilcovered, on fome occasions, fymptoms of vanity and felt-applante. He mult have been indeed more than man, if, upon contemplating all that he actually accomplished, he had never felt any fentiment of this kind riting in his breatt.

Some time before his death he felt his ftrength declining, his contitution being worn out by a prodigious multiplicity of butinets, added to the labour of difcharging his ministerial function with unrenotting diligence, to the fatigue of confiant findy, belides the composition of works as voluminous as if he had enjoyed uninterrupted leifure and retirement. His natural intrepidity did not forfake him at the appreach of death: his last conversation with his friends was concerning the happinels referved for good men in a future world, of which he spoke with the fervour and delight natural to one who expected and withed to enter foon upon the enjoyment of it. The account of his death filled the Roman Catholic party with excellive as well as indecent joy, and damped the fpirits of all his followers; neither party fufficiently confidering that his doctrines were now fo firmly rooted, as to be in a condition to flourith, independent of the hand which first had planted them. His funeral was celebrated by order of the Elector of Saxony, with extraordinary pomp. He left feveral children by his wife, Catharine Bore, who furvived him: towards the end of the last century, there were in Saxony fome of his descendants in decent and honourable flations.

Robertson.

§ 40. Churader of Alfred, King of England.

The merit of this prince, both in private and public life, may with advantage be fet in opposition to that of any monarch or citizen which the annals of any age or any nation can present to us. He feems, indeed

indeed to be the complete model of that perfect character, which, under the denomostion of a lage or wife man, the philolophers have been fond of delineating, rather as a fiction of their imagination, than in hopes of ever feeing it reduced to practice: fo happily were all his virtues tempered together, so justly were they blended, and to powerfully did each preventthe other from exceeding its proper bonads. He knew how to conciliate the met enterpriting spirit with the couleft moderation; the most obtinate perfeverance with the exhelt flexibilty; the most fevere justice with the greatest lenity; the greatest rigour in command with the greatest affability of deportment; the highest capacity and inclination for feience, with the most thining talents for action. His civil and his mulitary virtues are abnot equally the objects of our admiration, excepting only, that the former being more rare among princes, as well as more victul, feem chiefly to challenge our applante. Nature also, as if defirons that to bright a production of her skill should be fet in the faired light, had betowed on him all bodily accomplithments, vigour of limbs, dignity of thape and air, and a pleafant, engaging, and open countenance. Fortune alone, by throwing him into that barbarous age, deprived him of historians worthy to transmit his fame to potterity; and we with to fee him delineated in more lively colours, and with more particular firokes, that we may at leaft perceive fome of those small specks and blemsthes, from which, asa man, it is impubble becould be entirely exempted.

§ 41. Another Character of ALTHED.

Alfred, that he might be the better ableto extend his charity and munificence, regulated his finances with the molt perfect economy, and divided his revenues into a certain number of parts, which he appropriated to the different expences of the flate, and the exercise of his own private liberality and devotion; nor was he a lefs aconomitt in the diffribution of his time, Which he divided into three equal portions, allotting one to fleep, meals, and exercile; and devoting the other two to writing, reading, butinely, and prayer. That this divition might not be encroached up-On load vertently, be measured them by tapersof an equaltize, which he kept contianally burning before the formes of relics. Alfred formed to be a genius felt-taught, which contrived and comprehended eve-

ry thing that could contribute to the fecurity of his kingdom. He wasauthorof that inettimable privilege peculiar to the fubjects of this nation, which confids in their being tried by their peers; for he first inflituted juries, or at least improved upon an old inititution, by specifying the number and qualifications of jurymen, and extending their power to trials of property as well as criminal indichments; but no regulation redounded more to his honour and the advantage of his kingdom, than the measures he took to prevent rapine, murder, and other outrages, which had to long been committed with impunity. His attention anoped even to the meanch circumtiances of his people's conveniency. He introduced the art of brick-making, and built his own houses of those materials, which being much more durable and fecure from accidents than timber, his example was followed by his tubjects in general. He was, doubtlets, an object of most perfect eleem and admiration; for, exclufive of the qualities which diffinguished him as a warrior and legislator, his perfunal character was amiable in every respect. Died 897, aged 52.

§ 42. Character of William the Conqueror.

Few princes have been more fortunate than this great monarch, or were better entitled to prosperity and grandeur, for the abilities and vigour of mind which he displayed in all his conduct. His spirit was bold and enterprifing, yet guided by prudence. His ambition, which was exorbitant, and lay little under the reftraints of justice, and will less under those of humanity, ever submitted to the dictates of reason and found policy. Born in an age when the minds of men were intractable and unacquainted with fubmillion, he was yet able to direct them to his purpofes; and, partly from the afcendant of his vehement disposition, partly from art and diffigulation, to chablith an unlimited monarchy. Though not inleasible to generotity, he was hardened against compastion, and feemed equally othentatious and ambitious of eclat in his clemency and his severity. The maxims of his administration were fevere; but might have been ufeful, had they been folely employed in preferving order in an enablished government; they were ill calculated for foftening the rigours which under the motigentle management are infeparablé from conqueit. His attempt against England

was the last enterprize of this kind, which he joined to all the capacity that genius during the courfe of feven hundred years, had fully fucceeded in Europe; and the greatness of his genius broke through those limits, which first the feudal institutions, then the refined policy of princes, have fixed on the feveral pates of Chrif-Though he rendered himfelf infinitely odious to his English subjects, he transmitted his power to his posterity, and the throne is ftill filled by his defeendants; a proof that the foundation which he laid was firm and folid, and that amongft all his violences, while he feemed only to gratify the prefent pailion, he had fill an eye towards futurity. Died Sept. 9, 1087, aged 63%.

§ 43. Another Character of WHAJAM the Conqueror.

From the transactions of William's reign, he appears to have been a prince of great courage, capacity, and ambition; politic, cruel, vindictive, and rapacious; tiern and baughty in his deportment, reterved and jealous in his difposition. He was tond of glory; and, though parfanonious in his household, delighted much in eften-Though fudden and impetuous tation. in his enterprizes, he was cool, deliberate, and indefatigable in times of danger and difficulty. His afpect was nobly fevere and imperious, his stature tall and portly: his constitution robust, and the composition of his bones and muscles ftrong: there was hardly a man of that age, who could bend his bow, or handle his arms. Smollett.

§ 44. Another Character of WILLIAM the Conqueror.

The character of this prince has feldom been fet in its true light; fome eminent writers having been dazzled to much by the more thining parts of it, that they have hardly feen his faults; while others, out of a strong detestation of tyranny, have been unwilling to allow him the praife he deferves.

He may with juitice be ranked among the greatest generals any age has produced. There was united in him activity, vigilance, intrepidity, caution, great force of judgment, and never-failing prefence of mind. He was first in his discipline, and kept his foldiers in perfect ohedience; yet preferved their affection. Having been from his very childhood centibually in war, and at the head of armies,

Smollet fay: 61.

could give, all the knowledge and tkill that experience could teach, and was a perfect mafter of the military art, as it was practifed in the timeswherein he lived, His conflitution enabled him to endure any hardfhips, and very few were equal to him in perfonal strength, which was an excelleace of more importance than it is now, from the manner of fighting then in ufe. It is faid of him, that none except himfelf could bend his bow. His courage was heroic, and he pollefied it not only in the field, but (which is more uncommon) in the cabinet, attempting great things with means that to other men appeared totally unequal to fuch undertakings, and fleadily profecuting what he had boldly refolved; being never diffurbed or difficurtened by difficulties in the courie of his enterprizes; but having that noble vigour of mind, which, initead of bending to oppolition, rifes againft it, and feems to have a power of controlling and commanding Fortune herielf.

Nor washe lefs superior to pleasure than to fear : no luxury foftened him, no riot difordered, no floth relaxed. It helped not a little to maintain the high respecthis lubjects had for him, that the majefty of his character was never let down by any incontinence or indecent excess. Histenperance and his chaftity were confiant guards, that feeured his mind from all weakness, supported its dignity, and kept it always, as it were, on the throne. Through his whole life he had no partner of his bed but his queen; a most extraordinary virtue in one who had lived, even from his earlieft youth, amidft all the licence of camps, the allurements of a court. and the feductions of fovereign power! Had he kept his oaths to his people as well as he did his marriage vow, hewould have been the best of kings; but he indulged other passions of a worse nature, and infinitelymore detrimental to the public than those he restrained. A lust of power, which no regard to justice could limit, the most unrelenting cruelty, and the most insatiable avarice, poffeffed his foul. It is true, indeed, that among many acts of extreme inhumanity, fome thining infrances of great clemency may be produced, that were either effects of his policy, which taught him this method of acquiring friends, or of his magnanimity, which made him flight a weak and fubdued enemy, fuch as was Edgar Atheling, in whom he found neither spirit nor talents able to contend

Maria I and Thomas

with him for the crown. But where he had no advantage nor pride in forgiving, his nature discovered itself to be utterly void of all sense of compassion; and some barbarities which he committed, exceeded the bounds that even tyrants and conquerors

prescribe to themselves.

Most of our ancient historians give him the character of a very religious prince; but his religion was after the fashion of those times, belief without examination, and devotion without piety. It was a religion that prompted him to endow monateries, and at the same time allowed him to pillage kingdoms; that threw him on his knees before a relic or cross, but suffered him unrestrained to trample upon the liberties and rights of mankind.

As to his wisdom in government, of which fome modern writers have fpoken very highly, he was, indeed, to far wife that, through a long unquiet reign, he knew how to support oppression by terror, and employ the propereft means for the carrying on a very iniquitous and violent administration. But that which alone defervesthe name of wifdom in the character of a king, the maintaining of authority by the exercise of those virtues which make the happiness of his people, was what, with all his abilities, he does not appear to have possessed. Nor did he excel in those foothing and popular arts, which fometimes change the complexion of a tyranny, and give it a fallacious appearance of freedom. His government was harhand despotic, violating even the principles of that constitution which he himself had established. Yet so far he performed the duty of a fovereign, that he took care to maintain a good police in his realm; curbing licentiousnels with a strong hand, which, in the tumultuous state of his government, was a great and difficult work. How well he performed it, we may learn even from the testimony of a contemporary Saxon historian, who says, that during his reign a man might have travelled in perfeet fecurity all over the kingdom with his bosom full of gold, nor durst any kill another in revenge of the greatest offences, nor offer violence to the chaftity of a woman. But it was a poor compensation, that the highways were fafe, when the courts of justice were dens of thieves, and when almost every maninauthority, or in office, used his power to oppress and pillage the people. The king himfelf did not only tolerate, but encourage, support, and even there these extortions. Though the great-

ness of the ancient landed estate of the crown, and the feudal profits to which he legally was entitled, rendered him one of the richest monarchs in Europe, he was not content with all that opulence, but by authorifing the sheriffs, who collected his revenues in the feveral counties, to practife the most grievous vexations and abuses, for the raising of them higher, by a perpetual auction of the crown-lands, fo that none of his tenants could be fecure of poffession, if any other would come and offer more; by various iniquities in the court of exchequer, which was entirely Norman; by forfeitures wrongfully taken; and, laftly, by arbitrary andillegal taxations, he drew into his treasury much too great a proportion of the wealth of his kingdom.

It must however be owned, that if his avarice was infatiably and unjufily rapacious, it was not meanly parfimonious, nor of that fordid kind which brings on a prince dishonour and contempt. He supported the dignity of his crown with a decent magnificence; and though he never was lavish, he sometimes was liberal, more especially to his soldiers and to the church. But looking on money as a necessary means of maintaining and increasing power, he desired to accumulate as much as he could, rather, perhaps, from an ambitious than a covetous nature; at least his avarice was subservient to his ambition, and he laid up wealth in his coffers, as he did arms in his magazines, to be drawn out, when any proper occafion required it, for the defence and enlargement of his dominions.

Upon the whole, he had many great qualities, but few virtues; and if those actions that most particularly distinguish the man or the king are impartially confidered, we shall find that in his character there is much to admire, but still more to abhor.

Lyttelton.

§ 45. The Character of WILLIAM RUFUS.

The memory of this monarch is transmitted to us with little advantage by the churchmen whom he had offended; and though we may suspect in general that their account of his vices is somewhat exaggerated, his conductaffords little reason for contradicting the character which they have affigued him, or for attributing to him any very estimable qualities; he seems to have been a violent and tyrannical prince; a perfidious, encroaching, and

dangerou

dangerous neighbour; an unkind and ungenerous relation. He was equally prodigal and rapacious in the management of the treafury : and, if he possessed abilities, he lay to much under the government of impetuous passious, that he made little use of them in his administration; and he indulged intirely the domineering policy which fuited his temper, and which, if supported, as it was in him, with courage and vigour, proves often more fuccelsful in diforderly times, than the deepeth forefight and most refined artifice. The monuments which remain of this prince in England are, the Tower, Westminster-Hall, and London Bridge, which he built. Died August 2, 1100, aged 40. Hume.

§ 46. Another Character of WILLIAM RUFUS.

Thus fell William *, fornamed Rufus, from his red hair and florid complexion, after he had lived four-and-forty years, and reigned near thirteen; during which , time he apprefied his people in every form of tyranny and infult. He was equally void of learning, principle, and honour; haughty, passionate, and ungrateful; a fcofferatreligion, a fcourge to the clergy; vain-glorious, talkative, rapacious, lavish, and diffolute; and an inveterate enemy to the English, though he owed his crown to their valour and fidelity, when the Norman lords intended to expel him from the throne. In return for this instance of their loyalty, he took all opportunities to fleece and cuflave them; and at one time imprisoned fifty of the best families in the kingdom, on pretence of killing his deer: fo that they were compelled to purchase their liberty at the expence of their wealth, though not before they had undergone the fiery ordeal. He lived in a fcandalous commerce with profitutes, profelling his contempt for marriage, and having no legitimate iffue, the crown devolved to his brother Henry, who was fo intent upon the fuccession, that he paid very little regard to the funeral of the deceased king.

Smollett.

By the hand of Tyrell, a French gentleman, remarkable for his addres in archery, attending him in the recreation of hunting, as William had diffuounted after a chufe. Tyrel, impatient to thew his dexterity, let fly at a flag which fuddenly flatted before him: the arrow glancing from a tree, fruck the king in his breatt, and intrantly flew him.

§ 47. Character of HENRY L.

This prince was one of the most arcomplished that has filled the English throne; and possessed all the qualities both of body and mind, natural and acquired, which could fit him for the high fiation to which he attained; his perfon was manly; his countenance engaging; his eyes clear, ferene, and penetrating. The affability of his address encouraged those who might be overawed by the fense of his dignity or his wifdom; and though he often indulged his facetious humour, he knew how to temper it with diferetion, and ever kept at a diffiance from all indecent familiarities with his courtiers. His superior eloquence and judgment would have given him an afcendant, even if he had been born in a private station; and his personal bravery would have procured him respect, even though it had been less supported by art and policy. By his great progress in literature, he acquired the name of Beau Clerc, or the Scholar; but his application to fedentary purfuits abated nothing of the activity and vigilance of his government; and though the learning of that age was better fitted to corrupt than improve the understanding, his natural good fense preserved itself untainted both from the pedantry and superstition which were then fo prevalent among men of letters. His temper was very susceptible of the fentiments as well of friending as refentment; and his ambition, though high, might be efteemed moderate, had not his conduct towards his brother thewed, that he was too much difposed to facrifice to it all the maxims of juffice and equity. Died December 1, 1135, aged 67, having reigned 35 years. Hume.

§ 48. Another Character of HENRY I.

Henry was of a middle flature and robust make, with dark brown hair, and blue ferene eyes. He was facetious, fluent, and affable to his favourites. His capacity, naturally good, was improved and cultivated in such a manner, that he acquired the name of Beau Clerc by his learning. He was cool, cautious, politic, and penetrating; his courage was unquestioned, and his fortitude invincible. He was vindictive, cruel, and implacable, inexorable to offenders, rigidand severe in the execution of justice; and, though temperate in his diet, a voluptuary inhisamours, which produced

produced a numerous family of illegitimate islue. His Norman descent and connexions with the continent inspired him with a contempt for the English, whom he oppressed in the most tyrannical manner. Smollett.

omuli

§ 49. Character of Stephens

England fuffered great miferies during the reign of this prince; but his personal character, allowing for the temerity and injutuce of his usurpation, appears not liabletoany great exception; and he feems to have been well qualified, had he fucceeded by a just title, to have promoted the happinels and prosperity of his subjects. He was possessed of industry, activity, and conrage, to a great degree; was not deficient inability, had he the talent of gainingmen's affections; and, not with flanding his precarious fituation, never indulged himself in the exercise of any cruelty of revenge. His advancement to the throne procured him neither tranquillity nor happineis. Died 1154.

§ 50. Another Character of Stephen.

Stephen was a prince of great courage, fortitude, and activity, and might have reighed with the approbation of his people, had he not been haralled by the efforts of a powerful competitor, which obliged him to take fuch measures for his fatety 25 were inconfittent with the dictates of homour, which indeed hisambition promptwhim to forego, in his first endeavours to aftend the throne. His necessities after-"ards compelled him to infringe the charbr of privileges he granted at his accelfon; and he was integated by his jealouty and refentment to commit the most flagrant outrages againft gratitude and found policy. His vices, as a king, feem to have been the effect of troubles, in which he was involved; for, as a man, he was brave, open and liberal; and, during the thort calm that forceeded the tempeli of his reign, he made a progress through his kingdom, published an edict to restrain all rapine and violence, and difbanded the foreign mercenaries who had preyed lo long on his people.

§ 51. Character of HENRY II.

Thus died, in the 58th year of his age, and thirty-fifth of his reign, the greatest prince of his time for wildom, virtue, and ability, and the most powerful in extent of dominion, of all those that had ever filled

the throneof England. Hischaracter, both in public and privatelife, is almost without a blemith; and he feems to have pollefled every accomplishment, both of body and mind, which makes a man estimable or amiable. He was of a middle stature. ftrong, and well-proportioned; his countenance was lively and engaging, his converfation affable and entertaining; hiselocution eafy, perfusiive, and ever at command. He loved peace, but possessed both conduct and bravery in war; was provident without timidity; fevere in the execution of justice without rigour; and temperate without aufterity. He preferred health, and kept himfelf from corpulency, to which he was somewhat inclined, by an abstemious diet, and by frequent exercite, particularly by hunting. When he could enjoy leifure, he recreated himself in learned convertation, or in reading; and he cultivated his natural talents by fludy, above any prince of his time. His affections, as well as his enmitties, were warm and durable; and his long experience of ingratitude and infidelity of men never deftroyed the natural fentibility of his temper, which disposed him to friendship and fociety. His character has been transmitted to us by many writers who were his contemporaries; and it refembles extremely, in its most remarkable strokes, that of his maternal grandfather, Henry Lexcepting only that ambition, which was a ruling patlion in both, found not in the first Henry fuch unexceptionable means of exerting itfelf, and puthed that prince into meafures which were both criminal in themselves, and were the cause of furthe revimes, from which his grandfon's conduct was happily exempted. Died 1189. Hume.

§ 52. Another Character of HENRY II.

Thus died Henry, in the fifty-feventh year of his age (Hume fays 58) and thirty-fifth of his reign; in the course of which he had, on fundry occations, difplayed all the abilities of a politician, alt. the fagacity of a legitlator, and all the magnanimity of a hero. He lived revered above all the princes of his time; and his death was deeply lamented by his subjects, whole happinels feems to have been the chief aim of all his endeavours. He not only enacted whole formelaws, but faw them executed with great punctuality. He was generous, even to admiration, with regard to those who committed offences against his own perion; but he never forgave the

3 B injurie.

injuries that were offered to his people. for atrocious crimes were punished severely without respect of persons. He was of a middle stature, and the most exact proportion; his countenance was round, fair, and ruddy; his blue eyes were mild and engaging, except in a transport of passion, when they fparkled like lightning, to the terror of the beholders. He was broadchetted, strong, muscular, and inclined to be corpulent, though he prevented the bad effects of this disposition by hard exercise and continual fatigue; he was temperate in his meals, even to a degree of abitinence, and feldom or ever fat down, except at supper; he was eloquent, agreeable and facetious; remarkably courteous and polite; compassionate to all in distres; so charitable, that he confiantly allotted onetenth of his boulhold provisions to the poor, and in the time of dearth he maintained ten thousandindigent persons, from the beginning of fpring till the end of autumn. His talents, naturally good, he had cultivated with great affiduity, and delighted in the conversation of learned men, to whom he was a generous benefactor. His memory was fo furprifingly tenacious, that he never forgot a face nor a circumflance that was worth remembering. Though fuperior to his contemporaries in firength, riches, true courage, and military skill; he never engaged in war without refuctance, and was to averfe to bloodthed, that he expressed an uncommon grief at the lofs of every private foldier; yet he was not exempt from human frailties; his paffions, naturally violent, often hurried him to excels; he was prone to anger, transported with the luft of power, and particularly accused of incontinence, not only in the affair of Rofamond, whom he is faid to have concealed in a labyrinth at Woodftock, from the jealous inquiry of hiswife, but also in a supposed commerce with the French princels Adalais, who was bred in England as the future wife of his fon This infamous breach of ho-Richard. · nour and hospitality, if he was actually guilty, is the foulest stain upon his character; though the fact is doubtful, and we hope the charge untrue. Smollett.

§ 53. Churacter of Richard I.

The most thining part of this prince's character was his military talents; no man ever in that romantle age carried courage and intrepidity to a greater height; and this quality gained him the appellation of

the lion-hearted, cour de lion. He paffionately loved glory; and as his conduct in the field was not inferior to his valour, he feems to have possessed every talenuncesfary for acquiring it: his refentments also were high, his pride unconquerable, and his subjects, as well as his neighbours, had therefore reason to apprehend, from the continuance of his reign, a perpetual fcene of blood and violence. Of an impetuous and vehement spirit, he was diffinguished by all the good as well as the bad qualities which are incident to that character. He was open, frank, generous, fincere, and brave; he was revengeful, domineering, ambitious, haughty, and cruel, and was thus better calculated to dazzle men by the fplendour of his enterprifes, than either to promote their happiness, or his own grandeur by a found and well-regulated policy. As military talents make great impression on the people, he feems to have been much beloved by his English subjects; and he is remarked to have been the first prince of the Norman line who bore a fincereaffertion and regard for them. He passed, however, only four months of his reign in that kingdom: the crufade employed himneat three years: he was detained about four months in captivity; the rest of his reign was fpent either in war, or preparations for war against France: and he was fo pleafed with the fame which he had arquired in the eath, that he feemed determined, notwithstanding all his past missortunes, to have further exhausted hiskingdom, and to have exposed himself to new hazards, by conducting another expedition against the infidels. Died April 6. 1199, aged 42. Reigned ten years. Hume.

§ 54. Another Character of RICHARD I.

This renowned prince was tall, ftrong, ftraight, and well-proportioned. Hisarms were remarkably long, his eyes blue, and full of vivacity: his hair was of a vellowith colour; his countenance fair and comely. and hisair majestic. He was endowed with good natural understanding; his penetration was uncommon; he possessed a fund of manly eloquence; his convertation was spirited, and he was admired for his talents of repartee; as for his courage and ability in war, both Europe and Afia refound with his praise. The Saracens stilled their children with the terror of his name; and Saladine, who was an accomplished prince, admired his valour to fuch a degree of enthulialm, that immediately after Richard Richard had defeated him on the plains of Joppa, he fent him a couple of fine Arabian horfes, in token of his efteem; a polite compliment, which Richard returned with magnificent prefents. Their are the thining parts of his character, which, however, cannot dazzle the judicious obferver to much, but that he may perceive a number of blemithes, which no hiftorian has been able to efface from the memory of this celebrated monarch. His ingratitude and want of filial affection are unpardonable. He was proud, haughty, ambitious, choleric, cruel, vindictive, and debauched; nothing could equal his rapacioutness but his profution, and, indeed, the one was the effect of the other; he was a tyrant to his wife, as well as to his people, who groaned under his taxations to fuch a degree, that even the glory of his victories did not exempt him from their execrations; in a word, he has been aptly compared to a lion, a species of animals which he refembled not only in courage,

§ 55. Character of John.

Smollett.

but likewise in ferocity.

The character of this prince is nothing but a complication of vices, equally mean and edious, ruinous to himfelf, and defiructive to his people: cowardice, inactivity, folly, levity, licentiousness, ingralitude, treachery, tyranny, and cruelty; all these qualities too evidently appear in the feveral incidents of his life, to give us room to fuspect that the disagreeable pichas been anywife overcharged by the prejudice of the ancient historians. It Is hard to fay, whether his conduct to his father, his brother, his nephew, or his subjects, was most culpable; or whether hiscrimes in these respects were not even exceeded by the baseness which appeared in histransactions with the king of France, the pope, and the barons. His dominions, when they devolved to him by the death of his brother, were more extensive than have ever since his time been ruled by any English monarch. But he first lost, by his milconduct, the flourishing provinces in France; the ancient patrimony of his family, He subjected his kingdom to a hameful vassalage under the seeof Rome; he law the prerogatives of his crown diminished by law, and still more reduced by faction; and he died at last when in danger of being totally expelled by a foreign power, and of either ending his life miserably in a prison, or seeking the sterasa fugitive from the pursuit of his enemies.

The prejudices against this prince were so violent, that he was believed to have fent an emhassy to the emperor of Morocco, and to have offered to change his religion and become Mahometan, in order to purchase the protection of that monarch; but, though that story is told us on plausible authority, it is in itself utterly improbable, except that there is nothing so incredible as may not become likely from the folly and wickedness of John. Died 1216.

Hume.

§ 56. Another Character of JOHN.

John was in his person taller than the middle fize, of a good shape and agreeable countenance; with respect to his difpolition, it is ftrongly delineated in the transactions of his reign. If his understanding was contemptible, his heart was the object of detertation; we find him Aothful, shallow, proud, imperious, cowardly, libidinous, and inconfiant, abject in adverfity, and overbearing in fuccels; contemned and hated by his subjects, over whom he tyrannized to the utmost of his power; abhorred by the clergy, whom he oppressed with exactions; and despised by all the neighbouring princes of Europe: though he might have passed through life without incurring fuch a load. of odium and contempt, had not his reign been perplexed by the turbulence of his barons, the rapaciousness of the pope, and the ambition of fuch a monarch as Philip Augustus; his character could never have afforded one quality that would have exempted him from the difgust and scorn of his people: nevertheles, it must be owned that his reign is not altogether barren of laudable transactions. He regulated the form of the government in the city of London, and feveral other places in the kingdom. He was the first who coined sterling money.

Smollett.

§ 57. Character of HENRY III.

The most obvious circumstance of Henry the Third's character, is his incapacity for government, which rendered him as much a prisoner in the hands of his own ministers and favourites, and as little at his own disposal, as when detained a captive in the hands of his enemies. From this source, rather than from infincerity and treachery, arose his negligence in observing his promites; and he was too easily induced for the sake of present conve-

3 B.

nience, to facrifice the latting advantages ariting from the truit and confidence of his people. Hence were derived his profution to favourites, his attachment to itrangers, the variableness of his conduct, his afty refentments, and his fudden for giveness and return of affection. Initead of reducing the dangerous power of his nobles, by obliging them to observe the laws towards their inferiors, and setting them the falutary example in his own government, and to make his arbitrary will, or rather that of his miniters, the rule of his actions.

Infread of accommodating himfelf, by a firict frugality, to the embarafied fituation to which his revenue had been left, by the military expedition of his uncle, the diffipations of his father, and theufurpations of the barons; he was tempted to levy money by irregular exactions, which, without enriching himfelf, impoverified, or at leaft difgutted, his people. Of all men, nature feemed leaft to have fitted him for being a tyrant; yet are there inflances of oppression in his reign, which, though derived from the precedents left him by his predecessors, had been carefully guarded against by the great charter; and are incomment with all rules of good government: and, on the whole, we may fay, that greater abilities, with his good dispositions, would have prevented him from falling into his faults; or, with worse dispositions, would have enabled him to maintain and defend them. Died November16,1272, aged 64. Reigned 56 years. Hune.

§ 58. Another Character of Henry III-

Henry was of a middle fize and robutt make, and his countenance had a peculiar caft from his left eye-lid, which hung down to far as to cover part of his eve. The particulars of his character may be gathered from the detail of his conduct. He was certainly a prince of very mean talents; irrefolute, inconftant, and capricious; proud, infolent, and arbitrary; arrogant in prosperity, and abject in adverfity; profute, rapacious, and choleric, though defittute of liberality, economy, and courage; yet his continence was praifeworthy, as well as his aversion to cruelty; for he contented himfelf with punishing the rebels in their effects, when he might have glutted his revenge with their blood. He was prodigal even to exces, and therefore always in necessity. Notwithitanding the great fums he levied

from his subjects, and though his occasions were never so pressing, he could not help squandering away his money upon worthless favourites, without considering the difficulty he always found in obtaining supplies from parliament. Smollett.

§ 59. Character of EDWARD I.

The enterprizes finished by this prince, and the projects which he formed, and brought very near to a conclusion, were more prudent, and more regularly conducted, and more advantageous to the folid interest of this kingdom, than those which were undertaken in any reign either of his ancestors or successors. He reftored authority to the government, difordered by the weakness of his father; he maintained the laws against all the efforts of his turbulent barons; he fully annexed to the crown the principality of Wales; he took the wifeft and most effectual measures for reducing Scotland to a like condition; and though the equity of this latter enterprife may reasonably be questioned, the circumstances of the two kingdoms promifed fuch fuccefs, and the advantage was fo visible, of uniting the whole ifland under one head, that those who give great indulgence to reasons of state in the measures of princes, will not be apt to regard this part of his conduct with much feverity.

But Edward, however exceptionable his character may appear on the head of juttice, is the model of a politic and warlike king. He possessed industry, penetration, courage, vigour, and enterprize. He was frugal in all expences that were not necessary; he knew how to open the public treafures on proper occations; he punithed criminals with feverity; he was gracious and affable to his fervants and courtiers; and being of a majeftic figure expert at all bodily exercise, and in the main well-proportioned in his limbs, notwithfianding the great length of his legs, he was as well qualified to captivate the populace by his exterior appearance, as to gain the approbation of men of fenfeby his more folid virtues. Died July 7,1307, aged og. Reigned 35 years.

§ 60. Another Character of EDWARD K

He was a prince of very dignified appearance, tall in flature, regular and comely in his features, with keen piercing eyes, and of an afpect that commanded reverence and efteem. His continuous

- 18

was robust: his strength and dexterity perhaps unequalled in his kingdom; and his shape was unblemished in all other respects, but that of his legs, which are faid to have been too long in proportion to his body; whence he derived the epithet of Long Shanks. In the qualities of his head, he equatled the greatest monarchs who have fat on the English throne He was cool, penetrating, fagacious, and circumspect. The remotest corners of the earth founded with the fame of his courage; and all over Europe he was confidered as the flower of chivalry. Nor was he less conformmate in his legislative capacity, than eminent for his prowefs. He may be tiyled the English Justinian: for, besides the excellent statutes that were enacted in his reign, he new-modelled the administration of justice, fo as to render it more fure and fummary; he fixed proper bounds to the courts of jurifdiction; fettled a new and eafy method of collecting the revenue, and established wife and effectual methods of preferving peace and order among his tubjects. Yet, with all thefe good qualities, he cherithed a dangerous ambition, to which he did not feruple to facrifice the good of his country; witnesshis ruinouswar with Scotland, which drained the kingdom of men and money, and gave rife to that rancorous enmity which proved to prejudicial to both nations. Though he is celebrated for his chaffity and regular deportment, there is not in the whole course of his reign, one instance of . his liberality and munificence. He had . great abilities, but no genius; and was an accomplished warrior, without the least fpark of heroilm. Smollett.

§ 61. Character of EDWARD II.

It is not eafy to imagine a man more. innocent or inoffensive than this unhappy king; nor a prince less fitted for governing that fierce and turbulent people fubjected to his authority. He was obliged to devolve on others the weight of government, which he had neither ability nor inclination to bear: the fame indotence and want of penetration led him to make choice of ministers and favourities, which were not always belt qualified for the truit committed to them. The feditions grandees, pleased with his weakness, and complaining of it, under prefence of attacking his ministers, insulted his person, andinvaded his authority; and the impatient populace, ignorant of the fource of their

grievances, threw all the blame upon the king, and increased the public disorders by their faction and infolence. It was in vain to look for protection from the laws. whose voice, always feeble in those times, was not heard in the din of arms: what could not defend the king, was lefs able to give the lter to any one of his people; the whole inachine of government was torn in pieces, with they and violence; and men, inflead of complaining against the manners of the age, and the form of their conflitution, which required the most fleady and the most skilful hand to conduct them, imputed all errors to the person who had the misfortune to be intrufted with the reins of empire. Murdered 21 September, 1327.

§ 62. Another Character of EDWARD II.

Thus perished Edward II. after having atoned by his fufferings for all the errors of his conduct. He is faid to have refembled his father in the accomplishments of his person, as well as in his countenance: but in other respects he seems only to have inherited the defects of his character; for he was cruel and illiberal, without his valour or capacity. He had levity, indolence, and irrefolution, in common with otherweak princes; but the diffing uithing foible of his character was that unaccountable pattion for the reigning favourites, to which he facrificed every other consideration of policy and convenience, and at last fell a miterable victim. Smollett.

§ 63. Character of EDWARD HI.

The English are apt to consider with peculiar fondness the history of Edward the Third, and to effeem his reign, as it was one of the longest, the mote glorious alfo, which occurs in the annals of the nation. The afcendant which they began to have over France, their rival and national enemy, makes them caft their eves on this period with great complacency, and fauctifies every measure which Edward embraced for that end. But the done ftic government is really more admirable than his foreign victories; and England enjoyed, by his prodence and vigour of administration, a longer interval of domettic peace and tranquillity, than the has been bleft with in any former period, or than the experienced for many years after. He gained the affections of the great, and curbed their licentiousness: he made them feel his power, without their daring, or 3 B 3 even even being inclined to murmur at it; his affable and obliging behaviour, his munificence and generolity, made them submit with pleafure to his dominion; his valour and conduct made them fuccessful in most of their enterprizes; and their unquiet spirits, directed against a public enemy, had no leifure to breed disturbances, to which they were naturally fomuch inclined, and which the form of the government, feemed fo much to authorize. This was the chief benefit which resulted from Edward's victories and conquests. reign wars were, in other respects, neither founded in justice, nor directed to any very falutary purpose. His attempt against the king of Scotland, a minor, and a brother-in-law, and the revival of his grandfather's claim of superiority over that kingdom, were both unreasonable and ungenerous: and he allowed himfelf to be too foon feduced by the glaring prospects of French conqueit, from the acquilition . of a point which was practicable, and which might really, if attained, have been of lafting utility to his country, and to his fuccessors. But the glory of a conqueror is to dazzling to the vulgar, and the animostly of nations so extreme, that the fruit-Jess desolation of so fine a part of Europe as France is totally difregarded by us, and never confidered as a blemish in the character or conduct of this prince: and indeed, from the unfortunate state of human nature, it will commonly happen that a fovereign of great genius, such as Edward, who usually finds every thing easy in the domestic government; will turn himfelf towards military enterprizes, where alone he meets opposition, and where he has full exercise for his industry and capacity. Died 24ft of June, aged 65, in the 51st year of his reign. Hume.

§ 64. Another Character of EDWARD III.

Edward's constitution had been impaired by the satigues of his youth; so that he began to seel the infirmities of old age, before they approach the common course of nature: and now he was seized with a malignant sever, attended with eruptions, that soon put a period to his life. When his distemper became so violent, that no hope of his recovery remained, all his attendants sorsook him, as a bankrupt no longer able to requite their services. The ungrateful Alics, waiting until she perceived him in the agonies of death, was so inhuman as to strip him of his rings and

jewels, and leave him without one domeftic to close his eyes, and do the last offices to his breathless corfe. In this deplorable condition, bereft of comfort and athitance, the mighty Edward lay expiring; when a priest not quite so favage as the rest of his domestics, approached his bed; and, finding him ftill breathing, began to adminifter fome comfort to his foul. Edward had not yet lost all perception, when he found himfelf thus abandoned and forlorn, in the last moments of his life. He was just able to express a deep sense of forrow and contrition for the errors of his conduct, and died pronouncing the name of JESUS.

Such was the piteous and obscure end of Edward the Third, undoubtedly one of the greatest princes that ever swayed the fceptre of England; whether we respect him as a warrior, a lawgiver, a monarch, or aman. He possessed all the romantic spirit of Alexander; the penetration, the fortitude, the polished manners of Julius; the liberality, the munificence, the wildomof Augustus Cæsar. Hewastall, majestic, finely shaped, with a picroing eye, and a quiline visage. Hn excelled all his contemporaries in feats of arms and personal address. He was courteous, affable, and eloquent; of a free deportment, and agreeable conversation; and had the art of commanding the affection of his fubjects, without feeming to folicit popularity. The love of glory was certainly the predominant pation of Edward, to the gratification of which he did not scraple to facrifice the feelings of humanity, the lives of his subjects, and the interests of his country. And nothing could have induced or enabled his people to bear the load of taxes with which they were incumbered in his reign, but the love and admiration of his person, the fame of his victories, and the excellent laws and regulations which the parliament enacted with his advice and concur-Smollett. rence.

§ 65. Character of RICHARD II.

All the writers who have transmitted to us the history of Richard, composed their works during the reign of the Lancastrian princes; and candour requires that we should not give entire credit to the reproaches which have been thrown upon his memory. But after making all proper abatements, he fill appears to have been a weak prince, and unfit for government; less for want of natural parts and capa-

city,

city, than of folid judgment and good education. He was violent in his temper, profuse in his expences, fond of idle show and magnificence, devoted to favourites, and addicted to pleafure; passions, all of them, the most inconsistent with a prudent economy, and confequently dangerous in a limited and mixed government. Had he possessed the talents of gaining, and, still more, of overawing his great barons, he might have eicaped all the misfortunes of his reign, and been allowed to carry much further his oppressions over his people, if he really was guilty of any, without their daring to rebel, or even murmur against him. But when the grandees were tempted, by his want of prudence and rigour, to refift his authority, and execute the most violent enterprizes upon him, he was naturally led to feek for an opportunity of retaliation; justice was neglected; the lives of the chief nobility facrificed; and all thefe evils feem to have proceeded more from a fettled defign of establishing arbitrary power, than from the infolence of victor;, and the necessities of the king's situation. Themanners, indeed, of theage, were the chief fources of fuch violence; laws, which were feebly executed in peaceable times, lost all their authority in public Both parties were alike convultions. guilty; or, if any difference may be remarked between them, we shall find the authority of the crown, being more legal, was commonly carried, when it prevailed, to less desperate extremities than those of aniltocracy *.

§ 66. Another Character of RICHARD II.

Such was the last conclusion of Richard II. a weak, vain, frivolous, inconstant, prince; without weight to balance the scalesof government, without discernment to choose a good ministry; without virtue to oppose the measures, or advice, of evil counsellors, even where they happened to clash with his own principles and opinion. He was a dupe to flattery, a flave to oftentation, and not more apt to give up his reason to the suggestion of sycophants and vicious ministers, than to facrifice those ministers to his safety. He was idle, profuse, and profligate; and, though brave by starts, naturally pussilanimous, and irre-

folute. His pride and refentment prompted him to cruelty and breach of faith; while his necessities obliged him to sleece his people, and degrade the dignity of his character and situation. Though we find none of his charities on record, all his historians agree, that he excelled all his predecessor in state hospitality, and fed a thousand every day from his kitchen.

§ 67. Another Character of RICHARD II.

Richard of Bourdeaux (fo called from the place of his birth) was remarkably beautiful and handfome in his perfon; and doth not feem to be naturally defective, either in courage or understanding. For on some occasions, particularly in the dangerous infurrections of the crown, he acted with a degree of spirit and prudence superior to his years. But his education was miferably neglected; or, rather, he was intentionally corrupted and debauched by three ambitious uncles, who, being defirous of retaining the management of his affairs, encouraged him to spend his time in the company of diffolute young people of both fexes, in a continual course of feathing and distipation. By this means, he contracted a taste for pomp and pleafure, and a diflike to bufi-The greatest foible in the character of this unhappy prince was an excessive fondness for, and unbounded liberality to his favourites, which enraged his uncles, particularly the Duke of Gloucester, and difgusted such of the nobility as did not partake of his bounty. He was an affectionate hufband, a generous mafter, and a faithful friend; and if he had received a proper education, might have proved a great and good king. Henry.

§ 68. Character of HENRY IV.

The great popularity which Henry enjoyed before he attained the crown, and which had fo much aided him in the acquisition of it, was entirely loft, many years before the end of his reign, and he governed the people more by terror than affection, more by his own policy than their fense of duty and allegiance. When men came to reflect in cold blood on the crimes which led him to the throne; and the rebellion against his prince; the deposition of a lawful king, guilty sometimes of oppression, but more frequently of imprudences; the exclusion of the true heir;

3 B 4

He was flarved to death in prilon, or murdered, after having been dethroned, A. D. 1399, in the year of his age 34; of his reign 23.

the murder of his fovereign and near relation; these were such enormities, as drew on him the hatred of his subjects, fanctified all the rebellions against him, and made the executions, though not remarkably fevere, which he found neceffary for the maintenance of his authority, appear cruel as well as iniquitous to his people. Yet, without pretending to apo-logize for these crimes, which must ever be held in detertation, it may be remarked, that he was infentibly led into this blameable conduct, by atrain of incidents, which few men possess virtue enough to withstand. The injustice with which his predecessor had treated him, in first condemning him to banishment, and then despoiling him of his patrimony, made him naturally think of revenge, and of recovering his loft rights; the headstrong zeal of the people hurried him into the throne; the care of his own fecurity, as well as his ambition, made him an usurper; and the fieps have always been fo few between the prifons of princes and their graves, that we peed not wonder that Richard's fate was no exception to the general rule. All thefe confiderations made theking's fituation, if he retained any fenfe of virtue, very much to be lamented; and the inquietudes with which he polletted his envied greatness, and the remorfes by which, it is faid, he was continually haunted, rendered him an object of our pity, even when feated upon the throne. But it must be owned, that his prudence, vigilance, and forelight in maintaining his power, were admirable; his command of temper remarkable; his courage, both military and political, without blemish: and he possessed many qualities, which fitted him for his high fration, and which rendered his usurpation of it, though pernicious in after-times, rather falutary during his own reign, to the English nation.

Died 1413. Aged 43. Howe. § 69. Another Character of Henry IV.

Henry IV. wasofamiddle stature, well-proportioned, and perfect in all the exertifies of arms and chivalry; his countenance was severe, rather than serene, and his disposition four, fullen, and reserved; he possessed agreed share of courage, fortitude, and penetration; was naturally imperious, though he bridled his temper with a great deal of courion; superficient

perious, though he bridled his temper with a great deal of caution; fuperfittious, though without the leaft tincture of virtue and true religion; and meanly parfimonious, though juftly cenfured for want of economy, and ill-judged profusion. He was tame from caution, humble from fear, cruel from policy, and rapacious from indigence. He rose to the throme by perfuly and treason; and established his authority in the blood of his subjects, and died a penitent for his sins, because he could no longer enjoy the fruit of his transfersious.

Smollett.

§ 70. Character of HENRY V.

This prince possessed many eminent virtues; and, if we give indulgence to ambition in a monarch, or rank it, as the vulgar do, among his virtues, they were unfained by any considerable blemish; his abilities appeared equally in the cabinet and in the field: the boldness of his enterprizes was no less remarkable than his personal valour in conducting them. He had the talent of attaching his friends by affability, and gaining his enemies by address and elemency.

The English, dazzled by the lustre of his character, fall more by that of his victories, were reconciled to the defects of The French almost forgot be his title. was an enemy; and his care of maintaining justice in his civil administration, and preferring discipline in his armies, made fome amends to both natious for the calamities infeparable from those warsin which his foot reign was almost occupied. That he could forgive the earl of Marche, who had a better right to the throne than himfelf, is a fure proof of his magnanimity; and that the earl relied fo on his friendship, is no less a proof of his establiffied character forcandour and fincerity.

There remain, in history, few instances of such mutual trust; and still fewer, where neither found reason to repent it.

The exterior figure of this great prince, as well as his deportment, was engaging. His fiature was somewhat above the middle size; his countenance beautiful, his limbs genteel and stender, but full of vigour; and he excelled in all warlike and manly exercises.

Died 31st August, 1422: in the year of his age 34; of his reign, the 10th. Hume.

§ 71. Another Character of HENRY V.

Henry was tall and flender, with a long neck, and engaging afpect, and limbs of the most elegant turn. He excelled all the youth of that age, in agility, and the exercise of arms; was hardy, patient, laborious, rious, and more capable of enduring cold, hunger, and fatigue, than any individual in his army. His valour was fuch as no danger could ftartle, and no difficulty oppole; nor was his policy inferior to his courage.

He managed the diffentions among his enemies with fuch address, as spoke him confummate in the arts of the cabinet. He fomented their jealousy, and converted their mutual retenument to his own ad-

vantage.

Henry possessed a felf-taught genius, that biazed out at once, without the aid of intruction and experience; and a fund of natural fagacity, that made ample amends for all their defects. He was chaffe, temperate, moderate, and devout, icrupulouily juit in his administration, and feverely exact in the discipline of his army; upon which he knew his glory and fucceis, in a great meature, depended. In a word, it muit be owned, he was without an equal in the arts of war, policy, and government. But we cannot be fo far dazzled with his great qualities, as to overlook the defects in his character. His pride and imperious temper lott him the hearts of the French nobility, and frequently fellout into outrage and abute; as at the fiege of Melun, when he treated the Marechal l'Ise d'Adam with the utmost indignity, although that nobleman had given him no other offence, than that of coming into his prefence in plain decent apparel.

Smollett.

§ 72. Hume's Account of Henny VI. (for there is no regular Character of this Prince given by this Historian) is expressed ed in the following manner.

In this manner finished the reign of Henry VI. who, while yet in his cradle, had been proclaimed king both of France and England, and who began his life with the most splendid prospects which any prince in Europe had ever enjoyed. The revolution was unhappy for his people, as it was the fource of civil wars; but was almost entirely indifferent to Henry himfelf, who was utterly incapable of exercifinghisanthority, and who, provided he met perpetually with good utage, was equally eafy, as he was equally enflaved, in the hands of his enemies and of his friends. His weakness, and his disputed title, were the chief causes of his public misfortunes: but whether his queen and his ministers were not guilty of some great abuses of

power, it is not eafy for us, at this diffance of time, to determine. There remain no proofs on record of any confiderable violation of the laws, except in the death of the Duke of Gloucetier, which was a private crime, formed no precedent, and was but too much of a piece with the ulual ferogity and crueity of the times-

§ 73. Smollett's Account of the Death of Henry VI. with fome Strictures of Character; is as follows.

This infurrection* in all probability haftened the death of the unfortunate Henry, who was found dead in the Tower, in which he had been confined lince the refloration of Edward. The greater part of historians have alleged, that he was affailinated by the Duke of Glonceker, who was a prince of the most brutal disposition; while fome moderns, from an affectation of fingularity, affirm that Henry died of grief and vexation. This, no doubt, might have been the cafe; and it must be owned, that nothing appears in history, from which either Edward or Richard could be convicted of having contrived or perpetrated his murder: but, at the fame time, we must observe some concurring circumflances that amount to ftrong prefumption against the reigning monarch, Henry was of a hale conflitution, but just turned of fifty, naturally infentible of affliction, and hackneyed in the vicillitudes of fortune, fo that one would not expect he should have died of age and infirmity, or that his life would have been affected by gricf arising from his laft difatter. His fudden death was sulpicious, as well as the conjuncture at which he died, immediately after the fuppression of a rebellion, which seemed to declare that Edward would never be quiet, while the head of the house of Lancaster remained alive: and laftly, the fulpicion is confirmed by the characters of the reigning king and his brother Richard, who were bloody, barbarous, and unrelenting. Very different was the disposition of the ill-fated Henry, who, without any princely virtue or qualification, wastotally free from cruelty orrevenge; on the contrary, he could not, without reluctance, confent to the punishment of those male actors who were facrificed to the public fafety; and frequently funcained indignities of the groflett nature, without discovering the least mark of refentment. He was chafte, pious, compaf-

Revolt of the bastard of Falconbridge, iionate,

fionate, and charitable; and foinoffensive, that the bishop, who was his confessor for ten years, declares, that in all that time he had never committed any fin that required penance or rebuke. In a word, he would have adorned a cloifter, though he disgraced a crown; and was rather respectable for those vices he wanted, than for those virtues he possessed. He sounded the colleges of Eton and Windsor, and King's College in Cambridge, for the reception of those scholars who had begun their studies at Eton.

On the morning that fucceeded his death, his body was exposed at St. Paul's church, in order to prevent unfavourable conjectures, and, next day, sent by water to the abbey of Chertsey, where he was interred: but it was afterwards removed, by order of Richard HI. to Windsor, and there buried with great funeral

Tolemnity.

§ 74. Character of EDWARD IV.

Edward IV. was a prince more splendid and shewy, than either prudent or virtuous; brave, though cruel; addicted to pleasure, though capable of activity in great emergencies; and less fitted to prevent ills by wife precautions, than to remedy them after they took place, by his vigour and enterprize. Hume.

§ 75. Another Character of EDWARD IV.

He was a prince of the most elegant perfon and infinuating address; endowed with the utmost fortitude and intrepidity; possessed of uncommon lagacity and penetration; but, like all his ancestors, was hrutally cruel and vindictive, perfidious, lewd, perjured, and rapacious; without one liberal thought, without one fentiment of humanity. Smollett.

§ 76. Another Character of EDWARD IV.

When Edward ascended the throne, he was one of the handsomest men in England, and perhaps in Europe. His noble mien, his free and easy way, his asfable carriage, won the hearts of all at firstlight. These qualities gained him esteem and assection, which stood him in great stead in several circumstances of his life. For some time he was exceeding liberal: but at length he grew covetoas, not so much from his natural temper, as out of a necessity to bear the immediate expences which his pleasures ran him into.

Though he had a great deal of wit, and

a found judgment, he committed, however, feveral overlights. But the crimes Edward is most justly charged with, are his cruelty, perjury, and incontinence. The first appears in the great number of princes and lords he put to death on the scattold, after he had taken themin battle. If there ever was realon to shew mercy in case of rebellion, it was at that satal time, when it was almost impossible to shad neuter, and so difficult to chuse the justes side between the two houses that were contending for the crown.

And yet we do not fee that Edward had any regard to that confideration. As for Edward's incontinence, one may fay, that his whole life was one continued feene of excefs that way; he had abundance of miftreffes, but especially three, of whom he faid, that one was the merriest, the other the wittics, and the other the holiest in the world, since she would not stir from the church but when he fent for her.—What is most astonishing in the life of this prince is his good fortune, which seemed

to be prodigious.

He was raised to the throne, after the loss of two battles, one by the Duke his father, the other by the Earl of Warwick, who was devoted to the house of York. The head of the father was still upon the walls of York, when the son was pro-

claimed in London.

Edward elcaped, as it were, by miracle, out of hisconfinement at Middleham. He was reftored to the throne, or at least received into London, at his return from Holland, before he had overcome, and whilft his fortune yet depended upon the illue of a battle, which the Earl of Warwick was ready to give him. In a word, he was ever victorious in all the battles wherein he fought in person. Edward died the 9th of April, in the 42d year of his age, after a reign of twenty-two years and one month.

§ 77. EDWARD V.

Immediately after the death of the fourth Edward, his fon was proclaimed king of England, by the name of Edward V. though that young prince was but just turned of twelve years of age, never received the crown, nor exercised any function of royalty; to that the interval between the death of his father, and the usurpation of his uncle; the Duke of Gloucester, asterwards Richard III. was properly an interregnum, during which

the uncle took his measures for wresting the crown from his nephew.

§ 78. Character of RICHARD III.

Those historians who favour Richard, for even He has met partizans among later writers, maintain that he was well qualified for government, had he legally obtamed it; and that he committed no crimes but fuch as were necessary to procure him polleflion of the crown; but this is a very poor apology, when it is confelled that he was ready to commit the most horrid crimes which appeared necessary for that purpole; and it is certain that all his courage and capacity, qualities in which hereally feems not to have been deficient, would neverhave made compensation to the people, for the danger of the precedent, and for the contagious example of vice and murder, exalted upon the throne. This prince was of fmail stature, hump-backed, and had a very harth difagreeable vifage; fo that his body was in every particular no less deformed than his mind.

§ 79. Another Character of RICHARD III.

Such was the end * of Richard III. the most cruel unrelenting tyrant that ever fat on the throne of England. He feems to have been an utter stranger to the foster emotions of the human heart, and entirely destitute of every social enjoyment. His ruling passion was ambition: for the gratification of which be trampled upon every law, both human and divine; but this thirly of dominion was unattended with the least work of generolity, or any delire of rendering himfelf agreeable to his fellow-creatures: it was the ambition of a favage, not of a prince; for he was a folitary king, altogether detached from the reft of mankind, and incapable of that fatisfaction which refults from private friendship and ditinterested society. We must acknowledge, however, that after his accession to the throne, his administration in general was conducted by the rules of justice; that he enacted falutary laws, and established wife regulations; and that if his reign had been protracted, he might have proved an excellent king to the Englith nation. He was dark, filent, and referved, and fo much master of dislimulation, that it was almost impossible to dive into his real fentiments, when he wanted to conceal his defigns, this stature was finall, his aspect cloudy, fevere, and forbidding : one of his arms

. Slain at the buttle of Befworth.

was withered, and one floulder higher than another, from which circumfiance of deformity he acquired the epithet of Crookbacked. Smollett.

§ 80. Character of HENRY VII.

The reign of Henry VII. was in the main fortunate for his people at home, and honourable abroad. He put an end to the civil wars with which the nation had been fo long haraffed; he maintained peace and order to the state; he depressed the former exorbitant power of the nobility; and, together with the friendship of some foreign princes, he acquired the consideration and regard of all.

He loved peace, without fearing war; though agitated with criminal suspicions of his servants and ministers, he discovered no timidity, either in the conduct of his attairs, or in the day of battle; and, though often severe in his punishments, he was commonly less actuated by revenge than by the maxims of policy.

The fervices which he rendered his people were derived from his views of private interest, rather than the motives of public spirit; and where he deviated from ielish regards, it was unknown to himself, and ever from malignant prejudices, or the mean projects of avarice; not from the salties of passion, or allurements of pleasure; still less from the benigh motives of friendship and generosity.

His capacity was excellent, but fomewhat contracted by the narrowness of his heart; he possessed infinuation and address, but never employed these talents except fome great point of interest was to be gained; and while he neglected to conciliate the affections of his people, he often felt the danger of reiling his authority on their fear and reverence alone. He was always extremely attentive to his affairs; but possessed not the faculty of seeing far into futurity; and was more expert at promoting a remedy for his mittakes, than judicious in avoiding them. Avarice was on the whole his ruling passion; and he remained an inftance almost fingular, of a man placed in a high tration, and pofferfed of talents for great affairs, in whom that passion predominated above ambition. Even among private persons, avarice is nothing but a species of ambition, and is chiefly incited by the prospect of that regard, diffinction, and confideration, which attends on riches.

Died April 12th, 1509, aged 52, having reigned 23 years. Hume.

§ 81.

\$ 81. Another Character of HENRY VII.

Henry wastall, straight and well-shaped. though flender; of a grave afpect, and faturnine complexion; authore in his drefs, and referved in converfation, except when be had a favourite point to carry; and then he would fawn, flatter, and practife all the arts of infinuation. He inherited a , natural fund of fagacity, which was improved by fludy and experience; nor was he deficient in perfonal bravery and political courage. He was cool, ciofe, cunning, dark, diffruftful, and defigning; and of all the princes who had fat on the English throne, the most fordid, selfish, and ignorant. He possessed, in a peculiar manner, the art of turning all his domestic troubles, and all his foreign disputes, to his own advantage; hence he acquired the appellation of the English Solomon; and all the powers of the continent courted his alliance, on account of his wealth, wifdom, and uninterrupted prosperity.

The nobility he excluded entirely from the administration of public affairs, and employed clergymen and lawyers, who, , as they had no interest in the nation, and depended entirely upon his favour, were · more obsequious to his will, and ready to . concur in all his arbitrary measures. At the fame time it must be owned, he was a wife legislator; chaffe, temperate, and allidness in the exercise of religious deties; decent in hisdeportment, and exact in the and administration of justice, when his private Saterell was not concerned; though he frequeptly used religion and justice as cloaks for perildy and of predien. His foul was continually aguated by two ruling paffions, equally base and unkingly naciety, the flar of h fing his grown, and the defire of amaffing riches; and thele motives in-· Ruencedhis whole conduct. Neverthelefs, his apprehending and avarice redounded, on the whole, to the advantage of the nation. They first induced him to depress the nobility, and abolith the foudal tenures. which rendered them equally formidable to the prince and people; and his avarice prompted him to encourage induftry and trade, because it improved his customs, and enriched his hbjects, whom he could afterwards pillage at difcretion.

. § 82. Character of HENRY VIII.

. It is difficult to give a just fummary of this prince's qualities; he was fo different from

himfelf in different parts of his reign, that, as is well remarked by Lord Herbert, his hiftory is his best character and defeription. The absolute and uncontrolled authority which he maintained at home, and the regard he obtained among foreign nations, are circumfiances which entitle him to the appellation of a great prince; while his tyranny and cruelty from to exclude him from the characterof a good

He poffesfed, indeed, great vigour of mind, which qualified him for exercifing dominion over men; courage, intrepidity, vigilance, inflexibility; and though thefe qualities lay not always under the guidance of a regular and folid judgment, they were accompanied with good parts, and an ententive capacity; and every one dreaded a conteit with a man who was never known to yield, or to forgive; and who, in every controverly, was determined to ruin himfelf, or his antagonift.

A catalogue of his vices would comprehend many of the worst qualities incident to human nature. Violence, crueky, profution, rapacity, injuttice, obstinacy, arrogance, bigotry, prefumption, caprice; but neither was he subject to all these vices in the most extreme degree, nor was he at intervals altogether devoid of virtues. He was fincere, open, gallant, liberal, and capable at leaft of a temporary friendship and attachment. In this respect he was me fortunate, that the incidents of his times ferved to display his faults in their full light; the treatment he met with from the court of Rome provoked him to violence; the danger of a revolt from his tuperfiitious subjects seemed to require the most extreme feverity. But it must at the same time be acknowledged, that his fituation tended to throw an additional luttre on what was great and magnanimous in his character.

The cimilation, between the Emperor and the French King rendered his alliance, notwithstanding his impolitic conduct, of great importance to Europe. The extensive powers of his prerogative, and the submittion, not to say slavish disposition of his parliament, made it more cafy for him to assume and maintain that entire dominion, by which his reign is fo much diftinguithed in Englith biftory.

It may feem a little extraordinary, that notwithfranding his cruelty, his extortion, his violence, his arbitrary administration, this prince not only acquired the regard of his fubjects, but never was the object of

their hatred; he feems even, in fome degree, to have possessed their love and assection. His exterior qualities were advantageous, and fit to captivate the multitude; his magnificence and personal bravery, rendered him illustrious to vulgareves; and it may be said with truth, that the English in that age were so thoroughly subdued, that, like eastern slaves, they were inclined to admire even those acts of violence and tyranny, which were exercised over themselves, and at their own expence.

Died January 28th, 1547, anno attatis 57, regni 37. Hume.

§ 83 Another Character of HENRY VIII.

Henry VIII. before he became corpulent, was a prince of a goodly perfonage, and commanding afpect, rather imperious He excelled in all the than dignified. exercifes of youth, and possessed a good understanding, which was not much improved by the nature of his education. Instead of learning that philosophy which opens the mind, and extends the qualities of the heart, he was confined to the fludy of gloomy and scholastic disquisitions, which ferved to cramp his ideas, and pervert the faculty of reason, qualifying him for the disputant of a cloiner, rather than the lawgiver of a people. In the first years of his reign, his pride and vanity feemed to domineer over all his other pations; though from the beginning he was impetious, headstrong, impatient of contradiction and advice. He was raft, arrogant, prodigal, vain-glorious, pedantic, and fuperstitious. He delighted in pomp and pageantry, the bauldes of a weak mind. His pallions, foothed by adulation, rejected all reflraint; and as he was an utter firanger to the finer feelings of the foul, he gratified them at the expence of juftice and humanity, without remorfe or compunction.

If wrested the supremacy from the bissop of Rome, partly on conscientious motives, and partly from reasons of state and conveniency. He suppressed the monasteries, in order to supply his extravagance with their spoils; but he would not have made those acquisitions, had they not been productive of advantage to his nobility, and agreeable to the nation in general. He was frequently at war; but the greatest conquest he obtained wasoverhis own parliament and people.—Religious disputes had divided them into two fac-

tions. As he had it in is power to make either feale preponderate, each courted his favour with the most obsequious stop million, and in triuming the balance, he kept them both in subjection. In accustoming them to these abject compliances, they degenerated into slaves, and he from their profittation acquired the most desputic authority. He became rapacious, arbitrary, froward, sretful, and so ruel that he seemed to delight in the blood of his subjects.

He never feemed to betray the least fymptoms oftenderness in his difposition; and, as we already observed, his kindness to Cranmer was an inconsistence in his character. He feemed to live in defiance of censure, whether ecclesiastical or fecular; he died in appreheation of futurity; and was buried at Windfor, with idle procedions and childish pageantry, which in those days pasted for real tatteand magnificence.

Smotlett.

§ 84. Character of EDWARD VI.

Thus died Edward VI. in the fixteenth year of his age. He was counted the wonder of his time; he was not only learned in the tongues and the liberal felences, but he new well the state of his kingdom. He kept a table-book, in which he had written the characters of all. the emineut men of the nation : he fludied fortification, and understood the mint well. He knew the harbours in all his dominions, with the depth of the water, and way of coming into them. He understood foreign affairs fo well, that the ambattadors who were fent into England, publithed very extraordinary things of him, in all the courts of Europe. He had great quickness of apprehension; but being distrutiful of his inemory, he took notes of . every thing he heard (that was confiderable) in Greek characters, that those about him might not understand what he writ, which heafterwards copied out fair in the journal that he kept. His virtues were wonderful: when he was made to believe that his uncle was guilty of conspiring the death of the other counfeilors, he upon that abandoned him.

Barnaby Fitz Patrick washis favourite; and when he fent him to travel, he writ ofttohim to keep good company, to avoid excefs and luxury; and to improve himfelf in those things that might render him capable of employment at his return. He was afterwards made Lord of Upper Offory in Ireland, by Queen Elizabeth, and

die

did answer the hopes this excellent king had of him. He was very merciful in his nature, which appeared in his unwillingness to fign the warrant for burning the maid of Kent. He took great care to have his debts well paid, reckoning that a prince who breaks his faith, and lofes his credit, has thrown up that which he can never recover, and made himfelf liable to perpetual distrust, and extreme contempt. He took special care of the petitions that were given him by poor and opprest people. But his great zeal for religion crowned all the refl-it was not an angry heat about it that actuated him, but it was a true tenderness of conscience, founded on the love of God and his neighbour. Thefe extraordinary qualities, fet off with great fweetness and assability, made him univerially beloved by his people. Burnet.

& 85. Another Character of EDWARD VI.

All the English historians dwell with pleasure on the excellencies of this young prince, whom the flattering promises of hope, joined to many real virtues, had made an object of the most tender affections of the public. He possessed mildness of disposition, application to study and bulinels, a capacity to learn and judge, and an attachment to equity and justice. He feems only to have contracted, from his education, and from the age in which he lived, too much of a narrow prepoffeffion in matters of religion, which made him incline fomewhat to bigotry and per-But as the bigotry of Protestants, less governed by priests, lies under more restraints than that of Catholics, the effects of this malignant quality were the lessto be apprehended, if a longer life had been granted to young Edward. Hume.

§ 86. Another Character of EDWARD VI.

Edward is celebrated by historians for the beauty of his person, the sweetness of his disposition, and the extent of his knowledge. By the time he had attained his fixteenth year, he understood the Greek, Latin, French, Italian, and Spanish languages; he was verfed in the feiences of logic, music, natural philosophy, and master of all theological disputes; infomuch that the famous Cardanus, in his return from Scotland, visiting the English court, was aftonished at the progress he had made in learning; and afterwards extolled him in his works as a prodigy of nature. Notwithitanding thefe encomiums, he feems

to have had an ingredient of bigotry in his disposition, that would have rendered him very troublesome to those of tender confciences, who might have happened to differ with him in religious principles; nor can we reconcile either to his boafted humanity or penetration, his confenting to the death of his uncle, who had ferved him faithfully; unlesswe suppose he wanted refolution to withstand the importunities of his ministers, and was deficient in that vigour of mind, which often exists independent of learning and culture. Smollett.

§ 87. Character of MARY.

It is not necessary to employ many words in drawing the character of this princefs. She potfesfedfew qualities either estimable or amiable, and her person war as little engaging as her behaviour and address. Obstinacy, bigotry, violence, cruelty, malignity, revenge, and tyranny; every circumflance of her character took a tincture from her bad temper and narrow understanding. And amidst that complication of vices which entered into her composition, we shall scarcely find any virtue but fincerity, a quality which she scems to have maintained throughout her whole life, except in the beginning of her reign, when the necessity of her affairs obliged her to make fome promifes to the Protestants, which she certainly never intended to perform. But in those cases a weak bigotted woman, under the government of priests, easily finds cafuistry sufficient to justify to herself the violation of an engagement. She appears, as well as her father, to have been fusceptible of some attachment of friendship; and that without caprice and inconstancy, which were fo remarkable in the conduct of that monarch. To which we may add, that in many circumstances of her life, the gave indications of resolution and vigour of mind; a quality which feems to have been inherent in her family. . Hume. Died Nov. 7, A. D. 1558.

§ 88. Another Character of MARY.

We have already observed, that the characteristics of Mary were bigotry and revenge: we shall only add, that she was proud, imperious, froward, avaricious, and wholly destitute of every agreeable qualification.

§ 89. Character of Elizabeth. Elizabeth had a great deal of wit, and

was naturally of a found and folid judgment. This was vitible by her whole management, from one end of her reign to the other. Nothing thews her capacity more, than her address in furmounting ail the difficulties and troubles created by her enemies, especially when it is considered whothele enemies were; persons the most powerful, the moftartful, the moft fubtile, and the leaft forugulous in Europe. The following are the maxims which the laid down for the rule and measures of her whole conduct, and from which the never fwerved: "To make herfelf beloved by "her people: To be frugal of her trea-"fure: To keep up diffention amongst "her neighbours."

Her enemies pretend that her abilities confitted wholly in overthrained diffimulation, and a profound hypocrify. word, they fay she was a perfect comedian. For my part, I don't deny that the made great use of diffimulation, as well with regard to the courts of France and Spain, as to the queen of Scotland and the Scots. I am allo perfuaded that, being as much concerned to gain the love and effeem of her fubjects, the affected to fpeak frequently, and with exaggeration, of her tender affection for them. And that the had a mind to make it believed that the did some things from an excessive love to her people, which the was led to more by her own interest.

Avarice is another failing which her own friends reproach her with. I will not deny that the was too parfimonious, and upon fome occasions stuck too close to the maxims she had laid down, not to be at any expence but what was absolutely necessary. However, in general I maintain, that if her circumstances did not require her to be covetous, at least they required that she should not part with her money but with great caution, both in order to preserve the affection of her people, and to keep herself always in a condition to withstand her enemies.

She is accused also of not being so chaite as she affected to appear. Nay, some pretend that there are now in England, the descendants of a daughter she had by the Earl of Loicetter; but as hitherto nobody has undertaken to produce any proofs of this accusation, one may fafely reckon it among the slanders which they endeavoured to stain her reputation with, both in her life-time and after her decease.

It is not fo eafy to justify her concerning the death of the queen of Scots. Here it must be owned the facrificed equity, justice, and it may be her own conscience, to her fafety. If Mary was guilty of the murder of her hulband, as there is ground to believe, it was not Elizabeth's business to punish her for it. And truly it was not for that she took away her life; but she made use of that pretence to detain her in prilon, under the deceitful colour of making her innocence appear. On this occafion her diffimulation was blame-worthy, This first piece of injustice, drew her in afterwards to use a world of artful devices to get a pretence to render Mary's imprifonment perpetual. From hence arose in the end, the necessity of putting her to death on the scaffold. This doubtlefs is Elizabeth's great blemish, which manifestly proves to what degree the carried the fear of loing a crown. The continual fear and uneafiness she was under on that account, is what characterifes her reign, because it was the main spring of almost all The best thing that can be her actions. faid in Elizabeth's behalf is, that the queen of Scots and her friends had brought matters to fuch a pass, that one of the two queens must perish, and it was natural that the weakeft should fall. I don't believe anybody ever questioned her being a true Protenant. But, as it was her interest to be fo, fome have taken occasion to doubt whether the zeal she expressed for her religion, was the effect of her perfuaiion or policy. All that can be faid is, that she happened fometimes to prefer her temporal concerns before those of religion. To fum up in two words what may ferve to form Elizabeth's character, I shall add, the was a good. and illustrious queen, with many virtues and noble qualities, and few faults. But what ought above all things to make her memory precious is, that she caused the English to enjoy a state of felicity unknown to their ancestors, under most part of the kings, her predecessors.

Died March 24, 1603, aged 70, having reigned 44 years, 4 months and 8 days.

Rapin.

§ 90. Another Character of ELIZABETH.

There are few great personages in history who have been more exposed to the calumny of enemies, and the adulation of friends, than queen Elizabeth; and yet there is scarce any whose reputation has been more certainly determined, by the wnamimous

unanimous confent of posterity. The unnfual length of her administration, and the firong features of her character, were able to overcome all prejudices; and obliging her detractors to abate much of their invectives, and her admirers fomewhat their. panegyricks, have at last, in spite of political factions, and, what is more, of religious animolities, produced an uniform judgment with regard to her conduct. Her vigour; her conflancy, her magnanimity, her penetration, and vigilance, are allowed to merit the highest praise, and appear not to have been furpatled by any perfor who everfilled a throne. A conduct lets vigorous, less imperious; more incere, more indulgent to her people, would have been requilite to form a perfect character. By the force of her mind, the controlled all her more active and ftronger qualities, and prevented them from running into excess. Her heroilin was exempt from all temerity, her frugality from avarice, her friendthip from partiality, heractive for it from turbuleuce and a vain ambition. She guarded not herfelf with equal care, or equal fuccels from leffer infirmities; the rivalship of beauty, the defire of admiration, the jealouty of love, and the fallies of anger.

Her fingular talents for government were founded equally on her temper and on her capacity. Endowed with a great command of herfelf, the obtained an uncontrouled afcendant over her people; and while the merited all their effect by her real virtues, the alto engaged their affection by her pretended ones. Few fovereigns of England forceded to the throne in more difficult circumffances; and none ever conducted the government with fuch uniform fuccels and felicity. Though unacquainted with the practice of toleration, the true fecret for managing religious factions, the preferved her people, by her fuperior providence, from those confusions in which theological controverly had involved all the neighbouring nations; and though her enemies were the most powerful princes in Europe, the most active, the most enterprizing, the least forupulous, the was able by her vigour to make deep impredions on their flate; her own greatness meanwhile untouched and unimpaired.

The wife miniters and brave warriors who flourished during her reign, share the praife of her success; but instead of lessening the applicate due to her, they make great addition to it. They owed all of

them their advancement to her choice; they were supported by her constancy; and with all their ability they were never able to acquire any undue ascendant over her. In her family, in her court, in her kingdom, she remained equally mistress. The force of the tender passions was great over her, but the force of her mindwas still superior; and the combat which her victory visibly cost her, serves only to display the firmness of her resolution, and the lostiness of her ambitious sentiments.

The fame of this princefs, though it has furmounted the prejudices both of faction and bigotry, yet lies fill exposed to another prejudice which is more durable, becaufe more natural, and which, according to the different views in which we furvey her, is capable either of exalting beyond measure, or diminishing the luttre of her character. This prejudice is founded in confideration of her fex. When we contemplate her as a woman, we are apt to be firuck with the highest admiration of her great qualities and extensive capacity; but we are apt also to require some more foftness of disposition, some greater lenity of temper, fome of those amiable weakness. es by which her fex is diftinguished. But the true method of estimating her meritis, to lay afide all those considerations, and confider her merely as a rational being, placed in authority, and entrufted with the government of mankind. We may find it difficult to reconcile our fancy to her as a wife, or a mistress; but her qualities as a fovereign, though with fome confiderable exceptions, are the object of undifputed applaufe and approbation.

thus left unfinished by

Hume.

§ 91. Another Character of ELIZABETH.

Elizabeth, in her perlon, was masculine, tall, ftraight, and ftrong-limbed, with an high round forehead, brown eyes, fair complexion, fine white teeth, and yellow hair; the danced with great agility; her voice was firong and fhrill; the understood mutic, and played upon feveral infiruments. She posselled an excellent memory, and understood the dead and living languages, and made good proficiency in the fciences, and was well read in history. Her conversation was sprightly, and agreeable, her judgment folid, her apprehension acute, her application indelatigable, and her courage invincible. She was the great bulwark

bolwark of the Protestant religion; she was highly commendable for her general regard to the impartial administration of junice; and even for her rigid @conomy, whichfar edthepublic money, and evinced that love for her people which the fo-warmly profelled. Yet the deviated from julice in fome infrances when her interest and pattions were concerned; and, notwithhanding all her great qualities, we cannot deny the was vain, proud, imperious, and in fome cafes cruel: her predominant pallion was jealouty and avarice; though the was also subject to such violent guits of anger as overwhelmed all regard to the dignity of her fration, and even hurried her beyond the common bounds of decency. She was wife and iteady in her principles of government, and above all princes fortunate in a ministry:

Smullett.

§ 92. Character of JAMES I.

James was of a middle flature, of a fine complexion, and a foft fkin; his perfon plamp, but not corpulent, his eyes large and rolling, his beard thin, his tongue too big for his mouth, his countenance difagreeable, his air aukward, and his gait remarkably ungraceful, from a weakness in his knees that prevented his walking without affiltance; he was tolerably tempetate in his diet, but drank of little elfe than rich and tirong wines. His character, from the variety of grotelque qualities that compose it, is not easy to be defineated. The virtues he polletled were to loaded with a greater proportion of their neighbouring vices, that they exhibit no lights, west off the dark shades; his principles of generously were tainted by fuch a childith profision, that they left him without means of paying his just obligations, and fubicated him to the necessity of attempting irregular, illegal, and unjuit methods of acquiring money. His friendthip, not to give it thename of vice, was directed by so puerile a fancy, and fo abfurd a caprice, that the objects of it were contemptible, and its confequences attended with fuch an unmerited profusion of favours, that it was Perhapsthe most exceptionable quality of any he postelled. His dittinctions wereformed on principles of felfifuness; he valued no person for any endowments that could not be made fubtervient to his pleafures or his interest; and thus he rarely adranced any man of real worth to preferment. His familiar conversation, both in writing and in speaking, was stuffed with vulgar and indecent phrases. Though proud and arrogant in his temper, and full of the importance of his station, he defeended to busionery, and suffered his savourites to address him in the most disrespectful terms of gross sanisarity.

Himfelf affected a fententious wit, but role no higher in those attempts than to quaint, and often tiale conceits. His education had been a more learned one than is commonly beliewed on princes; this, from the conceit it gave him, turned out a very difadvantageous circumftance, by contracting his opinions to his own narrow views; his pretences to a confummate knowledge in divinity, politics, and the art of governing, expete him to a high degree of ridicule; his conduct thewing him more than commonly deficient in all thefe points. His romantic idea of the natural rights of princes, caused him publicly to avow pretentions that imprefled into the minds of the people an incurable jealoufy; this, with an affectation of a profound skill in the art of diffembling, or kingcraft, as he termed it, rendered him the object of fear and distrust; when at the fame time he was himfelf the only dupe to an impertinent, utclefs hypocrify.

If the laws and contitution of England received no prejudice from his government, it was owing to his want of ability to effect a change fuitable to the purpose of an arbitrary fway. Stained with thefe vices, and fullied with their weaknesses, if he is even exempt from our hatred, the exemption must arise from motives of contempt. Despicable as he appears through his own Britannic government, his behaviour when king of Scotland was in many points unexceptionable; but, intoxicated with the power he received over a people whote privileges were but feebly established, and who had been long subjected to civil and ecclefialtical tyranny, he at once flung off that moderation that hid his deformities from the common eye. It is alleged, that the corruption he met with in the court of England, and the time-ferving genius of the English noblemen, were the great means that debauched him from his cincumspect conduct. Among the forwardest of the worthless tribe was Cecil, afterwards Earl of Salisbury, who told him on his coming to the crown, that he should find his English subjects like asses, on whom he might lay any burden, and 3 C thould

should need neither bit nor bridle, but their asses ars. Died March 27, A. D. 1625. Aged 59. Macauley.

§ 93. Another Character of JAMES.

James was in his stature of the middle fize, inclining to corpulency; his forehead was high, his heard feauty, and his afpect mean; his eyes, which were weak and lane. guid, he rolled about incessantly, as if in quest of novelty; his tongue was so large, that in fpeaking or drinking, he beliabbered the by-standers: his knees were fo weak as to bend under the weight of his body; his address was aukward, and his appearance flovenly. There was nothing dignified either in the composition of his mind or person. We have in the course of his reign exhibited repeated instances of his ridiculous vanity, prejudices, profution, folly, and littlenets of foul. All that we can add in his favour is, that he was averse to cruelty and injustice; very little addicted to excess, temperate in his meals, kind to his fervants, and even defirous of acquiring the love of his fubjects, by granting that as a favour, which they claimed as a privilege. His reign, though ignoble to himfelf, was happy to his people. They were curiched by commerce, which no war interrupted. They felt no fevere impolitions; and the commons made confiderable progress in ascertaining the liberties of the nation. Smollett.

§ 94. Another Character of James.

No prince, fo little enterprizing and for inoffentive, was ever to much expoted to the opposite extremes of calumny and flattery, of fatire and panegyric. And the factions which began in his time, being ftill continued, have made his character be as much disputed to this day, as is commonly that of princes who are our contemporaries. Many virtues, however, it must be owned, he was possessed of; but not one of them pure, or free from the contagion of the neighbouring vices. His generofity bordered on profusion, his learning on pedantry, his pacific disposition on pusillanimity, his wildom on cunning, his friendhip on light fancy, and boxish fondness. While he imagined that he was only maintaining his own authority, he may perhaps be suspected in some of his actions, and fill more of his pretentions, to have encreached on the liberties of his people.

While he endeavoured, by an exact neutrality, to acquire the good-will of all his neighbours, he was able to preferve fully the etseem and regard of none. His capacity was confiderable, but after to discourse on general maxims than to conduct any intricate butiness.

His intentions were just, but more adapted to the conduct of private life, than to the government of kingdoms. Aukward in his person, and ungainly in his manners, he was ill qualified to command refpect : partial and undifcerning in his affections, he was little fitted to acquire general love. Of a feeble temper more than a frugal judgment; exposed to our ridicule from his vanity, but exempt from our hatred by his freedom from pride and arrogance. And upon the whole it may be pronounced of his character, that al: hisqualities were fullied with weakness, and embellished by humanity. Political courage he was certainly devoid of; and from thence chiefly is derived the strong prejudice which prevails against his perfonal bravery: an inference, however, which must be owned, from general experience, to be extremely fullacious. Hume.

§ 95. Another Character of James.

The principal thing which is made to ferve for matter for king James's panegyric, is the constant peace he caused his subjects to enjoy. This cannot be faid to be the effect of chance, fince it clearly appears, it was his fole, or at least his chief aim in the whole course of his administration. Nothing, fay his friends, is more worthy a great king than fuch a delign. But the same defigu loses all its merit, if the prince discovers by his conduct, that he preferves peace only out of fear, careletluels, excellive love of cafe and repofe; and king James's whole behaviour thems he acted from these motives, though he colouned it with the pretence of his affection for the people.

His liberality, which fome praise him for, is exclaimed against by others as prodigality. These last pretend he gave without measure and difference, without any regard to his own wants, or the merit of those whom he heaped his favours

As to his manners, writers are no less divided: some will have him to be looked on as a very wife and virtuous prince; whilst others speak of him as a prince of a disolute life, given to drinking, and a

great fwearer in common conversation, especially when in a passion. He is likewise taxed with distributing the Earl of Estex's marriage, the pardoning the Earl and Counters of Somerset, the death of Sir Walter Raleigh, and the confidence wherewith in full parliament he called God to witness, that he never had any thoughts of giving the Papiss a toleration, which he could not affirm but by means of some mental reservation.

Butwhatever may be faid for or against James's person, it is certain England never source flourished less than in his reign; the English saw themselves exposed to the insults and jests of other nations, and all the world in general threw the blame on the king.

Rapin.

§ 96. Character of CHARLES I.

Such was the unworthy and unexampled fate of Charles I. king of England, who fell a facrifice to the most atrocious infolence of treason, in the forty-ninth year of his age, and in the twenty-fourth of his reign. He was a prince of a middling stature, robust, and well-proportioned. His hair was of a dark colour, his forehead high, his complexion pale, his vilage long and his afpect melancholy. He excelled in riding, and other manly exercifes; he inherited a good understanding from nature, and had cultivated it with great affiduity. His perception was clear and acute, his judgment folid and deciave; he possessed a refined taste for the libirglarts, and was a munificent patron to those who excelled in painting, sculpture, music, and architecture. In his private morals he was altogether unblemished and exemplary. He was merciful, modeft, chaste, temperate, religious, personally brave, and we may join the noble hittorian in faying, " He was the worthieft gentle-"man, the best master, the best friend, the " best husband, the best father, and the hest "christian of the age in which he lived." He had the misfortune to be bred up in high notions of the prerogative, which he thought his honour and his duty obliged him to maintain. Helivedat a time when thespirit of the people became too mighty forthofe restraints which theregal power derived from the constitution; and when the tide of fanaticifm began to overbear the religion of his country, to which he was confeientiously devoted, he suffered himfelt to be guided by counfellors, who were not only inferior to himfelf in knowledge.

and judgment, but generally proud, partial, and inflexible; and from an excess of conjugal affection, that bordered upon weakness, he paid too much deference to the advice and defires of his confort, who was superstitiously attached to the errors of popery, and importuned him incesfantly in favour of the Roman Catholics.

Such werethe fources of all that mifgovernment which was imputed to him during the first fisteen years of his reign. From the beginning of the civil war to his fatal cataftrophe, his conduct feems to have been unexceptionable. His infirmities and imperfections have been candidly owned in the course of his narration. He was not very liberal to his dependants: his conversation was not easy, nor his address pleasing; yet the probity of his heart. and the innocence of his manners, won the affection of all who attended his perfon, not even excepting those who had the charge of his confinement. In a word, he certainly deferved the epithet of a virtuous prince, though he wanted fome of those shining qualities which constitute the character of a great monarch. Beheaded January 30, 1648-9. Smollett.

§ 97. Another Character of CHARLES I.

The character of this prince, as that of moftmen, if not of all men, was mixed, but his virtues predominated extremely above hisvices; or, more properly speaking, his imperfections: for fcarce any of his faults arose to that pitch, as to merit the appellation of vices. To confider him in the most favourable light, it may be affirmed, that his dignity was exempted from pride, his humanity from weakness, his bravery from raffinels, his temperance from aufterity, and his frugality from avarice: all thefe virtues in him maintained their proper bounds, and morited unreferved praife. To speak the most harshly of him, we may affirm, that many of his good qualities were attended with fome latent frailty, which, though feemingly inconfiderable, was able. when seconded by the extreme malevolence of his fortune, to disappoint them of all their influence. His beneficent difpois tion was clouded by a manner not gracious, his virtue was tinctured with superstition, his good fenfe was disfigured by a deference to perfons of a capacity much inferior to his own, and his moderate temperexempted him not from hafty and precipitate resolutions. He deserves the epithet of a good, rather than a great man; and 3 C 2

was more fitted to rule in a regular chab-Lithed government, than either to give way to the eneroughments of a popular affembly, or finally to fobdue their pretentions. He wanted suppleness and dexterity sufficient for the first measure; he was not endowed with vigour requifite for the fecond. Had he been born an absolute prince, his humanity and good feofe had rendered his reign happy, and his memory precious. Had the limitations on the prerogative been in his time quite fixed and certain, his integrity, had made him regard as facred the boundaries of the constitution. Unhappily his fate threw him into a period when the precedents of many former reigns favoured firongly of arbitrary power, and the genius of the people ran violently towards liberty. And if his political prodence was not fufficient to extricate him from fo perilous a fituation, he may be excused; fince, even after the event, when it is commonly easy to correct all errors, one is at a lofs to determine what conduct in his circumstances would have maintained the authority of the crown, and preferred the peace of the nation. Exposed without revenue, without arms, to the affault of furious, implacable, and bigoted factions; it was never permitted him, but with the most fatal confequences, to commit the fmallest mistake; a condition too rigorous to be impoled on the greatest human capacity.

Some hittorians have rathly questioned the good faith of this prince; but for this reproach, the most malignant scrutiny of his conduct, which in every circumitance. is now thoroughly known, affordenot any reasonable foundation. On the centrary, if we consider the extreme difficulties to which he was fo frequently reduced, and compare the fincerity of his prefessions and declarations, we shall avow, that probity and honour ought justly to be numbered among his most thining qualities. In every treaty, those concessions which he thought in confeience he could not maintain, he never would by any motive or perfusion be induced to make.

And though some violations of the persistent of right may be imputed to him, those are more to be ascribed to the necessity of his situation, and to the lofty ideas of royal prerogative, which be had imbibed, than to any failure of the integrity of his principles. This prince was of a comely presence; of a sweet and melancholy aspect; his sace was regular,

bandforne, and well complexioned; his body frrong, healthy, and juftly proportioned; and being of middle stature, he was capable of enduring the greatest fatignes. He excelled in hortennaship and other exercises; and he possessed all the exterior, as well as many of the escutial, qualities, which form an accomplished prince.

§ 98. Another Character of CHARLES I.

In the character of Charles, as reprefented by his panegy rifts, we find the qualities of temperance, chastity, regularity, piety, equity, humanity, dignity, condefeention, and equanimity; fome have gone fo far as to allow him integrity, and many writers, who condemn his political principles, give him the title of a moral man. In the comparison of this representation with Charles's conduct, accurately and justly described, it is discernible that vices of the worst tendency, when shaded by a plaufible and formal carriage, when concordant to the interests of a faction, and the prejudices of the valgar, adume the appearances of, and are impufed on the credulous world as, virtues of the firk rank.

Passion for power was Charles's predominant vice; idolatry to his regal prerogatives, his governing principle. The interests of the crown, legitimated every measure, and fanctified, in his eye, the widest deviation from moral role.

Neither gratitude, clemency, humanity, equity, nor generolity, have place in the fair part of Charles's character; of the virtues of temperance, fortitude, and perfonal bravery he was undeniably peticited. His manners partook of diffipation, and his convertation of the indecency of a court. Hischaftity has been called in queftion, by an author of the highest repute; and were it allowed, it was tainted by an excels of uxoriouineis, which gave it the properties and the confequences of vice. The want of integrity is manifeft in every part of his conduct; which, whether the corruption of his judgment or heart, loft him fair opportunities of reinfratement in the throne, and wasthevice for which above all others he paid the tribute of his life. His intellectual powers were naturally good, and fo improved by a continual exercise, that though in the beginning of his reign he fpoke with difficulty and hefitation, towards the close of his life he discovered in his writings purity of language and dig-

nity of ftyle; in his debates, elocution, and quickness of perception. The high opinion he entertained of regal dignity, occasioned him to observe a trateliness and imperiousness in his manuer; which to the rational and intelligent, was unamiable and offensive; by the weak and formal it was mistaken for dignity.

In the exercise of horiemanthip he excelled; had a good tade, and even fkill, in feveral of the polite arts; but though a proficient in some branches of literature, was no encourager of uleful learning, and only patronized adepts in jargon of the divine right, and utility of kings and bi-His understanding in this point was so depraved by the prejudices of his education, the flattery of prictis, and the affections of his heart, that he would pever endure converfation which tended to inculcate the principles of equal right in men; and not with than diag that the particularity of his fituation enforced his attention to doctrines of this kind, he went out of the world with the fame foul prejudices with which he had been foffered in his nurfery, and cajoled in the zenith of his power.

Charles was of a middle stature, his body strong, healthy, and justly proportioned; and his aspect melancholy, yet not unpleasing. His surviving issue were three sons and three daughters. He was executed in the 49th year of his age, and bustle, by the appointment of the parliment, at Windsor, decently yet without point.

Mucaulay.

§ 99. Character of OLIVER CHOM-

Oliver Cromwell was of a robust make and constitution, his aspect manly though clownish. His education extended no farther than a superficial knowledge of the Latin tongue, but he inherited great talents from nature; though they were such as he could not have exerted to advantage at any juncture than that of a civil war, instanced by religious conteits. His character was formed from an amazing conjuncture of enthaliasso, hypocrify, and ambition. He was posseled of courage and resolution, that overlooked all dangers, and saw no difficulties. He dived into the characters of mankind with won-

derful fagacity, whilft he concealed his own purpoles, under the impenetrable flueld of diffimulation.

He reconciled the most atrocious crimes to the most rigid notions of religious obligations. From the feverest exercise of devotion, he relexed into the most ridiculous and idle buffoonery: yethe preferved the dignityand diffance of his character, inthe mide of the coarfest familiarity. He was cruel and tyrannic from policy; just and temperate from inclination; perplexed and despicable in his discourse; clear and confummate in his defigns; ridiculous in his reveries; respectable in his conduct; in a word, the ftrangest compound of villainy and virtue, baleness and magnanimity, abfurdity and good fenfe, that we find on record in the annals of man-Noble. kind*.

§ 100. Character of CHABLES II.

If we furvey the character of Charles. the Second in the different lights which it will admit of, it will appear very various, and give rife to different and even opposite fentiments. When confidered as a companion, he appears the most amiable and engaging of men; and indeed in this views his deportment must be allowed altogether unexceptionable. His love of raillery was to tempered with good breeding, that it was never offensive. His propentity to fatire wasfochecked with diferetion, that his friends never dreaded their becoming the object of it. His wit, to use the expression of one who knew hun well, and who was himfelfan exquifite judge +, could not be faid formuch to be very ratine dorelevated, qualities apt to beget jealoufy and apprehention in company, as to be a plain, mining, well-bred, recommending kind And though perhaps he talked morethan first rules of behaviour might permit, men were fop leafed with the affable, communicative deportment of the

• Cromwell died morethan five millions in debt; though the parliamenthad left him in the treafury above five hundred thousand possed; and in force to the value of feven hundred thousand pounds.

Richard, the fon of Cromwell, was proclaimed protector in his room; but Richard, being of a very different disposition to his father, religned his authority the 22d of April 1659; and foon atter tigated his abdication in form, and retrest to live feveral years after his religantion, at first on the Continent, and afterwards upon his paternal fortune at home.

3 C 3

From Noble's Memoirs of the Trotectoral

^{. †} Marquis of Halifax.

monarch, that they always went away contented both with him and with themfelves. This indeed is the most shining part of the king's character, and he seems to have been sensible of it; for he was fond of dropping the formalities of state, and of relapsing every moment into the

companion.

In the duties of private life, his conduct though not free from exception, was in the main laudable. He was an eafy generous lover, a civil obliging husband, a friendly brother, an indulgent father, and a good-natured master. The voluntary friends thips, however, which this prince contracted, nay, even his fense of gratitude, were feeble; and he never attached himself to any of his ministers or courtiers with a very fincere affection. He believed them to have no other motive for ferving him but felf-interett, and he was still ready, in his turn, to facrifice them to present ease and convenience.

With a detail on his private character we must fet bounds to our panegyric on Charles. The other parts of his conduct may admit of fome apology, but can deferve fmall applause. He was indeed so much fitted for private life, preferably to public, that he even puffelled order, frugality, occonomy in the former; was profule, thoughtless, negligent in the latter. When we confider him as a fovereign, his character, though not altogether void of virtues, was in the main dangerous to his people, and dishonourable to himself. Negligent of the interests of the nation, careless of its glory, averse to its religion, jealeas of its liberty, lavish of its treasure. and sparing only of its blood; he exposed it by his measures (though he appeared ever but in sport) to the danger of a furious civil war, and even to the ruin and ignominy of a foreign contest. all thefe enormities, if fairly and candidly examined, be imputed, in a great measure, to the indolence of his temper; a fault which, however unfortunate in a monarch, it is impossible for us to regard with great feverity.

It has been remarked of this king, that he never faid a foolift thing, nor ever did a wife one: a cenfore, which, though too far carried, feems to have fome foundation in his character and deportment. Died Feb. 6, 1685, aged 54. Hume.

§ 101. Another Character of CHARLES II. Charles II. was in his person tall and

fwarthy and his countenance marked with frong, harfh lineaments. His penetration was keen, his judgment clear, his understanding extensive, his conversation lively and entertaining, and he possessed the talent of wit and ridicule. He was easy of access, polite, and affable; had he been limited to a private station, he would have pailed for the most agreeable and bestnatured man of the age in which he lived, His greatest enemies allow him to have been a civil husband, an obliging lover, an atlectionate father, and an indulgent mafter; even as a prince he manifelled an aversion to cruelty and injustice. Yet these good qualities were more than over-balanced by his weakness and defects. He wasafcofferatreligion, and a libertine in his morals; carelefs, indolent, profufe, abandoned to effeminate pleafure, incapable of any noble enterprize, a ftranger to any manly friendthip and gratitude, deaf . to the voice of honour, blind to the allurements of glory, and, in a word, wholly deftitute of every active virtue. Being himfelf unprincipled, he believed mankind were falle, perfidious, and interested; and therefore practifed diffimulation for his own convenience. He was strongly attached to the French manners, government, and monarch; he was diffatisfied with his own limited prerogative. The majority of his own subjects he despised or hated, as hypocrites, fanatics, and republicans, who had perfecuted his father and himfelf, and fought the defiruction of the monarchy. In these sentiments, he could not be supposed to pursue the interest of the nation; on the contrary, he feemed to think that his own fafety was incompatible with the honour and advantage of his pepole.

§ 102. Another Character of CHABLES II.

Thus lived and died king Charles the Second. He was the greatest instance in history of the various revolutions of which any one man seemed capable. He was bred up the first twelve years of his life, with the splendour that became the heir of so great a crown. After that, he passed through eighteen years in great inequalities, unhappy in the war, in the loss of his father, and of the crown of England.—While he was abroad at Paris, Colen, or Brussels, he never seemed to lay any thing to heart. He pursued all his diversions, and irregular pleasures, in a free career; and seemed to

be as ferene under the folk of a crown, as the greatest philosopher could have been. Nor did he willingly bearken to any of those projects, with which, he complained often, his chancellor perfecuted him. That in which he feemed most concerned was, to find money for supporting his expence. And it was often faid, that if Cromwell would have compounded the matter, and have given him a good round pention, he might have been induced to relign his title to him. During his exile, he delivered himself so entirely to hispleasures, that he became incapable of application. frent little of his time in reading and Rudy; and yet less in thinking. And in the statehisassairs were then in, he accustomed himself to say to every person, and upon alloccations, that which bethought would pleasemost: fo that words or promites went very eafily from him. And he had to ill an opinion of mankind, that he thought the great art of living and governing was to manage all things and all perfons, with a depth of craft and diffiniulation. defired to become absolute, and to overfurn both our religion and laws; yet he would neither run the rifque, nor give himself the trouble, which so great a defign required. He had an appearance of gentleness in his outward deportment; but be feemed to have no bowels nor tender-Bels in his nature; and in the end of his life he became cruel. Burnet.

§ 103. Another Character of CHARLES II.

The character of Charles the Second, like the transactions of his reign, has affuned various appearances, in proportion to the passions and prejudices of different To affirm that he was a great and good king, would be as unjust as to allege that he was destitute of all virtue, and a bloody and inhuman tyraut. The indolence of his disposition, and the distipation occasioned by his pleasures, as they were at first the source of his misfortunes, became afterwards the sufety of the nation. Had he joined the ambition of power, and the perfeverance and attention of his brother, to his own infinuating and engaging address, he might have fecared his reputation with writers, by enflaving them with the nation.

In hisperson he wastall and wellmade. His complexion was dark, the lines of his face tirong and harth, when fingly traced: but when his features were comprehended in one view, they appeared dignified and

even pleasing. In the motions of his perfon he was only, graceful, and firm. His contitution wastirong, and communicated an active vigour to all his limbs. Though a lover of eafe of mind, he was fond of bodily exercife. He rofe early, he walked much, he mixed with the meaneft of his fubjects, and joined in their conversation, without diminishing his own dignity, or railing their prefumption. He was acquainted with many perfons in the lower ttations of life. He captivated them with fprightly terms of humour, and with a kind of good-natured wit, which rendered thempleafed with themfelves. His guards only attended him on public occasions. He took theair frequently in company with a fingle friend; and though crowds followed him, it was more from a wish to attract his notice, than from an idle curiofity. When evident defigns against his life were dailyexhibited before the courts of justice, he changed not his manner of appearing in public. It was foon after the Rye-house plotwas discovered, he is said to have been severe on his brother's character, when he exhibited a striking feature of his own. The duke returning from hunting with his guards, found the king one day in Hyde Park. He expressed his furprise how his majelty could venture his person alone at fuch a perilous time. "James," (replied the king) "take you care of yourfelf, and "I am fafe. No man in England will " kill me, to make you king."

When he was opposed with most violence in parliament, he continued the most popular man in the kingdom. His goodbreeding as a gentleman overcame the opinion conceived of his faults as a king. Hisaffability, his eafy address, his attention to the very prejudices of the people, rendered him independent of all the arts of hisenemies to inflame the vulgar. He is faid with reason to have died opportunely for his country. Had, his life extended to the number of years which the firength of his contitution feemed to promife, the nation would have loft all memory of their liberties. Had his fate placed Charles the Second in these latter times, when influence supplies the place of obvious power; when the crown has cealed to be diffressed through the channel of its necessities; when the representatives of the people, in granting supplies for the public fervice, provide for themselves; his want of ambition would have precluded the jealouly, and his popular qualities fecured the utmost

C4 admiration

admiration of his subjects. His gallantry itself would be confirm almost prict, in an age where decency is only an improvement on vice.

Macpherjon.

§ 104. Character of James II.

In many respects it must be owned, that he was a virtuous man, as well as a good monarch. He was frugalof the public money; he encouraged commerce with great attention; he applied himfelf to naval affairs with fuccels; he supported the fleet as the glory and protection of England. He was also zealous for the honour of his country; he was capable of supporting its interests with a degree of diguity in the feale of Europe. In his private life he was almost irreproachable; he was an indulgent parent, a tender husband, a generous and fleady friend; in his deportment he was affable, though itately; he bellowed favours with peculiar grace; he prevented folicitation by the fuddennels of his disposal of places; though scarce any prince was ever to generally deferted, few ever had fo many private friends; those who injured him most were the first to implore his forgiveness, and even after they had raifed another prince to the throne, they respected his person, and were anxious for his fafety. To thefe virtues he added a fleadiness of counsels, a perseverance in his plans, and courage in his enterprifes. He was honourable and fair in all his dealings; he was unjuit to men in their principles, but never with regard to their property. Though few monarch severoffended a people more, he yielded to none in his love of his subjects; he even affirmed that he quitted England to prevent the horrors of a civil war, as much as from fear of a reftraint upon his perfon from the prince of Orange. His great virtue was a firici adherence to facts and truth in all he wrote and faid, though some parts of his conduct had rendered his fincerity in his political profession suspected by his enemies. Abdicated his throne 1689. Macpherion.

§ 105. Another Character of JAMES II.

The enemies of James did not fail to make the most of the advantages they had gained by their fabtle manœuvres; some said, that the king's flight was the effect of a disturbed conscience, labouring under the load of secret guilt; and those whose censures were more moderate, affected, that his incurable bigotry

had led him even to facrifice his crown to the interests of his prictis; and that he chose rather to depend on the precarious support of a French force to studde the refractory spirit of his people, than to abide theistice of events which threatened such legal limitations as should effectually prevent any further abuse of power.

The whole tenor of the king's pak conduct, undoubtedly gave a countenance to intinuations, which were in thendelves fulficiently plaufible to answer all the purpoles for which they were indutriously circulated; but when the following circumtiances are taken into confideration, namely, that timidity is natural to the human mind, when opprefied with an uninterrupted feries of misfortunes; that the king's life was put entirely into the hands of a rival, whole ambitious views were altogether incompatible even with the thadow of regal power in his perion; that the means taken to increase the apprehensions which reflections of this nature multneed. farily occasion, were of the motimortilying kind; it must be acknowledged, that if the principles of heroic virtue might have produced conduct in fome exalted individuals, yet that the generality of mankind would, in James's tituation, have fought fliciter in the professed generosity of a truffed friend, from personal infult, perfonul danger, and from all the haralling fuspente under which the mind of this imprudent and unfortunate monarch had long laboured.

The opposition of James's religious principles to those of his subjects, his unpopular connexions with the court of France; but, above all, the permament chabithment of a rival family on the throne of England, has formed in his favour fuch an union of prejudice and interest, as to detiroy in the minds of posterity, all that sympathy, which, on fimilar occasions, and in timilar misfortunes, has fo wonderfully operated in favour of other princes; and whili we pay the tribute of unavailing tears over the memory of Charlesthe kirti; whilit, with the Church of England, we venerate him as a martyr to the power and office of prelates; whilft we fee, with regret, that he was tripped of his diguity and life at the very time when the chaftening band of alfliction had, in a great measure, corrected the errors of a faulty education; the irrefiftible power of truth must oblige us to confess, that the adherence to religious principle, which coft the futher his life, deprised

deprived the fonofhis dominions; that the enormous abufer of power with which both forereigns are accused, owed their origin to the fame fource; the errors arifing from a bad education, aggravated and extended by the impious flattery of defigning priefes; we shall also be obliged to confets, that the parliament itself, by an unprecedented fervility, helped to confirm James in the exalted idea he had entertained of the royal office, and that the doctrines of an absolute and unconditional submission on the part of subjects, which, in the reign of his father, was in a great measure confined to the precepts of a Land, a Sibthorpe, and Maynwaring, were now tanglit as the avowed doctrines of the Church of England, were acknowledged by the two Universities, and implicitly avowed by a large majority of the nation; fo great, indeed, was the change in the temper, manners, and opinious of the people, from the commencement of the reign of Charles the First to the commencement of the reign of his fon James, that at this thameful period the people gloried in having laid all their privileges at the foot of the throne, and execrated every generous principle of freedom, as ariting from a spirit totally incompatible with the peace of fociety, and altogether repugnant to the doctrines of Christianity.

This was the fituation of affairs at the accession of the unfortunate James; and had he been equally unprincipled as his brother, the decealed king; had he profeifed himfelf a Protestant, whillt he was in his heart a Papiti; had he not regarded it as his duty to use his omnipotent power for the rettoring to some parts of its ancient dignity a Church which he regarded as the only true Church of Chrift; or had he, instead of attacking the prerogative of the prelacy, fulfered them to thare the regal defpotitio which they had fixed on the bulisof confeience, the most slagrant abuses of civil power would never have been called in judgment against him, and parliament themselves would have lent their conflictational authority to have rivetted the chains of the empire in fuch a manner as should have put it out of the power of the most determined votaries of freedom to have re-established the government on its ancient foundation. From this immediate evil England owes its deliverance to the bigoted incerity of James; a circumitance which ought, in tome measure, to conciliate Our affections to the memory of the fufferer, and induce us to treat those errors with

lenity, which have led to the enjoyment of privileges which can never be entirely lot, but by a general corruption of priaciple and depravity of manners.

It was faid by the witty duke of Buck. ingham, " that Charles the Second might do well if he would, and that James " would do well if he could;" an observation which fays little for the understanding of James, but a great deal for his heart; and, with all the blemithes with which his public character is nained, he was not deficient in feveral qualities necessary to compole a good fovereign. His induftry and butinels were exemplary, he was frugal of the public money, he cherithed and extended the maritime power of the empire, and his encouragement of trade was attended with fuch fuccels, that, according to the observation of the impartial hitinrian Ralph, as the frugulity of his adminitiration helped to increase the number of malcontents, to his extreme attention to trade was not lefs alarming to the whole body of the Dutch, than his refolution not to ruth into a war with France, was more

tifying to their fiadtholder.

In domettic life, the character of James. though not irreproachable, was comparatively good. It is true, he was in a great measure tainted with that licention fuels of manners, which at this time pervaded the whole fociety, and which reigned triumphant within the circle of the court; but he was never carried into any excelles which trenched deeply upon the duties of feetal life; and if the qualities of his heart were only to be judged by his different conduct in the different characters of hutband, tather, matter, and friend, he might be pronounced a man of very anniable difpolition. Butthole who know not how to forgive injuries, and can never pardon the errors, the infirmities, the vices, or even the virtues of their fellow-creatures, when in any respectthey affect personal interest or inclination. will aim against them the femibility of every humane mind, and can never expect frontothers that juttice and committeration which themfelves have never exercifed: but whilft we execrate that rancorous cruelty with which James, in the thorthour of triumph, perfecuted all those who endenvoured to thwart his ambitious hopes, it is but justice to observe, that the rank vices of pride, malice, and revenge, which blacken his conduct, whill the figured in the fration of prefumptive heir to the crown, and afterwards in the character of fove reign, on the fuccefsful quelling of the Monmouth rebullion,

bellion, were thoroughly collected by the chaftifing hand of affliction; that the whole period of his life from his return to Ireland to the day of his death, was fpent in the exercife of the first Christian virtues, patience, fortitude, humility, and refignation. Bretonneau, his biographer, records, that he always ipoke with an extreme moderation of the individuals who had acted the most fuccessfully in his disfavour; that he reproved those who mentioned their conduct with feverity; that he read, even with a stoical apathy, the bitterest writings which were published against him; that he regarded the loss of empire as a necessary correction of the mifdemeanors of his life, and even rebuked those who expressed any concern for the iffue of events, which he respected asordinations of the divine will.

According to the fame biographer, James was exact in his devotion, moderate even to abitinence in his life; full of fentiments of the highest contrition for past offences; and, according to the discipline of the Romith church, wasvery fevere in the austerities which he inflicted on his person. As this prince justly regarded himself as a martyr to the Catholic faith, as his warmest friends were all of this perfuation, as his convertation in his retirement at St. Germains was entirely, in a great measure, confined to priests and devotees, it is natural that this superstition should increase with the increase of religious fentiment; and ashe had made use of his power and authority, whilft in England, to enlarge the number of profelytes in popery, fo, in a private station, he laboured inceffantly, by prayer, exhortation, and example, to confirm the piety of his Popith adherents, and to effect a reformation in those who fill continued firm to the doctrines of the church of England. He vifited the monks of La Trappe once a year, the feverell order of religionists in France; and his conformity to the difcipline of the convent was fo first and exact, that he impressed those devotees with featiments of admiration at his piety, humility, and confiancy.

Thus having spent twelve years with a higher degree of peace and tranquillity than he had ever experienced in the most triumphant part of his life, he was feized with a pally in September 1701, and after having languished fifteen days, died in the fixty-eighth year of his age, having filled up the interval between his first seizure and final exit with the whole train of religious exercifes enjoined on fimilar occa-

fions by the church of Rome, with folema and repeated professions of his faith, and earnest exhortation to his two children, the youngest of whom was born in the second year of his exile, to keep fledfaft m the religion in which they had been edu-Thefe precepts and commands have acted with a force superior to all the temptations of a crown, and have been adhered to with a firmness which obliges an historian to acknowledge the superiority which James's descendants, in the nice points of honour and confcience, have gained over the character of Henry the Fourth, who, at the period when he was looked up to as the great hero of the Protestant cause, made no scruple to accept the crown on the difgraceful terms of abjuring the principles of the Reformation, and embracing the principles of a religion, which, from his early infancy, he had been taught to regard as idolatrous and profane.

The dominion of error over the minds of the generality of mankind is irreliable. James, to the last hour of his life, continued as greata bigot to his political as his religious errors: he could not help confidering the firength and power of the crown as a circumftance necessary to the prefervation and happiness of the people; and in a letter of advice which he wrote to his fon, whilft he conjures him to pay a religious observance to all the duties of a good fovereign, he cautions him against suffering any entrenchment on the royal prerogative.. Among feveral heads, containing excellent infiructions on the art of reigning happily and jutily, he warns the young prince never to disquiet his subjects in their property or their religion; and, what is remarkable, to his lait breath he perfitted in afferting, that he never attempted to subvert the laws, or procure more than a toleration and equality of privilege to his Catholic subjects. As there is great reason to believe this affertion to betrue, it shews, that the delusion was incurable under which the king laboured, by the trust he had put in the knavish doctrines of lawyers and priefts: and that neither himfelf, nor his Protestant abettors, could fathom the confequences of that enlarged toleration which he endeavoured to establish. Macauley.

§ 106. Character of WILESAM III.

William III. was in his person of the middle stature, a thin body, and delicate conflitution, fubject to an afthma and con-

finual cough from his infancy. He had an aquiline nofe, sparkling eyes, a large forehead, and grave folemn aspect. He was very sparing of speech; his conversation was dry, and his manner difgutting, except in battle, when his deportment was free, spirited, and animating. In courage, fortitude, and equanimity, he rivalled the modeminent warriors of antiquity; and his natural fagacity made amends for the defects of his education, which had not been properly superintended. He was religious, temperate, generally just and fincere, a firanger to violent transports of passion, and might have passed for one of the best princes of the age in which he lived, had he neverafcended the throne of Great Britain. But the diftinguishing criterion of his character was ambition; to this he facrificed the punctilios of honour and decorum, in depoling his own fatherin-lawand uncle; and this he gratified at the expence of the nation that raifed him to fovereign authority. He aspired to the honour of acting as umpire in all the contells of Europe; and the fecond object of his attention was, the prosperity of that country to which he owed his birth and extraction. Whether he really thought the interests of the Continent and Great Britain were inseparable, or sought only to drag England into the confederacy as a convenient ally; certain it is, he involved thele kingdoms in foreign connexions, which, in all probability, will be productive of their ruin. In order to establish this avourite point, he scrupted not to employ all the engines of corruption, by which means the morals of the uation were totally debauched. He procured a parliamentary fanction for a standing army, which now feems to be interwoven in the constitution. He introduced the pernicious practice of borrowing upon remote funds; an expedient that necessarily hatched a brood of ulurers, brokers, and flock-jobbers, to prey upon the vitals of their country. He entailed upon the nation a growing debt, and a fystem of politics big with mifery, despair, and destruction. To sum up his character in a few words, William was a fatalist in religion, indefatigable in war, enterprising in politics, dead to all the warm and generous emotions of the human heart, a cold relation, an indifferent hufband, a difagrecable man, an ungracious prince, and an imperious lovereign.

Died March 8th, 1791, aged 52, having reigned 13 years. Smollett. § 107. Another Character of WHILLAM III.

William the Third, king of Great Britain and Ireland, was in his person of middle fize, ill-thaped in his limbs, fomewhat round in his shoulders, light brown in the colour of his hair, and in his complexion. The lines of his face were hard, and his nose was aquiline; but a good and penetrating eye threw a kind of light on his countenance, which tempered its feverity, and rendered his barth features, in forne meafure, agreeable. Though his conftitution was weak, delicate, and infirm, he loved the manly exercises of the field; and oftenindulged himfelf in the pleasures, and even fometimes in the excelles, of the table. In his private character he was frequently harth, pathonate, and fovere, with regard to trifles; but when the subject rose equal to his mind, and in the tumult of battle, he was dignified, cool, and farene. Though he was apt to form bad impreffions, which were not easily removed, he was neither vindictive in his disposition, norobainate in his refentment. Neglected in his education, and perhaps defitute by nature of an elegance of mind, he had no tafte for literature, none for the friences, none for the beautiful arts. He paid no attention to mufic, he understood no poetry; he difregarded learning; he encouraged no men of letters, no painters, no artitls of any kind. In fortification and the mathematics he had a confiderable degree of knowledge. Though unfuccefsful in the field, he understood military operations by land; but heneither pollelled nor pretend. ed to any skill in maritime affairs.

In the distribution of favours he was cold and injudicious. In the punishment of crimes, often too safy, and fometimes too fevers. He was patimonious where he should have been liberal; where he ought to be sparing, frequently profuse... In his temper he was filent and referred, in his address ungraceful; and though not destitute of dissimulation, and qualified for intrigue, less apt to conceal his passions. than his defigue: thefe defects rather than vices of the mind, combining with an indifference about humouring mankind thro' their ruling passions, rendered him extremely unfit for gaining the affections of the English nation. His reign, there's fore, was crowded with mortifications of various kinds; the discontented parties among his subjects found no difficulty inchranging the minds of the people from a prince policiled of few talents to make him. popular

popular. He was trufted, perhaps, lefs than he deferved, by the most obsequious of his parliament; but it feems, upon the whole, apparent, that the nation adhered to his government more from a fear of the return of his predecessor, than from any attachment to his own person, or respect for his right to the throne. Macpherson.

§ 108. Charucter of MARY, Queen Confort of. WILLIAM III.

Mary was in her perion tall and wellproportioned, with an oval vitage, lively eves, agreeable features, a mild afpect, and an air of dignity. Her apprehension was clear, her memory tenàcious, and her judgment folid. She was a zealous Proteftant, for apuloufly exact in all the duties of devotion, of an even temper, of a calm and mild convertation; the was ruffled by no passion, and feems to have been a ftranger to the emotions of natural affection, for the afcended the throne from which her father had been deposed, and treated her fifter as an alien to her blood. In a word, Mary, feems to have imbibed the cold difpolition and apathy of her hufband, and to have centeredailherambition in deferring the epithet of an humble and obedient wife.

Died 28th December, 1694, aged 33.

§ 109. Character of ANNE.

The queen continued to dole in a lethargic infentibility, with very thort intervals, till the first day of August in the morning, when the expired, in the fiftieth year of her age, and in the thirtieth of her reign. Anne Swart, queen of Great Brifain, was in her perion of the middle fize, well-proportioned; herhair wasof a dark brown colour, her complexion ruddy, her features were regular, her countenance was rather round than oval, and her afpect more comely than majeftic: her voice was clearand melodious, and her prefence engaging; her capacity was naturally good, but not much cultivated by learning; nor did the exhibit any marks of extraordinary genius, or perfouel ambition: the was certainly deficient in that vigour of mind by which a prince ought to preferve her independence, and avoid the fnares and fetters of fycophants and favourites; but, whatever her weaknefs in this particular might have been, the virtues of her heart were never called in quetion; the was a pattern of conjugal affection and fidelity; a tender mother, a warm friend, and indulgent miffrels, a nunificent patron, a

mildand merciful princess; during whole reign to blood was thed for treafon. She was acalously attached to the Church of England, from conviction rather than from prepoficition: unaffectedly pious, jult, charitable, and compassionate. She felt'a mother's fondness for her people, by whom the was univerfally beloved with a warmth of affection which even the prejudice of party could not abate. In a word, if the was not the greatest, she was certainly one of the best and most unblemished fovereigns that ever fat upon the throne of England, and well deferred the expredice, though simple epithet of, the "good queen Anne." Smollett.

She died in 1714.

§ 110. Another Character of Anne.

Thus died Anne Stuart, queen of Great Britain, and one of the best and greatest monarchs that ever filled that throne. What was most remarkable, was a clear harmonious voice, always admired in her graceful delivery of her speeches to parliament, infounce, that it used to be a common faying in the mouth of every one, " that her very speech was music." Good-nature, the true characteristic of the Stuarts, predominated in her temper, which was a compound of benevolence, generofity, indolence, and timidity, but not without a due fentibility of any flight which the thought was offered to her person or her dignity; to these all her actions, both as a monarch and as a woman, may be afcribed; thefe were the fources both of her virtues and her failings; her greatest blessing upon earth was that entire union of affections and inclinations between her and her royal confort; which made them a perfeel patternof conjugal love. She was a fond and tender mother, an eafy and indulgent miffrefs, and a most gracious fovereign; but the had more than once reafon to repent her giving up her heart, and trufting her fecrets without referve to her favourites. She retained to the last the principle of that true religion which the had imbibed early; being devout without affectation, and charitable without, oftentation. She had a great reverence for elergymen eminent for learning and good lives, and was particularly beneficent to the poorerforto (them, of which the left an evidence which bears her name, and will perpetuate both that and her bounty to all fuceceding generations. Chamberlaine.

6 . til

§ 111. Another Character of ANNE.

Thus died Anne Stuart, queen of Great Britain and Ireland, in the fiftieth year of her age, and thirteenth of her reign. In her perion the was of a middle thature, and, before the bore children, well made. Her hair was dark, her complexion fanguine, her features throug, but not irregular, her whole countenance more diguified than agreeable. In the accomplithments of the mind, as a woman, the was not deficient : the understood music; she loved painting; the had even some take for works of genius; she was always generous; sometimes liberal, but never profuse. Like the reft of the family, the was good-natured to a degree of weakness; indolent in her difposition, timid by nature, devoted to the company of her favourites, easily led. She pollefled all the virtues of her father, excopt political courage; the was subject to all his weaknesses, except enthusiasin in religion; the was jealous of her authority, and fullenly irreconcileable towards thole who treated either herfelf or prerogative with difrespect; but, like him also, she was much better qualified to discharge the daties of a private life, than to act the part of a fovereign. As a friend, a mother, a wife, the deferved every praite. Her conduct as a daughter could fearcely be excreded by a virtue much superior to all thefe. Upon the whole, though her reign was crowded with great events, the cannot, with any juttice, be called a great princels. Subject to terror, beyond the conflitutional fimidity of her fex, the was altogether incapable of decifive counfels, and nothing but her irrefiltible popularity could have supported her authority amidit the ferment of those diffracted times.

Macpherjon.

1112. The Character of Many Queen of

To all the charms of beauty, and the ulmost elegance of external form, Mary added those accomplishments which render their impression irrestitible. Polite, estable, infinuating, fprightly, and capable of peaking and of writing with equal ease and dignity. Sudden, however, and violent in all her attachments; because her heart was warm and unsufficious. Impatient of courtaiction, because he had been accustomed from her infancy to be treated as a queen. No stranger, on some occasions, to dissimulation; which, in that per-

fidious court, where the received her education, was reckoned among the necessary arts of government. Not infensible to flattery, or unconfeious of that pleafure, with which almost every woman beholds the influence of her own beauty. Formed with the qualities that we love, not with the talents that we admire; the was an agreeable woman rather than an idluttriousqueen. The vivacity of her spirit, not fufficiently tempered with found judge ment, and the warmth of her heart, which was not at all times under the reftraint of difcretion, betraved her both into errors. and into crimes. To fav that the was always unfortunate, will not account for that long and almost uninterrupted succession of ca-, lamities which befel her; we must likewife add, that the was often imprudent. Her pathon for Darnly was raft, youthful, and excellive. And though the fudden transition to the oppolite extreme was the natural effect of her ill-requited love, and of his ingratitude, infolence, and brutality; yet neither thefe, nor Bothwell's artful address and important fervices, can' justify her attachments to that nobleman." Even the manners of the age, licentions as they were, are no apology for this un= happy passion; nor can they induce us to look on that tragical and infamous fcene, which followed upon it, with lefs abhorrence. Humanity will draw a veil over this part of her character, which it cannot ' approve, and may, perhaps, prompt fome to impute heractions to her lituation, more than to her disposition; and to lament the unhappiness of the former, rather than accufethe perversenessof the latter. Mary's futlerings exceed, both in degree and in duration, those tragical diffrestes which fancy has feigned to excite forrow and commiferation; and while we furvey them, we are apt altogether to forget her frailties, we think of her faults with lefs indignation, and approve of our tears, as if they were shed for a perion who had attained much nearer to pure virtue.

With regard to the queen's perfon, a circumfiance not to be omitted in writing the hiltory of a female reign, all contemporary authors agree in a feribing to Mary the utmost beauty of countenance and elegance of shape of which the human form is capable. Her hair was black, though, a ccording to the fashion of that age, the frequently wore borrowed locks, and of different colours. Her eyes were a dark grey, her complexion was exquisitely fine

and

and her hands and arms remarkably delicate, both as to shape and colour. Her stature was of a height that rose to the majestic. She danced, the walked, and rode with equal grace. Her tafte for music was just, and she both sung and played upon the lute with uncommon skill. Towards the end of her life the began to grow fat ; and her long confinement, and the coldness of the houses in which she was imprisoned, brought on a rheumatism which-deprived her of the use of her limbs. No: man, fays Brantome, ever beheld her perfon without admiration and love, or will read her history without forrow.

Robertson.

The Character of FRANCIS 1. with some Reflections on his Rivalship with CHABLES V.

Prancis died at Rambouillet, on the laft day of March, in the fifty-third year of his age, and the thirty-third year of his reign. During twenty-eight years of that time, an avowed rivalihip sublifted between him and the emperor, which involved not only their own dominions, but the greater part of Europe in wars, profecuted with more violent animofity, and drawn out to a greater length, than had been known in any former period. Many circumftances contributed to both. Their animofity was founded in opposition of interest heightened by personal emulation, and exasperated not only by mutual injuries, but by reciprocal infults. At the fametime, whatever advantage one feemed to possels towards gaining the ascendant, waswonderfully balanced by fome favourable circumstance, peculiar to the other. The emperor's dominions were of great extent, the French king's lay more compact: Francis governed his kingdom with abfolute power: that of Charles was limited. but he supplied the want of authority by address: the troops of the former were more impetuous and enterprising; those of the latter better disciplined, and more patient of fatigue. The talents and abilities of the two monarchs were as different as the advantages which they possessed, and contributed no less to prolong the contest between them. Francis took his refolutions fuddenly, profecuted them at first with warmth, and pushed them into execution with a most adventurous courage; but being deflitate of the perfeverance necessary to furmount difficulties, he often abandonpurfuit from impatience, and fometimes from levity.

Charles deliberated long, and determined with coolness; but, having once fixed his plan, he adhered to it with inflexible obitinacy, and neither danger nor discouragement could turn himalide from the execution of it. The fuccels of their enterprifes was as different as their characters, and was uniformly influenced by them. Francis, by his impetuous activity, often disconcerted the emperor's best-laid fchemes; Charles, by a more calm, but fleady profecution of his defigns, checked the rapidity of his rival's career, and baffled or repulfed his most vigorous efforts. The former at the opening of a war, or of a campaign, broke in upon his enemy with the violence of a torrent, and carried all before him; the latter waiting until he faw the force of his rival begin to abate, recovered in the end not only all that he had loft, but made new aquifitions. Few of the French monarch's attempts towards conquest, whatever promiting aspect they might wear at first, were conducted to an happy iffue: many of the emperor's enterprifes, even after they appeared desperate and impracticable, terminated in the mot. prosperous manner. Francis was daszled with the splendour of an undertaking; Charles was allured by the prospect of its turning to his advantage. The degree, however, of their comparative merit and reputation has not been fixed, either by a firicl forutiny into their abilities for government, or by an impartial confideration of the greatness and success of their undertakings; and Francis is one of those menarchs who occupies a higher rank in the temple of fame, than either his talents or performances entitle him to hold. This pre-eminence he owed to many different circumstances. The superiority which Charles acquired by the victory of Pavia, and which from that period he preferred through the remainder of his reign, was fo manifest, that Francis's struggle against his exorbitant and growing dominion, was: viewed by most of the other powers, not only with the partiality which naturally ariles from those who gallantly maintain an unequal contest, but with the favour due to one who was refilting a common enemy, and endeavouring to fet bounds to a monarch equally formidable to them all. The characters of princes too, especially among their contemporaries, depend not only ed his defigns, or relaxed the vigour of upon their talents for government, butapon

upon their qualities as men. Francis, notwithstanding the many errors confpicuous in his foreign policy and domefwas nevertheless tic administration, humane, beneficent, generous. possessed dignity without pride; affability free from meannels, and courtely exempt from deceit. All who had access to him (and no man of merit was ever denied that privilege) respected and loved him. Captivated with his personal qualities, histubjects forgot his defects as a monarch, and admiring him as the most accomplified and amiable gentleman in his dominions, they never murmured at acts of mal-administration, which in a prince of lessengaging dispositions would have been deemed unpardonable. This admiration, however, mult have been temporary only, and would have died away with the courtiers who behowed it; the illusion ariting from his private virtues must have ceased, and posterity would have judged of his public conduct with itsufual impartiality; but another circumitance prevented this, and his name hath been transmitted to posterity with increasing reputation. Science and the arts had, at that time, made little progressin France. They were just beginning toadvance beyond the limits of Italy, where they had revived, 'and which had hitherto been their only feat. Francistook them immediately under his protection, and vied with Leo himself in the zeal and munificence with which he encouraged them. He invited learned men to his court; seconverfed with them familiarly, he employed them in bufiness; he raised them 14 offices of dignity, and honoured them with his confidence. That race of men, not more prone to complain when denied the respect to which they fancy themselves entitled, than apt to be pleafed when treated with the distinction which they consider as their due, though they could not exceed in gratitude to fuch a benefactor, frained their invention, and employed all their ingenuity in panegyric.

Succeeding authors, warned with their descriptions of Francis's bounty, adopted their encomiums, and refined upon them. The appellation of Father of Letters, beflowed upon Francis, hath rendered his memory facred among historians, and they feem to have regarded it as a fort of impiety touncover his infirmities, or to point out his defects. Thus Francis, notwithfunding his inferiorabilities, and want of fuccess, bath more than equalled the fame of Charles. The virtues which he possessed

as a man have entitled him to greater admiration and praife, than have been befowed upon the extensive genius and fortunate arts of a more capable, but less ammble rival.

Robertion.

§ 114. The Character of CHARLES V.

As Charles was the first prince of his age in rank and dignity, the part which he acled, whether we confider the greatness, the variety, or the success of his undertaking, was the most conspicuous. It is: from an attentive observation to his conduct, not from the exaggerated praises of .; the Spanish historians, or the undistinguishing censure of the French, that a just idea. of Charles's genius and abilities is to be collected. He polletied qualities fo peculiar, as firongly mark his character, and not only diffinguish him from the princes. who were his contemporaries, but account: for that superiority overthem which he for long maintained. In forming his schemes, he was, by nature as well as by habit, cautious and confiderate. Born with calents, which unfolded themfelves flowly, and ... were late in attaining maturity, he was accustomed to ponder every subject that demanded his confideration, with a careful and deliberate attention. He bent the whole force of his mind towards it, and dwelling upon it with ferious application. undiverted by pleafure, and hardly relaxed by any amusement, he revolved it in filence in his own breaft: he then communicated the matter to his ministers; and after hearing their opinions, took his refolytion with a decilive firmnels, which feldom follows such flow consultations. In confequence of this, Charles's measures, instead of refembling the defultory and irregular fallies of Henry VIII. or Francis I. had the appearance of a confident ly flem, in which all the parts were arranged, the effects were forefeen, and the accidents were provided for. His promptitude in execution was no less remarkable than his patience in deliberation. He confulted with phlegm, but he acted with vigour; and did not discover greater fagacity in his choice of the measures which it was proper topurfue, than fertility of genius in finding out the means for rendering his purfuit of them fucceisful. Though he had naturally fo little of the martial turn, that during the most ardent and builting period of life, he remained in the cabinet inactive; yet when he chose at length to appear at the head of his armies his mind was folormed.

for vigorous exertions in every direction, that he acquired fuch knowledge in the are of war, and fuch talents for command. as rendered him equal in reputation and faccels to the most able generals of the age. But Charles possessed, in the most emittent degree, the feience which is of greatest importance to a monarch, that of knowing men, and of adapting their talents to the various departments which he allotted to them. From the death of Chieweek to the end of his reign, he employed no general in the field, no minister in the cabinet, no ambaffador to a foreign court, progovernor of a province, whose abilities were inadequate to the truft which he reposed in them. Though destitute of that bewitching affability of manuer, which gained Francis the hearts of all who approached his perfon, he was no ftranger to the virtues which fecure fidelity and attachment. He placed unbounded confidence in his generals; he rewarded their fervices with munificence; he neither envied their fame, nor discovered any jealoufy of their power. Almost all the generals who conducted hisarmies, may be placed on a level with those illustrious perfonages who have attained the highest eminence of military glory: and his advantages over his rivals are to be afcribed to manifelly to the superior abilities of the commanders whom he fet in oppotition to them, that this might frem to detract, in fome degree, from his own merit, if the talent of difcovering and employing fuch infiruments were not the molt undoubted proof of his capacity for government.

There were, nevertheless, defects in his political character, which must considerably abate the admiration due to his extraordinary talents. Charles's ambitionwas infatiable; and though there feems to be no foundation for an opinion prevalent in his own age, that he had formed the chimerical project of enablishing an univerfal monarchy in Europe, it is certain that his detire of being diffinguished as a conqueror involved him in continual wars, which exhautted and oppressed his fubjects, and left him little leifure for giving attention to the interior police and improvement of hiskingdoms, the great objects of every prince who makes the happinels of his people the end of his government. Charles, at a very early period of life, having added the imperial crown to the kingdoms of Spain, and to the hereditary dominions of the houtes of Authria

and Burgundy; this opened to himfuch a van field of enterprife, and engaged him in schemes to complicated us well as arduous, that feeling his power to be unequal to the execution of thefe, he had often recourse to low artifices, unbecoming his superior taients; and fometimes ventured on fuch deviations from integrity, as were dithonourable in a great prince. His infidious and fraudulent policy appeared more confpicuous, and was rendered more odious, by a compariton with the open and undefigning character of his contemporaries, Francis I. and Henry VIII. This difference, though occasioned chiefly by the divertity of their tempers, mun be atcribed in fome degree to tuch an opposition in the principles of their political conduct, as affords some excute for this detect in Charles's behaviour, though it cannoticive as a judification of it. I rancis and lienty feldom acted but from the impulfe of their pathons, and ruthed headlong towards the object in view. Charles's meafures being the refult of cool reflection, were disposed into a regular fythem, and carried on upon a concerted plan. Perfous who act in the former manner naturally purfue the end in view, without alluming any difguife, or difplaying much address. Such as hold the latter courle, are apt, in forming, as well as in executing their defigns, to employ fuch refinements, as always lead to artifice in conduct, and often degenerate into deceit. Robertion.

§ 115. The Character of EPAMINONDAL

Epaminoudas was born and educated in that honest poverty which those less corrupted ages accounted the glorious mark of integrity and virtue. The intructions of a Pythagorean philosopher, to whom he wasentrutted in his earlieft years, formed him to all the temperance and feverity peculiar to that fect, and were received with a docility and pleafure which befookean ingenuous mind. Mutic, dancing, and all thefe arts which were accounted honourable diffinctions at Thebes, he received from the greatest matters. In the athletic exercifes he became confpicuous, but foon learned to apply particularly to those which might prepare him for the labours and occasions of a military life. His modetty and gravity rendered him ready to hear and receive intiruction; and his genius enabled him to learn and improve. A love of truth, a love of virtue, tenderness, and humanity, and an exalted patriotifm, he

hadlearned, and foon difplayed. To thefe glorious qualities he added penetration and fagacity, a happiness in improving every incident, a confummate tkill in war, an unconquerable patience of toil and distreft, a boldness in enterprize, vigour, and magnanimity. Thus did he become great and terrible in war; nor was he lefs distinguished by the gentler virtues of peace and retirement. He had a foul capable of the most exalted and difinterested friendflip. The warmth of his benevolence supplied the deficiencies of his fortune; his credit and good offices frequently were emploved to gain that relief for the neceffities of others, which his own circumstances could not grant them: within the narrow fphere of these were his desires regularly confined; no temptations could corrupt him; no prospects of advantage could hake his integrity; to the public he appeared unalterably and folely devoted: norcould neglect or injuries abate his zeal for Thebes. All these illustrious qualitiesheadorned with that eloquence which was then in fuch repute, and appeared in council equally eminent, equally useful to his country as in action. By him Thebes first role to lovereign power, and with him the lost her greatness.

§116. A Comparison of the political Principles and Conduct of CATO, ATTICUS, and CICERO.

The three fects which chiefly engroffed the philosophical part of Rome were, the Stoic, the Epicorean, and the Academic; and the chief ornaments of each were, Cato, Atticus, and Cicero; who lived together in strict friendship, and a mutual esteem of each other's virtue: but the different behaviour of these three will show, by fact and example, the different merit of their several principles, and which of them was the best adapted to promote the good of society.

The Stoics were the bigots or enthusast in philosophy; who held none to be truly wife or good but themselves; placed perfect happiness in virtue, thoughstripped of every other good; affirmed all fins to be equal, all deviations from right equally wicked; to kill a dunghill-cock without reason, the same crime as to kill a parent; that a wife man could never forgive; never be moved by anger, savour, or pity; never be decoived; never repeat never change his mind. With these principles Cato entered into public life;

and acted in it, as Cicero fays, 'as if he had lived in the polity of Plato, not in the dregs of Romulus,' He made no distinction of times or things; no allowance for the weakness of the republic, and the power of those who oppressed it: it was his maxim to combat all power not built upon the laws, or to defy it at least, if he could not controulit; he knew no way to his end, but the direct; and whatever obstructions he met with, relolved still to ruth on, and either to furmount them, or perish in the attempt; taking it for a basenefs, and confession of being conquered. to decline a tittle from the true road. In an age, therefore, of the utmost libertinifm, when the public discipline was lost, and the governmentitlelf tottering, he struggled with the fame zeal against all corrup ion, and waged a perpetual war with a fuperior force; whilst the rigour of his principles tended rather to alienate his friends, than reconcile enemies; and by provoking the power that he could not fubdue, help to hasten that ruin which he was striving to avert: fo that after a perpetual course of disappointments and repulses, finding himfelf unable to purfue his old way any further, instead of taking a new one, he was driven by his philosophy to putan end to his life.

But as the Stoics exalted human nature too high, so the Epicureans depressed it too low; as those raised it to the heroic, thefe debafed it to the brutal state; they held pleafure to be the chief good of man, death the extinction of his being; and placed their happiness, confequently, in the fecure enjoyment of a pleafarable life; esteeming virtue on noother account than as it was a handmaid to pleasure, and helped to enfure the pulk thon of it; by preferving health and conciliating friends. Their wife man, therefore, had no other duty, but to provide for his own eafe, to declineall struggles, to retire from public affairs, and to imitate the life of their gods, by passing his days in a calm, contemplative, undisturbed repose, in the midstof ruralihades and pleafaut gardens. This was the februe that Atticus followed; he had all the talents that could qualify a man to be useful to fociety; great parts, learning, judgement, candour, benevolence, generofity, the fame love of his country, and the fame fentiments in politics, with Cicero; whom he was always adviting and urging to act, yet determined never to act himfelf; or never, at least,

3 D

fo far as to disturb his cafe, or endanger his fafety. For though he was fo strictly united with Cicero, and valued him above all men, yet he managed an interestall the while with the oppolite faction, and a friendship even with his mortal enemies, Clodius and Antony; that he might fecure, against all events, the grand point which he had in view, the peace and tranquillity of his life. Thus two excellent men, by their mistaken notions of virtue, drawnfrom their principles of philosophy, were made ufeless in a manner to their country, each in a different extremeoflife; the one always acting and exposing himself to dangers, without the prospect of doing good; the other, without attempting to do any, refolving never to act at all.

Cicero chose the middle way, between the obstinacy of Cato, and the indolence of Atticus; he preferred always the readiest road to what was right, if it lay open to him; if not, he took the next that feemed Ekely to bring him to the fame end; and in politics, as in morality, when he could not arrive at the true, contented himfelf with the probable. He often compares the statefman to the pilet, whofeart confists in managing every turn of the winds, and applying even the most perverle of the progress to his voyage; so as, by changing his courfe, and enlarging his circuit offailing, to arrive with fafety, though later, at his destined port. He mentions likewife an observation, which long experience had confirmed to him, that none of the popular and ambitious, who affored to extraordinary commands, and to be leaders in the republic, ever choic toobtalutheir ands from the people, tdithey had first been repulfed by the fe-This was verified by all their civil dalenfous, from the Gracchi down to Cathr: fothat when he faw men of this spirit at the head of the government, who, by the iplendour of their lives and actions, had acquired an afcendant over the populace, it was his constant advice to the fenate, to gain them by gentle compliances, and to gratify their thirst of power by voluntary grants of it, as the best way to moderate their ambition, and reclaim them from desperate councils. He declared contention to be no longer prudent than while it either did fervice, or at least no burt; but when faction was grown too strong to be withstood, that it was time to give over ighting; and nothing left but to extract tome good out of the ill, by mitigating that power by patience, which they could

not reduce by force, and conciliating it if pollible, to the interest of the state. This was what he had advifed, and what he practifed; and it will account, in a great measure, for those parts of his conduct which are the most liable to exception on the account of that complailance which he is supposed to have paid, at different times, to the several usurpers of illegal power.

Middleton.

§ 117. The Character of Lord Town-

Lord Townshend by very long experience, and unwearied application, was certainly an able man of business, which was his only passion. His parts were neither above nor below it; they were rather slow, a defect of the safer side. He required time to form his opinion; but when formed, he adhered to it with invincible firmness, not to say obstinacy, whether right or wrong, and was impatient of contradiction.

He was a most ungraceful and confused speaker in the house of lords, in elegant in his language, perplexed in his arguments, but always near the stress of the question.

His manners were coarfe, rustic, and feemingly brutal; but his nature was by no means fo; for he was a kind hufhand to both his wives, a most indulgent father to all his children, and a benevolent master to his fervants; fure tests of real goodnature, for noman can long together timulate or diffirmulate at home.

He was a warm friend, and a warm enemy; defects, if defects they are, infeparable in human nature, and often accompanying the most generous minds.

Never minister had cleaner handsthan he had. Merc domestic a conomy washit only care as to money; for he did not add one acre to his estate, and left his younger children very moderately provided for, though he had been in confiderable and lucrative employments near thirty years.

As he only loved power for the take of power, in order to preferve it, he was obliged to have a most unwarrantable complaifance for the interests and even dictates of the electorate, which was the only way by which a British minister could hold either favour or power during the reigns of king George the First and Second.

The coarfness and imperious est of his manners, made him disagreeable to queen Caroline.

Lord Townshend was not of a temper

to act a fecond part, after having acted a first, as he did during the reign of king George the First. He refolved, therefore, to make one convultive struggle to revive his expiring power, or, if that did not fucceed, to retire from bufnels. He tried the experiment upon the king, with whom he had a personal interest. The experiment failed, as he might easily, and ought to have foreseen. He retired to his feat in the country, and, in a few years, died of an apoplexy.

Having thus mentioned the flight defects, as well as the many valuable parts of his character, I must declare, that I owed the former to truth, and the latter to gratitude and friendflip as well as to truth, tince, for fome years before he retired from bufinefs, we lived in the strictest intimacy that the difference of our age and fituations could admit, during which time he gave me many unaffed and unequivocal proofs of his friendflip.

Chesterfield.

§ 118. The Churacter of Mr. Pork.

Pope in convertation was below himfelf; he was feldom cafy and natural, and feemed afraid that the man should degrade the poet, which made him always attempt wit and humour, often unfuccessfully, and too often unfeasonably. I have been with him a week at a time at his house at Twickenham, where I necessarily saw his mind in its undress, when he was both an agreeable and instructive companion.

His moral character has been warmly attacked, and but weakly defended; the natural confequence of his thining turn to fatire, of which many felt, and all feared the fmart. It must be owned that he was the most irritable of all the genus irritabile ratum, offended with trifles, and never forgetting or forgiving them; but in this I really think that the poet was more in fault than the man. He was as great an instauce as any he quotes, of the contrarities and inconfistencies of human nature; for, not withstanding the malignancy of his fatires, and fome blameable paffages of his life, he was charitable to his power, active in doing good offices, and pioufly attentive to an old bedridden mother, who died but a little time before him. His poor, crazy, deformed body was a mere Pandora's box, containing all the physical ills that ever afflicted humanity. This, perhaps, whetted the edge of his fatire, and may in some degree excuse it.

I will fay nothing of his works, they

speak sufficiently for themselves; they will live as long as letters and taste shall remain in this country, and be more and more admired as envy and resentment shall subside. But I will venture this piece of classical blasphemy, which is, that however he may be supposed to be obliged to Horace, Horace is more obliged to him.

Chestricid.

§ 119. Character of Lord BOLINGBROKE.

It is impossible to find lights and shades strong enough to paint the character of lord Bolingbroke, who was a most mortifying instance of the violence of human passions, and of the most improved and exalted human reason. His virtues and his vices, his reason and his passions, did not blend themselves by a gradation of tints, but formed a shining and sudden contrast.

Here the darkest, there the most fplendid colours, and both rendered more striking from their proximity. Impetuofity, excefs, and almost extravagancy, characterifed not only his passions, but even his fenfes. His youth was distinguished by all the tumultand storm of pleafures, in which he licentiously triumphed, disdaining all decorum. His fine imagination was often heated and exhausted, with his body, in celebrating and deifying the prostitute of the night; and his convivial joys were puthed to all the extravagancy of frantic bacchanals. These passions were never interrupted but by a stronger ambition. The former impaired both his constitution and his character; but the latter destroyed both his fortune and his reputation.

He engaged young, and distinguished himfelf in bufinets. His penetration was almost intuition, and he adorned whatever fubject he either fooke or wrote upon, by the most splendid eloquence; not a studied or laboured eloquence, but by fuch a flowing happiness of diction, which from care. perhaps, at first) was become fo habitual to him, that even his most familiar conversations, if taken down in writing, would have borne the prefs, without the least correction, eitler as to method or style. He had noble and generous fentiments, rather than fixed reflected principles of good-nature and friendthip; but they were more violent than lasting, and fuddenly and often varied to their opposite extremes, with regard even to the fame perfors. He received the common attention of civility as obligations, which he returned with interest; and refented with paffion

2 D 2 • the

the little inadvertencies of human nature, which he repaid with interest too. Even a difference of opinion uponsa philosophical subject, would provoke and prove him no practical philosopher at least.

Notwithstanding the diffipation of his youth, and the tuniultuous agitation of his middle age, he had an infinite fund of various and almost univerfal knowledge, which, from the clearest and quickest conception, and the happiest memory that ever man was bleffed with, healways carried about him. It was his pocket-usoney, and he never had occasion to draw upon a book for any fum. He excelled more particularly in history, as his historical works plainly prove. The relative political, and commercial interests of every country in Europe, particularly of his own, were betterknown to him than perhaps to any man in it; but how steadily he purfued the latter in his public conduct, his enemies of all parties and denominations tell with . pleafare.

During his long exile in France, he applied himfelf to study with his characteriftical ardour; and there he formed, and chiefly executed, the plan of his great philosophical work. The common bounds of human knowledge were too narrow for his warm and afpiring imagination; he must goestra flammantia menia wandi, and explore the unknown and unknowable regions of metaphylies, which open an unbounded field for the excursions of an ardeat imagination; where endless conjectures supply the defects of unattainable knowledge, and too often usurp both its

name and its influence.

He had a very handfome perfou, with a most engaging address in his air and manners; he had all the dignity and good-breeding which a man of quality hand or can have, and which so few, in this country at least, really have.

He professed himself a deist, believing in a general Providence, but doubting of, though by nomeans rejecting, (as is commonly supposed) the immertality of the

foul, and a future state.

He died of a cruel and shocking diftemper, a cancer in his face, which he endured with firmnels. A week before he died, I took my last leave of him with griels and he returned me his last farewell with tendernels, and faid, "God, who "placed me here, will do what he pleases" with me hereafter; and he knows best what to do. May he blefs you?

I fon the whole of this exteaordinary

character, what can we fay, but, alas! poor inunan nature! Chekerfield,

§ 120. Churacter of Mr. PULTENEY.

Mr. Pulteney was formed by nature for focial and convivial pleafures. Refentment made-him engage in business. He had thought him felt flighted by Sir Robert Walpole, to whom he publicly avowed not only revenge, but other destruction. He had lively and fining parts, a furprising quickness of wit, and a happy turn to the most amosing and cutertaining kinds of poetry, as epigrams, ballads, odes, &c.; in all which he had an uncommon facility. His compositions in that way were fometimes fatirical, often licentions, but always full of wit.

He had a quick and clear conception of business; could equally detect and practic sophistry. He could state and explainthe most intricate matters, even in figure, with the utmost perspicuity. His parts were rather above business; and the warmth of his imagination, joined to the impetuosity and restletliness of his temper, made him incapable of conducting it long together with prudence and steadiness.

He was a most complete orator and debater in the honfe of commons; eloquent, entertaining, perfuaive, strong, and pathetic, as occasion required; for he had arguments, wit, and tears, at his command. His breast was the feat of all those passions which degrade our nature and disturb our reason. There they raged in perpetual conflict; but avarice, the meanest of them all, generally triumphed, ruled absolutely, and in many instances, which I forbear to mention, most scandalously.

His fudden passion was outrageous, but fupported by great perfonal courage. Nothing exceeded his ambition, but his avarice; they often accompany, and are frequently and reciprocally the cautes and the effects of each other; but the latter is always a clog upon the former. He affected good-nature and compassion; and perhaps his heart might feel the misfortunes and distreffes of his fellowcreatures, but his hand was feldom or never stretched out to relieve them. Though he was an able actor of truth and fincerity, he could occasionally lay them calde, to ferve the purpotes of his ambition or avarice.

He was once in the greatest point of view that ever I faw any fulfiert in. When the opposition, of which he was the leader in the house of commons, prevailed at lat-

againfi

against Sir Robert Walpole, he became - mean to do impartial justice to his characthe arbiter between the crown and the people; the former imploring his protection, the latter his support. In that crifical moment his various jarring pathons were in the highest ferment, and for a while suspended his ruling one. Sense of frame made him helitate at turning courtier on a fudden, after having acted the patriot follow, and with formuch applaufe; and his pride made . m declare, that he would accept of no place; vaisily imagining, that he could, by fuch a finishated and temporary felf-denial, preferve his popu-Jarity with the public, and his power at court. He was mistaken in both. Ring hated him almost as much for what he might have done, as for what he had done; and a mottey ministry was formed, which by no means defired his company. The nation looked upon him as a deferter, and he thrunk into infiguificancy and an earldom.

Hemade feveral attempts afterwards to retriege the opportunity he had lost, but invain; his fituation would not allow it .--He was fixed in the house of lords, that hospital of incurables; and his retreat to popularity wascutoff; for the confidence of the public, when once great, and once lost is never to be regained. He lived afterwards in retirement, with the wretched comfort of Horace's mifer:

Populus me fibilat, &c.

I may, perhaps, he suspected to have given too strong colouring to force features of this portrait; but I folemaly protest, that I have drawn it confcientiously, and to the best of my knowledge, from a very long acquaintance with, and observation of, the original. Nay, I have rather fortened than heightenes the colouring.

Chesterheld.

Character of Sir Robert WAL-POLE.

I much question whether an impartial character of Sir Robort Walpole will or can be transmitted to posterity; for he governed this kingdom fo long, that the various pathous of mankind mingled, and inamanner incorporated themfelves, with every thing that was faid or written concerning him. Never was man more flattered, nor more abused; and his long power was probably the chief cause of both. I was much acquainted with him, both in his public and his private life.' I

ter; and therefore my picture of him will, perhaps, be more like him than it will be like any of the other pictures drawn of him.

In private life he was good-natured, chearful, focial; inclegant in his manners, loofe in his morals. He had a coarfe, strong wit, which he was too free of for a man in his station, as it is always inconfistent with dignity. He was very able as a minister, but without a certain elevation of mind necessary for great good or great mifchief. Profuse and appetent, his ambition was fubfervient to his detire of making a great fortune. He had more of the Mazarin than of the Richelicu. He would do mean things for profit, and never thought of doing great ones for glory.

He was both the best parliament man, and the ablest manager of parliament, that, I believe, ever lived. An artful, rather than an elequent speaker; he faw, as hy intuition, the difpolition of the house, and preffed or receded accordingly. So clear in stating the most intricate matters, especially in the finances, that, whilst he was lipeaking, the most ignorant thought that they understood what they really did not. Money, not prerogative, was the chief engine of his administration; and he employed it with a fuccefs which in a manner difgraced humanity. He was not, it is true, the inventor of that hameful method of governing, which had been gaining ground infenfibly ever fince Charles II.; but, with uncommon skill, and unbounded profusion, he brought it to that perfection, which at this time diffunours and distreffes this country, and which (if not checked, and God knows how it can be now checked) must ruin it.

Bendesthis powerful engine of government, he had a most extraordinary talent' of perfuading and working men up to his purpole. A hearty kind of franknels, which fometimes feemed impudence made people think that he let them into his fecrets, whilst the impoliteness of his manners feemed to attest his fincerity. When he found any body proof against pecuniary temptations; which, alas! was but feldom, he had recourse to a still worse art; for he laughed at and ridiculed all notions of public virtue, and the love of one's' country, calling them, "The chimerical. " fehool-boy flights of claffical learning;" de laring himfelf, at the fame time, "No " faint, no Spartan, no reformer." He

3 D 3 would would frequently ask young fellows, at their first appearance in the world, while their houest hearts were yet untainted, "Well, are you to be an old Roman? a "patriot? you will soon come off of that, "and grow wifer." And thus he was more dangerous to the morals than to the liberties of his country, to which I am persuaded he meant no ill in his heart.

He was the easy and profuse dupe of women, and in fonce instances indecently fo. He was excessively open to flattery, even of the groffest kind; and from the coarfest bunglers of that vile profession; which engaged him to pass most of his leifure and jovial hours with people whofe blasted characters reflected upon hisown. He was loved by many, but respected by hone; his samiliar and illiberal mirth and raillery leaving him no dignity. He was not vindictive, but, on the contrary, very placable to those who had injured him the most. His good-humour, good-nature, and beneficence, in the feveral relations of father, hufband, master, and friend, gained him the warmest affections of all within that circle.

His name will not be recorded in history among the "best men," or the "best min" nisters;" but much less ought it to be ranked among the worst.

Chefterfield.

§ 122. Character of Lord GRANVILLE.

Lord Granville had great parts, and a most uncommon there of learning for a man of quality. He was one of the best speakers in the house of lords, both in the declamatory and the argumentative way. He had a wonderful quickness and precifion infeizing the strets of a question, which no art, no fophistry, could difguife in him. In bufiness he was bold, enterprising, and overbearing. He had been bred up in high monarchical, that is, tvrannical principles of government, which his ardent and imperious temper made him think were the only rational and practicable ones. He would have been a great first minister in France, little inferior, perhaps, to Richelicu: in this government, which is yet free, he would have been a dangerous one, little less so, perhaps, than Lord Strafford. He was neither ill-natured, nor vindictive, and had a great contempt for money; his ideas were all above it. In focial life he was an agreeable, good-humoured, and instructive companion; a great but entertaining talker.

He degraded bimfelf by the vice of drinking; which, together with a great stock of Greek and Latin, he brought away with him from Oxford, and retained and practifed ever afterwards. By his own industry, he had made himfelf inaster of all the modern languages, and had acquired a great knowledge of the law. His political knowledge of the interest of princes and of commerce was extensive, and his notions were just and great. His character may be summed up, in nice precision, quick decision, and unbounded presumption.

Identification

**Ide

§ 123. Character of Mr. Pelham.

Mr. Pelham had good scose, without either shining parts or any degree of literature. He had by no means an elevated or enterprining genius, but had a more manly and steady resolution than his brother the Duke of Newcastle. He had a gentleman-like frankness in his behaviour, and as great point of honour as a minister can have, especially a minister at the head of the treasury, where number-less sturdy and unsatiable beggars of condition apply, who cannot all be gratified, nor all with safety be resused.

He was a very inclegant speaker in parliament, but spoke with a certain candour and openness that made him be well heard, and generally believed.

He wished well to the public, and managed the finances with great care and personal purity. He was par negotiss neque supra: had many domestic virtues and no vices. If his place, and the power that accompanies it, made him some public enemies, his behaviour in both secured him from personal and rancorous ones. Those who wished him worst, only wished themselves in his place.

Upon the whole, he was an honourable man, and a well-wishing minister.

Ibid.

§ 124. Character of RICHARD Earl of SCARBOROUGH.

In drawing the character of Lord Scarborough, I will be strictly upon my guard against the partiality of that intimate and unreferred friendfilp, in which we lived for more than twenty years; to which friendfilp, as well as to the public notoriety of it, I owe much more than my pride will let my gratitude own. If this may be suspected to have biasied my judgment, it must, at the same time, be allowed to have informed informed it; for the most fecret movements of his whole foul were, without diguife, communicated to me only However, I will rather lower than heighten the colouring; I will mark the shades, and draw acredible rather than an exact likeness.

He had a very good person, rather above the middle size; a handsome size, and, when he was cheerful, the most engaging countenance imaginable: when grave, which he was oftenest, the most respectable one. He had in the highest degree the air, manners, and address of a man of quality; policeness with cute, and dignity without pride.

Bred in camps and coarts, it cannot be supposed that he was untained with the salhonable vices of these warm climates; but (if I may be allowed the expression) hedignified them, instead of their degrading him into any mean or indecent action. He had a good degree of classical, and a great one of modern, knowledge; with a just, and, at the same time, a delicate taste.

In his common expenses he was liberal within bounds; but in his charities, and bounties he had none. I have known them put him to fome prefent inconveniencies.

He was a strong, but not an eloquent or florid speaker in parliament. He spoke so unaffectedly the honest dictates of his heart, that truth and virtue, which never want, and seldom wear, ornaments, seemed only to borrow his voice. This gave such an astonishing weight to all he said, that he more than once carried an unwilling majority after him. Such is the authority of unsufpected virtue, that it will sometimes shame vice into decency at least.

He was not only offered, but preffed to accept, the post of fecretary of state; but he constantly refused it. I once tried to perfuade him to accept it; but he told me, that both the natural warmth and melancholy of his temper made him unfit for it; and that moreover he knew very well that, in those ministerial employments, the course of business made it necessary to do many hard things, and fome unjust ones, which could only be authorifed by the jefuitical cafaistry of the direction of the intention: a doctrine which he faid he could not possibly adopt. Whether he was the first that ever made that objection, I cannot affirm; but I suspect that he will be the last.

ile was a true constitutional, and yet

practical patriot; a sincere lover, and a zealous afferter of the natural, the civil, and the religious rights of his country; but he would not quarrel with the crown, for fome flight stretches of the prerogative; nor with the people, for some unwary ebullitions of liberty; nor with any one for a difference of opinion in speculative points. He considered the constitution in the aggregate, and only watched that no one part of it should preponderate too much.

His moral character was so pure, that if one may say of that imperfect creature man, what a celebrated historian says of Scipio, nil non laudandum aut dixit, aut fecit, aut fenju; I sincerely think (I had almost faid I know), one might say it with great truth of him, one single instance excepted, which shall be mentioned.

He joined to the noblest and strictest principles of honour and generofity, the tenderest fentiments of benevolence and compation; and, as he was naturally warm, he could not even hear of an injustice or a balencis, without a fudden indignation; nor of the misfortunes or miferies of a fellow creature, without melting into fottness, and endeavouring to relieve them. This part of his character was fo univerfally known, that our best and most fatirical English poet fays,

When I confess there is who feels for same, And melts to goodness, need I Scarborough name?

He had not the least pride of birth and rank, that common narrow notion of little minds, that wretched mistaken fuccedaneum of merit; but he was jealous to auxiety of his character, as all men are who deferve a good one. And fuch was his diffidence upon that fubject, that he never could be perfuaded that mankind really thought of him as they did; for furely never man had a higher reputation, and never man enjoyed a more universal esteem. Even knaves respected him; and fools thought they loved him. If he had any enemies (for I protest I never knew one), they could be only fuch as were weary of always hearing of Aristides the Just.

He was too subject to sudden gusts of passion, but they never hurried him into any illiberal or indecent expression or action; so invincibly habitual to him were good-nature and good-manners. But if

everany word happened to fall from him in warmth, which upon subsequent reflection he himfelf thought too strong, he was never easy till he had made more than a fufficient atonement for it.

He had a most unfortunate, I will call it a most fatal kind of melancholy in his nature, which often made him both abfent and filent in company, but never morufe or four. At other times he was a chearful and agreeable companion; but, confcious that he was not always fo, he -avoided company too much, and was too often alone, giving way to a train of gloomy reflections.

His constitution, which was never robust, broke rapidly at the latter end of his-life. He had two fevere strokes of apoplexy or palfy, which confiderably affected his body and his mind.

I defire that this may not be looked upon as a full and finished character, writ for the take of writing it; but as my for lemn deposit of the truth to the best of my knowledge. I owed this fmall deposit of justice, such as it is, to the memory of the best man I ever knew, and of the dearest friend I ever had. Chefterfield.

§ 125. Charafter of Lord HARDWICKE.

Lord Hardwicke was, perhaps, the greatest magistrate that this country ever had. He prefided in the court of Chancery above twenty years, and in all that time none of his decrees were reverfed, nor the justness of them ever questioned. Though avarice was his ruling passion, he was never in the least suspected of any kind of corruption: a rare and meritorious instance of virtue and felf-denial, under the influence of fuch a craving, infatiable, and increasing passion.

He had great and clear parts; understood, loved, and cultivated the belles let-He was an agreeable, eloquent fpeaker in parliament, but not without fame little tincture of the pleader.

Men are apt to mistake, or at least to feem to mistake, their own talents, in hopes, perhaps, of misleading others to allow them that which they are confcious they do not possess. Thus Lord Hardwicke valued himfelf more upon being a great minister of state, which he certainly was not, than upon being a great magistrate, which he certainly was.

All his notions were clear, but none of them great. Good order and domestic details were his proper department. The

great and thining parts of government, though not above his parts to conceive, were above his timidity to undertake.

By great and lucrative employments, during the course of thirty years, and by still greater parfimony, he acquired an immenfe fortune, and established his numerous family in advantageous posts and profitable alliances.

Though he had been folicitor and attorney general, he was by no means what is called a prerogative lawyer. He loved the constitution, and maintained the just prerogative of the crown, but without stretching it to the oppression of the

He was naturally humane, moderate, and decent; and when, by his former employments, he was obliged to profecute state-criminals, he discharged that duty in a very different manner from most of his predecetlors, who were too justly called the "blood-hounds of the crown."

He was a chearful and instructive companion, humane in his nature, decenting his manners, unstained with any vice (avarice excepted), a very great magiftrate, but by no means a great minister,

Chesterfield.

§ 126. Character of the Duke of New-CASTLE.

The Duke of Newcastle will be fo often mentioned in the history of these times, and with fo strong a bias either for or against him, that I refolved for the fake of truth, to draw his character with my usual impartiality: for as he had been a minister for above forty years together, and in the last ten years of that period first minister, he had full time to oblige one half of the nation, and to offend the other.

We were cotemporaries, near relations, and familiar acquaintances; fometimes well, and fometimes ill together, according to the feveral variations of political affairs, which know no relations, friends,

or acquaintances.

The public opinion put him below his level: for though he had no superior parts, or eminent talents, he had a most indefatigable industry, a perfeverance, a court craft, a fervile compliance with the will of his fovereign for the time being; which qualities, with only a common mare of common feule, will carry a man fooner and more fafely through the dark labyrinths of a court, than the most flining parts

parts would do, without those meaner talents.

He was good-natured to a degree of weakness, even to tears, upon the flightest occasions. Exceedingly timorous, both personally and politically, dreading the least innovation, and keeping, with a fcrupulous timidity, in the beaten track of business, as having the safest bottom.

I will mention one instance of this difposition, which, I think, will fet it in the
strongest light. When I brought the bill
into the house of lords, for correcting and
amending the calendar, I gave him previous notice of my intentions: he was
alarmed at so bold an undertaking, and
conjured me not to stir matters that had
been long quiet; adding, that he did not
love new-fangled things. I did not, however, yield to the cogency of these arguments, but brought in the bill, and it passed
unanimously. From such weaknesses it
necessarily follows, that he could have no
great ideas, nor elevation of mind.

His ruling, or rather his only, paffion was, the agitation, the bustle, and the hurry of busines, to which he had been accustomed above forty years; but he was as dilatory in dispatching it, as he was eager to engage in it. He was always in a hurry, never walked, but always run, infomuch that I have fometimes told him, that by his seetness one should rather take him for the courier than the author

of the letters,

He was as jealous of his power as an impotent lover of his mistres, without activity of mind enough to enjoy or exert it, but could not bear a share even in

the appearances of it.

His levees were his pleafure, and his triumph; he loved to have them crowded, and confequently they were fo: there he made people of business wait two or three hours in the anti-chamber, while hetrified away that time with some insignificant favourites in his closet. When at last he came into his levee-room, he accosted, hugged, embraced, and promised every body, with a seeming cordiality, but at the same time with an illiberal and degrading familiarity.

Hewas exceedingly difinterested: very profuse of his own fortune, and abhorring all those means, too often used by persons in his station, either to gratify their avarice, or to supply their prodigality; for he restired from business in the year 1762, above

four hundred thousand pounds poorer than when he first engaged in it.

Upon the whole, he was a compound of most human weaknesses, but untainted with any vice or crime. Chesterfield.

§ 127. Character of the Duke of Bed-

The Duke of Bedford was more confiderable for his rank and immense fortune, than for either his parts or his virtues.

He had rather more than a common fhare of common fense, but with a head so wrong-turned, and so invincibly obstinate, that the share of parts which he had was of little use to him, and very troublesome to others.

He was paffionate, though obstinate; and, though both, was always governed by fome low dependants; who had art enough to make him believe that he governed them.

His manners and address were exceedingly illiberal; he had neither the talent nor the defire of pleasing.

In speaking in the house, he had an inelegant flow of words, but not without some reasoning, matter, and method.

He had no amiable qualities: but he had no vicious nor criminal ones: he was much below fhining, but above contempt in any character.

In fhort, he was a Duke of a respectable family, and with a very great estate.

§ 128. Another Character.

The Duke of Bedford is indeed a very confiderable man. The highest rank, a fplendid fortune, and a name glorious till it was his, were fufficient to have supported him with meaner abilities than he possessed. The use he made of these uncommon advantages might have been more honourable to himself, but could not be more instructive to mankind. The eminence of his station gave him a commanding prospect of his duty. The road which led to honour was open to his view. He could not lose it by mistake, and he had no temptation to depart from it by design.

An independent, virtuous Duke of Bedford, would never prostitute his dignity in parliament by an indecent violence, either in oppreffing or defending a minister: he would not at one moment rancoroufly perfecute, at another basely cringe to the fa-

vourite

Though devontite of his fovereign. reived perhaps in his youth, he would pot, through the courfe of a long life, have invariably cholen his friends from among the most profligate of mankind: his own honour would have forbidden him from mixing his private pleafures or convertation with jockeys, gametters, blafphemers, zladiators, or bufloons. He would then have neverfelt, much less would he have submitted to, the humiliating necessity of engaging in the interest and intrigues of his dependants; of supplying their vices, or relieving their beggary, at the expence of his country. He would not have betrayed fuch ignorance, or fuch contempt of the constitution, as openly to avow in a court of justice the purchase and fale of a borough. If it should be the will of Providence to afflict him with a domestic misfortune, he would fubmit to the stroke with feeling, but not without dignity; and not look for, or find, an immediate confolation for the lofs of an only fon in confultations and empty bargains for a place at court, nor in the mifery of ballotting at the India-house.

The Duke's history began to be important at that an ipicious period, at which he was deputed to the court of Verfailles. It was an honourable office, and was executed with the fame spirit with which it was accepted. His patrons wanted an amballador who would submit to make concessions:—their business required a man who had as little feeling for his own dignity, as for the welfare of his country; and they found him in the first rank

of the nobility.

Junius.

§ 129. Charaster of Mr. Henny Fox, af-

Mr. Henry Fox was a younger brother of the lowest extraction. His father, Sir Stephen Fox, made a confiderable fortune, formshow or other, and left him a fair younger brother's portion, which he foon pent in the common vices of youth, gaming included: this obliged him to travel for fome time.

When he returned, though by education a Jacobite, he attached hunfelf to Sir Robert Walpole, and was one of his ablest cires. He had no fixed principles either of religion or morality, and was too nawary in ridiculing and expoing

them.

He had very great abilities and indefatigable industry in bulines; great skill in managing, that is, in corrupting, the house of commous; and a wonderful dexterny in attaching individuals to himself. He promoted, encouraged, and practifed their vices; he gratified their avaries, or supplied their profusion. He wisely and punctually performed whatever he promised, and most liberally rewarded their attachment and dependence. By these, and all other means that can be imagined, he made himself many perfonal friends and political dependants.

: He was a most difagreeable speaker in parliament, inelegant in his language, hefitating and ungraceful in his elocution, but skilful in discerning the temper of the house, and in knowing when and how to

preis, or to yield.

A constant good-humour and feeming franknefsmade him awelcome companion in focial life, and in all domestic relations he was good-natured. As he advanced in life, his ambition became firbfervient to his avarice. His early profusion and diffugation had made him teel the many inconveniencies of want, and, as it often happens, carried him to the contrary and worfe extreme of corruption and rapine. Rem, quocunque modo rem, became his maxim, which he observed (I will not say religiously and scrupulously, but) invariably and shamefully.

He had not the least notion of, or regard for, the public good or the constitution, but despifed those cares as the objects of narrow minds, or the pretences of interested ones: and he lived, as Brutus died, calling virtue only a name.

Chefterfield.

§ 130. Character of Mr. PITT.

Mr. Pittowed his rife to the most confiderable posts and power in this kingdom fingly to his own abilities; in him they supplied the want of birth and fortune, which latter in others too often supply the want of the former. He was a younger brother of a very new family, and his fortune only an annuity of one hundred pounds a-year.

The army was his original destination, and a cornectey of horfe his first and only commission in it. Thus, unassisted by favour or fortune, he had no powerful protector to introduce him into business, and (if I may use that expression) to do the honours of his parts; but their own

strength was fully fufficient.

His constitution refused him the word

pleafures, and his genius forbad him the idle diffipations of youth; for fo early as at the age of fixteen, he was the martyr of an hereditary gout. He therefore employed the leifure which that tedious and painful distemper either procured or allowed him, in acquiring a great fund of premature and ufeful knowledge. Thus, by the unaccountable relation of causes and effects, what seemed the greatest misfortune of his life was, perhaps, the principal cause of its splendour.

Hisprivatelife was stained by no vices, norfullied by any meanness. All his fentiments were liberal and elevated. His ruling passion was an unbounded ambition, which, when supported by great shifties, and crowned by great success, make what the world calls "a great man." He was haughty, imperious, impatient of contradiction, and overbearing; qualities which too often accompany, but al-

ways clog, great ones.

He had manners and address; but one might different through them too great a confciousness of his own superior talents. He was a most agreeable and lively companion in focial life; and had such a verificatility of wit, that he could adapt it to all forts of conversation. He had also a most happy turn to poetry, but he feldom in-

dulged and feldom avowed it.

He came young into parliament, and upon that great theatre foon equalled the oldestand the ablest actors. His eloquence was of every kind, and he excelled in the argumentative as well as in the declamatory way; but his invectives were terrible, and uttered with fuch energy of diction, and stern dignity of action and countenance, that he intimidated those who were the most willing and the best able to encounter him *; their arms fell out of their hands, and they shrunk under the ascendant which his genius gained over theirs.

In that affembly, where the public good is fo much talked of, and private interest fingly purfued, he fet out with acting the patriot, and performed that part fo nobly, that he was adopted by the public as their chief, or rather only unfulpected absence.

ed, champion.
The weight of his popularity, and his univerfally acknowledged abilities, obtrud-

verfally acknowledged abilities, obtruded him upon king George II. to whom he was perfonally obnoxious. He was made

Hume, Campbell, and Lord Chief Julice Manifold.

fecretary of state: in this difficult and delicate fituation, which one would have thoughtmust have reduced either the patriot or the minister to a decilive option. he managed with fuch ability, that while he ferved the king more effectually in his most unwarrantable electoral views, than any former minister, however willing, had dared to do, he still preferved all his credit and popularity with the public: whom he affured and convinced, that the protection and defence of Hanover, with an army of feventy-five thousand men in British pay, was the only possible method of fecuring our polleflions or acquifitions in North America. So much eatier is it to deceive than to undeceive mankind.

His own difinterestedness, and even contempt of money, smoothed his way to powe er, and prevented or silenced a great hare of that envy which commonly attends it. Most men think that they have an equal natural right to riches, and equal abilities to make the proper use of them; but not very many of them have the impudence to think themselves qualified for power.

Upon the whole, he will make a great and thining figure in the annals of this country, notwithstanding the blot which his acceptance of three thouland pounds per annum pension for three lives, on his voluntary refignation of the feals in the first year of the prefent king, must make in his character, especially as to the difinterested part of it. However, it must be acknowledged, that he had those qualities which none but a great man can have, with a mixture of those failings which are the common lot of wretched and imperfect human nature. Chefterfield.

. § 131. Another Character.

Mr. Pitt had been originally defigned for the army, in which he actually bore a. commission; but fate referred him for a more important station. In point of fortune he was barely qualified to be elected member of parliament, when he obtained a feat in the house of commons, where he foon outthone all his compatriots. He difplayed a suprising extent and precision of political knowledge, and irrefistible energy of argument, and fuch power of elocution as struck his hearers with astonithment and admiration; it flathed like the lightning of heaven against the ministers and fons of corruption, blasting where it fmote, and withering the nerves of oppolition: but his more substantial praise was

was founded upon his disinterested inregrity, his incorruptible heart, his unconquerable spirit of independence, and bis invariable attachment to the interest Smollett. and liberty of his country.

§ 132. Another Character.

The fecretary stood alone. Modern degeneracy had not reached him. Original and unaccomodating, the features of his character had the hardihood of antiquity. His august mind over-awed majesty, and one of his fovereigns thought royalty fo impaired in his prefence, that he conspired to remove him, in order to be relieved from his superiority. No state chicanery, no narrow fystem of vicious politics, no idle contest for ministerial victories, funk him to the vulgar level of the great : but overbearing, perfusive, and impracticable, his object was England, his ambition was fame. Without dividing, he destroyed party; without corrupting, he made a venalage unanimous. France funk bemeath him. With one hand he fmote the house of Bourbon, and wielded in the other the democracy of England. The sight of his mind was infinite; and his schemes were to affect, not England; not the prefent age only, but Europe and pofterity. Wonderful were the means by which thefe schemes were accomplished; always feafonable, always adequate, the fuggestions of an understanding animated by ardour, and enlightened by prophecy.

The ordinary feelings which make life amiable and indolent were unknown to him. No domestic difficulties, no domestic weakness reached him; but aloof from the fordid occurrences of life, and unfullied by its intercourfe, he came occasionally into our fystem, to counsel and

to decide.

A character fo exalted, fo strenous, for various, fo authoritative, astonished a corrupt age, and the treafury trembled at the name of Pitt through all her classes of venality. Corruption imagined, indeed, that she had found defects in this statesman, and talked much of the inconsistency of his glory, and much of the ruin of his victories; but the history of his country and the calamities of the enemy, answered and resuted her.

Nor were his political abilities his only talents: his eloquence was an arra in the fenate, peculiar and fpontaneous, familiar-

stinctive wildom; not like the torrent of Demosthenes, or the fplendid conflagration of Tully; it refembled fometimes the thunder, and fometimes the music of the fpheres. Like Murray, he did not conduct the understanding through the painful. fubtilty of argumentation; nor was be, like Townsheud, for ever on the rack of exertion; but rather lightened upon the fubject, and reached the point by theflafeings of the mind, which. like those of hiseve, were felt, but could not be followed.

Upon the whole, there was in this man fomething that could create, suhvert, or reform; an understanding, a spirit, and an eloquence, to fummon mankind to fociety, or to break the bonds of flavery afunder, and to rule the wilderness of free minds with unbounded authority; fomething that could establish or overwhelm empire, and strike a blow in the world that should refound through the universe. Anonymous.

§ 133. Another Character.

Lord Chatham is a great and celebrated name; a name that keeps the name of this country respectable in every other on the globe. It may be truly called,

Clarum et venerabile nomen Gentibus, et multum nostræ quod proderat-urbi.

The venerable age of this great man, his merited rank, his fuperior elequence, his splendid qualities, his eminent services, the vast space he fills in the eye of mankind, and, more than all the rest, his fall from power, which, like death, canonizes and fanctifies a great character, will not fuffer me to cer-ure any part of his conduct. I am afraid to flatter him ; I am fore I am not disposed to blame him; let those who have betrayed him by their adulation, infult him with their malevolence-But what I do not prefume to censure, I may have leave to lament.

For a wife man, he feemed to me at that time to be governed too much by general maxims: one or two of thefe maxims, flowing from an opinion not the most induigent to our unhappy species, and furely a fittle too general, led him into measures that were greatly mischievous to himself; and for that reason, among others, perhaps fatal to his country; measures the effects of which I am afraid are for ever incurable. He made an administration to checkered and speckled; he put together a piece of ly expressing gigantic sentiments and in- . joinery so crossly indented and white seally

diore-

dove-tailed; a cabinet fo variously inlaid; fuch a piece of divertified molaic, fuch a tellelated pavement without cement; here a bit of black stone, and there a bit of white; patriots and courtiers; king's friends and republicans; whigs and tories; treacherous friends and open enemies; that it was indeed a very curious thow, but utterly unfafe to touch, and unfure to stand on. The colleagues whom he had afforted at the fame boards stared at each other, and were obliged toutk," Sir, your name, &c." It to happened, that perfons had a single office divided between them. who had never spoken to each other in their lives; until they found themselves, they knew not how, pigging together, heads and points, in the fame truckle-bed.

In consequence of this arrangement having put so much the larger part of his enemies and opposers into power, the confusion was such that his own principles could not possibly have any effect or influence on the conduct of affairs. If ever he fell into a fit of the gout, or if any other cause with drew him from public cares, principles directly contrary were sure to predaminate. When he had executed his plan, he had not an inch of ground to stand upon: when he had accomplished his scheme of administration, he was no

longer a minister.

When his face was hid but for a moment, his whole fystem was on a wide fea, without chartor compais. The gentlemen. his particular friends, in various departments of ministry, with a confidence in him which was justified, even in its extravagance, by his superior abilities, had never in any instance prefumed on any opinion of their own; deprived of his guiding influence, they were whirled about, the sport of every gust, and early driven into any port; and as those who joined with them in manning the veilel Were the most directly opposite to his opimions, meafures, and character, and far the most artful and most powerful of the fet, they easily prevailed, fo as to seize upon the most vacant, unoccupied, and dereliet minds of his friends, and instantly they turned the veffel wholly out of the course of his policy. As if it were to insult as well as to betray him, even long before the close of the first session of his administration, when every thing was publicly transacted, and with great parade, in his name, they made an act, declaring it high-

ly just and expedient to raife a revenue in America. For even then, even before the fplendid orb was entirely fet, and while the western horizon was in a blaze with his defeending glory, on the opposite quarter of the heavens arofe another luminary (Charles Townshend) and for his hour became lord of the ascendant, who was officially the reproducer of the fatal scheme, the unfortunate act to tax America for a revenue.

Edm. Barke.

§ 134. Mr. Putrenty's Speech on the Motion for reducing the Army.

Sir,

We have heard a great deal about parliamentary armies, and about an army continued from year to year; I have always been, Sir, and always shall be, against a standing army of any kind. To me it is a terrible thing; whether under that of parliamentary or any other defignation, a standing army is still a standing army, whatever name it be called by: they are a body of men distinct from the body of the people; they are governed by different laws; and blind obedience, and an entire fubmission to the orders of their commanding officer, is their only principle. The nations around us, Sir, are already enflaved, and have been enflaved by those very means; by means of their standing armies they have every one lost their liberties; it is indeed impossible that the liberties of the people can be preferved in any country where a numerous standing army is kept up. Shall we then take any of our measures from the examples of our neighbours? No, Sir; onthe contrary, from their misfortunes we ought to learn to avoid those rocks upon which they have folit.

It fignifies nothing to tell me, that our army is commanded by fuch gentlemen as cannot be fupposed to join in any measures for entlaving their country. It may be so; I hope it is so; I have a very good opinion of many gentlemen now in the army; I believe they would not join in any such measures; but their lives are uncertain, nor can we be sure how long they may be continued in command; they may be all dismissed in a moment, and proper tools of power put in their room. Besides, Sir, we know the patsons of inch, we know how dangerous its storus the bost of men with too much power. Where was there a

brance

braver army than that under Julius Carlar? Where was there ever any army that had ferved their country more faithfully? That army was commanded generally by the best citizens of Rome, by men of great fortune and figure in their country, yet that army enflaved their country. The affections of the foldiers towards their country, the honour and integrity of the underofficers, are not to be depended on: by the military law the administration of jultice is so quick, and the punishment so severe, that neither officer nor foldier dares offer to dispute the orders of his supreme commander; he must not confult his own inclinations: if an officer were commanded to pull his own father out of this house, he must doit; he dares not difobey; immediate death would be the fure confequence of the least grumbling. And if an officer were fent into the court of requests, accompanied by a body of musketeers with ferewed bayonets, and with orders to tell us what we ought to do, and how we were to vote, I know what would be the duty of this house; I know it would be our duty to order the officer to be taken and hanged up at the door of the lobby; but, Sir, I doubt much if fuch a spirit could be found in the house, or in any house of commons that will ever be in England.

Sir, I talk not of imaginary things: I talk of what has happened to an English house of commons, and from an English army; not only from an English army, but an army that was raifed by that very house of commons, an army that was paid by them, and an army that was commanded by generals appointed by them. Therefore do not let us vainly imagine, that an army raifed and maintained by authority of parliament will always be fubmissive to them; if any army be fo numerous as to have it in their power to over-awe the parliament, they will be fubmissive as long as the parliament does nothing to disoblige their favorite general; but when that cafe happens, I am afraid that in place of the parliament's difmiffing the army, the army will dismiss the parliament, as they have done heretofore. Nor does the legality or illegality of that parliament, or of that army after the cafe; for, with respect to that army, and according to their way of thinking, the parliament difinified by them was a legal parliament; they were an army raifed and maintained according to law, and at first they were raifed, as they imagined, for the prefervation of

those liberties which they afterwards destroyed.

It has been urged, Sir, that whoever is for the Protestant succession, must be for continuing the army: for that very reafon, Sir, I am against continuing the army. I know that neither the Protestant fuccession in his Majesty's most illustrious house, nor any succettion, can ever be fafe, as long as there is a standing army in the country. Armies, Sir, have no regard to hereditary fuccessions. The first two Cafars at Rome did pretty well, and found means to keep their armies in tolerable fubjection, because the generals and officers were all their own creatures. But how did it fare with their fucceffors? Was not every one of them named by the army without any regard to hereditary right, or to any right? A cobler, a gardener, or any man who happened to raife himfelf in the army, and could gain their affections, was made emperor of the world. Was not every fucceeding emperor raifed to the throne, or tumbled headlong into the dust, according to the mere whim or mad

frenzy of the foldiers?

We are told this army is defired to be continued but for one year longer, or for a limited term of years. How abfurd is this distinction? Is there any army in the world continued for any term of years? Does the most absolute monarch tell his army, that he is to continue them for any number of years, or any number of months? How long have we already continued our army from year to year? And if it thus continues, wherein will it differ from the standing armies of those countries which have already fubmitted their necks to the yoke? We are now come to the Rubicon; our army is now to be reduced, or it never will; from his Majesty's own mouth we are affured of a profound tranquillity abroad; we know there is one at home. If this is not a proper time, if thefe circumstances do not afford us a fafe opportunity for reducing at least a part of our regular forces, we never can expect to fee any reduction; and this, nation, already overburdened with debts and taxes, must be loaded with the heavy charge of perpetually supporting a numerous standing army; and remain for ever exposed to the danger of having its liberties and privileges trampled upon by any future king or ministry, who hall take it in their heads to do fo, and fhall take a proper care to model the army for that purpofe.

§ 135. Sir John St. Aubin's Speech for repealing the Septennial Act.

Mr. Speaker,

The subject matter of this debate is of fuch importance, that I thould be athamed to return to my electors, without endearouring, in the best manner I am able, to declare publicly the reasons which induced me to give my most ready affent to this question.

right to frequent new parliaments by ancient ufage; and this ufage has been confirmed by feveral laws which have been progressively made by our ancestors, as often as they found it necessary to intist on

this effential privilege.

Parliaments were generally unnual, but never continued longer than three years, till the remarkable reign of Henry VIII. He, Sir, was a prince of unruly appetites, and of an arbitrary will; he was impatient of every restraint; the laws of God and man fell equally a facrifice, as they stood in the way of his avarice, or disappointed his ambition: he therefore introduced long parliaments, because he very well knew that they would become the proper instruments of both; and what a flavish obedience they paid to all his meafures, is fufficiently known.

If we come to the reign of king Charles the First, we must acknowledge him to be a prince of a contrary temper: he had certainly an innate love for religion and virtue. But here lay the misfortune; he was led from his natural disposition by sycophants and flatterers; they advised him to neglect the calling of frequent new parliaments, and therefore, by not taking the constant fenfe of his people in what he did, he was worked up into to high a notion of prerogative, that the commons, in order to restrainit, obtained that independent fatal power, which at last unhappily brought him to his most tragical end, and at the fame time subverted the whole constitution; and I hope we shall learn this lesson from it, never to compliment the crown with any new or extravagant powers, nor to deny the people those rights which by ancient ulage they are entitled to; but to Preferve the just and equal balance, from which they will both derive mutual fecurity, and which, if duly observed, will reader our constitution the envy and admiration of all the world.

King Charlesthe Second naturally took

a furfeit of parliaments in his father's time. and was therefore extremely defirous to lay them ande: but this was a febeme impracticable. However, in effect, be did for for he obtained a parliament which, by its long duration, like an army of veterans, became to exactly disciplined to his own measures, that they knew no other command but from that perion who gave them their pay.

This was a fafe and most ingenious way The people have an unquestionable of enflaving a nation. It was very well known, that arbitrary power, if it was open and avowed, would never prevail here; the people were amufed with the specious form of their ancient constitution: it existed indeed, in their fancy; but, like a mere phantom, had no substance nor reality in it: for the power, the authority, the dignity of parliaments were wholly lost. This was that remarkable parliament which to justly obtained the opprobrious name of the Pention Parliament; and was the model, from which, I believe, fome later parliaments have been exactly copied.

At the time of the Revolution, the pedple made a fresh claim of their ancient privileges; and as they had so lately experienced the misfortune of long and fervile parliaments, it was then declared, that they thould be held frequently. But, it feems, their full meaning was not understood by this declaration; and, therefore, as in every new lettlement the intention of all parties should be specifically manifested, the parliament never ceafed struggling with the crown, tiffthe triennial law was obtained: the preamble of it is extremely full and strong; and in the body of the bill you will find the word declared before enucled, by which Lapprehend, that though this law did not immediately take place at the time of the Revolution, it was certainly intended as declaratory of their first meaning, and therefore stands a part of that original contract under which the constitution was then fettled. His Majesty's title to the crown is primarily derived from that contract; and if upon a review there fhall appear to be any deviations from it, we ought to treat them as fo many injuries done to that title. And I dare fay, that this house, which has gone through so long a feries of fervices to his majetty, will at last be willing to revert to those original stated measures of government, to renew and strengthen that title.

But, Sir, I think the manner in which: the septennial law was first introduced; is a

very

very strong reason why it should be repealed. People, in their wars, have very often recourfe to desperate expedients, which, if not cancelled in feafon, will themselves provefatal to that constitution which shey were meant to fecure. Such is the nature of the feptennial law; it was intended only as a prefervative against a temporary inconvenience; the inconvenience is removed, but the mischievous effects still continuc; for it not only altered the conftitution of parliaments, but it extended that fame parliament beyond its natural duration; and therefore carries this most unjust implication with it, That you may atany time usurp the most indubitable, the most effential privilege of the people, I mean that of chusing their own representatives: a precedent of fuch a dangerous confequence, of fo fatal a tendency, that I think it would be a reproach to our statute-book, if that law was any longer to fubfist, which might record it to posterity.

This is a feafon of virtue and public fpirit; let us take advantage of it to repeal those laws which infringe our liberties, and introduce such as may restore the vigour of our ancient constitution.

Human nature is so very corrupt, that all obligations lofe their force, unless they are frequently renewed: long parliaments become therefore independent of the people, and when they do fo, there always happens a most dangerous dependance effewhere.

Long parliaments give the minister an opportunity of getting acquaintance with members, of practiting his feveral arts to win them into his fchemes. This must be the work of time. Corruption is of fo bafe a nature, that at first fight it is extremely flocking; hardly any one has submitted to it all at once: his disposition must be previously understood, the particular bait must be found out with which he is to be allured, and after all, it is not without many struggles that he furrenders his virtue. Indeed, there are some who will at once plunge themselves into any base action; but the generality of mankind are of a more cautious nature, and will proceed only by leifurely degrees; one or two perhaps have deferted their colours the first campaign, fome have done it a . fecond; but a great many, who have not that eager disposition to vice, will wait till a third.

For this reason, thort parliaments have been less corrupt than long ones; they are observed, like streams of water, always to grow more impure the greater distance they run from the sountain-head.

I am aware it may be faid, that frequent new parliaments will produce frequent new expences; but I think quite the contrary: I am really of opinion, that it will be a proper remedy against the evil of bribery at elections, especially as you have provided so wholesome a law to cooperate upon these occasions.

Bribery at elections, whence did it arife not from country gentlemen, for they are fure of being cholen without it; it was, Sir, the invention of wicked and corrupt ministers, who have from time to time led weak princes into fuch destructive meafures, that they did not dare to rely upon the natural representation of the people. Long parliaments, Sir, first introduced bribery, because they were worth purchafing at any rate. Country gentlemen, who have only their private fortunes to rely upon, and have no mercenary ends to ferve, are unable to oppose it, especially if at any time the public treafure shall be unfaithfully fquandered away to corrupt their boroughs. Country gentlemen, indeed, may make fome weak efforts, but as they generally prove unfuccefsful, and the time of a fresh struggle is at so great a distance, they at last grow faint in the difpute, give up their country for lost, and retire in despair; despair naturally produces indolence, and that is the proper disposition for flavery. Ministers of state understand this very well, and are therefore unwilling to awaken the nation out of its lethargy by frequent elections. They know that the spirit of liberty, like every other virtue of the mind, is to be kept alive only by constant action; that it is impolfible to enflave this nation, while it is perpetually upon its guard .- Let country gentlemen, then, by having frequent opportunities of exerting themselves, he kept warm and active in their contention for the public good: this will raise that zeal and spirit, which will at last get the better of those undue influences by which the officers of the crown, though unknown to the feveral boroughs, have been able to fupplant country gentlemen of great characters and fortune, who live in their neighbourhood .- I do not fay this upon idle speculation only: I live in a country where it is too well known, and I appeal to many gentlemen in the house, to more out of it, (and who are to for this very reason) for

the truth of my affertion. Sir, it is a fore which has been long eating into the most vital part of our constitution, and I hope the time will come when you will probe it to the bottom. For if a minister should ever gain a corrupt familiarity with our boroughs; if he should Reep a register of them in his closet, and, by fending down his treasury mandates, thould procure a fpurious reprefentation of the people, the offspring of his corruption, who will he at all times ready to reconcile and justify the most contradictory measures of his administration, and even to vote every crude indigested dream of their patron into a law; if the maintenance of his power should become the fole object of their attention, and they should be guilty of the most violent breach of parliamentary trust, by giving the king a diferetionary liberty of taxing the people without limitation or controul; the last fatal compliment they can pay to the crown; ---- if this should ever be the unhappy condition of this nation, the people indeed may complain; but the doors of that place, where their complaints should be heard, will for ever be thut against them.

Our difease, I fear, is of a complicated nature, and 1 think that this motion is wifely intended to remove the first and principal disorder. Give the people their ancient right of frequent new elections; that will restore the decayed authority of parliaments, and will put our constitution into a natural condition of working out

her own cure.

Sir, upon the whole I am of opinion, that I cannot express a greater zeal for his Majesty, for the liberties of the people, or the honour and dignity of this house, than by secunding the motion which the honourable gentleman has made you.

1 136. Sir ROBERT WALFOLE'S Reply.

Mr. Speaker,

Though the question has been already fo fully opposed, that there is no great occasion to say any thing farther against it, yet I hope the house will indulge me the liberty of giving some of those reasons which induce me to be against the motion. In general, I must take notice, that the nature of our constitution seems to be very much mistaken by the gentlemen who have spoken in favour of this motion. It is certain that ours is a mixed government, and the perfection of our constitution consists in this, that the monarchical, aristocratical, and democratical form of

government, are mixt and interwoven in ours, fo as to give us all the advantages of each, without hibjecting us to the dangers and inconveniencies of either. The democratical form of government, which is the only one I have now occasion to take notice of, is liable to the fe inconveniencies; that they are generally too tedious in their coming to any resolution, and feldoni britk and expeditious enough in carrying their refolutions into execution : that they are always wavering in their resolutions, and never steady in any of the measures they resolve to pursue; and that they are often involved in factions, feditions, and infurrections, which expofes them to be made the tools, if not the prey, of their meighbours: therefore, in all regulations we make with respect to our constitution, weare to guard against running too much into that form of government, which is properly called democratical: this was, in my opinion, the effect of the triennial law, and will again be the effect, if ever it thould be restored.

That triennial elections would make our government too tedious in all their refolyes, is evident; because, in such case, no prudent administration would ever refolve upon any measure of confequence till they had felt not only the pulie of the parliament, but the pulle of the people; and the ministers of state would always labour under this difadvantage, that, as fecrets of state must not be immediately divulged, their enemies (and enemies they will always have) would have a handle for expoling their measures, and rendering them dilagreeable to the people, and thereby carrying perhaps a new election against them, before they could have an opportunity of justifying their measures, by divulging these facts and circumstances from whence the justice and the wifdom of their meatures would clearly appear.

Then, Sir, it is by experience well known, that what is called the populace of every country, are apt to be too much elated with fucces, and too much dejected with every misfortune: this makes them wavering in their opinions about affairs of state, and never long of the fame mind; and as this house is chosen by the free and anbiasiled voice of the people in general, if this choice were so other renewed, we might expect that this house would be as wavering, and as unsteady, as the people usually are: and it being impossible to carry on the public affairs of the nation without the concurrence of this house, the

3 1

ministers

ministers would always be obliged to comply, and confequently would be obliged to change their measures, as often as the people changed their minds.

With feptennial parliaments, Sir, we are not exposed to either of these missortunes, because if the ministers, after baving felt the pulse of the parliament, which they can always soon do, resolve upon any measures they have generally time enough, before the new elections comeon, to give the people a proper information, in order to thew them the justice and the wildom of the measures they have pursued; and if the people should at any time be too much elazed or too much dejected, or should without a cause change their minds, those at the helm of affairs have time to feet them right before a new election comes on.

As to faction and fedition, Sir, I will grant, that, in monarchical and aristocratical governments, it generally arises from violence and oppression; but, in democratical governments, it always arifes from the people's having too great a fhare in the guvernment. For in all countries, and in all governments, there always will be many factious and unquiet spirits, who can never be at rest either in power or out of power; when in power, they are never eafy, unless every man submits entirely to their direction; and when out of power, they arealways working and intriguing against those that are in, without any regard to justice, or to the interest of their country. In popular governments such men have too much game, they have too many opportunities for working upon and corrupting the minds of the people, in order to give them a bad impression of, and to raile discontents against, those that have the management of the public affairs for the time; and thefe discontents often break out into feditions and infurrections. This, Sir, would in my opinion be our misfortune, if our parliament were either annual or triennial; by fuch frequent elections there would be fo much power thrown into the hands of the people, as would destroy that equal mixture which is the beauty of our constitutution : in foort, our government would really become a democratical government, and might from thence very probably diverge into a tyrannical. Therefore, in order to preferve our constitution, in order to prevent our falling under tyranny and arbitrary power, we nught to preferve that law, which I really think has brought our constitution to

a more equal mixture, and confequently to a greater perfection, than it was ever in before that law took place.

As to bribery and corruption, Sir, if it were possible to influence, by such base means, the majority of the electors of probably give up their liberties; if it were possible to influence, by fuch means, a majurity of the members of this house to confent to the establishment of arbitrary power: I would readily allow, that the calculations made by the gentleman of the other fide were just, and their inference true; but I am perfuaded that neither of thefe is possible. As the members of this house generally are, and must always be, gentlemen of fortune and figure, in their country, is it possible to suppose, that any one of them could, by a pention, or a post be influenced to confent to the overthrow of our constitution; by which the cajoyment, not only of what he got, but of what he before had, would be rendered altogether precarious: I will allow, Sir, that, with respect to bribery, the price must be higher or lower, generally in proportion to the virtue of the man who is to be bribed; but it must likewife be granted, that the humour he happens to be in at the time, the spirit he happens to be endowed with, adds a great deal to his virtue. When no encroachments are made upon the rights of the people, when the people do not shink themfolves in any danger, there may be many of the electors, who, by a bribe of ten guineas, might be induced to vote for one caudidate rather than another; but if the court were making any encreachments upon the rights of the people a proper spirit would, without doubt, arife in the nation; and in tuch a cause, I am persuaded, that none, or very few, even of fuch electors, could be induced to vote for a court candidate; no, not for ten times the fum.

There, may, Sir, be some bribery and corruption in the nation; I amastraid there will always be some; but it is no proof of it that strangers are sometimes chosen; for a gentleman may have sometimes chosen; for a gentleman may have sometimes chosen; for a gentleman may have sometimes chosen, so to be able to prevail with them to chuse any person he pleases to recommend; and if upon such recommendation they chuse one or two of his friends, who are perhaps strangers to them, it is not from thence to be inferred, that the two strangers were chosen their representatives by the means of bribery and corruption.

To infinuate, Sir, that money may be issued from the public treasury for bribing elections, is really fomething very extraordinary, especially in those gentlemen who know how many checks are upon every fulling that can be iffeed from thence; and how regularly the money granted in one year for the public fervice of the nation, must always be accounted for the very next fellion, in this house, and likewife in the other, if they have a mind to call for any fuch account. as to the gentlemen in offices, if they have any advantage over country gentlemen, m having fomething elfe to depend on be-Mestheir own private fortunes, they have ' likewife many difadvantages: they are obliged to live here at London with their families, by which they are put to a much greater expence than gentlemen of equal fortunes who live in the country: this lays them under a very great difadvantage, with respect to the supporting their interest in the country. The country gentleman, by living among the electors, and purchating the necethries for his family from them, keeps up an acquaintance and correspondence with them, without puttinghimfelf to any extraordinary charge; whereas a gentleman who lives in London has no other way of keeping up an acquaintance or correspondence among his friends in the country, but by going down once or twice a year, at a very extmordinary charge, and often without may other bufiness; so that we may conclade, a gentieman in office cannot, even in feven years, fave much for distributing in ready money at the time of an election; and I really believe, if the fact were narrowly enquired into, it would appear, that the gentlemen in office are as little guilty of bribing their electors with ready money, as any other fet of gentlemen in the kingdom.

That there are ferments often raifing among the people without any just cause is what I am furprised to hear-controverted, since very late experience may convince us of the contrary. Do not we know what a ferment was raifed in the nation towards the latter end of the late queen's reign? And it is well known what a fatal change in the affairs of this nation was introduced, or at least confirmed, by an election's coming on while the nation was in that ferment. Do not we know what a fermentwas raised in the nation foon after his late Majesty's nocetion? And if an election had then been allowed to come on,

while the nation was in that ferment, it might perhaps have had as fatal effects as the former; but, thank God, this was wifely provided against by the very law which is now wanted to be repealed.

As fuch ferments may hereafter often happen, I must think that frequent elections will always be dangerous; for which reason, as sar as I can see at prefent, I shall, I believe, at all times, think it a very dangerous experiment to repeal the septennial bill.

§ 137. Lord LYTTELTON's Speech on the Repeal of the Act, called the Jew Bill, in the year 1753.

Mr. Speaker,

I fee no occasion to enter at present into the merits of the bill we passed the last fession, for the naturalization of Jews, because I am convinced, that is the prefent temper of the nation, not a fingle foreign Jewwill think it expedient to take the benefit of that act; and therefore the repealing of it is giving up nothing. I atlented to it last year, in hopes it might induce some wealthy Jews to come and fettle among us: in that light I faw enough of utility in it, to make me incline rather to approve than diflike it; but that any man alive could be zealous, either for or against it; I confels I had no idea. What affects our religion is, indeed, of the highest and most ferious importance: God forbid we fhould ever be indifferent about that! but I thought this had no more to do with religion than any turnpike ad we passed in that festion; and, after all the divinity that has been preached on the fubject, I think fo still.

Refolution and stendinels are excellent qualities; but it is the application of them upon which their value depends. A wife government, Mr. Speaker, will know where to yield, as woll as where to refift: and there is no furer mark of littleness of mind inauadministration, than obstinacy in trifles. Public wildom, on fome occilions, must condefeend to give way to popular folly, especially in a free country, where the humour of the people must be confidered as attentively as the humour of a king in an absolute monarchy. Under both forms of government, a prudent and honest ministry will indulge a fmall folly, and will relift a great one. Not to vouchfate now and then akind indulgence to the former, would discover an ignorance in human nature; not to relift the latter at all times, would be meanness and fervility.

Sir, I look on the bill we are at prefent debating, not as a facrifice made to popularity (for it facrifices nothing) but as a prudent regard to some consequences arising from the nature of the clamour raised against the late act for naturalizing Jews, which seem to require a particular confideration.

It has been hitherto the rare and envied felicity of his Majesty's reign, that his fubiects have enjoyed such a settled tranquillity, such a freedom from angry religious disputes, as is not to be paralleled in any former times. The true Christian fpirit of moderation, of charity, of univerful benevolence, has prevailed in the people, has prevailed in the clergy of all ranks , and degrees, instead of those narrow principles, those bigoted pleasures, that furious, that implacable, that ignorant zeal, , which had often done formuch hurt both to the church and the state. But from the . ill-understood, infignificant act of parlia-.. ment you are now moved to repeal, occation has been taken to deprive us of this inestimable advantage. It is a pretence to disturb the peace of the church, to infufe idle fear into the minds of the people, and make religion itfelf an engine of fedition, .It behaves the piety, as well as the wifdom of parliament, to difappoint those endeavours. Sir, the very worst mischief that . can be done to religion, is to pervertic to the pupofes of faction. Heaven and bell are not more distant than the benevelent fpirit of the Gospel, and the malignant The most impious wars spirit of party. ever made were those called holy wars. He who hates another man for not being a Christian, is himfelf not a Christian. Christianity, Sir, breathes love and peace, and good-will to man. A temper conformable to the dictates of that holy religion, has lately distinguished this nation; and a glorious distinction it was! But there is latent, at all times, in the minds of the yulgar, a spark of enthusiasm, which, if blown by the breath of a party, may, even when it feems quite extinguilhed, be fuddenly revived and raifed to a flame. The act of last fellion for naturalizing . Jews, has very unexpectedly administered fuel to feed that flame. To what a : height it may rife, if it should continue much longer, one cannot eafily tell; but, take away the fuel, and it willdie of itfelf. .

It is the misfortune of all the Roman Catholic countries, that there the church and the state, the civil power and the hierarchy, have feparate interests; and are continually atvariance one with the other. It is our happines, that here they form but one fystem. While this harmony lasts, whatever hurts the church, hurts the state; whatever weakens the credit of the governors of the church, takes away from the civil power a part of its strength, and flankes the whole constitution.

Sir, I trust and believe that, by fpeedily passing this bill, we shall filence that obloquy which has fo unjustly been cast upon our reverend prelates (fome of the most respectable that ever adorned our church) for the part they took in the act which this repeals. And it greatly concerns the whole community, that they should not lose that respect which is so justly due to them, by a popular clamour kept up in opposition to a measure of no importance in itself. But if the departing from that measure should not remove the prejudice fo maliciously raised, I am certain that no further step you can take will be able to remove it; and, therefore; I hope you will stop here. This appears to he a reasonable and fafe condescention, by which nobody will be hurt; but all beyond this would be dangerous weakness in government; it might open a door to the wildest enthufialm, and to the most mischievous attacks of political difaffection working upon that enthufiafm. If you encourage and authorize it to fall on the fynagogue, it will go from thence to the meetinghouse, and in the end to the palace. But let us be careful to check its further progrefs. The more zealous we are to support Christianity, the more vigilant hould we be in maintaining toleration. If we bring back perfecution, we bring back the Anti-christian spirit of popery; and when the fpirit is here, the whole fystem will foon foilow. Toleration is the bafis of all public quiet. It is a charter of freedom given to the mind, more valuable, Ithink, than that which fecures our persons and Indeed, they are inseparably estates. connected together; for, where the mind is not free, where the confcience is enthrailed, there is no freedom. Spiritual tyranny puts on the galling chains; but civil tyranny is called in, to river and fix We fee it in Spain, and many other countries; we have formerly both feen and felt it in England. By the bleffing of God, we are now delivered from all kinds of oppression. Let us take cart, that they may never seturn.

NARRATIVES, DIALOGUES, &c.

WITH OTHER

HUMOROUS, PACETIOUS, AND ENTERTAINING PIECES.

1. The Story of LE FEVRE.

T was some time in the summer of that year in which Dendermond wastaken by the allies, --- which was about fevery ears beforemy father came into the country,and about as many after the time that my uncle Toby and Trim had privately decamped from my father's house in town, in order to lay fome of the finest fieges to some of the finest fortified cities in Europe -When my uncle Toby was one evening getting his supper, with Trim litting behind him at a fmall (ideboard;—the landlord of a little inn in the village came into theparlour with an empty phial in hishand to beg a glass or two of fack; 'tis for a poor gentleman,-I think, of the army, faid the landlord, who has been taken ill at my house four days ago, and has never held up his head fince, or had a defire to taste any thing 'till just now, that he has a fancy for a glass of fack and a thin toast. -I think, fays he, taking his hand from his forehead, it would comfort me .-

-If I could neither beg, borrow, nor buy fuch a thing,—added the landlord,-I would almost steal it for the poor gentleman, he is fo ill .-- I hope in God he will still mend, continued he-we are all

of us concerned for him.

Thou art a good-natured foul, I will answer for thee, cried my uncle Toby; and thou fhait drink the poor gentleman's health in a glass of fack thyfelf, -and take a couple of bottles, with my fervice, and

tell him he is heartily welcome to them, and to a dozen more, if they will do him

Though I am perfuaded, faid my uncle Toby, as the landlord shut the door, he is a very compassionate fellow-Trim, - yet . Icannothelp entertaining an high opinion of his guest too; there must be fomething more than common in him, that in fo fhort. a time should win so much upon the affections of his host; ---- And of his whole family, added the corporal, for they are all concerned for him. Step after him, faid my uncle Toby,-do Trim,-and alk if he knows his name.

-I have quite forget it, truly, faid the landlord, coming back into the parlour with the corporal, -but I can ask his fon again: --- Has he a son with him then? said my uncle Toby. - A boy, replied the landlord, of about eleven or twelve years of age; -but the poor creature has tasted almost as little as his father; he does nothing but mourn and lament for him night and day: he has not stirred from the bed-fide thefe two days.

My uncle Toby laid down his knife and fork, and thrust his plate from before him, as the landlord gave him the account; and Trim, without being ordered, took as ay without faying one word, and in a few minutes after brought him his pipe and tobacco

-Stay in the room, a little, fays my uncle Toby .-

Trim!--faid my uncle Toby, after he 3 E 3 had

had lighted his pipe, and smoked about a dozen whish—Trim came in front of his master, and made his bow: my uncle Toby implied on, and faid no more. Corporal! faid my uncle Foby, -the corporal made his bow.-My uncle Toby proceeded no farther, but finished his pipe.

Trim! faid my uncle Toby, I have a project immy head, as it is a bad night, of wrapping myfelf up warm in my roquelaure, and paying a vifit to this poor gentleman .- Yourhonour's roquelaure, replied the corporal, has not once been had on, fince the aight before your honour received your wound, when we mounted guard in the trenches before the gate of St. Nicholas; -and befides, it is fo cold and rainy a night, that what with the roquelaure, and what with the weather, 'twill be enough to give yourhonour your death, and bring on your honour's torment in your groin .-I fear fo, replied my uncle Toby; but I am not at rest in my mind, Trim, fince the account the landlord has given me .--I with I had not known fo much of this affair-added my uncle Toby,-or that I had known more of it:--How shall we manage it?-Leave it, an't please your honour, to me, quoth the corporal;-I'll take my hat and stick, and go to the house and reconnoitre, and act accordingly; and I will bring your honour a full account in an hour.—Thou shalt go, Trim, faid my uncle Toby, and here's a flilling for thee to drink with his fervaut-I shall get it all out of him, faid the corporal, thutting the dong,

My uncle l'oby filled his fecond pipe; and had it not been, that he now and then wandered from the point, with confidering whether it was not full as well to have the curtain of the tennaile a straight line, as a crooked one, -he might be faid to have thought of nothing effe but poor Le Fevre and his boy the whole time he

Imoked it.

It was not till my uncle Tohy had knocked the after out of his third pipe, that corporal Trim returned from the inn, and gave him the following account:

I despaired at first, said the corporal, of being able to bring back your honour any kind of intelligence concerning the poor fick lieutenant-Is he in the army then? faid my uncle Toby-He is, faid the corporal-And in what regiment? faid my uncle Toby-1'lltell your honour, replied the corporal, every thing straight forwards, as I learnt it -Then, Trim, I'll

fillanotherpipe, faid my uncle Toby, and not interrupt thee till thou hast done; fo fit down at thy eafe, Trim, in the window feat, and begin thy story again. The corporal made his old bow, which generally spoke, as plain as a bow could speak it-" Your honour is good:"-And having done that, he fat down, as he was ordered, -and began the story to my uncle Toby over again in pretty near the fame words.

I defpaired at first, faid the corporal, of being able to bring back any intelligence to your honour, about the lieutenant and his fon; for when I asked where his fervant was, from whom I made myfelf fure of knowing every thing which was proper to be afked-That's a right diftinction, Trim, faid my uncle Toby-lwas answered, an' please your honour, that he had no fervant with him; -that he had come to the inn with hired horses, which, upon finding himfelf unable to proceed, (to join, I suppose, the regiment) he had difmiffed the morning after be came .- If I get better, my dear, faid he, as he gave his purse to his son to pay the man,-we can hire horfes from hence,-But alas! the poor gentleman will never go from hence, faid the landlady to me,-for I heard the death-watch all night long:and when he dies, the youth, his fon, will certainly die with him: for he is brokenbearted already.

I was hearing this account, continued the corporal, when the youth came into thekitchen, toorder the thin to ast the landlord fpoke of; -but I will do it for myfather myfelf, faid the youth .- Pray let me faveyouthetrouble, young gentleman, faid I, taking up a fork for the purpofe, and offering him my chair to fit down upon by the fire, whilst I did it .- I believe, fir, faid he, very modestly, I can pleafe him best myfelf .- I am fure faid I, his honout will not like the toast the worfe for being toasted by an old foldier.-The youth took hold of my hand, and instantly burst into tears .- Poor youth! faid my uncle Toby,-he has been bred up from an infant in the army, and the name of a foldier, Trim, founded in his ears like the name of a friend; -I wish I had him here.

----I never, in the longest march, faid the corporal, had fo great a mind to my dinner, as I had to ery with him for company :- What could be the matter with me an' pleafe your honour? Nothing in the world, Trim, faid my uncle Toby.

blowing his nofe, -but that thou art a

good-natured fellow.

When I gave him the toast, continued the corporal, I thought it was proper to tell him I was Captain Shandy's fervant, and that your honour (though a stranger) was extremely concerned for his father; -and that if there was any thing in your house or cellar-(and thou might'st have added my purie too, faid my uncle Toby) he was heartily welcome to it:-be made 8 very low bow, (which was meant to your honour) but no answer, -for his heart was full-lo he went up stairs with the toast; - I warrant you my dear, faid I, as I opened the kitchen-door, your father will be weil again .- Mr. Yorick's curate was fmoking a pipe by the kitchen fire-but faid not a word good or bad to coinfort the youth-I thought it was wrong, added the corporal-I think fo too, faid my uncle Toby.

When the dieutenant had taken his glafs of lack and toast, he felt himfelf a little-revived, and fent down into the kitchen, to let me know, that in about ten minutes he should be glad iff would step up stairs.—I believe, faid the landlord, he is going to say his prayers—for there was a book laid upon the chair by his bed-side; and as I shut the door I saw his son take up a

cuthion .-

I thought, faid the curate, that you gentlemen of the army, Mr. Trim, nevertaid your prayers at all .-- I heard the poor gentleman fay his prayers last night, faid the landlady, very devoutly, and with my own ears, or I could not have believed it. -Are you fure of it? replied the curate; -A foldier, an' pleafe your reverence, faid, I, praysas often (of his own accord) as a parfon; -- and when he is fighting for his king, and for his own Kie, and for his honour too, he has the most reason to pray to God of any one in the whole world .--Twas well faid of thee, Trim, faid my uncle Toby .- But when a foldier, faid I, an' pleafe your reverence, has been stand-' ing for twelve hours together in the treaches; up to his knees in cold water, -or engaged, faid I, for months together in long and dangerous marches ;haraffed, perhaps, in his rear to-day;haralling others to-morrow :-- detached here ;-countermanded there ;-resting this night upon his arms:-beat up in his fairt the next;-benumbed in his joints;-perhaps without straw in his tent to kneel on ;--he must fay his prayers how and when he can .- I believe,

faid I,-for I was picqued, quoth the corporal, for the reputation of the army, -I believe, an't please your reverence, faid I, that when a foldier gets time to pray,-he prays as heartily as a parfon -though not with all his Tuls and hypocrify .-- Thou should'st not have faid that, Trim, faid my uncle Toby, -for God only knows who is a hypocrite, and who is not :-- At the great and general review of us all, corporal, at the day of judgment, (and not till then) it will be feen who has done their duties in this world, and who has not, and we shall be advanced, Trim, accordingly. - I hope we thall, said Trim - It is in the Scripture, faid my uncle Toby; and I will thew it thee tomorrow;-In the mean time we may depend upon it, Trim, for our comfort, faid my uncle Toby, that God Almighty is fo good and just a governor of the world, that if we have but done our duties in it,-it will never be enquired into, whether we have done them in a red coat or a black one :- I hope not, faid the corporal .- But go on, Trim, faid my uncle Toby, with thy story.

When I went up, continued the corporal, into the lieutenant's room, which I did not do till the expiration of the ten minutes,—he was lying in his bed with his beadraifed upon his hand, with his elbow upon the pillow, and a clean white cambric hand-kerchief befide it:—The youth was just stooping down to take up the cushion, upon which I supposed he had been kneeling—the book was laid upon the bed,—and as he rose, in taking up the cushion with one hand he reached out his other to take it away at the same time.—Let it remain there, my dear, said the lieutenant.

He did not offer to speak to me, till I had walked up close to his bed-fide :-If you are Captain Shandy's fervant, faid he you must prefent my thanks to your master, with my little boy's thanksalong with them, for his courtefy to me, -- if he was of Leven's-faid the lieutenant -I told him your honour was .- Then, faid he, I ferved three campaigns with him in Flanders, and remember him-but 'tis most likely, as I had not the honour of any acquaintance with him, that he knows nothing ofme .- You will tell him, however, that the person his good-nature has laid under obligations to him, is one Le Feyre, a lieutenant in Angus's-but he knows menot, -faidhe, afecond time, muting;possibly he may mystory - addedhe-pray iall the captain, I was the ensign at Breda,

3 E 4

whose wise was most unfortunately killed with a musket-shot, as she lay in my arms in my tent.—I remember the story, an't-please your honour, said I, very well.—That kind Do you so? I said he wiping his eyes with his handkerchiës—then well may I.—In faying this, he drews little ring out of his bosom which seemed tied with a black ribband, about his neek, and kisted it wice.—Here, Billy, said he,—the boy slew acrost the room to the bed-side, and falling down upon his knee, took the ring in his hand, and kisted it too,—then kisted his sattle, and falling the hounded to Le Fevre,—a then, and fall down upon the bed and wept.

I with, faid my uncle Toby with a deep figh, —I with, Trim, I was affeep.

Your honour, replied the corporal, is too much concerned;—thall I pour your honour out a glass of fack to your pipe? —Do, Trim, faid my uncle Toby.

I remember, faid my uncle Toby, fighing again, the story of the ensign and his wife, with a circumftance his modefly omitted ;-and particularly well that he, as well as the upon forneaccount or other, (I forget what) was univerfally pitied by the whole regiment; -but finish the story thou art upon :- "I is finithed already, faid the corporal,-for I could stay no longer, -fo withed his honour a good night; young Le Feyte role from off the bed, and faw me to the hottom of the stairs; and as we went down together, told ine, they had come from Ireland, and were on their route to join their regiment in Flanders-But, alas! faitl the corporal, -the lieutenant's last day's march is ever. Then what is to become of his poor boy? cried my uncle Toby.

It was to my uncle Toby's eternal honour,-though I tell it only for the fake of those, who, when cooped in betwixt a natural and a politive law, know not for their fouls which way in the world to turn themfelves -that notwithstanding my uncle Toby was warmly attached at that time in carrying on the fiege of Dendermond, parallel with the allies, who preffed theirs on to vigorously that they fearce allowed him time to get his dinner - that nevertheleis he gave up Dendermond, though he had already made a ludgment upon the counterfearp; and bent his whole thoughts towards the private distreffes at the inn : and, except that he ordered the gardengate to be bolted up, by which he might be faid to have turned the fiege of Dendermond into a blockade-he left Dendermond to itself-to be relieved or not we she French king, anthe French king

thought good; and only confidered how he himself should relieve the poor lieute-

That kind being, who is a friend to the friendless, shall recompense thee for this.

Thou hast left this matter fhort, faid my uncle Toby to the corporal, as he was putting him to bed, and I will tell thee in what, Trim,-In the first place, when thoumadest an offer of my fervices to Le Fevre, -as fickness and travelling are both expensive, and thou knowest he was but a poor lieutenant, with a fon to subfift as well as himself, out of his pay,-that thou didst not make an offer to him of my purfe; because, had he stood in need, thou knowest, Trim, he had been as welcome to it as myfelf. -Your honour knows, faid the corporal, I had no orders; -- True, quoth my uncle Toby, -thou didst very right, Trim, as a foldier, -- but certainly very wrong as a man.

In the fecoud place, for which, indeed, then hast the fame excufe, continued my uncle Toby, — when thou offereds him whatever was in my house, — thou shoulds have offered him my house too; — A fick brother officer should have the best quarters, Trim; and if we had him with us, — we could tend and look to him, — thou art an excellent nurse thyself, Trim, — and what with thy care of him, and the old woman's and his boy's and mine tegether, we might recruit him again at once, and set him upon his legs.—

--- In a fortnight or three weeks, added my uncle Toby, fmiling,-he might march,-He will never march ,an' please your honour, in this world, faid the corporal; --- He will march, faid my uncle Toby, rifing up from the tide of the bed, with one three off :- Au' please your honour, faid the corporal, he will never march but to his grave:- Hefhallmarch, cried my uncle Toby, marching the foot which had a fhoe on, though without advancing an inch,—he shall march to his regiment.-He cannot stand it, faid the corporal:-he finall be supported, faid my uncle Toby .-- He'lldrop at last, faid the corporal, and what will become of his boy? -le shall not drop faid my uncle Toby. firmly .-- A-well-o'day .-- do what we can for him faid Trim, maintaining his point, the poor foul will die :- He thall not die, by G-, cried my uncle Toby.

The accusing spirit, which slew up to heaven's chancery with the path, blushed

as he gave it in—and the recording angel, as he wrote it down, dropp'd a tear uponthe word, and blotted it out for ever.

—My uncle Toby went to his bureau,—put his purfe into his breeches pocket, and liaving ordered the corporal to go early in the morning for a phylician,—he went to bed and fell afleep.

The fun looked bright the morning after, to every eye in the village but Le Fevre's and his afflicted fon's; the hand of death press'd heavy upon his eye-lids,and hardly could the wheel at the cistern turn round its circle,-when my uncle Toby, who had role up an hour before his wonted time, entered the lieutenant's room, and without preface or apology fat himfelf down upon the chair, by the bedfide, and independently of all modes and customs opened the curtain in the manner an old friend and brother officer would have done it, and asked him how he did, -how he had rested in the night, -what was his complaint, where was his pain, -and what he could do to help him? -and without giving him time to anfwer any one of the enquiries, went on and told him of the little plan which he had been concerting with the corporal the night before for him.

Fevre, faid my uncle Toby, to my house, and we'll fend for a doctor to see what's the matter,—and we'll have an apothecary,—and the corporal shall be your nurse;—and I'll be your fervant,

Le Fevre.

There was a franknessin my uncle Toby, -not the effect of familiarity,-but the cause of it, which let you at once into his foul, and thewed you the goodness of his nature; to this, there was fomething in his looks, and voice, and manner, superadded, which eternally beckoned to the unfortunateto come and take shelter under him; fo that before my uncle Toby had half finished the kind offers he was making to the father, had the fon infenfibly preffed up close to his knees, and had taken hold of the breast of his coat, and was pulling it towards him.blood and spirits of Le Fevre, which were waxing cold and flow within him, and were retreating to their last citadel, the hvart,-rallied back, the film forfook his eyes for a moment,-he looked up wishfully in my uncle Toby's face, -then cast a look upon his hoy, -and that ligament, fine as it was, -was never broken.

. Nature instantly ebb'd again, --- the

film returned to its place,—the pulfetlutter'd—stopp'd—went on—throbb'd—stopp'dagain—mov'd—stopp'd—shall I go on?—No. Sterne.

§ 2. Youick's Death.

A few-hours before Yorick breathed his last, Eugenius stept in, with an intent to take his last fight and last farewell of him. Upon his drawing Yorick's curtain, and atking how he felt himfelf, Yorick looking up in his face, took hold of his hand,and, after thanking him for the many tokens of his friendship to him, for which, he faid, if it was their fate to meet hereafter, he would thank him again and again: he told him, he was within a few hours of giving his enemies the flip for ever.—I. hope not, answered Eugenius, with tears trickling down his cheeks, and with the tenderest tone that ever man fpoke,-I hope not, Yorick, faid he .- Yorick replied, with a look up, and a gentle fqueeze of Rugenius's hand, - and that was all, but it cut Eugenius to his heart .- Come, come, Yorick, quoth Eugenius, wiping his eyes, and fummoning up the man within him, - my dear lad, be comforted,... -let not all thy spirits and fortitude forfake thee at this crisis when thou most. wantest them; -who knows what refources are in store, and what the power of God may yet do for thee; - Yorick laid his hand upon his heart, and gently shook hishead; formy part, continued Eugenius, crying bitterly as he uttered the words, -I declare, I know not, Yorick, how to part with thee, and would gladly flatter my hopes, added Eugenius, chearing up his voice, that there is still enough of thee left to make a bishop, -and that I may live to fee it. I befeech thee Eugenius, quoth Yorick, taking off his night-cap as well as he could with his left hand,his right being still grasped, close in that of Eugenius, --- I befeech thee to take a view of my head .- I fee nothing that ails it, replied Eugenius. Then alas! my friend, faid Yorick, let me tell you, that it is to bruifed and mif-shapened with the blows which have been fo unhandfomely given me in the dark, that I might fay with Sancho Panca, that should I recover, and" mitres thereupon be fuffered to rain " down from heaven as thick as hail; not " one of them would fit it."--Yorick's laftbreathwashangingupon histrembling lips, ready to depart as he uttered this:yet still it was uttered with fornething of a Cervantic tone; - and as he spoke it, Eugenius could perceive a stream of lambent fire lighted up for a moment in his eyes; ——l'aint picture of those flashes of his spirit, which (as Shakespear said of his ancestor) were wont to set the table in a roar!

Eugenius was convinced from this, that the heart of his friend was broke; he fqueezed his hand,—and then walked fortly out of the room, weeping as he walked. Yorick followed Eugenius with his eyes to the door,—he then closed them—and never opened them more.

He lies buried in a corner of his churchyard, under a plain marble-flab, which his friend Eugenius, by leave of his executors, laid upon his grave, with no more than thefe three words of infeription, ferving both for his epitaph, and elegy——

Alas, poor YORICK!

Ten times a day has Yorick's ghost the confolation to hear his monumental infeription read over with fuch a variety of plaintive tones, as denote a general pity and esteem for him;—a foot-way crofling the church-yard close by his grave,—not a paffenger goes by, without stopping to cast a look upon it,—and fighing as he walks on.

Alas, poor Y O R I C K!

Sterne.

§ 3. The Story of Alcander and Sertimus. Taken from a Byzantine Hijtorian.

Athens, long after the decline of the Roman empire, still continued the feat of learning, politeness, and wildom. Theodoric the Ostrogoth repaired the schools which barbarity was fullering to fall into decay, and continued those pensions to men of learning which avaricious gover-

nors had monopolized.

In this city, and about this period, Alcander and Septimius were fellow-audents together: the one the most fubther reasoner of all the Lyceum, the other the most eloquent speaker in the academic grove. Mutual admiration soon begot a friendship. Their fortunes were nearly equal, and they were natives of the two most celebrated cities in the world; for Alcander was of Athens, Septimius came from Rome.

In this state of harmony they lived for fome time together; when Alcander, after puffing the first part of his youth in the audolence of philosophy, thought at

length of entering into the bufy world; and, as a step previous to this, placed his affections on Hypatia, a lady of exquitive beauty. The day of their intended suptials was fixed; the previous coronomies were performed; and nothing now remained but her being conducted in triumph to the apartment of the intended bridegroom.

Alcander's exultation in his own happinels, or being unable to enjoy any faristaction without making his friend Septimius a partner, prevailed upon him to introduce Hypatia to his fellow-student; which he did with all the guiety of aman who found himfelf equally happy in friendthip and love. But this was an interview fatal to the future peace of both; for Septimius no fooner faw her, but he was fmitten with an involuntary paffion; and, though he uted every effort to tupp refadefires at once to imprudent and unjust, the emotions of his mind in a thort time became fo strong, that they brought on a fever, which the phyficians judged incurable.

During this illness, Alcander watched him with all the anxiety of fondness, and brought his mistress to join in those amable offices of friendship. The fagacity of the physicians by these means foon discovered that the cause of their patient's disorder was love; and Alcander being apprized of their discovery, at length extorted a contession from the reluctant

dying lover.

It would but delay the parratire to defcribe the conflict between love and friendthip in the breast of Alcanderon this occafion; it is enough to fay, that the Athenians were at that time arrived at fuch refinement in morals, that every virtue was carried to excess. In thort, forgetful of his ownfelicity, he gave up his intended bride, in all her charms, to the young Roman-They were married privately by his connivance, and this unlooked-for change of fortune wrought as unexpected a change in the constitution of the now happy Septimius: in a few days he was perfectly recovered, and fet out with his thir partner for Rome. Here, by an exertion of those talents which he was fo eminently polletied of, Septimius in a few years arrived at the highest dignities of the state, and was constituted the city-judge, or prator.

In the mean time Alcauder not only felt the pain of being separated from his friend and his mistress, but a prosecution was also commenced against him by the relations

οí

offlypatia, for having basely given up his bride, as was suggested, for money. His imposence of the crime laid to his charge, and even his eloquence in his own defence, were notable to with stand the influence of a powerful party. He was cast, and condemned to pay an enormous sine. However, being unable to raite to large a sum at the time appointed, his possessions were consistently, he himself was stripped of the habit of freedom, exposed as a slave in the market-place, and sold states by cheet hidder.

totte bighest bidder. A m webant of Thrace becoming his perchater, Alcander, with fome other companions of distrefs, was carried into that region of defolation and flerility. His flated employment wastnfollow the herds of an imperious master, and his fuccess in . hunting was all that was allowed him to supply his precarious subsistence. Every morning awaked him to a renewal of famine or toil, and every change of feafon ferved but tonggravate his untheltered distrefs. After fome years of bondage, however, an opportunity of eleaping offered; he embraced it with ardour; fo that travelling by night, and lodging in caverns by day, to shorten along story, he at last arrived in Rome. The fume day on which Alcander arrived, Septimius fatadministering justice in the forum, whither our wanderer came, expecting to be instantly known, and publicly acknowledged by his former friend. Herehestood the whole day amongst the crowd, watching the eyes of the judge, and expecting to be taken notice of; but he was to much altered by a long fuccession of hardships, that he continued unnoted among the rest; and, in the evening, when he was going up to the prætor's chair, he was brutally repulfed by the attending lictors. The attention of the poor is generally driven from oneungrateful object to another; for night comingon, he now found himfelf under a necessity of seeking a place to lie in, and yet knew not where to apply. All emaciated and in rags as he was, none of the citizens would harbour fo much wretchednels; and fleeping in the streetsmight be attended with interruption or danger: iu. fort, he was obliged to take up his lodging in one of the tombs without the city, the usual retreat of guilt, poverty, and despair. In this mantion of horror, laying his head upon an inverted urn, he forgot his mileries for a while in fleep; and found, on his flinty couch, more ease than beds of down can supply to the guilty.

As he continued here, about midnight two rebbers came to make this their retreat; but happeningto difagree about the division of their plunder, one of them stabled the other to the heart, and left him. weltering in blood at the entrance. thefe circumstances he was found next morning dead at the mouth of the vault. This naturally inducing a farther enquiry, an alarm was ipread; the cave was examined; and Alcander being found, was immediately apprehended, and accused of robbery and murder. The circumstances against him were Brong, and the wretchedness of his appearance confirmed suspicion. Misfortune andhe were now folong acquainted, that he at last became regardless of life. He detested a world where he had found only ingratitude, fallehood, and cruelty; he was determined to make no defence, and thus, lowering with refolution he was dragged, bound with cords, before the tribunal of Septimius. As the proofs were politive against him, and he offered nothing in his own vindication. the judge was proceeding to doom him to a most crue land ignominious death, when the attention of the multitude was soon divided by another object. The robber. who had been really guilty, was apprehended felling his plunder, and struck . with a panic, had confeded his crime. He was brought bound to the fame tribunal. and acquitted every other person of any partnership in hisguilt. Alcander's innocence therefore appeared, but the fullen rashness of his conduct remained a wondertothefurroundingmultitude; but their astonishment was still farther increased, when they faw their judge start from his. tribunal to embrace the supposed criminal; Septimius recollected his friend and former benefactor, and hung upon his. neck with tears of pity and of joy. Need the fequel be related? Alcander was acquitted: fhared the friendship and honours of the principal citizens of Rome; lived afterwards in happiness and ease; and left it to be engraved on histomb, That no circumstances are fo delperate, which Providence may not relieve.

5. 4. The Monk.

A poor Monk of the order of St. Francis came into the room to beg fomething for his convent. The moment I cast my eyes upon him, I was pre-determined not to give him a fingle fous, and accordingly I put my purfectuto my preket—buttoned it up—fet myfelf a little more upon my

centre, and advanced up gravely to him: there was fomething. I fear, forbidding in my look: I have his figure this moment before my eyes, and think there was that

in it which deferved better.

The Monk, as I judge from the break in his tonfure, a few feattered white hairs upon his temples being all that remained of it, might be about feventy-but from his eyes, and that fort of fire which was in them, which seemed more tempered by courtefy than years, could be no more than fixty-truth might lie between-He was certainly fixty five; and the general air of his countenance, notwithstanding fomething feemed to have been planting wrinkles in it before their time, agreed to the account.

It was one of those heads which Guido hasoften painted-mild-pale-penetrating, free from all common-place ideas of fat contented ignorance looking downwardsupon the earth-it look'd forwards; but look'd as if it look'd at fomething beyond this world. How one of his order came by it, Heaven above, who let it fall upon a Monk's thoulders, best knows; but it would have fuited a Bramin, and had I met it upon the plains of Indostan, I had reverenced it.

The rest of his outline may be given in a few strokes; one might put it into the hands of any one to delign, for 'twas neithe elegant nor otherwise, but as characterand expression made it fo; it was a thin, fpare form, femething above the common fine, if it lost not the distinction by a bend forwards in the figure-but it was the attifude of entreaty; and as it now stands prefent to my imagination, it gain'd

more than it lost by it.

When he had entered the room three paces, he stood still; and laying his left hand upon his breast (a flender white staff with which he journeyed being in his right)-when I had got close up to him, he introduced himfelf with the little story of the wants of his convent, and the poverty of his order-and did it with fo . Ample a grace-and fuch an air of deprecation was there in the whole cast of his. the door-Pfha! faid I, with an air of look and figure-I was bewitched not to have been struck with it-

-A better reason was, I had pre-determined not to give him a fingle fous.

"Tis very true, faid I, replying to a cast unwards with his eyes, with which he had concluded his address-'tis very true-and Heaven be their refource who have no other but the charity of the. world, the stock of which, I fear, is no way fufficient for the many great claims . which are hourly made upon it.

As I pronounced the words " great " claims," he gave a flight glance with his eye downwards upon the fleeve of his tunic-I felt the full force of the appeal-I acknowledge it, faid I-a coarfe habit, and that but once in three years, with meagre diet-are no great matters: and the true point of pity is, as they can be earn'd in the world with folittle industry, that your ordershould with toprocure them by prefsing upon a fund which is the property of the lame, the blind, the aged, and the infirm: the captive, who lieadown counting over and over again the days of his affliction, languithes also for his there of it; and had you been of the order of Mercy, inflead of the order of St. Francis, poor as I am, continued I, pointing at my portmanteau, full chearfully should it have been opened to you for the ranfom of the unfortunate. The Monk made me a bow-but of all others, refumed I, the unfortunate of our own-country, furely, have the first rights; and have left thousands in distress upon our own shore --- The Monk gavea cordial wave withhishead-as much as to . fay, No doubt, their is mifery enough in every corner of the world, as well as within our convent-Butwedistinguith, faid 1, laying my hand upon the fleeve of his tunic, in return for his appeal-we distinguish my good father! betwixt those who. wish only to eat the bread of their own labour and those who eat the bread of other people's, and have no other plan in life, but to get through it in soth and ignorance, for the love of God.

The poor Franciscan made no reply: a hectic of a moment pass'd across his cheek, but could not tarry-Nature feemed to have had done with her refentments in him; he shewed none-but letting his staff fall within his arm, he pressed both his hands with refignation upon his

breast, and retired.

My heart fmote me the moment heftent careleffness, three several times-but it would not do; every ungracious fyllable I had uttered crowded back into my imagination; I reflected I had no right over the poor Franciscan, but to deny him; and that the punishment of that was enough to the disappointed, without the addition of unkind language—I confidered his grey

hairs-

thairs—his courteous figure feemed to reenter, and gently ask me, what injury he had done me? and why I could use him thus?—I would have given twenty livres for an advocate—I have behaved very iff, faid I within myself; but I have only just set out upon my travels; and shall learn better manners as I get along.

· Sterne.

§ 5. Sir Bertrand. A Fragment.

-Sir Bertrand turned his steed towards the wolds, hoping to cross these dreary moors before the curfew. But ere he had proceeded half his journey, he was bewildered by the different tracks; and not being able, as far as the eye could reach, to efpy any object but the brown heath furrounding him, he was at length quite uncertain which way he thould direct his courfe. Night overtook him in this fituation. It was one of those nights when the moon gives a faint glimmering of light through the thick black clouds of a lowering flry. Now and then the fuddenly emerged in full fplendour from her veil, and then instantly retired behind it; having just ferved to give the forlorn Sir Bertrand a wide extended prospect over the desolate waste. Hope and native courage awhile urged him to puth forwards, but at length the increasing darknessand fatigue of body and mind overcame him; he dreaded moving from the ground hestood on, for fear of unknown pits and bogs, and 'alighting from his horfe in defpair, he threw himself on the ground. He had not long continued in that posture, when the fullen toll of a distant bell struck his ears-he started up, and turning towards the found, difcerued a dim twinkling light. Instantly he feized his horse's bridle, and with cautious steps advanced towards it. After a painful march, he wasstopped by a mosted ditch, furrounding the place from whence the light proceeded; and by a momentary glimple of moon-light he had a full view of a large antique manfion, with turrets at the corners, and an ample porch in the centre. The injuries of time were strongly marked on every thing about it. The roof in various places was fallen in, the battlements were half demolished, and the windows broken and difmantled. A drawbridge, with a ruinous gateway at each end, led to the court before the building-He entered, and instantly the light, which proceeded from a window in one of the turrets, glided along and vanished; at the

fame moment the moon funk beneath a black cloud, and the night was darker than ever. All was filent-Sir Bertrand fastened his steed under a flied and approaching the house, traversed its whole front with light and flow footsteps-All was still as death-He looked in at the lower windows, but could not distinguish a fingle object through the impenetrable gloom. After a fhort parley with himfelf, he entered the porch, and feizing a maffy iron knocker at the gate, lifted it up, and hefitating, at length struck a loud stroke-the noise resounded through the whole mansion with hollow echoes. All was still againhe repeated the strokes more boldly and louder-another interval of filence enfued -A third time he knocked, and a third time all was still. He then fell back to fome distance, that he might difeern whether any light could be feen in the whole front-Itagain appeared in the fameplace, and quickly glided away as before-at the fameinstanta deep fullen tull founded from the turret. Sir Bertrand's heart made a fearful stop—he was n while motionless; then terror impelled him to make fonte hasty steps towards his steed-but shame stopt his flight; and urged by honour, and a refistlefs defire of finishing the adventure. be returned to the porch; and working up his foul to a full fleadiness of resolution, he drew forth his fword with one hand, and with the other lifted up the latch of the gate. The heavy door creeking upon its hinges reluctantly yielded to his hand-he applied his thoulder to it, and forced it open-he quitted it, and stept forwardthe door instantly flut with a thundering clap. Sir Bertrand's blood was chilled he turned back to find the door, and it was long ere his trembling hands could feize it -but his utmost strength could not open it again. After several ineffectual attempts he tooked behind him, and beheld, across li hall, upon a large stair-cafe, a pale bloith flame, which cast a difmal gleam of light around. He again fummoned forth his courage, and advanced towards it-it retired. He came to the foot of the stairs. and after a moment's deliberation afcended. He went flowly up, the flame retiring before him, till he came to a wide gallery The flame proceeded along it, and he followed in filenthorror, treading lightly, for the echoes of his foot-steps startledhim. It led him to the foot of another stair-cafe, and then vanished-At the same instant another toll founded from the turret-Sir Bertrand

Bertrand felt it strike upon his heart. He was now in total darkness, and with his arms extended, began to afcend the fecond stair-cafe. A dead cold hand met bis left hand, and firmly grafped it, drawinghimforcibly forwards-he endeavoured to difengage himfelt, but could not,he made a furious blowwith his sword, and instantly a loud fhrick pierced hisears, and the dead hand was left powerlefs with his -He dropt it, and ruthed forwards with a desperate valour. The stairs were narrow andwinding, and interrupted by frequent breaches, and loofe fragments of stone. The stair-cafe grew narrower and narrower, andatlerigth terminated in a low iron grate. Sir Bertrand pushed it open-it led to an -intricatewindingpaffage, just large enough to admit aperson upon his hands and knees. A faint glimmering of light ferved to thew the nature of the place-Sir Bertrand entered-A deep hollow groan refounded from a distance through the vault-lie went forwards, and proceeding beyond the first turning, he differred the fame blue flame which had before conducted him-He followed it. The vault, at length, fuddenly opened into a lofty gallery, in the midst of which a figure appeared, compleatly armed, thrusting forwards the bloody stump of an arm, with a terrible frown and menacing gesture, and brandithing a fword in his hand. Sir Bertrand undagatedlyfprung forwards; and aiming a fierce blow at the figure, it instantly vamithed, letting fall a mally iron key. flame now rested upon a pair, of ample folding doors at the end of the gallery. Sir Bertrand went up to it, and applied the key to a brazen lock-with difficulty he turned the bolt-instantly the doors flew open, and discovered a large apartment, at the end of which was a coffin rested upon a bier, with a taper burning on each fide of it. Along the room, on both fides, were gigantic statues of bluck marble, attired in the Moorish habit, and holding enormous fabres in their right hands. Each of them reared his arm, and advanced one leg forwards, as the knight entered; at the fame moment the lid of the coffintlewopen and the bell tolled. The flame still glided forwards, and Sir Bertrand resolutely followed, till he arrived within fix paces of the coffin. Suddenly a lady in a throud and black veil rote up in it, and stretched out her arms towards him-at the fame time the statues classed their sabres and advanced. Sir Bertrand flew to the lady,

and clasped her in his arms—the threw up her veil, and killed his lips; and infamily the whole building flook as with an earthquake, and fell afunder with a horrible Sir Bertrand was thrown into a fudden trance, and on recovering found himfelf feated on a velvet fola, in the most magnificent room lie had ever feen, lighted with innumerable tapers, in lustres of pure crystal. A fumptuous banquet was fet in the middle. The doors opening to loft mulic, a lady of incomparable beauty, attired with amazingiplendour, entered, furrounded by a troop of gay nymplis more fair than the Graces-She advanced to the knight, and falling on her knees, thanked him as her deliverer. The nymphs placed a garland of laurel upon his head, and the lady led him by the hand to the banquet, and fat befide him. The nymphs placed themfelves at the table, and a numerous train of fervants entering, ferved up the leaft; delicious music playing all the time. Sir Bertraud could not speak for astonithment -he could only return their honours by courteous looks and gestures. After the banquet was finished, all retired but the lady, who leading back the knight to the fofa, addressed him in these words:

Aikin's Mifcel.

§ 9. On Human Grandeur.

An alchoule-keeper near Islington, who had long lived at the fign of the French King, upon the commencement of the last war pulled down his old fign, and put up that of the Queen of Hungary. Under the influence of her red face and golden sceptre, he continued to fell ale, till he was no longer the favourite of his customers; he changed her therefore, some time ago, for the King of Prussia, who may probably be changed, in turn, for the next great man that shall be fet up for vulgar admiration.

In this manner the great are dealt out, one after the other, to the gazing crowd. When we have fufficiently wondered at one of them, he is taken in, and another exhibited in his room, who feldom holds his station long; for the mob are ever pleased with variety.

I must own I have fuch an indifferent opinion of the vulgar, that I am ever led to fuspect that merit which raises their shout; at least I am certain to find those

fatisfaction.

great, and fometimes good men, who find fatisfaction in fuch acclamations, made worfa by it; and history has too frequently taught me, that the head which has grown this day giddy with the roar of the million, has the very next been fixed

upon a pole.

As Alexander VI: was entering a little townin the aeighbourhood of Rome, which had beeen just evacuated by the enemy, he perceived the townsmen buly in the market place in pulling down from a gibbeta figure which had been deligned to reprefenthimfelf. Therewere some also knocking down a neighbouring statue of one of the Orfini family, with whom he was at war, in order to put Alexander's effigy in its place. It is possible a man who knew less of the world would have condemned the adulation of those bare-faced tlatterers: but Alexander feemed pleafed at their zeal; and turning to Borgia, his fon, faid with a fmile, " Vides, mi fili, quam leve "diferimen, patibulum inter et flatuam." 4 You fee, my fon, the fmall difference "between a gibbet and a flatue." If the great could be taught any lesion, this might fervetoteachthem upon how weak a foundation their glory stands: for, as popular applaufe is excited by what focus like merit, it as quickly condemns what, has-only the appearance of guilt.

Popular glory is a perfect coquet: her lovers mont toil, feel every inquietude, indulge every caprice; and, perhaps, at last, be jilted for their pains. True glory, on the other hand, refembles a woman of fense; her admirers must play no tricks; they feel no great anxiety, for they are fure, in the end, of being rewarded in proportion to their merit. When Swift used to appear in public, he generally had the mob shouting at his train. "Pox take "these fools," he would fay, "how much poy might all this bawling give my

" lord-mayor !?

We have feen those virtues which have, while living, retired from the public eve, generally transmitted to posterity, as the truest objects of admiration and praise. Perhaps the character of the late duke of Marlborough may one day be setup, even above that of his more talked-of predecessor; since an assemblage of all the mild and amiable virtues are far superior to those vulgarly called the great ones. I must be pardoned for this short tribute to the memory of a man, who, while living, would as much detest to receive any

thing that wore the appearance of flattery, as I should to offer it.

I know not how to turn fo trite a fubject out of the benten road of commonplace, except by illustrating it, rather by the affistance of my memory than judgment; and, instead of making reflections,

by telling a flory.

A Chinese, who had long studied the works of Confucius, who knew the characters of fourteen thousand words, and could read a great part of every book that came into his way, once took it into his head to travel into Europe, and observe the cuftoms of a people which he thought not very much inferior even to his own countrymen. Upon his arrival at Amsterdam his pation for letters naturally led him to a book-feller's fhon; and, as he could tpeak a little Dutch, he civilly asked the bookfeller of the works of the immortal Xixofou. The bookfeller affored him he had never beard the book mentioned " Alas !" cries our traveller, 4 to what purpose, then, has he fasted " to death, to gain a renown which has ne-"ver travelled beyond the precincts of China !"

There is fearce a village in Europe, and not one university, that is not thus furnished with its little great men. The head of a petty corporation, who appofes the defigns of a prince, who would tyrannically force his subjects to fave their best clothes for Sundays; the puny pedant, who finds one undifcovered quality in the polype, or describes an unbeeded process in the skeleton of a mole; and whole mind, like his mierofcope, perceives nature only in detail: the rhymer, who makes finooth veries, and paints to our imagination, when he should only fpeak to our hearts, all equally fancy themfelves walking forward to immortality, and defire the crowd behind them to look on. The crowd takes them at their word. Patriot, philosopher, and poet, are fhouted in their train. "Where was there "ever to much merit feen? no time fo im-" portant as our own! ages, yet unborn. "thall gaze with wonder and applaufe!" To fuch mufic the important pigmy moves forward, bustling and fwelling, and aptly compared to a puddle in a storm.

thavelived to see generals who once had crowd shallowing after them wherever they went, who were bepraised by newfpapers and magazines, those echoes of the voice of the vulgar, and yet they have long sunk into merited obscurity, with

fcarce.

fearce even an epitaph left to flatter. A few years ago the herring-filher yemployed all Grub-street; it was the topioin every coffee-house, and the burden of every ballad. We were to drug up oceans of gold from the bottom of the tea; we were to supply all Europe with herring supon our own terms. At present, we hear no more of all this. We have fished up very little gold that I can learn; ner do we surnish the world with herrings, as was expected. Let us wait but a few years longer, and we shall find all our expectations an herring sishery.

Goldmith.

§ 7. A Dialogue between Mr. Appison and Dr. Swift.

Dr. Swift. Surely, Addison, Fortune was exceedingly bent upon playing the fooi (a humour her ladyship, as well as most other ladies of very great quality, is frequently in) when the made you a mainster of state, and me a divine!

... Addifon. I must confess we were both of the out of our elements. But you do not mean to infinuate, that, if our destinies had been reversed, all would have been

right?

Swift. Yes, I do—You would have made an excellent bithop, and I thould have governed Great Britain as I did Ireland, with an abiolute fivay, while I talked of nothing but liberty, property, and so forth.

Addition. You governed the mob of Ireland; but I never heard that you governed the kingdom. A nation and a

meb are different things.

Swift. Aye, fo you fellows that have no genius for politics may suppose. But there are times when, by putting himself at the head of the mob, an able man may get to the head of the nation. Nay, there are times when the nation itself is a mob, and may be treated as such by a kilful observer.

Addijon. I do not deny the truth of your axiom: but is there no danger that; from the vicifitudes of human affairs, the favourite of the mob should be mubbed

in his turn?

Swift. Sometimes there may; but I risked it, and it answered my purpose. Ask the lord-lieutenants, who were forced to pay court to me instead of my courting them, whether they did not feel my superiority. And if I could make myself for considerable when I was only a dirty dean of St. Patrick's, without a seat in either

house of parliament, what should I have done if fortune had placed me in England, unincumbered with a gown, and in a situation to make myself heard in the house of fords or of commons?

Addion. You would doubtless have done very marvellous acts! perhaps you might have then been as zealous a whig as lord Wharton himself: or, if the whigs had offended the statelinan, as they unhappily did the doctor, who knows but you might have brought in the Pretender? Pray let meak you one question, between you and mealfyou had been first minister under that prince, would you have tolerated the Protestant religion, or not?

Swift. Ha! Mr. Secretary, are you witty upon me? Do you think, because Sunderland took a fancy to make you a great man in the state, that he could also make you as great in wit as Nature made me? No, no: wit is like grace, it must come from above. You can no more get that from the king, than my lords the bishops can the other. And though I will own you had fone, yet, believe me, my friend, it was no match for mine. I think you have not vanity enough to pretend to a competition with me.

Addition. I have been often told by my friends that I was rather too modest: fo, if you pleafe, I will not decide this dispute for myfeit, but refer it to Mercury, the god of wit, who happens just now to be coming this way, with a foul he has new-

ly brought to the shades.

Mercury. Dr. Swift, I rejoice to fee you.—How does my old lad? How does honest Lemuel Guiliver? Have you been in Lilliput lately, or in the Flying Island, or with your good nurse Gluindatclitch 3 Pray, when did you eat a crust with Lord Peter? Is Jack as mad still as ever? I hear the poor fellow is almost got well by more gentle ulage. If he had but more food he would be as much in his fentes as brother Martin himself. But Martin they tell me, has fpawned a strange brood of fellows, called Methodifts, Meravians, Hutchinfonians, who are madder than Jack was in his worst days. It is a pity you are not alive again to be at them: they would be excellent food for your tooth; and a tharp tooth it was, as ever was placed in

the gum of a mortal; aye, and a firong one too. The hardest food would not break it, and it could pierce the thickest skulls. Indeed it was like one of Cerberus's teeth: one should not have thought it belonged to a man.—Mr. Addison, I beg your pardon, I should have spoken to you sooner; but I was so struck with the fight of the doctor, that I forgot for a time the respect due to you.

Swift. Addison, I think our dispute is decided before the judge has heard the

caufe.

Addison. I own it is in your favour,

and I fubmit-but-

Mercury. Do not be discouraged, friend Addison. Apollo perhaps would have given a different judgment. I am a wit, and a rogue, and a foe to all dignity. Swift and I naturally like one another: he worthips me more than Jupiter, and I honour him more than Homer; but yet, I affore you, I have a great value for you. -Sir Roger de Coverley, Will Honeycomb, Will Wimble, the country gentleman in the Freeholder, and twenty more characters, drawn with the fineth frokes of natural wit and humour in your excellent writings, feat you very high in the class of my authors, though not quite to high as the deen of St. Patrick's. Perhaps you might have come nearer to him, if the decency of your nature and cauti-outless of your judgment would have given you leave. But if in the force and piritof his wit he has the advantage, how much does he yield to you in all the polite and elegant graces; in the fine touches of delicate fentiment; in developing the fecretiprings of the foul; in shewing all the mild lights and shades of a character; in marking diffinctly every line, and every' foft gradation of tints which would escape the common eve! Whoever painted like you the beautiful parts of human nature, and brought them out from under the thade even of the greatest simplicity, or the most ridiculous weaknesses; so that we are forced to admire, and feel that we venerate, even while we are laughing? Swift could do nothing that approaches to this. -- He could draw an ill face very well, or caricature a good one with a mufterly hand: but there was all his power; and, if I am to speak as a god, a worthless power it is. Yours is divine: it tends to improve and exalt human nature.

Swift. Pray, good Mercury (if I may have leave to fay a word for myfelf), do you think that my talent was of no use to correct human nature? Is whipping of no ufe to mend naughty boys?

Mercury. Men are not so patient of whipping as boys, and I feldom have known a rough fatirift mend them. But I will allow that you have done fome good in that way, though not half fo much as Addison did in his. And now you are here, if Pluto and Proferpine would take my advice, they thould dilpole of you both in this manner :-- When any hero comes hither from earth, who wants to be humbled (as most heroes do), they should fet Swift upon him to bring him down. The fame good office he may frequently do to a faint fwoln too much with the wind of fpiritual pride or to a philosopher vain of his wifdom and virtue. He will foon fhew the first that he cannot be holy without being humble; and the last, that with all his boafted morality, he is but a better kind of Yahoo. I would also have himapply his auticosmetic wash to the painted face of female vanity, and his rod, which draws blood at every firoke, to the hard back of infolent folly or petulant wit. But you, Mr. Additon, thould be employed to comfort and raile the spirits of those whose good and noble fouls are dejected with a fense of some infirmities in their nature. To them you should hold your fair and charitable mirrour, which would bring to their fight all their hidden perfections, cast over the rest a softening shade, and put them in a temper fit for Elysium. -Adieu: I must now return to my bufinels above. Dialogues of the Dead.

§ 8. The Hill of Science. A Vision.

In that feafon of the year when the ferenity of the fky, the various fruits which cover the ground, the discoloured foliage of the trees, and all the fweet, but fading graces of inspiring autumn, open the mind to benevolence, and dispose it for contemplation, I was wandering in a beautiful and romantic country, till curiofity began to give way to wearinels; and I fatmedown on the fragment of a rock overgrown with mofs, where the ruftling of the falling leaves, the dashing of waters, and the hum of the diftant city, foothed my mind into the most perfect tranquillity, and sleep intentibly stole upon me, as I was indulging the agraeable reveries which the objects around me naturally inspired.

I immediately found myfelf in a vaft extended plain, in the middle of which arofe
3 F a moun-

a mountain higher than I had before any conception of. It was covered with a multitude of people, chiefly youth; many of whom prefled forwards with the livielieft exprellion of ardour in their countenance, though the way was in many places freep and difficult. I observed, that those who had but juit begun to climb the hill thought themicives not far from the top; but as they proceeded, new hills were continually rising to their view, and the funmit of the highest they could before discern seemed but the foot of another, till the mountain at length appeared to lofe itself in the clouds. As I was gazing on the fethings with altonishment, my good genius suddenly appeared: The mountain before thee, faid he, is the Hill of Science. On the top is the Temple of Truth, whose head is above the clouds, and a veil of purelight covers her face. Observe the progress of her votaries; be filent and attentive.

I faw that the only regular approach to the mountain was by a gate, called the gate of languages. It was kept by a woman of a pensive and thoughtful appearance, whose lips were continually moving, as though the repeated fomething to herfelf. Her name was Memory. On entering this first euclosure, I was stunned with a confused murmur of jarring voices, and diffonant founds; which increased upon metetucha degree, that I was utterly confounded, and could compare the noise to nothing but the confusion of tongues at Bahel. The road was also rough and itony; and rendered more difficult by heaps of rubbish continually tumbled down from the higher parts of the mountain; and broken ruins of ancient buildings, which the travellers were obliged to climb over at every step; infomuch that many, difguiled with fo rough a beginning, turned back, and attempted the mountain no snore; while others having conquered this difficulty had no spirits to ascend further, and fitting down on fome fragment of the rubbish, barangued the multitude below with the greatest marks of importance and felf-complacency.

About half way up the hill, I observed on each fide the path a thick foreit covered with continual fogs, and cut out into laborinths, crossalleys, and irrpentine walks entangled with thorns and ariars. This was called the wood of Error: and I heard the voices of many who were toft up and down in it, calling to one another, and enterwouring in vanito extricate the micles. The trees is many places that their

boughs over the path, and a thick mixth often reflect on it; yet never to much but that it was differnible by the light which beamed from the countenance of Truth.

In the pleafantest part of the mountain were placed the bowers of the Muses, whole office it was to cheer the spirits of the travellers, and encourage their fainting steps with songs from their divine harps. Not far from hence were thefields of Fiction, filled with a variety of wild flowers springing up in the greatest luxuriance, of richer fcents and brightercolours than I had observed in any other climate. And near them was the dark walk of Allegory, so artificially thaded, that the light at noonday was never fironger than that of a bright moon-shine. This gave it a pleafingly romantic air for those who delighted in contemplation. The paths and alleys were perplexed with intricate windings, and were all terminated with the statue of a Grace, a Virtue, or a

After I had observed these things, I turned my eye towards the multitudes who were climbing the freep afcent, and obferved amongs them a youth of a lively look, a piercing eye, and formething hery and irregular in all his motions. His name was Genius. He darted like an eagle up the mountain, and left his companions gazingafter him with envy and admiration; but his progress was unequal, and interrupted by a thousand caprices. Pleasure warbled in the valley he mingled in her train. When Pride beckened towards the precipice he ventured to the tottering edge. He delighted in devious and untried paths; and made fo many excursions from the road, that his feebler companions often outliripped him. I obferved that the Muses beheld him with partiality; but Truth often frowned, and turned afide her face. While Genius was thus walting his firength in eccentric flights, I faw a person of a very different appearance, named Application. crept along with a flow and unremitting pace, his eyes fixed on the top of the mountain, patiently removing every from that obttructed his way, till he law most of those below him who had at first derided his flow and toiliome progress. Indeed there were few who alcended the hill with equal and uninterrupted iteadinels; for, beide the difficulties of the way, they were continually folicited to turn afide by a numerous crowd of Appetites, Pathons, and Pleatures, whole importunity, when they had once complied

complied with, they became less and less able to resist; and though they often returned to the path, the asperities of the road were more severely felt, the hill appeared more steep and rugged, the fruits which were wholesome and refreshing seemed harsh and ill-tasted, their sight grew dim, and their feet tript at every little obstruction.

Ifaw, with fome furprize, that the Mufes, whose butiness was to cheer and encourage those who were toiling up the ascent; would often fing in the bowers of Pleafure, and accompany those who were entired away at the call of the Passions; they accompanied them, however, but a little way, and always forfook them when they loft fight of the hill. The tyrants then doubled their chains upon the unhappy captives, and led them away, without reliftance, to the cells of Ignorance, or the manions of Mifery. Amongst the innumerable seducers, who were endeavouring to draw away the votaries of Truth from the path of Science, there was one, so little formidable in her appearance, and fo gentle and languid in her attempts, that I should fearcely have taken notice of her, but for thenumbers the had imperceptibly loaded with her chains. Indolence (for fo the was called) far from proceeding to open hostilities, did not attempt to turn their feet out of the path, but contented herfelf with retarding their progress; and the purpose he could not force them to abandon, the perfuaded them to delay. Her touch had a power like that of the torpedo, which withered the strength of those who came within its influence. Her unhappy captives fill turned their faces towards the temple, and always hoped to arrive there; but the ground feemed to flide from beneath their feet, and they found themselves at the bottom, before they suspected they had changed their place. The placid ferenity, which at first appeared in their countenance, changed by degrees into a melancholy languor, which was tinged with deeper and deeper gloom, as they glided down the fiream of Infignificance; adark and fluggish water, which is curled by no breeze, and enlivened by no murmur, till it falls into a dead fea, where flartled passengers are awakened by the flock, and the next moment buried in the gulf of Oblivion.

Of all the unhappy deferters from the paths of Science, none feemed lefs able to return than the followers of Indolence. The Captives of Appetite and Passon could often feize the moment when their tyrants were languid or affeep to escape from their enchantment; but the dominion of Indolence was confiant and unremitted, and feldom refitted, till relistance was in vair.

After contemplating thefe things, I turned my eyes towards the top of the mountain, where the air was always pure and exhibitaring, the path shaded with laurels and other ever-greens, and the effulgence which beamed from the face of the goddefs feemed to field a glory round her votaries. Happy, faid I, are they who are permitted to afcend the mountain !but while I was pronouncing this exclamation with uncommon ardour, I faw flanding belide me a form of diviner features and amore benign radiance. Happier, faid the, are those whom Virtue conducts to the manfions of Content! What, faid 1. does Virtue then retide in the vale? I am found, faid the, in the vale, and Lilluminate the mountain: I cheer the cottager at his toil, and inspire the sage at his meditation.: I mingle in the crowd of cities, and blefs the hermit in his cell, I have a temple in every heart that owns ray influence; and to him that wishes for me I am already prefent. Science may raife you to eminence, but I alone can guide you to felicity!-While the goddels was thus fpeaking, I stretched out my arms towards her with a vehemence which broke my flumbers. The chill dews were falling around me, and the shades of evening irretched over the landscape. I hastened homeward. and refigned the night to filence and meditation. Aikin's Mifcel.

§ 9. On the Love of Life.

Age, that leffens the enjoyment of life, increases our defire of living. Those dangers which, in the vigour of youth, we had learned to despife, assume new terrors as we grow old. Our caution increasing as our years increase, fear becomes at last the prevailing passion of the mind; and the small remainder of life is taken up in useless efforts to keep off our end, or provide for a continued, existence.

Strange contradiction in our nature, and to which even the wife are liable! If I should judge of that part of life which lies before me by that which I have already feen, the protiped is hideous. Experience tells me, that my past enjoyments have brought no real felicity; and sensation againers me, that those I have felt are 3 F 2 stronge:

frongerthan those which are vet to come. Yet experience and fensation in vain perfuade; hope, more powerful than either, dresses out the distant prospect in fancies beauty; some happiness, in long prospective, still beckons me to pursue; and, like a losing gamester, every new disappointment increases my ardour to

continue the game.

Whence then is this increased love of life, which grows upon us with our years? whence comes it, that we thus make greater efforts to prefervé our existence, at a period when it becomes fcarce worth the keeping? Is it that Nature, attentive to the prefervation of mankind, increases our wifnes to live, while the lettens our enjoyments; and, as the robs the fentes of every pleafure, equips Imagination in the spoils? Lifewould be insupportable to an old man, who, loaded with infirmities, feared death no more than when in the vigour of manhood; the numberless calamities of deeaving nature, and the confcioufness of furviving every pleafure, would at once induce him, with his own hand, to terminate the scene of misery; but happily the contempt of death forfakes him at a time when it could only be prejudicial; and life acquires an imaginary value, in proportion as its real value is no more.

Our attachment to every object around us, increases, in general, from the length of our acquaintance with it. "I would "not chuse," says a French Philosopher, "to see an old post pulled up, with which "I had been long acquainted." A mind long habituated to a certain set of objects, insensibly becomes fond of seeing them; visits them from habit, and parts from them with reluctance: from hence proceeds the avarice of the old in every kind of postessions, they love the world and all that it produces; they love life and all its advantages; not because they have known it

long.

Chinvang the Chafte, afcending the throne of China, commanded that all who were unjuftly detained in prifon during the preceding reigns fhould be fet free. Among the number who came to thank their deliverer on this occasion, there appeared a majestic old man, who, falling at the emperor's feet, addressed him as follows: "Great father of China, behold a "wretch, now eighty-five years old, who "was thut up in a dangeon at the age of "twenty-two. I was imprisoned, though "a stranger to crime, or without being

" even confronted by my accufors. Thave " now lived in folitude and darkness for " more than fifty years, and am grown fa-" miliar with diffress Asyet, dazzled with " the splendour of that fun to which you " have reftored me, I have been wandering " the fireets to find out fome friend that " would affift, or relieve, or remember me; " but my friends, my family, and relations " are all dead; and I am forgotten. Per-" mit me then, O Chinvang, to wear out " the wretched remains of life in my for-" mer prifon; the walls of my dungeon " are to me more pleafing than the moli " fplendid palace: I have not long to live, " and shall be unhappy except I spend " the reft of my days where my youth " was paffed; in that prifon from whence " you were pleafed to releafe me."

The old man's passion for confinement . is fimilar to that we all have for life. We are habituated to the prison, we look round with discontent, are displeased with the abode, and yet the length of our captivity only increases our fondness for the cell. The trees we have planted, the houses we have built, or the posterity we have begotten, all ferve to bind us closer to the , earth, and embitter our parting. Life fuer the young like a new acquaintance; the companion, as yet unexhaufted, is at once interactive and amufing; its company pleafes, yet, for all this it is but little regarded. To us, who are declined in years, life appears like an old friend; its jetts have been anticipated in former converfation; it has no new flory to make us fraile, no new improvement with which to furprize, yet fill we love it; defitute of every enjoyment, fill we love it, hutland the wasting treasure with increasing fregality, and feel all the poignancy of anguish in the fatal separation.

Sir Philip Mordaunt was young, beautiful, fincere, brave, an Englishman. He had a complete fortune of his own, and the love of the king hismafter, which was equivalent to riches. Life opened all her treafures before him, and promifed a long fuccession of happiness. He came, tasted of the entertainment, but was difguited even at the beginning. He professed an aversion to living; was tired of walking round the fame circle; had tried every enjoyment, and found them all grow weaker at every repetition. " If life be, in youth, so dif-" pleafing," cried he to himfelf, " what " will it appear when age comes on? if " it be at present indifferent, sure it will

" then be execrable." This thought em-

hittered every reflection; till, at laft, with all the ferenity of perverted reason, he ended the debate with a pittol! Had this felf-deluded man been apprized, that existence grows more desirable to us the longer we exist, he would then have faced old age without shrinking; he would have boldly dared to live; and served that society by his future assiduity, which he basely injured by his defertion. Goldjmith.

§ 10. The Canal and the Brook. A Reverie.

A delightfully pleafant evening fucceeding a fultry fummer day, invited fire to take a folitary walk; and, leaving the duft of the highway, I fell into a path which led along a pleafant little valley watered by a fmall meandring brook. The meadow ground on its banks had been lately mown, and the new grafs was springing up with a lively verdure. The brook was hid in feveral places by the fhrubs that grew on each fide, and intermingled their branches. The tides of the valley were roughened by finall irregular thickfets; and the whole scene had an air of folitude and retirement, uncommon in the neighbourhood of a populous town. The Duke of Bridgewater's canal croffed the valley, high raifed on a mound of earth, which preferved a level with the elevated ground on each fide. An arched read was carried under it, beneath which the brook that ran along the valley was conveyed by a fubterraneous pattage. I threw myfelf upon a green bank, fliaded by a leafy thicket, and retting my head upon my hand, after a welcome indolence had overcome my fenfes, I faw, with the eyes of fancy, the following frene.

The firm-built fide of the aqueduct fuddealy opened, and a gigantic form iffued forth, which I foon discovered to be the Genius of the Canal. He was clad in a close garment of russet hue. A mural crown, indented with battlements, furrounded his brow. His naked feet were discoloured with clay. On his left shoulder he bore a huge pick-axe; and in his right hand he held certain instruments, used in furveying and levelling. His looks were thoughtful, and his features harfn. The breach through which he proceeded infantly closed, and with a heavy tread lie. advanced into the valley. As he approached the brook, the Deity of the Stream arose to meeth in. He was habited in a light green mantle, and the clear drops fell from his dark hair, which was

encircled with a wreath of water-lily interwoven with fweet-scented flag: an angling rod supported his steps. The Genius of the Canal eyed him with a contemptuous look, and in a hoarse voice thus began:

" Hence, ignoble rill! with thy feanty " tribute to thy lord the Merfey; nor thus " waste thy almost-exhausted urn in linger-" ing windings along the vale. Feeble as, " thine aid is, it will not be unacceptable " to that master stream himself; for, as I " lately croffed his channel, I perceived " his fands loaded with firanded' veffels. " I faw, and pitied him, for undertaking a " talk to which he is unequal. But thou, " whose languid current is obscured by " weeds, and interrupted by mishapen " pebbles; who lofest thyself in endless " mazes, remote from any found but thy " own idle gurgling; how cantithou fup-" port an existence so contemptible and " useless? For me, the noblest child of " Art, who hold my unremitting courfe from hill to hill, over vales and rivers; " who pierce the folid rock for my paf-" fage, and connect unknown lands with " ditiant feas; wherever I appear I am " viewed with attoniffment, and exulting " Commerce hails my waves. Behold my " channel thronged with capacious veffels " for the conveyance of merchandize, " and iplendid barges for the use and " pleafure of travellers; my banks crowned with airy bridges and huge ware-" houses, and echoing with the buty founds "of indufiry! Pay then the homago edue from Sloth and Obscurity to Gran-" deur and Utility."

" I readily acknowledge," replied the Deity of the Brook, in a modelt accent, " the superior magnificence and more ex-" tentive utility of which you fo proudly " boaft; yet in my humble walk, I am not " void of a praise less thining, but not less " folid than yours. The nymph of this " peaceful valley, rendered more fertile " and beautiful by my ftream; the neigh-" bouring fylvan deities, to whose pleasure "I contribute; will pay a grateful testi-"mony to my merit. The windings of " my courfe, which you to much blame, " ferve to diffule over a greater extent of " ground the refreshment of my waters; " and the lovers of Nature and the Mufes, " who are fond of fraying on my banks, " are better pleased that the line of beauty " marks my way, than if, like yours, it " were directed in aftraight, unvaried line. "They prize the irregular wildness with

3 F 3

"which I am decked, as the charms of " beauteous simplicity. What you call " the weeds which darken and obscure " my waves, afford to the botanist a pleas-" ing speculation of the works of nature; " and the poet and painter think the luftre " of my ftream greatly improved by glit-" tering through them. The pebbles " which divertify my bottom, and make "these ripplings in my current, are " pleasing objects to the eye of tasic; and " my simple murmurs are more melodious " to the learned ear than all the rude " noises of your banks, or even the mutic " that refounds from your flately barges. " If the unfeeling fons of Wealth and " Commerce judge of me by the mere " flandard of usefulness, I may claim no " undiffinguithed rank. While your " waters, confined in deep channels, or " lifted above the valleys, roll on, a ufe-" less burden to the fields, and only sub-" fervient to the drudgery of bearing " temporary merchandizes, my stream " will beflow unvarying fertility on the " meadows, during the fummers of future " ages. Yet I fcorn to fubmit my honours " to the decision of those whose hearts are " thut up to taste and sentiment: let me " appeal to nobler judges. The philoso-" pher and poet, by whose labours the " human mind is elevated and refined, " and opened to pleasures beyond the con-" ception of vulgar fouls, will acknow-" ledge that the elegant deities who pre-" fide over fimple and natural beauty, " have inspired them with their charming " and inflructive ideas. The sweetest and " most majestic bird that ever fung, has " taken a pride in owning his affection to " woods and fireams; and while the ftu-" pendous monuments of Roman gran-" dear, the columns which pierced the " skies, and the aqueducts which poured " their waves over mountains and valleys, " are funk in oblivion, the gently winding "Mineiusstill retains histranqu'il honours. " And when thy glorics, proud Genius! " are loft and forgotten; when the flood of " commerce, which now supplies thy urn, " is turned into another course, and has of left thy channel dry and defolate; the " foffly flowing Avon thall flill murmur " in fong, and his banks receive the ho-" mage of all who are beloved by Phœ-" bus and the Muscs." Aikin's Miscel.

§ 11. The Story of a difabled Sailor.

No observation is more common, and at the same time more true, than, That

one half of the world are ignorant how the other half lives. The misfortunes of the great are held up to engage our attention; are enlarged upon in tones of declamation; and the world is called upon to gaze at the noble fufferers; the great, under the preflure of calamity, are conficious of feveral others fympathizing with their diffrefs; and have, at once, the comfort of admiration and pity.

There is nothing magnanimous in bearing misfortunes with fortitude, when the whole world is looking on: men in such circumstances will act bravely, even from motives of vanity; but he who, in the vale of obscurity, can brave adversity; who, without friends to encourage, acquaintances to pity, or even without hope to alleviate his misfortunes, can behave with tranquillity and indifference, is truly great; whether peasant or courtier, he deserves admiration, and should be held up for our imitation and respect.

While the flightest inconveniencies of the great are magnified into calamities; while tragedy mouths out their fufferings in all the strains of eloquence; the mileries of the poor are entirely difregarded; and yet some of the lower ranks of people undergo more real hardships in one day, than those of a more exalted station suffer in their whole lives. It is inconceivable what difficulties the meanest of our common failors and foldiers endure without murmuring or regret; without paffion-ately declaiming against Providence, or calling their fellows to be gazers on their intrepidity. Every day is to them a day of mifery, and yet they entertain their hard fate without repining.

With what indignation do I hear an Ovid, a Cicero, or a Rabutin, complain of their misfortunes and hardships, whose greatest calamity was that of being unable to vifit a certain fpot of earth, to which they had foolifhly attached an idea. of happinels! Their diffresses were pleafores, compared to what many of the adventuring poor every day endure without murmuring. They are, drank, and flept; they had flaves to attend them; and were fure of subfittence for life: while many of their fellow-creatures are obliged to wander without a friend to comfort or affift them, and even without shelter from the severity of the scason.

I have been led into these reslections from accidentally meeting, somedays ago, a poor fellow, whom I knew when a bey dreffed in a failor's jacket, and begging at one of the outlets of the town with a wooden leg. I knew him to have been honeft and industrious when in the country, and was curious to learn what had reduced him to his prefent fituation. Wherefore, after having given him what I thought proper, I defired to know the history of his life and misfortunes, and the manner in which he was reduced to his present distress. The difabled foldier, for fuch he was, though dreffed in a failor's habit, foratching his head, and leaning on his crutch, put himfelf in an attitude to comply with my request, and gave me his history as follows:

"As for my misfortunes, mafter, I can't pretend to have gone through any more "than other folks; for, except the lofs of my limb, and my being obliged to beg, "I don't know any reafon, thank Heaven, that I have to complain: there is Bill "Tibbs, of our regiment, he has loft both his legs, and an eye to boot; but, "thank Heaven, it is not fo bad with me

" vet.

"I was born in Shropshire; my father " was a labourer, and died when I was five " years old; fo I was put upon the parish. " As he had been a wandering fort of a " man, the parithioners were not able to " tell to what parish I belonged, or where " I was born, to they fent me to another " parith, and that parith fent me to a third. " I thought in my heart, they kept fend-" ing me about to long, that they would " not let me be born in any parith at all; " but at laft, however, they fixed me. I " had fome difposition to be a scholar, and " was refolved, at leaft, to know my let-" ters; but the mafter of the workhouse " put me to bufinefs as foon as I was able " to handle a mallet; and here I lived an " eafy kind of life for five years. I only " wrought ten hours in the day, and had " my meat and drink provided for my la-"bour. It is true, I was not fuffered to " throut of the house, for fear, as they faid, " I should run away; but what of that, I " had the liberty of the whole house, and " the yard before the door, and that was " enough for me. I was then bound out " to a farmer, where I was up both early " and late; but I ate and drank well, and " liked my bufiness well enough, till he " died, when I was obliged to provide for " myfelf; fo I was refolved to go feek " my fortune.

" In this manner I went from town to

" town, worked when I could get employ-" ment, and itarved when I could get none: " when happening one day to go through " a field belonging to a justice of peace, I " fpied a hare crofling the path inti before " me, and I believe the devil put it in my " head to fling my flick at it :-well, what " will you have on't? I killed the hare, " and was bringing it away, when the jul-" tice himfelf met me; he called me a " poacher and a villain; and, collaring " me, defired I would give an account of " myfelf. I fell upon my knees, begged " his worthip's pardon, and began to give " a full account of all that I knew of my " breed, feed, and generation; but, though " I gave a very true account, the juffice: " faid I could give no account; fo I was. " indicted at fellions, found guilty of be-"ing poor, and fent up to Loudon to " Newgate, in order to be transported as " a vagabond.

" People may fay this and that of being " in jail, but, for my part, I found New-" gate as agreeable a place as ever I was " in in all my life. I had my belly-full to " eat and drink, and did no work at all. "This kind of life was too good to late " for ever; fo I was taken out of prifon, " after five months, put on board a thip, " and fent off, with two hundred more, to "the plantations. We had but an indit-" ferent pallage, for, being all confined in " the hold, more than a hundred of one " people died for want of fweet air; and " those that remained were fickly enough, " God knows. When we came athore, we " were fold to the planters, and I was " bound for feven years more. As I was "no febolar, for I did not know my let-" ters, I was obliged to work among the " negroes; and I ferved out my time, as " in duty bound to do.

"When my time was expired, I worked "my passage home, and glad I was to see "Old England again, because I loved my country. I was a fraid, however, that I thould be indicted for a vagabond once inore, so I did not much care to go down into the country, but kept about the "town, and did little jobs when I could

"get them.

"I was very happy in this manner for fometime, tillone evening coming home from work, two men knocked medown, and then defired me to fixed. They belonged to a prefa-gang: I was carried before the justice, and, as I could give no account of myfelf, I had my choice a F 4.

"left, whether to go on board a man of war, or lift for a foldier: I chose the lat"ter; and, in this post of a gentleman, I
served two campaigns in Flanders, was at the battles of Val and Fontenoy, and
received but one wound, through the
breath here; but the doctor of our regiment soon made me well again.

" When the peace came on I was dif-" charged; and, as I could not work, be-" cause my wound was sometimestrouble-" fome. Hifted for a landman in the East " India company's fervice. I have fought " the French in fix pitched battles; and I " verily believe that, if I could read or " write, our captain would have made me "a corporal. But it was not my good " fortune to have any promotion, for I " foon fell fick, and fo got leave to return " home again with forty pounds in my " pocket. This was at the beginning of " the prefent war, and I hoped to be fet " on thore, and to have the pleasure of " fpending my money; but the govern-" ment wanted men, and fo I was preffed " for a fallor before ever I could let foot " on thore.

"The boatswain found me, as he said, "an obstinate fellow: he swore he knew that I understood my business well, but that I shanmed Abraham, to be idle; but, God knows, I knew nothing of sea- business, and he beat me without confidering what he was about. I had still, "however, my forty pounds, and that was some comfort to me under every beating; and the money I might have had to this day, but that our ship was taken by the French, and so I lost my money."

" Our crew was carried into Brest, and " many of them died, because they were "not used to live in a jail; but, for my " part, it was nothing to me, for I was " feafoned. One night, as I was afleep on "the bed of boards, with a warm blanket. " about me, for I always loved to lie well, "I was awakened by the boatfwain, who " had a dark lanthorn in his hand: 'Jack,' " fays he to me, 'will you knock out the "French centries brains?' 'I don't care, " says I, ffriving to keep myfelf awake, 'if' " I lend a hand,' 'Then follow me,' fays "he, 'and I hope we shall do businefs.' " So up I got, and tied my blanket, which "was all the clothes I had, about my mid-"dle, and went with him to fight the

. Frenchmen. I hate the French, because

" they are all flaves, and wear wooden

"Though we had no arms, one English-" man is able to heat five French at any " time; fo we went down to the door, " where both the centries were posted, " and, rufning upon them, feized their " arms in a moment, and knocked them " down. From thence nine of us ran to-" gether to the quay, and feizing the first " boat we met, got out of the harbour, and " put to fca. We had not been here three " days before we were taken up 'yy the " Derfet privateer, who were glad of fo " many good hands, and we confented to " run our chance. However, we had not " as much luck as we expected. In three " days we fell in with the Pompadour privateer, of forty guns, while we had "but twenty-three; fo to it we went, " yard-arm and yard-arm. The fight " lasted for three hours, and I verily be-" lieve we should have taken the French-" man, had we but had fome more men " left behind; but, unfortunately, we loft " all our men just as we were going to get the victory.

" I was once more in the power of the " French, and I believe it would have gone " hard with me had I been brought back " to Breft; but, by good fortune, we were " re-taken by the Viper. I had almost for-" got to tell you that, in that engagement, " I was wounded in two places: I loft four " fingers off the left hand, and my leg was " that off. If I had had the good fortune " to have loft my leg and ufe of my hand " on board a king's ship, and not on board " a privateer, I should have been entitled " to clothing and maintenance during the " reft of my life! but that was not my " chance: one man is born with a filver " fpoon in his mouth, and another with a " wooden ladle. However, bleffed be " God, I enjoy good health, and will for "ever love liberty and Old England. " Liberty, property, and Old England

"for ever, huzza!"
Thus faying, he limped off, leaving me in admiration at his intrepidity and content; nor could I avoid acknowledging, that an habitual acquaintance with milery ferves better than philosophy to teach us to despife it.

Goldinith.

§ 12. A Diulogue between Uursses and Cince, in Cinch's Island.

- Circe. You will go then, Ulysses; but why

why will you go? I defire you to fpeak the thoughts of your heart. Speak without referve.—What carries you from me?

Ulyffes. Pardon, goddefs, the weaknefs of human nature. My heart will figh for my country. It is a tendernefs which all my attachment to you cannot overcone.

Circe. This is not all. I perceive you are afraid to declare your whole mind: but what do you fear? my terrors are gone. The proudest goddess on earth, when she has favoured a mortal as I have favoured you, has laid her divinity and power at his feet.

Uluffes. It may be fo, while there fill remains in her heart the fondness of love, or in her mind the fear of shome. But you, Circe, are above those vulgar

fensations,

Circe. I understand your caution, it belongs to your character; and, therefore, to take all distinction on harm to you or by Styx, I will do no harm to you or your friends for any thing which you say, though it should offend me ever so much, but will fend you away with all the marks of my friendship. Tell me, now, truly, what pleasures you hope to enjoy in the barrier island of Ithaca, which can compensate for those you leave in this paradise, exempt from all cares, and overslowing with all delights?

Ulyfics. The pleafures of virtue; the fupreme happiness of deing good. do nothing; my mind is in a pally; its faculties are benumbed. I long to return into action again, that I may employ those talents and virtues which I have cultivated from the earlieft days of my youth. Toils and cares fright not me: they are the exercise of my foul; they keep it in health and in vigour. Give me again the fields of Troy, rather than those vacant groves; there I could reap the bright harvest of glory; here I am hid from the eyes of mankind, and begin to appear contemptible in my own. The image of my former felf haunts and feems to upbraid me wherever I go: I meet it under the gloom of every shade; it even intradesitfelf into your prefence, and chides me from your arms. O goddels! unless you have power to lay that troublesome spirit, unless you can make me forget myfelf, I cannot be happy here, I shalk every day be more wretched.

Circe. May not a wife and good man

who has spent all his youth in active life and honourable danger, when he begins to decline, have leave to retire, and enjoy the rest of his days in quiet and pleafure?

Lights. No retreat can be honourable to a wife and good man, but in company with the Mufes; I am deprived of that facred fociety here. The Mufes will not inhabit the abodes of voluptuoufness and fentual pleafure. How can I fludy, how can I think, while fo many beafts (and the worlt beafts I know are men turned into heafts) are howling, or roaring, or

grunting about me?

Circe. There is fomething in this; but this is not all ; you suppress the firongest reason that draws you to Ithaca. There isanother image, befides that of your former fell, which appears to you in all parts of this itland, which follows your walks, which interpofes itself between you and me, and chides you from my arms: it is Penelope, Ulyfles: I knew it is .- Donot pretend to deny it : you ligh for her in my bosom itself .- And yet the is not an immortal.—She is not, as I am, endowed with the gift of unfading vouth: feveral years have past since her's has been faded. I think, without vanity, that she was never fo handsome as I. But what is the now?

Ulyffer. You have told me yourfelf, in a former converfation, when I inquired of you about her, that the is true to my bed, and as fond of me now, after twenty years abfence, as when I left her to go to Troy. I left her in the bloom of her youth and her beauty. How much muft her confiancy have been tried fince that time! how meritorious is her fidelity! Shall I reward her with fallshood! thall I forget her who cannot forget me? who has nothing fo dear to her as my remembrance?

Circe. Her love is preferved by the continual hope of your speedy return. Take that hope from her: let your companions return, and let her know that you have fixed wour abode here with me: that you have fixed it for ever: let her know that the is free to dispose of her heart and her hand as the pleases: fend my picture to her; bid her compare it with her own face—if all this does not cure her of the remains of her passion, if you do not hear of her marrying Eurymachus in a twelve-month, I understand nothing of weman-kind.

Ulyfes. O cruel goddels! why will you force

force me to tell you those truths I wish to conceal? If by fuch unput, such barbarous nfage, I could lofe her heart, it would break thine. How should lendure the torment of thinking that I had wronged fuch a wife? what could make me amends for her not being mine, for her being another's? Do not frown, Circe; I own (fince you will have me fpeak) I own you could not: with all your pride of immortal beauty, with all your magical charms to affift those of nature, you are not fuch a powerful charmer as the. You feel defire, and you give it; but you never felt love, nor can you infpire it. How can I love one who would have degraded me into a beaft? Penelope raifed me into a hero; her love ennobled, invigorated, exalted my mind. She hid me go to the fiege of Troy, though the parting with me was worle than death to herfelf: the bid me expose myself there to all perils among the foremost heroes of Greece, though her poor heart trembled to think of the leaft I should meet, and would have given all its own blood to fave a drop of mine. Then there was fuch a conformity in all our inclinations! when Minerva taught me the lessons of wisdom, the loved to be prefent; the heard, the retained the moral instructions, the fublime truths of nature, the gave them back to me, foftened and fweetened with the peculiar graces of her own mind. When we unbent our thoughts with the charms of poetry, when we read together the poems of Orpheus, Mufiens, and Linus, with what tafte did the mark every excellence in them? My feelings were dull, compared to her's. feemed herfelf to be the Mufe who had infpired those verses, and had tuned their lyres to infufe into the hearts of mankind the love of wildom and virtue, and the fear of the gods. How beneficent was the, how good to my people! what care did the take to instruct them in the finer and more elegant arts; to relieve the necessities of the tick and the aged; to superintend the education of children; to do my fubjects every good office of kind intercession; to lay before me their wants; to affift their petitions; to mediate for those who were objects of mercy; to fue for those who deferved the favours of the crown! And shall I banish myself for ever from such a confort? shall I give up her fociety for the brutal joysofa fenfoul life, keeping indeed the form of a man, but having loft the human foul, or at least all its noble and godlike powers? Oh, Circe, forgive me; I cannot bear the thought.

Circe. Be gone-do not imagine I alk you to flay. The daughter of the Sun is not fo mean spirited as to solicit a mortal to there her happiness with her. It is a happiness which I find you cannot enjoy. I pity you and despile you, That which you feem to value formuch, I have no notion of. All you have faid feems to me a jargon of fentiments fitter for a filly woman than for a great man. Go, read, and fpin too, if you pleafe, with your wife. I forbid you to remain another day in my island. You shall have a fair wind to carry you from it. After that, may every form that Neptune can raife purfue and overwhelm you! Be gone, I fav; quit my fight.

Uluffes. Great goddefs, I obey—But remember your oath.

§ 13. Love and Joy, a Tale.

In the happy period of the golden age, when all the celeftial inhabitants descended to the earth, and conversed familiarly with mortals, among the meft cherithed of the heavenly powers were twins, the offspring of Jupiter, Love and Joy. Where they appeared the flowers forung up beneath their feet, the fun thone with a brighter radiance, and all nature feemed embellithed by their prefence. They were inteparable companions, and their growing attachment was favoured by Jupiter, who had decreed that a latting union should be folemnized between them fo foon as they were arrived at maturer years; but in the mean time the fous of men deviated from their native innocence; vice and ruin overran the earth with giant firides; and Afrea, with her train of celeftial vititants, forfook their polluted abodes: Love alone remained. having been folenaway by Hope, who was his nurse, and conveyed by her to the forests of Arradia, where he was brought up among the flepherds. But Jupiter affigned him a different partner, and commanded him to cipoufe Sorrow, the daughter of Ate: be complied with reluctance: for her features were harfh and difagreeable; hereyesfunk, her forchead contracted into perpetual wrinkles, and her templeswere covered with a wreath of cypress and wormwood. From this union furung a virgin, in whom might be traced aftrong resemblance to both her parents; but the fullen and unamiable features of her mother were fo mixed and blended with the

iweetness

fweetness of her father, that her countenance, though mournful, was highly The maids and fhepherds of pleating. the neighbouring plains gathered round, and called her Pity .. A red-breaft was observed to build in the cabin where the was born; and while the was yet an infant, a dove purfied by a hawk flew into her bosom. This numph had a dejected appearance, but to loft and gentle a mien, that the was beloved to a degree of enthulialm. Her voice was low and plaintive, but inexpressibly fiveet: and the loved to lie for hours together on the banks of fome wild and melancholy ffream, finging to her lute. She taught men to weep, for the took a strange delight in tears; and often, when the virgins of the hamlet were affembled at their evening sports, she would steal in amongst them, and captivate their hearts by her tales, full of a charming fadnets. She wore on her head a garland composed of her father's myrtles twisted with her mother's cypres.

One day, as the fat muting by the waters of Helicon, her tears by chance fell iuto the fountain; and ever fince the Mufes' foring has retained a throng tafte of the infunon. Pity was commanded by Jupiter to follow the steps of her mother through the world, dropping balm into the wounds the made, and binding up the hearts the had broken. She follows with her hair loofe, her bosom bare and throbbing, her garments torn by the briars, and her feet bleeding with the roughness of the path. The nymph is mortal, for her mother is fo; and when the has fulfilled her destined course upon the earth, they shall both expire together, and Love be again united to Joy, his immortal and long-betrothed bride. Aikin's Miscel.

14. Scene between Colonel RIVERS and Sir HARRY; in which the Colonel, from Principles of Honour, refujes to give his Daughter to Sir HARRY.

Sir Har. Colonel, your most obedient; am come upon the old business; for, unless I am allowed to entertain hopes of Miss Rivers, I shall be the most miserable of all human beings.

Riv. Sir Harry, I have already told you by letter, and I now tell you personally, I cannot liften to your proposals.

Sir Har. No, Sir!

Riv. No, Sir: I have promifed my daughter to Mr. Sidney. Do you know that, Sir?

Sir Har. I do: but what then? Engagements of this kind, you know-

Riv. So then, you do know I have

promifed her to Mr. Sidney?

Sir Her. I do-but I also know that matters are not finally fettled between Mr. Sidney and you; and I moreover know, that his fortune is by no means equal to mine; therefore-

Riv. Sir Harry, let me afk you one quettion before you make your confe-

quence.

Sir Har. A thousand, if you please,

Why then, Sir, let me ask you, what you have ever observed in me, or my conduct, that you defire me fo familiarly to break my word? I thought, Sir, you confidered me as a man of honour?

Sir Har. And fo I do, Sir-a man of

the nicett honour.

And yet, Sir, you afk me to violate the functity of my word; and tell me directly, that it is my interest to be a

rafcal!

Sir Har. I really don't understand you, Colonek: I thought, when I was talking to you, I was talking to a man who knew the world; and as you have

not yet figned-

Why, this is mending matters with a witness! And so you think, because I am not legally bound, I am under no necessity of keeping my word! Sir Harry, laws were never made for men of honour: they want no bond but the rectitude of their own fentiments: and laws are of no use but to bind the villains of fociety.

Sir Har. Well! but my dear Colonel, if you have no regard for me, shew some

little regard for your daughter.

Riv. I shew the greatest regard for my daughter, by giving her to a man of honour; and I must not be insulted with any farther repetition of your proposals.

Sir Har. Infult you, Colonel! Is the offer of my alliance an infult! Is my readiness to make what settlements you

think proper-

Riv. Sir Harry, I should consider the offer of a kingdom an infult, if it were to be purchased by the violation of my word. Bendes, though my daughter shall never go a beggar to the arms of her hufband, I would rather fee her happy than rich; and if the has enough to provide handfomely for a young family, and fomething to spare for the exigencies of a

worthy

worthy friend, I shall think her as affluent as if the were mistress of Mexico.

Sir Har. Well, Colonel, I have done;

but I believe-

Riv. Well, Sir Harry, and as our conference is done, we will if you pleafe, retire to the ladies. I shall be always glad of your acquaintance, though I cannot receive you as a fon-in-law; for a union of interest I look upon as a union of diffioneur, and confider a marriage for money at best but a legal prostitution.

On Dignity of Manners. § 15.

There is a certain dignity of manners absolutely necessary, to make even the most valuable character either respected or re-

spectable.

Horfe-play, romping, frequent and loud fits of laughter, jokes, waggery, and indiferiminate familiarity, will fink both merit and knowledge into a degree of contempt. They compole at most a merry Tellow; and a merry fellow was never yet arespectable man. Indiscriminate familiarity either offends your superiors, or else dubsyoutheir dependent and led captain. It gives your inferiors just, but troublefome and improper claims of equality. A joker is near akin to a buffoon, and neither of them is the least related to wit. Whoever is admitted or fought for, in company, upon any other account than that of his merit and manners, is never refpected there, but only made ufc of. We will have fuch-a-one, for he fings prettily; we will invite fuch-a-one to a ball, for he dances well; we will have such-a-one at Supper, for heisalways joking and laughing; we will afkanother, because he plays deep at all games, or because he can drink m great deal. These are all vilifying diftinctions, mortifying preferences, and ex-clude all ideas of effect and regard. Whoever is had (as it is called) in company, for the fake of any one thingfingly, is fingly that thing, and wilknever be confidered in any other light; consequently never respected, let his merits be what they may.

This dignity of manners, which I recommend fo much to you, is not only as different from pride, as true courage is from bluftering, or true wit from joking, but is absolutely inconfiftent with it; for nothing vilifies and degrades more than pride. The pretentions of the proud man are oftener treated with fneer and contempt, than within dignation; as we offer

ridiculoufly too little to a tradelman, who afts ridiculoufly too much for his goods; but we do not haggle with one who only asks a just and reasonable price.

Abject flattery and indifcriminate affentation degrade, as much as indiferiminute contradiction and noify debate difguft. But a modett affertion of one's own opinion, and a complaifant acquiescence in other people's, preferve dignity.

Vulgar, low expressions, aukward motions and address, vilify, as they imply either a very low turn of mind, or low

education, and low company.

Frivolous curiofity about trifles, and a laborious attention to little objects, which neither require nor deferve a moment's thought, lower a man: who from thence is thought (and not unjufily) incapable of greater matters. Cardinal de Rætz, very fagacioufly, marked out Cardinal Chigi for a little mind, from the moment he told him he had wrote three years with the same pen, and that it was an exectlent good one ftill.

A certain degree of exterior feriouhiels in looks and motions gives dignity, without excluding wit and decent cheerfulnefs, which are always ferious themfelves. A conftant fmirk upon the face, and a whifiling activity of the body, are firong indications of futility. Whoever is in a hurry, thews that the thing he is about is too hig for him-hafte and hurry are very

different things.

I have only mentioned fome of those things which may, and do, in the opinion of the world, lower and fink characters, in otherrespects valuable énough; but I have taken no notice of those that affect and fink the moral characters: they are lufficiently obvious. Aman who has patiently been kicked, may as well pretend to courage, as a man blafted by vices and crimes, to dignity of any kind. But an exterior decency and diguity of manners, will even keep fych a man longer from finking, than otherwife he would be; of fuch confequence is the To appears, or decorum even though affected and put on.

§ 16. On Vulgarity.

Lord Chefterfield.

A vulgar, ordinary way of thinking, acling, or speaking, implies alow education, and a habit of low company. Young pcople contractitat school, or among servants, with whon, they are to rolten used to converle; but, after they frequent good company, they must want attention and obser-

vation very much, if they do not lay it quite slide; and, indeed, if they do not, good company will be very apt to lay them afide. The various kinds of vulgarifins are infinite; I cannot pretend to point them out to you; but I will give fome famples, by which you may guels at the reft.

A volgar man is captious and jealous; eager and impetuous about trifles; he fufpects himfelf to be flighted; thinks every thing that is faid is meant at him; if the company happens to laugh, he is perfuaded they laugh at him; he growsaugry and telly, fays fomething very impertment, and draws himfelf into a ferape, by thewing what he calls a proper spirit, and afterting himfelf. A man of fashion does not suppose himself to be either the sole or principal object of the thoughts, looks, or words of the company; and never fulpats that he is either flighted or laughed at, unless he is conscious that he deserves it. And if (which very feldom happens,) the company is abfurd or ill-bred enough to do either, he does not care two-pence, unless the infult be fo gross and plain as to require fatisfaction of another kind. As he is above triffes, he is never vehement and eager about them; and whereever they are concerned, rather acquiefces than wrangles. A vulgar man's converlation always favours firongly of the lowners of his education and company: it turns chiefly upon his domettic affairs, his fervants, the excellent order he keeps in his own family, and the little anecdotes of the neighbourhood; all which he relates with emphasis, as interesting matters .- He is a man-goffip.

Vulgarism in language is the next, and dilling withing characteristic of bad company, and a bad education. A man of fathion avoids nothing with more care than this. Proverbial expressions and trite fayings are the flowers of the rhetoric of a vulgar man. Would he fay that men differ in their taftes; he both supports and adorus that opinion, by the good old faying as he respectfully calls it, that "what " is one man's meat is another man's " poison." If any body attempts being fmurt, as he calls it, upon him; he gives them tit for tat, aye, that he does. has always fome favourite word for the time being; which, for the fake of using often he commonly abuses. Such as, raftly angry, vaftly kind, vaftly handsome, and saftly ugly. Even his pronunciation of proper words carries the mark of the

beaft along with it. He calls the parth yearth; he is obleiged, not obliged to you. He goes to wards, and not towards fuch a place. He fometimes affects hard words by way of ornament, which he always mangles. A manof fashion never has recourse to proverbs and vulgar aphorisms; uses neither favourite words nor hard words; but takes great care to speak very correctly and grammatically, and to pronounce properly; that is, according to the usage of the best companies.

An aukward addrefs, ungraceful attitudes and actions, and a certain left-handedness (if I may use the word) loudly proclaim low education and low company; for it is impossible to suppose that a man can have frequented good company, without having catched fomething, at leaft, of their air and motions. A newraifed man is diftinguished in a regiment by his aukwardness; but he mutt be impenetrably dull, if, in a month or two's time, he cannot perform at least the com... mon manual exercife, and look like a foldier. The very accoutrements of a man of fashion are grievous incumbrances to a vulgar man. He is at a lofs what to do with hishat, when it is not upon his head: his cane (if unfortunately he wears one) is at perpetual war with every cap of tea or coffee he drinks; deftroys them first; and then accompanies them in their fall! His fword is formidable only to his own legs, which would possibly carry him fast enough out of the way of any fword but his own. His clothes fit him so ill, and conttrain him so much, that he seems rather their prifouer than their proprietor: He prefents himfelf in company like a criminal in a court of justice; his very air condemns him; and people of fathion will no more connect themselves with the one; than people of character will with the other. This repulie drives and finks him into low company; a gulf from whence no man, after a certain age, ever emerged. Lord Chesterfield.

§ 17. On Good-breeding.

A friend of yours and mine has very juilly defined good-breeding to be, "the refult of much good fenfe, forme good-nature, and a little felf-denial for the fake of others, and with a view to obtain the fame indulgence from them." Taking this for granted (as I think it cannot be disputed) it is aftonishing to me, that any body, who has good fenie and good-na-

ture,

ture can effentially fail in good-breeding. As to the modes of it, indeed they vary according to perfons, places, and circumflances, and are only to be acquired by. observation and experience; but the subfrance of it is every where and eternally the fame. Good manners are, to particular focietics, what good morals are to fociety in general, their cement and their fecurity. And as laws are enacted to enforce good morals, or at least to prevent the ill effects of bad ones; fo there are certain rules of civility, univerfally implied and received, to enforce good manners, and punish bad ones. And, indeed, there feems to me to be less difference both between the crimes and punishments, than at first one would imagine. The immoral man, who invades another's property, is justly hanged for it; and the ill-bred man who, by his ill-manners, invades and diffurbs the quiet and comforts of private life, is by common confent as juitly banished fociety. Mutual complaifances, attentions, and facrifices of little conveniencies, are as natural an implied compact between civilized people, as protection and obedience are between kings and fubjects; whoever, in either cafe, violates that compact, justly forfeits all advantages arising from it. For my own part, I really think, that, next to the confciousness of doing a good action, that of doing a civil one is the most pleating; and the epithet which Ithould covet the most, next to that of Ariftides, would be that of well-bred, Thus much for good-breeding in general; I will now confider fome of the various modes and degrees of it.

Very few, scarcely any, are wanting in the respect which they should shew to those whom they acknowledge to be infinitely their superiors; fucli as crowned heads, princes, and public perions of diftinguithed and eminent poils. It is the manner of thewing that respect which is different. The man of fashion, and of the world, expresses it in its fullest extent; but naturally, easily, and without concern: whereas a man who is not used to keep good company, expresses it aukwardly; one fees that he is not used to it, and that it coffshim a great deal; but I never faw the worft bred man living guilty of lolling, whiftling, feratching his head, and fuchlike indecencies, in companies - ances, or those who really are our interiors; that he respected. In such companies, therefore, the only point to be attended to is, to thew that reflect which every body

means to fnew, in an easy, unembarrafled, and graceful manner. This is what observation and experience must teach you.

In mixed companies, whoever is admitted to make part of them, is, for the time at leaft, supposed to be upon a footing of equality with the reft; and, confequently, as there is no one principal object of awe and respect, people are apt to take a greater latitude in their behaviour, and to be less upon their guard; and so they may, provided it be within certain bounds, which are upon no occasion to be transgressed. But upon these occasions, though no one is entitled to diftinguished marks of respect, every one claims, and very julily, every mark of civility and good-breeding. Ease is allowed, but careleffinefs and negligence are firicily forbidden. If a man accosts you, and talks to you ever fo dully or frivolously; it is worfe than rudeness, it is brutality, to shew him, by a manifest inattention to what he fays, that you think him a fool or a blockhead, and not worth hearing. It is much more fo with regard to women: who, of whatever rank they are, are entitled in confideration of their fex, not only to an attentive, but an officious good-breeding frommen. Their little wants, likings, diflikes, preferences, antipathies, and fancies, must be officiously attended to, and, if posible, gueffed at and anticipated, by a wellbred man. You must never usurp to yourfelf those conveniencies and gratifications which are of common right; fuch as the best places, the best dithes, &cc. but on the contrary always decline them yourfelf, and offer them to others; who, in their turns will offerthem to you: fothat upon the whole, you will, in your turn, enjoy your thare of the common right. It would be endless for me to enumerate all the particular inftances in which a well-bred man thews his good-breeding in good company; and it would be injurious to you to suppose, that your own good sense will not point them out to you; and then your own good-nature will recommend, and your felf-interest enforce the practice.

There is a third fort of good-breeding, in which people are the most apt to fail, from a very mittaken notion that they cannot fail at all. I mean with regard to one's most familiar friends and acquaintand there, undoubtedly, a greater degree of cafe is not only allowed, hut proper, and contributes much to the comforts of a pri-

vate, focial life. But eafe and freedom have their bounds, which must by no means be violated. A certain degree of negligence and carelessness becomes injurious and infulting, from the real or fuppoled inferiority of the perfons; and that delightful liberty of convertation among a few friends, is foon deftroved, as liberty often has been, by being carried to licentioufuefs. But example explains things beit, and I will put a pretty ftrong cafe: -Suppole you and me alone together; I believe you will allow that I have as good a right to unlimited freedom in your company, as either you or I can possibly have in any other; and I am apt to believe too, that you would indulge me in that freedom, as far as any body would... But, notwith tranding this, do you imagine that I thould think there was no bounds to that freedom? I affure you, I thould not think fo; and I take mytelf to be as much tied down by a certain degree of good manners to you, as by other degrees of them to other people. The most familiar and intimate habitudes, connections, and friendthips, require a degree of good-breeding, both to preferve and cement them. The best of us have our bad sides; and it is as imprudent as it is illbred, to exhibit them. I shall not use seremony with you; it would be mifplaced between us: but I shall certainly observe that degree of good-breeding with yon, which is, in the first place, decent, and which, I am fure, is absolutely necesfary to make us like one another's company long. Lord Chejlerfield.

§ 18. A Dialogue betwirt MERCURY an English Duellist, and a North-American Savage.

Duellift. Mercury, Charon's boat is on the other fide of the water; allow me, before it returns, to have fome converfation with the North-American Savage whom you brought hither at the fame time as you conducted me to the shades. I never saw one of that species before, and am curious to know what the animal is. He looks very grim.—Pray, Sir, what is your name? I understand you speak English.

Savage. Yes, I learned it in my childhood, having been bred up for fome years in the town of New-York: but before I was a man I returned to my countrymen, the railant Mohawks; and being sheated

by one of yours in the fale of fome rum, I never cared to have any thing to do with them afterwards. Yet I took up the hatchet for them with the reft of my tribe on the war against France, and was killed white I was out upon a scalping party. But I died very well fatisfied; for my friends were victorious, and before I was thot I had scalped seven men and five women and children. In a former war I had done till greater exploits. My name is The Bloody Bear; it was given to me to express my serveness and valour.

Duellist. Bloody Bear, I respect you, and am much your humble servant. My name is Tom Pushwell, very well known at Arthur's. I am a gentleman by my birth, and by profession a gametier, and man of honour. I have killed men us fair sighting, in honourable single combat, but do not understand cutting the throats of women and children.

Savage. Sir, that's our way of making war. Every nation has its own cuftoms. But by the grimness of your countenance, and that hole in your breast, I presume you were killed, as I was mylelf, in some scalping party. How happened it that your enemy did not take off your scalp?

Duellift. Sir, I was killed in a duel. A friend of mine had lent me fome money; after two or three years, being in great want himfelf, he alked me to pay him; I thought his demand an affront tomy honour, and fent him a challenge. We met in Hyde-Park; the fellow could not fence: I was the adroiteft (wordiman in England. I gave him three or four wounds; but at lait he ran upon me with fuch impetualty, that he put me out of my play, and I could not prevent him from whipping me through the lungs. I died the next day, as a man of honour fhould, without any fnivelling figns of repentance: and he will follow me foon, for his furgeon has declared his wound to be mortal. It is faid that his wife is dead of her fright, and that his family of feven children will be undone by his death. So I am well revenged; and that is a comfort. For my part, I had no wife.-I' always hated marriage: my whore will take good care of herfelf, and my children are provided for at the Foundling Holpital.

Sugage. Mercury, I won't go in a boat with that fellow. He has murdered his countryman; he has murdered his friend. I fay I won't go m a boat with that fellow.

I will

I will fwim over the river: I can fwim like a duck.

Mercury. Swim over the Styx! it must not be done; it is against the laws of Pluto's empire. You must go in the boat.

and be quiet.

Savage. Do not tell me of laws: I am a Savage: I value no laws. Talk of laws to the Englishman: there are laws in his country, and yet you see he did not regard them. For they could never allow him to kill his fellow-subject in time of peace, because he asked him to pay a debt. I know that the English are a barbarous nation; but they cannot be so brutal as to make such things lawful.

Mercury. You reason well against him. But how comes it that you are so offended with murder: you who have massacred women in their sleep, and children in

their cradles?

Savage. I killed none but my enemies; I never killed my own countrymen: I never killed my friend. Here, take my blanket, and let it come over in the boat; but fee that the murderer does not fit upon it, or touch it; if he does I will burn it in the fire I fee yonder. Farewell.—I am refolved to fwim over the water.

Mercury. By this touch of my wand I take all thy firength from thee.-Swim

now if thou cantt.

Savage. This is a very potent enchanter.—Reflore me my firength, and I will obey thee.

Mercary. I restore it; but he orderly, and do as I bid you, otherwise worse will

befall you.

Duellift. Mercury, leave him to me, I will tutor him for you. Sirrah, Savage, doft thou pretend to be ashamed of my company? Dost thou know that I have kept the best company in England?

Savage. I know thou art a fcoundrel.

Not pay thy debts! kill thy friend, who leut thee money, for aking thee fir it!
Get out of my fight. I will drive thee

into Styx.

Mercury. Stop-I command thee. No

violence.-Talk to him calmly.

Savage. I must obey thee.—Well, Sir, let me know what merit you had to introduce you into good company? What could you do?

Duellift. Sir, I gamed, as I told you,— Beedes, I kept a good table.—I ate as well as any man in England or France.

Savage. Eat! Did you ever eat the chine of a Frenchman, or his leg, or his

flioulder? there is fine eating! I have eat twenty.—My table was always well ferved. My wife was the ben cook for drefling of man's fleth in all North America. You will not pretend to compare your eating with mine.

Duellift. I danced very finely.
Savage, I will dance with thee for thy ears.—I can dance all day long. I can dance the war-dance with more spirit and vigour than any man of my nation: let us see thee begin it. How thou stands like a post! Has Mercury struck theo with his enteebling rod? or art thou ashamed to let us see how aukward thou art? If he would permit the, I would teach thee

thou do, thou bragging rafeal?

Duellik. Oh, heavens! must I bear
this? what can I do with this fellow? I
have neither sword nor pittol; and
his shade seems to be twice as strong as

to dance in a way that thou haft not yet

leap like a buck.

I would make thee caper and

But what else canit

mine.

Mercury. You must answer his questions. It was your own desire to have a conversation with him. He is not well-bred; but he will tell you some truths which you must hear in this place. It would have been well for you if you had heard them above. He asked you what you could do besides eating and dancing.

Duelly. I fung very agreeably.
Swage. Let me hear you fing your death-long, or the war whoop. I challenge you to fing,—the fellow is mute.—Mercury, this is a liar.—He tells us nothing but lies. Let me pull out his tongue.

Ductlift. The lie given me!—and, alas! I dare not refent it. Oh, what a different to the family of the Pullwells! this in-

deed is damnation.

Mercury. Here, Charon, take thefetwo favages to your care. How far the barbariim of the Mohawk will excuse his horrid acts, I leave Minostojudge; but the Englithman, what excuse can be plead? The custom of duelling? A bad excuse, at the best! but in his case cannot avail. The spirit that made him draw his sword in this combatagainst his friend, is not that of honour; it is the spirit of the suries, of Alecto hersels. To her he must go, for she hath long dwelt in his merciles besom.

Savage. If he is to be punished, turn him over to me. I understand the art of tormenting. Sirrab, I begin with this kick

OIL

on your breech. Get you into the boat or Pll give you another. I am impatient to have you condemned.

Duellift. Oh, my honour, my honour, to what infamy art thou fallen!

Dialogues of the Dead.

19. BAYES's Rules for Composition.

Smith. How, Sir, helps for wit!

Bayes. Ay, Sir, that's my position: and I do here aver, that no man the fun e'er shoue upon, has parts sufficient to furnish out a stage, except it were by the help of thefe my rules.

Smith. What are those rules, I pray?

Bayes. Why, Sir, my first rule is the rule of transversion, or regula duplex, changing verse into prose, and prose into rerfe, alternately, as you pleafe.

Smith. Well, but how is this done by

rule, Sir?

Bayes. Why thus, Sir; nothing fo eafy, when understood. I take a book in my hand, either at home or elfewhere (for that's all one); if there be any wit in't (as there is no book but has fome) I tranfverse it; that is, if it be profe, put it into verse (but that takes up some time); and if it be verfe put into profe.

Smith. Methinks, Mr. Bayes, that putting verfe into profe, should be called

transposing.

Bayes. By my troth, Sir, it is a very good notion, and hereafter it thall be fo. Smith. Well, Sir, and what d'ye do

with it then?

Bayes. Make it my own: 'tis fo changed that no man can know it-My next rule is the rule of concord, by way of table-book. Pray observe.

Smith. I hear you, Sir: go on. Bayes. As thus: I come into a coffeehouse, or some other place where witty men refort; I make as if I minded nothing (do ye mark?) but as foon as any

one speaks-pop, I slap it down, and make

that too my own. Smith. But, Mr. Bayes, are you not fometimes in danger of their making you restore by force, what you have gotten

thus by art?

Bayes. No, Sir, the world's unmindful; they never take notice of thefe things.

Smith. But pray, Mr. Bayes, among all your other rules, have you no one rule for invention ?

Bayes. Yes, Sir, that's my third rule: that I have here in my pocket.

Smith. What rule can that be, I wonder?

Why, Sir, when I have any Bayes. thing to invent, I never trouble my head about it, as other men do, but prefently turn over my book of Drama commonplaces, and there I have, at one view, all that Persius, Montaigne, Seneca's trage-dies, Horace, Juvenal, Claudian, Pliny, Plutarch's Lives, and the reft, have ever thought upon this fubject; and fo, in a trice, by leaving out a few words, or putting in others of my own-the bufiness is

Smith. Indeed, Mr. Bayes, this is as fure and compenduous a way of wit as

ever I heard of.

Bayes. Sir, if you make the leaft foruple of the efficacy of thefe my rules, do but come to the play-house and you shall judge of them by the effects.—But now, pray, Sir, may I alk you how you do when you write?

Smith. Faith, Sir, for the most part,

I am in pretty good health.

Bayes. Ay, but I mean, what do you do when you write!

Smith. I take pen, ink, and paper,

and fit down.

Bayes. Now I write standing; that's one thing: and then another thing iswith what do you prepare yourfelf?
Smith. Prepare myfelf! What the de-

vil does the fool mean?

Bayes. Why I'll tell you now what I do :- If I am to write familiar things, as fonnets to Armida, and the like, I make use of siew'd prunesonly; but when I have a grand design in hand, I ever take phyfic and let blood: for when you would have pure fwiftness of thought, and fiery flights of fancy, you must have a care of the penfive part .- In fine, you must purge the belly.

Smith. By my troth, Sir, this is a most admirable receipt for writing.

Bayes. Ay, 'tis my fecret; and, in good earnest, I think one of the best I

Smith. In good faith, Sir, and that

may very well be.

Bayes. May be, Sir! I'm fure on't. Experto crede Roberto. But I must give you this caution by the way-be fore you never take fnuff when you write.

Why fo, Sir? Smith.

Why it spoiled me once one Bayes. of the sparkishest plays in all England. But a friend of mine, at Gresham-college,

has promifed to help me to some spirit of brains—and that shall do my business.

§ 20. The Art of Pleasing.

The defire of being pleafed is univerfal; the defire of pleafing thould be fo too. It is included in that great and fundamental principle of morality, of doing to others what one wifnes they should do to us. There are indeed fome moral duties of a much higher nature, but none of a more amiable; and I do not hefitate to place it at the head of the minor virtues.

The manner of conferring favours or benefits is, as to pleafing, almost as important as the matter itfelf. Take care, then, never to throw away the obligations, which perhaps you may have it in your power to confer upon others, by an air of infolent protection, or by a cold and comfortlessmanner, which tifles them in their birth. Humanity inclines, religion requires, and our moral duties oblige us, as far as we are able, to relieve the diffreffes and miferies of our fellow-creatures: but this is not all; for a true heart-felt benevolence and tenderness will prompt us to contribute what we can to their eafe, their amusement, and their pleasure, as far as innocently we may. Let us then not only featter benefits, but even frew flowers for our fellow-travellers, in the rugged ways of this wretched world.

There are fome, and but too many in this country particularly, who, without the least visible taint of ill-nature or malevolence, feem to be totally indifferent, and do not shew the least defire to please; as, on the other hand, they never defignedly offend. Whether this proceeds from a lazy, negligent, and littless disposition, from a gloomy and melancholic nature, from ill health, low spirits, or from a secret and fullen pride, arising from the confcioufness of their boatted liberty and independency, is hard to determine, confidering the various movements of the human heart, and the wonderful errors of the human head. But, bethe cause what it will, that neutrality, which is the effect of it, makes these people, as neutralities do, defpicable, and mere blanks in fociety. They would furely be roufed from their indifference, if they would feriously consider the infinite utility of pleafing.

The person who manifests a constant defire to please, places his, perhaps, small stock of merit at great interest. What vast returns, then, must real merit, when thus adorned, ould with transport place his last usurer whecestarily bring in! A prudent shilling at such interest, and upon so solid a security.

The man who is amiable, will make almost as many friends as he does acquaintances. I mean in the current acceptation of the word, but not such fentimental friends as Pylades or Orestes, Nysus and Euryalus, &c. but he will make people in general with him well, and inclined to ferve him in any thing not inconsistent with their own interest.

Civility is the effential article towards pleating, and is the refult of good-nature and of good fenfe; but good-breeding is the decoration, the luftre of civility, and only to be acquired by a minute attention to, and experience of good company. A good-natured ploughman or fox-hunter, may be intentionally ascivil as the politeit courtier; but their manner often degrades and vilifies the matter; whereas, in good-breeding, the manner always adorns and dignifies the matter to fuch a degree, that I have often known it give currency to bafe coin.

Civility is often attended by a ceremoniousness, which good-breeding corrects, but will not quite abolith. A certain degree of ceremony is a necessary outwork of manners, as well as of religion: it keeps the forward and petulant at a proper distance, and is a very small retiraint to the senible, and to the weil-bred part of the world.

Chesterfield.

§ 21. A Dialogue between PLINY the Elder and PLINY the Younger.

Pliny the Elder. The account that vos give me, nephew, of your behaviour amidit the terrors and perils that accompanied the first eruption of Vesuvius, does not pleafe me much. There was more of vanity in it than true magnanimity. Nothing is great that is unnatural and affected. When the earth shook beneath you, when the heavens were obscured with sulphureous clouds, full of ashes and cinders thrown up from the bowels of the new-formed volcano, when all nature feemed on the brink of destruction, to be reading Livy, and making extracts, as if all had been fafe and quiet about you, was an abfurd affectation .- To meet danger with courage is the part of a man, but to be infentible of it, is brutal stupidity: and to pretend infentibility where it cannot exist, is a ridiculou sfalfenefs. When you afterwards, refused to leave your aged mother

and

and fave yourfelf without her by flight, you indeed acted nobly. It was also becoming a Roman to keep up her spirits, amidst all the horrors of that dreadful feene, by shewing yourfelf undishayed and courageous. But the merit and glory of this part of your coudust is sunk by the other, which gives an air of oftentation and vanity to the whole.

Pliny the Younger. That vulgar minds flould suppose my attention to my studies in such a conjunctive unnatural and affected, I should not much wonder; but that you would blame it as such, I did not expectly you, who approached still nearer than I to the fiery storm, and died by the suf-

focating heat of the vapour.

Pliny the Elder. I died, as a good and brave man ought to die, in doing my duty. Let me recall to your memory all the particulars, and then you shall judge yourfelf on the difference of your conduct and mine. I was the practect of the Roman fleet, which then lay at Milenum. Upon the first account I received of the very unufual cloud that appeared in the air, I ordered a veffel to carry me out to fome distance from the shore, that I might the betterobserve the phenomenon, and try to difcover its nature and cause. This I did asaphilolopher, and it was a curiofity properand natural to a fearthing, inquitiive mind. I offered to take you with me, and furely you thould have defired to go; for Livy might have been read at any other time, and fuch spectacles are not trequent: but you remained fixed and chained down to your book with a pedantic attachment. When I came out from my house I found all the people forfaking their dwellings, and flying to the fea, as the fafest retreat. Foasist them, and allothers who dwelt on the coaft, Timmediately ordered the fleet to put out, and failed with it round the Whole bay of Naples, steering particularly to those parts of the shore where the danger was greatest, and from whence the inhabitants were endeavouring to escape with the most trepidation. Thus I spent the wholeday, and preferved by my carefome thousands of lives; noting at the same time, with a fleady composure and freedom of mind, the feveral forms of and phenomenaoftheeruption. Towardsnight, as we approached to the foot of Vesuvius, all the gallies were covered with after and em-bers, which grew hotter and hotter; then. howers of pumice flones, and burnt and broken pyrites, began to fall on our heads;

and we were flopped by the obstacles which the ruinsof the mountains had fuddenly formed by falling into thefea, and almost filling it up on the part of the coast. I then commanded my pilot to fleer to the viila of my friend Pomponianus, which you know was fituated in the inmoft receis of the bay. The wind was very favourshie to carry me thither, but would not allow him to put off from the shore, as he wished to have done. We were therefore constrained to pass the night in his house. They watched, and I flept, until the beaps of pumice-stones, which fell from the clouds, that had now been impelled to that fide of the bay, role fo high in the area of the apartment I lay in, that I could not have got out had I flaid any longer; and the carthquakes were fo violent, as to threaten every moment the fall of the house: we therefore thought it more fafe to go into the open air, guarding our heads as well as we could with pillowstied upon them. The wind continuing adverse, and the fea very rough, we remained on the there until a fulphureous and fiery vapour oppreffed my weak lungs, and ended my life.—In all this I hope that I acted as the duty of my flation required, and with true magnanimity. But on this occasion, and in many other parts of your life, I mult fay, my dear nephew, that there was a vanity mixed with your virtue, which hurt and difgraced it. Without that, you would have been one of the worthiell men that Rome has produced; for none ever excelled you in the integrity of your heart and greatness of your feutiments. Why would you lofe the fubflance of glory by feeking the fladow? Your eloquence had the famo fault as your manners: it was too affected. You professed to make Cicero your guide and your pattern: but when one reads his panegyric upondulius Cæfar, in his oration for Marcelius, and you'rs upon Trajan; the first feems tim language of nature and truth, raifed and dignified with all the majetty of the most sublime eloquence; the latter appears the studied harangue of a florid rhetorician, more defirous to thine and let off his own wit, than to extol. the great man he was praising.

Pliny the Younger. I have too high a respect for you, uncle, to question your judgment either of my life or my writings; they might both have been better, if I had not been too solicitous to render them perfect. But it is not for me to say much on that subject; permit me therefore to

2 G 2 retur

return to the subject on which we began our conversation. What a direful calamity was the eruption of Vefuvius, which you have now been describing! Do not you remember the beauty of that charming coast, and of the mountain itself, before it was broken and torn with the violence of those sudden fires that forced their way through it, and carried defolation and ruin over all the neighbouring country? The footofit was covered with corn-fields and rich meadows, interspersed with fine villas and magnificent towns; the fides of it were clothed with the best vines in Italy, producing the richeft and nobleft wines. How quick, how unexpected, how dreadfulthechange all was at once overwhelmed with ashes, and cinders, and fiery torrents, prefenting to the eye the most difmal fcene of horror and destruction!

Pliny the Elder. You paint it very truly .- But has it never occurred to your mind, that this change is an emblem of that which must happen to every rich, luxurious state? While the inhabitants of it are funk in voluptuoufnets, while all is finiling around them, and they think that no evil, no danger is nigh, the feeds of destruction are fermenting within; and, breaking out on a fudden, lay waste all their opulence, all their delights; till they are left a fad monument of divine wrath, and of the fatal effects of internal corruption. Dialogues of the Dead.

₹ 22. Humorous Scene at an Inn between BONIFACE and AIMWELL.

Bon. This way, this way, Sir.

You're my landlord, I suppose? Yes, Sir, I'mold Will Boniface; pretty well known upon this road, as the faying is.

Aim. O, Mr. Boniface, your fervant. Bon. O, Sir,-What will your honour pleafe to drink, as the faying is?

Aim. I have heard your town of Litchfield much famed for ale; I think I'll taile that.

. Bon. Sir, I have now in my cellar, ten ton of the best ale in Staffordshire: 'tis smooth as oil, fweet as milk, clear as amber and strong as brandy; and will be just fourteen years old the fifth day of next March, old ftyle.

Aim. You're very exact, I find, in the

age of your ale.

Bon. As punctual, Sir, as I am in the age of my children: I'll thew you fuch ale .- Here, tapster; broach number 1706, as the faying is-Sir, you shall take my anno domini. - I have lived in Litchfield, man and boy, above eight-and-fifty years, and, I believe, have not confumed eight-and-fifty ounces of meat.

Aim. At a meal you mean, if one may

guess by your bulk.

Bon. Not in my life, Sir; I have fed purely uponale: I have cat my ale, drank my ale and I always fleep upon my ale.

Enter Tapster with a Tankard.

Now, Sir, you shall fee-Your worship's health: [Drinks]-Ha! delicious, delicious:-Fancy it Burgundy, only fancy it—and 'tis worth ten shillings a quart.

Aim. [Drinks] Tis confounded ftrong. Bon. Strong! it must be so, or how would we be ftrong that drink it?

Aim. And have you lived to long upon

this ale, landlord?

Bon. Eight-and-fifty years, upon my credit, Sir: but it kill'd my wife, poor woman! as the faying is.

Aim. How came that to pass?

Bon. I don't know how, Sir-fine would not let the ale take its natural course, Sir: fhe was for qualifying it every now and then with a dram, as the faying is; and an honest gentleman that came this way from Ireland, made her a prefent of a dozen bottles of ufquebaugh-but the poor woman was never well after-but however, I was obliged to the gentleman you know.

Aim. Why, was it the usquebaugh that

killed her?

Bon. My lady Bountiful faid fo-She, good lady, did what could be done; the cured her of three tympanies: but the fourth carried her off: but she's happy, and I'm contented, as the faying is.

Aim. Who's that lady Bountiful you

mentioned?

Bon. Odds my life, Sir, we'll drink her health: [Drinks]-My lady Bountiful is one of the best of women. Her laft hufband Sir Charles Bountiful, left her worth a thousand pounds a year; and, I believe, the laysoutone-halfon't in charitable uses for the good of her neighbours.

Aim. Has the lady any children? Bon. Yes, Sir, she has a daughter by Sir Charles; the finest woman in all our county, and the greatest fortune. She has a fontoo, by her first husband, 'squire Sullen, who married a fine lady from London t'other day: if you pleafe, Sir, we'll drink his health. [Drinks.]

Aim. What fort of a man is he? Bon. Why, Sir, the man's well enough:

fays

fays little, thinks less, and does nothing at all, faith: but he's a man of great estate, and values nobody.

lim. A sportsman, I suppose?

Bon. Yes, he's a man of pleafure; he plays at whift, and fmokes his pipe eightand-forty hours together fometimes.

Aim. A fine sportsman, truly !- and

married, you fay?

Bon. Ay; and to a curious woman, Sir,

But he's my landlord, and so aman, you know, would not—Sir, my humble service to you. [Drinks.]—Tho' I value not a farthing what he can do to me; I pay him his rent at quarter-day; I have a good running trade; I have but one daughter, and I can give her—but no matter for that.

Aim. You're very happy, Mr. Boniface: pray what other company have you

in town?

Bon. A power of fine ladies; and then

we have the French officers.

Aim. O that's right, you have a good many of those gentlemen: pray how do

you like their company?

Bon. So well, as the faying is, that I could wish we had as many more of 'em. They're full of money, and pay double for every thing they have. They know, Sir, that we paid good round taxes for the making of 'em; and so they are willing to reimburse us a little: one of 'em lodges in my house. [Bell rings.]—I beg your worship'spardon—I'll wait on you in half a minute.

§ 23. Endeavour to please, and you can scarcely fail to please.

The means of pleasing vary according to time, place, and person; but the general role is the tripe one. Endeavour to please, and you will infallibly please to a certain degree; constantly shew a desire to please, and you will engage people's self-love in your interest; a most powerful advocate. This, as indeed almost every thing elfe, de-

pends on attention.

Be therefore attentive to the most trifling thing that passis where you are; have, as the rulgar phrase is, your eyes and your ears always about you. It is a very foolis, though a very common saying, "I "really did not mind it," or, "I was "thinking of quite another thing at that "time," The proper answer to such ingemious excuses, and which admits of no reply, is, Why did you not mind it? you was present when it was said or done. Oh! but you may fay, you was thinking of quite another thing: if fo, why was you not in quite another place proper for that important other thing, which you fay you was thinking of? But you will fav perhaps, that the company was fo filly, that it did not deferve your attention: that, I am fure, is the faying of a filly man; for a man of fense knows that there is no company fo filly, that some use may not be made of it by attention.

Let your address, when you first come into company, be modest, but without the least bashfulness or sheepissness, steady, without impudence; and unembarrassed, as if you were in your own room. This is a difficult point to hit, and therefore deferves great attention; nothing but a long usage in the world, and in the best com-

pany, can possibly give it.

A young man, without knowledge of the world, when he first goes into a fashionable company, where most are his superiors, is commonly either annihilated by bashfulness, or, if he rouses and lashes himself up to what he only thinks a modest assurance, he runs into impudence and absurdity, and consequently offends instead of pleasing. Have always, as much as you can, that gentleness of manners, which never fails to make favourable impressions, provided it be equally free from an insipid smile, or a pert smirk.

Carefully avoid an argumentative and disputative turn, which too many people have, and fome even value themfelves upon, in company; and, when your opinion differs from others, maintain it only with modesty, calmness, and gentleness; but never be eager, loud, or clamorous; and, when you find your antagonist beginning to grow warm, put an end to the dispute by fome genteel stroke of humour. For, take . it for granted, if the two best friends in the world difpute with eagerness upon the most trifling subject imaginable, they will, for the time, find a momentary alienation from each other. Disputes upon any subject are a fort of trial of the understanding, and must end in the mortification of one or other of the difputants. On the other hand, I am far from meaning that you should give an universal assent to all that you hear faid in company; fuch an affent would be mean, and in some cases criminal; but blame with indulgence, and correct with gentlenefs.

Always look people in the face when you speak to them; the not doing it is 3 G 3 thought

thought to imply conscious guilt; besides that, you lose the advantage of observing by their countenances, what impression your discourse makes upon them. In order to know people's real sentiments, I trust much more to my eyes than to my ears: for they can say whatever they have a mind I should hear; but they can seldoin help looking what they have no intention that I should know.

If you have not command enough over yourfelf to conquer your humours, as I am fure every rational creature may have, never go into company while the fit of illhumour is upon you. Instead of company's diverting you in those moments, you will displease, and probably shock them; and you will part worfe friends than you met: but whenever you find in yourfelf a difpolition to fullennels, contradiction, or teltinefs, it will be in vain to feek for a cure Stay at home; let your humour abroad. ferment and work itself off. Cheerfulness and good-humour are of all qualifications the most amiable in company; for, though they do not necessarily imply good-nature and good-breeding, they represent them, at leaft, very well, and that is all that is

required in mixt company.

I have indeed known fome very ill-natured people, who were very good humoured in company; but I never knew any one generally ill-humoured in company, who was not effentially ill-natured. there is no malevolence in the heart, there is always a cheerfulness and ease in the countenance and manners. By good humour and cheerfulness, I am far from meaning noify mirth and loud peals of laughter, which are the diftinguishing characteristics of the vulgar and of the ill-bred, whose mirth is a kind of storm. Observe it, the vulgar often laugh, but never fmile; whereas, well-bred people often fmile, but feldom laugh. A witty thing never excited laughter; it pleafes only themind, and never difforts the countenance: a glaring abfurdity, a blunder, a filly accident, and those things that are generally called comical, may excite a laugh, though never a loud nor a long one, among well-bred people.

Sudden passion is called short-lived madness: it is a madness indeed, but the fits of it return so often in choleric people, that it may well be called a continual madness. Should you happen to be of this unfortunate disposition, make it your constant study to subdue, or, at least, to check it; when you find your choler rifing, refolve neither to speak to, nor answer the person who excites it; but stay till you find it fubfiding, and then speak deliberately. Endeavour to be cool and iteady upon all occasions: the advantages of such a steady calmness are innumerable, and would be too tedious to relate. It may be acquired by care and reflection; if it could not, that reasonwhich distinguishes men frombrutes would be given us to very little purpole; as a proof of this, I never faw, and fearcely ever heard of a quaker in a passion. truth, there is in that fect a decorum and decency, and an amiable fimplicity, that I know in no other. Chefterfield.

§ 24. A Dialogue between M. APICIUS and DARTENEUF.

Darteneuf. Alas! poor Apicius—I pity thee much for not having lived in my age and my country. How many good diffes have I ate in England, that were unknown

at Rome in thy days!

Apicius. Keep your pity for yourfelf—how many good diffies have I ate in Rome, the knowledge of which has been loft in thele latter degenerate days! the fat paps of a fow, the livers of feari, the brains of phenicopters, and the tripotanum, which conflited of three forts of fifth for which you have no names, the lupis mariaus, the myxo, and the muranus.

Darteneuf. I thought the muraena had been our lamprey. We have excellent

ones in the Severn.

Apicius. No:—the muraena was a faltwater fifth, and kept in ponds into which the fea was admitted.

Darteneuf. Why then I dare fay our lampreys are better. Did you ever eat

any of them potted or flewed?

Apicius. I was never in Britain. Your country then was too barbarous for me to go thither. I should have been afraid that the Britons would have ate me.

Durtencyf. I am forry for you, very forry: for if you never were in Britain, you never ate the best oysters in the whole world.

Apicius. Pardon me, Sir, your Sandwich oysters were brought to Rome in

my time.

Darteneuf. They could not be fresh: they were good for nothing there:—You should have come to Sandwich to eat them: it is a shame for you that you did not.— An epicure talk of danger when he is in fearch of a dainty! did not Leander swim

ovet

over the Hellespont to get to his mistres? and what is a wench to a barrel of excel-

lent oysters!

Apicius. Nay—I am fure you cannot blame me for any want of alertness in seeking fine sishes. I failed to the coast of Afric, from Minturne in Campania, only to taste of one species, which I heard was larger there than it was on our coast, and finding that I had received a salfe information, I returned again without deigning to land.

Darteneuf. There was some sense in that: but why did you not also make a voyage to Sandwich! Had you tasted those oysters in their perfection, you would never have come back: you would have

ate till you burft.

Apteius. I wish I had:—It would have been better than poisoning my felf, as Idid, because, when I came to make up my accounts, I found I had not much above the poor sum of sourscore thousand pounds left, which would not afford me a table to keep me from starving.

Darteneuf. A sum of fourscore thousand pounds not keep you from starving! would I had had it! I should not have spent it in twenty years, though I had kept the best table in London, supposing I had made no

other expence.

Apicius. Alas, poor man! this shews that you English have no idea of the luxury that reigned in our tables. Before I died, I had spent in my kitchen 807, 2911.

Darteneuf. I do not believe a word of it: there is an error in the account.

Apicius. Why, the establishment of Lucullus for his suppers in the Apollo, I mean for every supper he ate in the room which he called by that name, was 5000 drachms, which is in your money 16141.

Darreneuf. Would I had supped with him there! But is there no blunder in

thefe calculations?

Apieius. Ask your learned men that.—I count as they tell me.—But perhaps you may think that these seems were only made by great men, like Lucullus, who had plundered all Asia to help him in his housekeeping. What will you say when I tell you, that the player Æsopus had one dish that cost him 6000 sestertia, that is, 48431. 10s. English.

Darteneuf. What will I fay! why, that I pity poor Cibber and Booth: and that, if I had known this when I was alive, I should have hanged myself for vexation that I did not live in those days.

Apicius. Well you might, well you might,—You do not know what eating is. You never could know it. Nothing lefs than the wealth of the Roman empire is fufficient to enable a man to keep a good table. Our players were richer by far than your princes.

Darteneig. Oh that I had but lived in the bleffed reign of Caligula, or of Vitellius, or of Heliogabalus, and had been admitted to the honour of dining with

their flaves!

Apicius. Ay, there you touch me.—I am miferable that I died before their good times. They carried the glories of their table much farther than the best eaters of the age that I lived in. Vitellius spent in eating and drinking, within one year, what would amount in your money to above feven millions two hundred thousand pounds. Het old me so himself in a conversation I had with him not long ago. And the others you mentioned did not fall short of his royal magnificence.

Durteneuf. These indeed were great princes. But what affects me most is the dish of that player, that d—d fellow Æsopus. I cannot bear to think of his having lived so much better than I. Pray of what ingredients might the dish be paid

to much for confift?

Apicius. Chiefly of finging birds. It was that which fo greatly enhanced the

price.

Darteneuf. Of finging birds! choak him-I never ate but one, which I stole from a lady of my acquaintance, and all London was in an uproar about it, as if I had stolen and roasted a child. But, upon recollection, I begin to doubt whether I have fo much reason to envy Æsopus; for the finging bird which I ate was no better in its tafte than a fat lark or a thrush: it was not fo good as a wheatear or becafigue; and therefore I fuspect that all the luxury you have bragged of was nothing but vanity and foolish expence. It was like that of the fon of Æfopus, who diffolved pearls in vinegar, and drank them at supper. I will bed-d, if a haunch of venifon, and my favourite ham-pye, were not much better dishes than any at the table of Vitellius himfelf. I do not find that you had ever any good foups, without which no man of tafte can possibly dine. The rabbits in Italy are not fit to eat; and what is better than the wing of one of our ling-

3G4 litte

lish wild rabbits? I have been told that you had no turkies. The mutton in Italy is very ill-flavoured; and as for your boars roasted whole, I despife them; they were only fit to be served up to the mob at a corporation seat, or election dinner. A finall barbecued hog is worth a hundred of them; and a good collar of Shrewsbury brawn is a much better dish.

Apicius. If you had fome kinds of meat that we wanted, yet our cookery mult have been greatly fuperior to yours. Our cooker were to excellent, that they could give to hog's flesh the take of all other meats.

Dartenenf. Ishould not have liked their d-d initations. You might as eafily have imposed on a good connoilleur the copy of a fine picture for the original. Our cooks, on the contrary, give to all other meats a rich flavour of bacon, without destroying that which makes the diftinction of one from another. I have not the least doubt that our effence of hams is a much better fauce than any that ever was used by the ancients. We have a hundred ragouts, the composition of which exceeds all description. Had yours been as good, you could not have lolled, as you did, upon couches, while you were eating; they would have made you fit up and at-tend to your bufiness. Then you had a custom of hearing things read to you while you were at supper. This shews you were not fo well entertained as we are with our meat. For my own part, when I was at table, I could mind nothing elfe: I neither heard, faw, nor fpoke: I only fmelt and tafted. But the worst of all is, that you had no wine fit to be named with good claret or Eurgundy, or Champague, or old book, or Tokay. You boafted much of your Falernam; but I have taited the Lachrymae Christi, and other wines that grow upon the fame coast, not one of which would I drink above a glass or two of if you would give me the kingdom of Naples. You boiled your wines, and mixed water with them, which shews that in themselves they were not fit to drink.

Apicius. I am afraid you beat us in wines, not to mention your cider, perry, and beer, of all which I have heard great fame from fome English with whom I have talked; and their report has been confirmed by the testimony of their neighbours who have travelled into England. Wonderful things have been also faid to me of a liquor called punch.

Darteneuf. Ay-to have died without

tafting that is unhappy indeed! There is rumpunch and arrack-punch; it is hard to fay which is best: but Jupiter would have given his nector for either of them, upon my word and honour.

Apicius. The thought of it puts me into a fever with third. From whence do you get your arrack and your rum?

Dartenenf. Why, from the East and West Indies, which you knew nothing of. That is enough to decide the dispute. Your trade to the East Indies was very far short of what we carry on, and the West, Indies were not discovered. What a new would of good things for eating and drinking has Columbus opened to us! Think of that, and despair.

Apicius. I cannot indeed but lamentmy ill late, that America was not found before I was born. It tortures me when I hear of chocolate, pine-apples, and twenty other fine meats or fine fruits produced there, which I have never tafted. What an advantage it is to you, that all your fweetmeats, tarts, cakes, and other delicacies of that nature, are fweetened with fugar inflead of honey, which we were obliged to make use of for want of that plant! but what grieves me most is, that I never ate a turtle; they tell me that it is absolutely the best of all foods.

Dartoneuf. Yes, I have heard the Americans fay fo:—but I never ate any; for, in my time, they were not brought over

to England.

Apicius. Never eat any turtle! how didit thou dare to accuse me of not going to Sandwich to eat oysters, and didft not thyself take a trip to America to riot on turtles? but know, wretched man, that I am informed they are now as plentiful in England as sturgeon. There are turtle-boats that go regularly to London and Bristol from the West Indies. I have just seen a fat alderman, who died in London last week of a surfle feat in that city.

Darteneuf. What does he say, does he tell you that turtle is better than venison?

Apicius. He says there was a haunch of venison untouched, while every mouth was employed on the turtle; that he ate till he fell assecp in his chair; and, that the food was so wholesome he should not have died, if he had not unsuckily caught cold in his steep, which stopped his perspiration, and hurt his digestion.

Darteneuf. Alas! how imperfect is hu-

man felicity! I lived in an age when the pleafure of eating was thought to be carried to its highest perfection in England and France; and yet a turtle feaft is a novelty to me! Would it be impossible, do you think, to obtain leave from Pluto of going back for one day, just to taste of that food! I would promife to kill myfelf by the quantity I would eat before

the next morning. Apicius, You have forgot, Sir, that you have no body; that which you had has been rotten a great while ago; and you can never return to the earth with another, unless Pythagoras carries you thither to animate that of a hog. But comfort yourfelf, that, as you have eat dainties which I never tafted, fo the next generation will eat fome unknown to the prefent. New discoveries will be made, and new delicacies brought from other parts of the world. We must both be philosophers. We must be thankful for the good things we have had, and not grudge others better, if they fall to their share. Confider that, after all, we could but have eat as much as our flomachs would hold, and that we did every day of our lives.—But fee, who comes thither? I think it is Mercury.

Mercury. Gentlemen, I must tell you that I have stood near you invisible, and heard your discourse; a privilege which we deities use when we please. Attend therefore to a discovery which I shall make to you, relating to the subject upon which you were talking. I know two men, one of whom lived in ancient, and the other in modern times, that had more pleasure in eating than either of you ever had in your lives.

Apicius. One of these, I presume, was a Sybarite, and the other a French gentleman settled in the West Indies.

Mercury. No; one was a Spartan foldier, and the other an English farmer.—I fee you both look assonished; but what I tell you is truth. The soldier never eat his black broth till the exercises, to which by their discipline the Spartantroops were obliged, had gothim such an appetite that he could have gnawed a bone like a dog. The farmer was out at the tail of his plough, or some other wholesome labour, from morning till night; and when he came home his wise dressed him a piece of good bees, or a sine barn-door sowl and pudding, sor his dinner, which he eatmuch more ravenously, and consequently with a great deal more relish and pleasure, than

you did your tripotanum or your hampye. Your stomachs were always so overcharged, that I question if ever you felt real hunger, or eat one meal in twenty years without forcing your appetites, which makes all things insipid. Itell you therefore again, that the soldier and the farmer had much more of the joy of eating than you.

Darteneuf. This is more mortifying than not to have shared a turtle feast. I fear indeed we have been in quite a wrong system, and never had any true notions

of pleasure.

Apicius. It is a fad thing not to know what good living is before one is dead. I with, Mercury, you had taught me your art of cookery in my life-time or held your tongue about it here.

Dialogues of the Dead.

§ 25. Scene between IAGO and CASSIO in which CASSIO regrets his Folly in getting drunk.

Iago. What! are you hurt, Lieute-ant?

Caf. Past all furgery.

lugo. Marry, Heav'n forbid!

Ca). Reputation, reputation, reputation! Oh I have loft my reputation! I have loft the immortal part of myfelf, and what remains is beftial. My reputation!

Iago, my reputation-

lago. As I am an honest man, I thought you had received some bodily wound: there is more sense in that, then in reputation. Reputation is an idle and most false imposition: oft got without merit, and lost without deserving. What man!—there are ways to recover the general again. Sue to him, and he's your's.

Caf. I will rather fue to be defpis'd.

Drunk! and fquabble! fwagger! fwear! and difcourfe fustian with one's own shadow! Oh thou invincible spirit of wine! if thou hast no name to be known by, let us call thee Devil.

Iago. What was he that you followed with your fword? what had he done to

you?

Caf. ¶ know not. Iago, Is't possible?

Caf. I remember a mass of things, but nothing distinctly; a quarrel, but nothing wherefore. Oh, that men should put an enemy in their mouths to steal away their brains; that we should with joy, pleasance, revel, and applause, transform ourselves into beasts!

Ingo.

Why, but you are now well enough: how came you thus recovered?

Caf. It has pleased the devil Drunkenness to give place to the devil Wrath; one imperfectness shews me another, to make

me frankly despife myself.

Iago. Come, you are too fevere a mo-As the time, the place, and the condition of this country stands, I could heartily wish this had not befallen; but fince it is as it is, mend it for your own good.

Caf. I will ask him for my place again -he shall tell me I am a drunkard!-Had I as many mouths as Hydra, fuch an answer would stop them all. To be now a fenfible man, by and by a fool, and prefently a heaft !-- Every inordinate cup is unbles'd, and the ingredient is a devil.

lugo. Come, come, good wine is a good familiar creature, if it be well us'd; exclaim no more against it. And good Lieutenant, I think you think I love you,

Caf. I have well approv'd it, Sir,-I

Iago. You, or any man living may be drunk at fonie time, man. I tell you what you shall do. Our general's wife is now the general. Confess yourfelf freely to her; importune her help, to put you in your place again. She is of fo free, fo kind, so apt, so blessed a disposition, she holds it a vice in her goodness not to do more than the is requested. This broken joint between you and her husband, entreat her to splinter; and, my fortunes against any lay worth naming, this crack of your love shall grow stronger than it was before.

Caf. You advise me well.

lago. I protest in the sincerity of love

and honest kindness.

Caf. I think it freely; and, betimes in the morning, I will befeech the virtuous Defdemona to undertake for me.

lago. You are in the right. Good night, Lieutenant: I must to the watch.

Caf. Good night, honest lago. Shakspeare.

A Dialogue between MERCURY and a modern fine Lady.

Mrs Modific. Indeed, Mr. Mercury, I cannot have the pleafure of waiting upon you now. I am engaged, absolutely engaged.

Mercury, I know you have an amiable affectionate hulband, and feveral fine chil-

dren: but you need not be told, that neither conjugal attachments, maternal affections, nor even the care of a kingdom's welfare or a nation's glory, can excuse a person who has received a summons to the realms of death. If the grim messenger was not as peremptory as unwelcome, Charon would not get a passenger (except now and then a hypochondriacal Englishman) once in a century. You must be content to leave your hulband and family, and pals the Styx.

Mrs. Modifa. I did not mean to infift on any engagement with my hufband and children; I never thought my felf engaged to them. I had no engagements but fuch as were common to women of my rank. Look on my chimney-piece, and you will fee I was engaged to the play on Mondays, balls on Tuefdays, the opera on Saturdays, and to card affemblies the rest of the week, for two months to come; and it would be the rudeft thing in the world not to keep myappointments. If you will hay forme till the fummer feafon, I will wait on you with all my heart. Perhaps the Elvian fields may be less detestable than the country in our world. Pray have, you a fine Vauxhall and Ranelagh? I think I should not diflike drinking the Lethe waters when you have a full feafon.

Mercury. Surely you could not like to drink the waters of oblivion, who have made pleafure the bufinefs, end, and aim, of your life! It is good to drown cares: but who would wash away the remembrance of a life of gaiety and pleafure?

Mrs. Modift. Diversion was indeed the business of my life; but as to pleasure, I have enjoyed none fince the novelty of my amusements was gone off. Can one be pleafed with feeing the fame thing over and over again? Late hours and fatigue gave me the vapours, spoiled the natural chearfulness of my temper, and even in youth wore away my natural vivacity.

If this way of life did not Mercury. give you pleafure, why did you continue in it? I suppose you did not think it was

very meritorious?

Mrs. Modish. I was too much engaged to think at all: fo far indeed my manner of life was agreeable enough. My friends always told mediversions were necessary, and my doctor afforcd me diffipation was good for my fpirits; my hufband infifted that it was not; and you know that one loves to oblige one's friends, comply with one's doctor, and contradictione's hutband;

and besides, I was ambitious to be thought du bon ton*.

Mercury. Bon ton I what's that, Ma-

dam? Pray define it.

Mrs. Modish. Oh, Sir, excuse me; it isone of the privileges of the Bonton never to define or be defined. It is the child and the parent of jargon. It is-I can never tell you what it is; but I will try to tell you what it is not. In conversation it is not wit; in manners it is not politenels; in behaviour it is not addrefs; but it is a little like them all. It can only belong to people of a certain rank, who live in a certain manner, with certain perfons who have not certain virtues, and who have certain vices, and who inhabit a certain part of the town. Like a place by courtefy, it gets an higher rank than the person can claim, but which those who have a legal title to precedency dare not dispute, for fear of being thought not to understand the rules of politeness. Now, Sir, I have told you as much as I know of it, though I haveadmired and aimed at it all my life.

Mercury. Then, Madam, you have wasted your time, faded your beauty, and deflroyed your health, for the laudable purpoles of contradicting your hulband, and being this fomething and this nothing

called the bon ton?

Mrs. Modish. What would you have had me do?

Mercury. I will follow your mode of instructing: I will tell you what I would not have had you do. I would not have had you facrifice your time, your reason, and your duties to fashion and folly. would not have had you neglect your hufband's happiness, and your children's education.

Mrs. Modish. As to my daughters' education I spared no expence; they had a dancing-mafter, music-master, and drawing-master, and a French governess to teach them behaviour and the French

language.

Mercury. So their religion, fentiments, and manners, were to be learnt from a dancing-mafter, music-mafter, and a chamber-maid! perhaps they might prepare them to catch the bon ton. Your daughters must have been so educated as to fit them to be wives without conjugal affection, and mothers without maternal care. Iam forry for the fort of life they are commencing, and for that which you have just concluded.Minosisafouroldgentleman, without the least smattering of the bon ton; and I am in a fright for you. The best thing I can advise you is, to do in this world as you did in the other, keep happiness in your view, but never take the road that leads to it. Remain on this fide Styx; wander about without end or aim; look into the Elyfian fields, but never attempt to enter into them, left Minosthould puth you into Tartarus; for duties neglected may bring on a fentence not much less severe than crimes Dialogues of the Dead. committed.

§ 27. Scene between the Jews SHYLOCK and Tubal; in which the latter alternately torments and pleases the former, by giving him an Account of the Extravagance of his Daughter JESSICA, and the Misfortunes of Antonio.

Shy. How now, Tubal? What news from Genoa! hast thou heard of my daughter?

Tub. I often came where I did hear of

her, but cannot find her,

Shy. Why there, there, there! a diamond gone that coft me two thousand ducats in Frankfort! The curfe never fell upon our nation till now; I never felt it till now. Two thousand ducats in that and other precious, precious jewels! I would my daughter were dead at my foot, and the jewels in her ear! O would she were hears'd at my foot, and the ducats in her coffin! No news of them; and I know not what spent in the search: loss upon lois! the thief gone with fo much, and so much to find the thief; and no fatisfaction, no revenge; no ill luck stirring but what lights on my shoulders; no fighs, but o' my breathing: no tears, but o' my shedding!

Tub. Yes, other men have ill luck too!

Antonio, as I heard in Genoa-Shy. What, what, what? ill luck, ill luck?

Tub. Hath an argone cast away, coming from Tripoli.

Shy. Thank God! thank God! is it true? is it true?

Tub. I spoke with some of the failors that escaped the wreck.

Shy. I thank thee, good Tubal; good

news, good news!

Tub. Your daughter fpent in Genoa, as I heard, in one night, fourscore ducats. Shy,

Du bon ton is a cant phrase in the modern French language, for the fashionable air of converfation and manners.

Shy. Thou flick'st a dagger in me; I shall never see my gold again: fourscore ducats at a sitting! fourscore ducats!

Tub. There came divers of Antonio's creditors in my company to Venice, that

fwear he cannot but break.

Shy. I'm glad of it: I'll plague him, I'll torture him: I am glad of.

Tub. One of them shew'd me a ring that he had of your daughter for a mon-

Shy. Out upon her! thou torturest me Tubal? it was my ruby, I had it of Leah when I was a batchelor; I would not have given it for a wilderness of monkies.

Tub. But Antonio is certainly undone. Shy. Nay, that's true, that's very true: go fee me an officer, bespeak him a fornight before. I will have the heart of him if he forseit; for were he out of Venice, I can make what merchandize I will. Go, go, Tubal, and meet me at

our fynagogue; go, good Tubal; at our fynagogue, Tubal. Shakfpeare.

§ 28. Humourous Scene between Prince HENRY and FALSTAFF, in which the Prince detects FALSTAFF's monstrous Lies.

P. Henry. Welcome Jack !- Where

haft thou been?

Fal. A plague of all all cowards, I fay, and a vengeance too, marry and amen! Give me a cup of fack, boy:-ere I lead this life long, I'll few nether focks and mend them, and foot them too. A plague of all cowards! give me a cup of fack; rogue. Is there no virtue extant? [He drinks.]-You rogue, here's lime in this fack too. There is nothing but roguery to be found in villainous man; yet a coward is worfe than a cup of fack with lime in it. A villainous coward!—Go thy ways, old Jack; diewhen thou wilt, if manhood, good manhood, be not forgot upon the face of the earth, then am I a shotten herring. There live not three good men unhang'd in England, and one of them is fat, and grows old. Heaven help the while! A bad world! I fay-plague of all cowards! I fay ftill.

P. Henry. How now, Woolfack? what

mutter you?

Fal. A king's fon! If I do not beat thee out of thy kingdom with a dagger of lath, and drive all thy fubjects afore thee like n flock of wild geefe, I'll never wear hair on my face more! You Prince of Wales!

P. Henry. Why what's the matter! Fal. Are you not a coward? answer me that.

P. Henry. Ye fat paunch, an' ye call

me coward, I'll stab thee.

Fal. I call thee coward! I'll fee thee hang'd ere I'll call thee coward; but I would give a thousand pound I could run as sast as thou canst. You are strait enough in the shoulders; you care not who see your back. Call you that backing of your friends? a plague upon such backing! give me them that will sace me—give me a cup of sack: I am a rogue if I drank to-day

P. Henry. Oh villain! thy lips are fearee wip'd fince thou drank'ft laft.

Fal. All's one for that. [He drinks.]
A plague of all cowards! ftill, fay I.
P. Henry. What's the matter?

Fal. What's the matter! here be four of us have ta'en a thousand pound this

P. Henry. Where is it, Jack? where

is it?
Fal. Where is it! taken from us, it is:

a hundred upon four of us.

P. Henry. What! a hundred, man? Fal. I am a rogue if I were not at half-fword with a dozen of them two hours together. I have escaped by miracle. I am eight times thrust through the doublet, four through the hose, my buckler cut through and through, my sword hack'd like a hand-saw, ecce fignum! I never dealt better since I was a man: all would not do. A plague of all cowards!

P. Henry. What, fought you with

them all?

Fal. All! I know not what ye callall; but if I fought not with fifty of them, I am a bunch of radifh; if there were not two or three and fifty upon poor old Jack, then I am no two-legg'd creature.

P. Henry. Pray heav'n you have not

murdered fome of them !

Fal. Nay, that's past praying for. I have pepper'd two of them; two, I am sure, I have paid; two rogues in buckram suits. I tell you what, Hal, if I tell the a lie, spit in my sace, call me a horse. Thou knowest my old ward: here I lay and thus I bore my point; four rogues in buckram let drive at me.

P. Henry. What, four! thou faidst but

two even now.

Fal. Four, Hał, I told thee four.— These four came all m front, and made a thrust at me: I made no more ado, but

Digitized by Google

took all their feven points, in my target,

P. Henry. Seven! why they were but four even now.

Fal. In buckram?

P. Henry. Ay, four, in buckram fuits: Fal. Seven by these hilts, or I am a villain else. Dost thou hear me, Hal!

P. Henry. Av, and mark thee too, Jack. Fal. Dofo, for it is worth the liftening to. These nine in buckram, that I told thee of-P. Henry. So, two more already.

Fal. Their points being broken, began to give me ground; but I followed me close, came in foot and hand, and with a thought-feven of the eleven I paid.

P. Henry. O montirous! eleven buck-

ram men grown out of two.

Fal. But, as the devil would have it, three misbegotten knaves, in Kendalgreen, came at my back, and let drive at me; (for it was fo dark, Hal, that thou couldst not see thy hand.)

P. Henry. These lies are like the father that begets them, groß as a mountain, open, palpable. Why, thou clay-brained guts, thou knotty-pated fool, thou obscene greafy tallow-catch-

Fal. What, art thou mad? art thou mad? is not the truth the truth?

P. Henry, Why, how couldft thou know these men in Kendal-green, when it was so dark thou could ft not fee thy hand? Come, tellus your reason: what fay'st thou to this? Come, your reason, Jack, your reason.

Fal. What upon compulsion !- No: were I at the strappado, or all the racks in the world, I would not tell you on compulsion! Give you a reason on compullion! If reasons were as plenty as blackberries, I would give no man a reason upon compulsion.

P. Henry. I'll be no longer guilty of this fin. This fanguine coward, this bedpreffer, this horfe-back-breaker, this huge

hill of flesh-

Ful. Away, you starveling, you elffkin, you dry'd neat's tongue, you flockfish! O, for breath to utter! what is like thee? you taylor's yard, you fleath, you bowcase, you vile standing tuck-

P. Henry. Well, breathe a while, and then to't again; and when thou hast tir'd thyself in base comparisons, hear mespeak but this:--Poins and I saw you four fet on four: you bound them, and were mafters of their wealth: mark now, how a plain tale shall put you down. Then did we two fet on you four, and with a word out-fac'd You from your prize, and have it; yea, and can shew it you here in the house. And, Falftaff, you carry'd your guts away as nimbly, with as quick dexterity, and roar'd for mercy, and ftill ran and roar'd, as ever I heard a bull-calf. What a flave art thou, to hack thy fword as thou haft done, and then fay it was in fight! What trick, what device, what flarting-hole canst thou now find out, to hide thee from this open and apparent fliame?

Ha! ha! ha!-D'ye think I did not know you!-By the Lord, I knew you as well as he that made you. Why, hear ye my mafter, was it forme to kill the heirapparent? should I turn upon the true prince? why, thou knowest I am as valiant as Hercules; but beware instinct; the lion will not touch the true prince; instinctisa great matter. I was a coward on inftinct: I grant you: and I shall think the better of myfelf and thee during my life; I for a valiant lion, and thou for a true prince. But I am glad you have the money. Let us clap to the doors; watch to-night, pray to-morrow. What, shall we be merry? fhall we have a play extempore?

P. Henry Content !- and the argument shall be, thy running away.

Fal. Ah!-no more of that, Hal, if Shukspeare. thou lovest me.

29. Scene in which Moody gives MANLY an Account of the Journey to LONDON.

Manly. Honest John!

Moody. Measter Manly! I am glad I ha' fun ye .- Well, and how d'ye do, Measter?

Munly. I am glad to fee you in Loudon, I hope all the good family are well. Moody. Thanks be praifed, your honour, they are all in pretty good heart; thof' we have had a power of croffes upo' the road.

Manly. What has been the matter, John? Moody. Why, we came up in fuch a hurry, you mun think, that our tackle

was not to tight as it flould be. Manly. Come, tell us all-Pray, how

do they travel?

Moody. Why, i'the awld coach, Meafter; and 'cause my Lady loves to do things handsome, to be sure, she would have a couple of cart-horfes clapt to the four old geldings, that neighbours might. fee she went up to London in her coach and fix; and fo Giles Joulter, the ploughman, rides postillion.

Manly. And when do you expect them

here, John?

Moody. Why, we were in hopesto ha' come

come yesterday, an' it had no' been that th'awld weazle-belly horsetired; and then we were so cruelly loaden, that the two fore-wheels came crash down at once, in Waggon-rut-lane, and there we lost four hours 'sore we could set things to rights again.

Munly. So they bring all their bag-

gage with the coach, then?

Moody. Ay, ay, and good flore on't there is—Why, my lady's gearalone were as much as filled four permantel trunks, befides the great deal box that heavy Ralph and the monkey fit upon behind.

Manly. Ha, ha, ha !- And pray, how

many are they within the coach?

Moody. Why there's my lady and his worship, and the younk 'squoire, and Miss Jenny, and the fat lap-dog, and my lady's maid Mrs. Handy, and Doll Tripe the cook, that's all—only Doll puked a little with riding backward; so they hoisted her into the coach-box, and then her stomach was easy.

Manly. Ha, ha, ha!

Moody. Then you mun think, Measter, there was some stowage for the belly, as well as th' back too; children are apt to be samish'd upo' the road; so we had such cargoes of plumb cake, and baskets of tongues, and biscuits, and cheese, and cold boil'd beef—and then, in case of sickness bottles of cherry-brandy, plague-water, sack, tent, and strong beer so plenty, as made th' awid coach crack again. Mercy upon them! and fend them all well to town, I say.

Manly. Ay, and well out on 'tagain, John. Moody. Measter! you're a wise mon! and for that matter, so am I—Whoam's whoam, I say; I am fure we ha' got but little good e'er sin' we turn'd our backs on't. Nothing but mischief! some devil's trick or other plagued us aw th' day lung. Crack, goes one thing! bawace goes another! Woa! says Roger—Then, sows! we are all set fast in a sough. Whaw! cries Miss: Scream! go the maids: and bawl just as tho' they were stuck. And so, mercy on us! this was the trade from morning to night.

Manly. Ha, ha, ha!

Moody. But I mun hie me whoam; the coach will be coming every hour naw.

Manly. Well, honest John-Moody. Dear Measter Manly! the goodness of goodness bless and preserve you!

§ 30. Directions for the management of Wit.

If you have wit (which I am not fure

that I wish you, unless you have at the fame time at leaft an equal portion of judgment to keep it in good order) wear it, like your fword, in the fcabbard, and do not blandishit to the terror of the whole company. Wit is a shining quality, that every body admires; most people aim II it, all people fear it, and few love it, unless in themselves:—a man must have a good share of withimfelf, to endure a great there in another. When wit exerts itself in fatire, it is a most malignant distemper: wit, it is true, may be shewn in satire, but satire does not conflitute wit, as many imagine. A man of wit ought to find a thoufand better occasions of thewing it.

Abitain, therefore, most carefully from fatire; which, though it fall on no particular person in company, and momentarily, from the inalignancy of the human heart, pleases all; yet, upon reflection, it frightens all too. Every one thinks it may be his turn next; and will hate you for what he finds you could say of him, more than be obliged to you for what you do not say. Fear and hatred are next-door neighbours: the more wit you have, the more good nature and politeness you must shew, to induce people to pardon your superiority; for that is no easy matter.

Appear to have rather less than more wit than you really have. A wife man will live at leaft as much within his wit as his income. Content yourfelf with good fense and reason, which at the long run are ever fure to please every body who has either; if wit comes into the bargain, welcome it, but never invite it. Bear this truth always in your mind, that you may be admired for your wit, if you have any; but that nothing but good sense and good qualities can make you be beloved. These are substantial every day's wear; whereas wit is a holiday-suit, which people put on chiefly to be stared at.

There is a species of minor wit, which is much used, and much more abused; I mean raillery. It is a most mischievous and dangerous weapon, when in unskilful and clumsy hands; and it is much safer to let it quite alone than to play with it and yet almost every body plays with it though they see daily the quarrels and heart-burnings that it occasions.

The injustice of a bad man is sooner forgiven than the insults of a witty one; the former only hurts one's liberty and property; but the latter hurts and morsifies that secret pride which no human breakis free from, I will allow, that there is a

fort

fort of raillery which may not only be inoffenfive, but even flattering; as when, by a genteel irony, you accure people of those imperfections which they are most notoriously free from, and confequently infinuate that they possels the contrary virtues. You may fafely call Aritides a knave, or a very handfome woman an ugly one. Take care, however, that neither the man's character nor the lady's beauty be in the least doubtful. But this fort of raillery requires a very light and fleady hand to administer it. A little too firong, it may be mittaken into an offence; and a little too fmooth, it may be thought a fneer, which is a most odicus

There is another fort, I will not call it wit, but merriment and bufficonery, which is mimicry. The most faccefsful mimic in the world is always the most abfurd fellow, and an ape is infinitely his faperior. His profession is to imitate and ridicule those natural defects and deformities for which no man is in the least accountable, and in the imitation of which he makes himself for the time, as diffagreeable and shocking as those he mimics. But I will fay no more of these creatures, who only amuse the lowest rabble of mankind.

There is another fort of human animals, called wags, whose profession is to make the company laugh immoderately; and who always succeed, provided the company consist of sools; but who are equally disappointed in finding that they never can alter a muscle in the face of a man of souls. This is most contemptible character, and never essentially enough to be diverted by them.

Be content for yourself with sound good sense and good manners, and let wit be thrown into the bargain, where it is proper and inoffensive. Good sense will make you esteemed; good manners will make you beloved; and wit will give a lustre to both.

Chesterfield.

§ 31. Egotism to be avoided.

The egotism is the most usual and favourite figure of most people's rhetoric, and which I hope you will never adopt, but, on the contrary, most scrupulously avoid. Nothing is more disagreeable or inksome to the company, than to hear a man either praising or condemning himfelf; for both proceed from the same motive, vanity. I would allow no man to speak of himself unless in a court of justice, in his own desence, or as a witness.

Shall a man speak in his own praise? No: the hero of his own little tale always puzzles and disguist the company; who do not know what to fay, or how to look. Shall he blame himself? No: vanity is as much the motive of his condemnation as of his panegyric.

I have known many people take fliame to themfelves, and, with a modeli contrition, confels themselves guilty of most of the cardinal virtues. They have fuch a weakness in their nature, that they cannot help being too much moved with the misfortunes and miferies of their fellowcreatures; which they feel perhaps more, but at least as much as they do their own. Their generotity, they are femille, is imprudence; for they are apt to carry it too far, from the weak, the irrelatible beneficence of their nature. They are possibly too jealous of their honour, too irafcible when they think it is touched; and this proceeds from their unhappy warm conflitution, which makes them too fenfible upon that point; and fo poffibly with respect to all the virtues. A poor trick, and a wretched inflance of human vanity, and what defeats its own purpole.

Do you be fure never to fpeak of yourfelf, for yourfelf, nor againft yourfelf; but let your character fpeak for you: whatever that fays will be believed; but whatever you fay of it will not be believed; and only make you odious and ridiculous.

I know that you are generous and benevolent in your nature; butthat, though the principal point, is not quite enough: you must seem so too. I do not mean oftentatiously; but do not be ashamed, as many young fellows are, of owning the laudable fentiments of good-nature and humanity which you really feel. I have known many young men, who defired to be reckoned men of spirit, affect a hardness and unfeelingness which in reality they never had; their convertation is in the decifive and menacing tone, mixed with horrid and filly oaths; and all this to be thought men of spirit. Aftonishing error this! which naturally reduces them to this dilcmma: If they really mean what they fay, they are brutes; and if they do not, they are fools for faying it. however, is a common character among young men: carefully avoid this contagion, and content yourfelf with being calmly and mildly refolute and fleady, when you are thoroughly convinced you are in the right; for this is true spirit.

Observe

Observe the a-propos in every thing you fay or do. In converting with those who are much your fuperiors, however eafy and familiar you may and ought to be with them, preserve the respect that is due to them. Converfe with your equals with an eafy familiarity, and, at the fame time, great civility and decency: but too much familiarity, according to the old faying, often' breeds contempt, and fometimes quarrels. I know nothing more difficult in common behaviour, than to fix due bounds to familiarity: too little implies an unfociable formality; too much destroys friendly and focial intercourse. The best rule I can give you to manage familiarity is, never to be more familiar with any body than you would be willing, and even wish, that he should be with you. On the other hand, avoid that uncomfortable referve and coldness which is generally the shield of cunning or the protection of dulnefs. To your inferiors you flould use a hearty benevolence in your words and actions, instead of a refined politeness which would be apt to make them suspect that you rather laughed at them.

Carefully avoid all affectation either of body or of mind. It is a very true and a very trite observation, That no man is ridiculous for being what he really is, but for affecting to be what he is not. man is aukward by nature, but by affecting to be genteel. I have known many a man of common fense passgenerally for a fool, because he affected a degree of wit that nature had denied him. A ploughman is by no means aukward in the exercise of his trade, but would be exceedingly ridiculous, if he attempted the air and graces of a man of fashion. You learned to dance; but it was not for the fake of dancing; it was to bring your air and motions back to what they would naturally have been, if they had had fair play, and had not been warped in youth by bad examples, and aukward imitations of other boys,

Nature may be cultivated and improved both as to the body and the mind; but it is not to be extinguished by art; and all endeavours of that kind are absurd, and an inexpressible fund for ridicule. Your body and mind must be at ease to be agreeable; but affectation is a particular restraint, under which no man can be genteel in his carriage or pleasing in his conversation. Do you think your motions would be easy or graceful, if you

wore the cloaths of another man much flenderer or taller than yourfelf? Certainly not: it is the fame thing with the mind, if you affect a character that does not fit you, and that nature never intended for you.

In fine, it may be laid down as a general rule, that a man who despairs of pleasing will never please; a man that is fure that he shall always please wherever he goes, is a coxcomb; but the man who hopes and endeavours to please, will most infallibly please.

Chesterfield.

§ 32. Extract from Lord Bolingbroke's Letters.

My Lord,
You have engaged me on a fabject which interrupts the feries of those leters I was writing to you; but it is one which I confess, I have very much at heart. I shall therefore explain myself fully, nor blush to reason on principles that are out of fashion among men who intend nothing by serving the public, but to feed their avarice, their vanity, and their luxury, without the sease of any duty they owe to God or man.

It feems to me, that inorder to maintain the moral fystem of the world at a certain point, far below that of ideal perfection, (for we are made capable of conceiving what we are incapable of attaining) but howeversufficient, upon the whole, to constitute a state easy and happy, or at the worst tolerable; I say, it seems to me, that the Author of nature has thought fit to mingle from time to time among the focieties of men, a few, and but a few, of those on whom he isgraciously pleased to bestow a larger proportion of the ethereal spirit, than is given in the ordinary course of his providence to the fons of men. These are they who engross almost the whole reason of the species, who are born to instruct, to guide, and to preferve, who are defigned to be the tutors and the guardians of human kind. When they prove fuch, they exhibit to us examples of the highest virtue and the truest piety; and they deferve to have their festivals kept, instead of that pack of anchorites and enthuliafts, with whose names the Calendar is crowded and difgraced. When these men apply their talents to other purpofes, when they strive to be great, and despife being good, they commit a most facrilegious breach of trust; they pervert the means, they defeat, as far as lies in them, the defigns of Providence, and diffurb, in fome fort, the fystem of In-

•

finite Wildom. Tomilapply these talents is the most diffused, and therefore the greatest of crimes in its nature and coufequences; but to keep them unexerted and unemployed, is a crimetoo. Look about you, my Lord, from the palace to the cottage, you will find that the bulk of mankind is made to breathe the air of this atmosphere, to roam about this globe, and to confume, like the courtiers of Alcinous, the fruits of the earth. Nos numerus fumus is frages confumere nati. When they have trod this intipid round a certain number of years, and left others to do the fame after them, they have lived; and if they have performed, in some tolerable degree, theordinary moral duties of life, they have done all they were born to do. about you again; my Lord; nay, look into your own breast, and you will find that there are superior spirits, men who thew, even from their infancy, though it be not always perceived by others, perhaps not always felt by themselves, that they were born for fomething more, and better. These are the men to whom the part I mentioned is afligned; their talents denote their general delignation, and the opportunities of conforming themselves to it, that arife in the courfe of things, or that are prefented to them by any circumstances of rank and fituation in the fociety to which they belong, denote the particular vocation which it is not lawful for them to relift, nor even to neglect. The duration of the lives of fuch men as these is to bedetermined, I think, by the length and importance of the parts they act, not by the number of years that pass between their coming into the world and their going out of it. Whether the piece be of three or five acts, the part may be long; and he who fustains it through the whole, may be faid to die in the fulness of years; whilsthe who declines it fooner, may be faid not to live out half his days.

3 33. The Birth of MARTINUS SCRIB-

Nor was the birth of this great man unattended with prodigies: he himfelf has often told me, that on the night before he was born, Mrs. Scriblerus dreamed the was brought to bed of a huge ink-horn, out of which iffued feveral large fireams of ink, as it had been a fountain. dream was by her huiband thought tofignify, that the child should prove a very voluminous writer. Likewise a crab-tree

that had been hitherto barren, appeared on a fudden laden with a vast quantity of crabs: this fign also the old gentleman imagined to be a prognostic of the acutenels of his wit. A great fwarm of wasps played round his cradle without hurting him, but were very troublesome to all in the room besides. This seemed a certain prefage of the effects of his fatire. dunghill was feen within the space of one night to be covered all over with mushrooms: this some interpreted to promise the infant great fertility of fancy, but no long duration to his works; but the father was of another opinion.

But what was of all most wonderful, was a thing that feemed a monstrous fowl, which just then dropped through the skylight, near his wife's apartment. It had a large body, two little disproportioned wings, a prodigious tail, but no head. As its colour was white, he took it at first fight for a fwan, and was concluding his fon would be a poet; but on a nearer view he perceived it to be fpeckled with black in the form of letters; and that it was indeed a paper-kite which had broke its leash by the impetuolity of the wind. His back was armed with the art military, his belly was filled with physic, his wings were the wings of Quarles and Withers. the feveral nodes of his voluminous tail were diverlified with feveral branches of fcience: where the Doctor beheld with great joy a knot of logic, a knot of metaphysic, a knot of casuistry, a knot of polemical divinity, and a knot of common law, with a lanthorn of Jacob Behmen.

There went a report in the family, that as foon as he was born he uttered the voice of nine feveral animals: he cried like a calf, bleated like atheep, chattered like a magpye, grunted like a hog, neighed like a foal, croaked like a raven, mewed like a cat, gabbled like a goofe, and brayed like an afs; and the next morning he was found playing in his bed with two owlswhich cametiown the chimney. His father was greatly rejoiced at all thefe figns which betokened the variety of his eloquence, and the extent of his learning ; but he was more particularly pleafed with the last, as it nearly resembled what hap. pened at the birth of Homer.

The Doctor and his Shield.

The day of the christening being come, and the house filled with gossips, the levity of whose conversation suited but ill with

2 H

the gravity of Dr. Cornelius, he cast about how to pais this day more agreeable to his character; that is to fay, not without fome profitable conference, nor wholly without observance of some ancient custom.

He remembered to have read in Theocritus, that the cradle of Hercules was a finield: and being possified of an antique buckler, which he held as a most inestimable relick, he determined to have the infant laid therein, and in that manner brought into the study, to be shewn to certain learned men of his acquaintance.

The regard he had for this shield, had caused him formerly to compile a differtation concerning it, proving from the several properties, and particularly the colour of the rust, the exact chronology thereof.

With this treatife and a moderate supper, he proposed to entertain his guests; though he had also another design, to have their assistance in the calculation of

his fon's nativity.

He therefore took the buckler out of a cafe (in which he always kept it, lest it might contract any modern rust) and entrusted it to his houfe-miad, with others, that when the company was come, for should lay the child carefully in it, covered with a mantle of blue fatin.

The guests were no fooner feated, but they entered into a warm debate about the Triclinium, and the manner of Decubitus, of the ancients, which Cornelius

broke off in this manner:

" This day, my friends, I propose to " exhibit my fon before you; a child not " wholly unworthy of inspection, as he is " descended from a race of virtuon. Let " the physiognomist examine his features; " let the chirographists behold his palm; " but, above all, let us confult for the cal-" culation of his nativity. To this end, " as the child is not vulgar, I will not " prefent him to you in a vulgar manner. " He shallbe cradled in my ancient shield, " fo famous through the univertities of " Europe. You all know how I purchased " that invaluable piece of antiquity, at the " great (though indeed inadequate) ex-" pence of all the plate of our family; how " happily I carried it off, and how trium-" phantly I transported it hither, to the " inexpreshble grief of all Germany. " Happy in every circumstance, but that " it broke the heart of the great Melchior

Here he stopped his speech, upon fight of the maid, who entered the room with

"Infipidus!"

the child: he took it in his arms, and proceeded:

"Behold then my child, but first behold "the shield: behold this rust,—or rather "let me call it this precious ærugo;—be "hold this beautiful varnishoftime,—this "venerable verdure of so many ages!"—In speaking these words, he slowly listed up the mantle which covered it inch by inch; but at every inch he uncovered, his cheeks grew paler, his hand trembled, his nerves failed, till on sight of the wholethe tremor became universal: the shield and the infant both dropped to the ground, and he had only strength enough to cry out, "O God! my shield!" my shield!"

The truth was, the maid (extremely concerned for the reputation of her own cleanliness, and her young master's honour) had scoured it as clean as her hand-

prons.

Cornelius funk back on a chair, the guests stood astonished, the infant squalled, the maid ran in, inatched it up again in her. arms, flew into her mistrefs's room, and told what had happened. Down stairs in an instant hurried all the gossips, where they found the Doctor in a trance: Hungary-water, hartthorn, and the confused noise of shrill voices, at length awakened him: when opening his eyes, he faw the fhield in the hand of the house-maid." O woman! woman!" he cried (and fnatched it violently from her), " was it to thy ig-" norance that this relick owes its ruin? "Where, where is the beautiful crust that " covered thee follong? where those traces of time, and fingers, as it were, of antiquity? Where all those beautiful obseurities, the cause of much delightful difputation, where doubt and enriolity went hand in hand, and eternally exercised " the forculations of the learned? And this the rude touch of an ignorant women " hath done away! The curious prominenceat the belly of that figure, which " fome, taking for the cufpis of a fword, " denominated a Roman foldier; other:, " accounting the infiguia virilia, pro-" nounce to be one of the Dii Termini: be-" hold the hath cleaned it in like thameful " fort, and thewn to be the head of a nail. " Omy flield! my flield! well may I fry with Horace, Nonbene relicta parmula."

Thegessips, not at all inquiring into the cause of his sorrow, only asked if the child had no hurt? and cried, "Come, come, all is well; what has the woman done but her duty? a tight cleanly weach,

" warrant

" warrant her: what a stir a man makes " about a bason, that an hour ago, before " herlabour was bestowed upon it, a coun-" try barber would not have hung at his "thop door ?" " A bason (cried ano-" ther), no fuch matter; 'tis nothing but a " paltry old fconce, with the nozzle broke " off." The learned gentlemen, who till now had stood speechless, hereupon looking narrowly on the thield, declared their affent to this latter opinion, and defired Cornelius to be comforted; affuring him it was a sconce, and no other. But this, instead of comforting, threw the doctor into fuch a violent fit of passion, that he was carried off groaning and speechless to bed; where, being quite spent, he fell into a kind of flumber.

The Nutrition of SCRIBLERUS.

Cornelius now began to regulate the fuction of his child; feldom did there pass a day without disputes between him and the mother, or the nurse, concerning the nature of aliment. The poor woman never dined but he denied her fome dish or other. which he judged prejudicial to her milk. One day the had a longing defire to a piece of beef; and as the stretched her hand towards it, the old gentleman drew it away, and spoke to this effect: "Hadst thou read " the ancients, O nurse, thou would'sf pre-" fer the welfare of the infant which thou " nourishest, to the indulging of an irregular and voracious appetite! Beef, it " is true, may confer a robustness on the " limbs of my fon, but will hebetate and " clog his intellectuals." While he fpoke this the nurse looked upon him with much anger, and now and then cast a withful eve upon the beef .- " Passion (continued the " doctor, still holding the dift) throws the " mind into too violent a fermentation: it " is a kind of fever of the foul; or, as Ho-" race expresses it, a short madness. Con-" fider, woman, that this day's fuction of my fon may cause him to imbibe many " ungovernable passions, and in a manner " spoil him for the temper of a philoso-" pher. Romulus, by fucking a wolf, be-" came of a fierce and favage disposition: " and were I to breed fome Ottoman em-" peror, or founder of a military common-" wealth, perhaps I might indulge thee in " this carnivorous appetite."-What! interrupted the nurse, beef spoil the understanding! that's fine indeed-how then could our parfon preach as he does upon beef, and pudding too, if you go to that?

Don't tell me of your ancients, had not you almost killed the poor babe, with a dish of dæmonial black broth?-" Lacedæ-" monian black broth, thou would'st fay (replied Cornelius); but I cannot allow the furfeit to have been occasioned by " that diet, fince it was recommended by " the divine Lycurgus. No, nurse, thou must certainly have caten some meats of ill digestion the day before; and that was the real cause of his diforder. Confider, woman, the different temperaments of different nations! What makes " the English phlegmatick and melan-"choly, but beet? What renders the " Wellin fo hot and choleric, but cheefe " and leeks? The French derive their lev-" ity from the foups, frogs, and mushrooms. " I would not let my ton dine like an Ita-" lian, lest, like an Italian, he should be " jealous and revengeful. The warm and " folid diet of Spain may be more bene-" ficial, as it might endow him with a pro-" found gravity; but, at the fame time, he " might fuck in with their food their into-" lerable vice of pride. Therefore, nurse, in fhort, I hold it requisite to deny you, at prefent, not only beef, but likewife " whatfoever any of those nations eat." During this speech, the nurse remained pouting and marking her plate with the knife, nor would the touch a bit during the whole dinner. This the old gentleman observing, ordered, that the child, to avoid the rifque of imbiling ill humours, thould be kept from her breastall that day, and be fed with butter mixed with honey, according to a prefcription he had met with fomewhere in Eustathius upon Homer. This indeed gave the child a great tooleness, but he was not concerned at it, inthe opinion that whatever harm it might do his body, would be amply recompensed by the improvements of his understanding. But from thenceforth he infifted every day upon a particular diet to be observed by the nurse; under which, having been long uncafy, the at last parted from the family, on his ordering her for dinner the paps of m fow with pig; taking it as the highest indignity, and a direct infult upon her fex and calling.

Play-Things.

Herèfollow the instructions of Cornelius Scriblerus concerning the plays and playthings to be used by his fon Martin.

"Play was invented by the Lydians, as a remedy against hunger. Sophocles: 3H 2 "tays

" faysof Polamedes, that he invented dice " to ferve fometimes instead of a dinner. " It is therefore wifely contrived by na-" ture, that children, as they have the " keenest appetites, are most addicted to " plays. From the fame cause, and from the unprejudiced and incorrupt fim-" plicity of their minds if proceeds; that " the plays of the ancient children are " preferved more entire than any other " of their customs. In this matter I would " recommend to all who have any con-" cern in my fon's education, that they " deviate not in the least from the primi-" tive and fimple antiquity.

"To fpeak first of the whistle, as it is " the first of all play-things. I will have " it exactly to correspond with the ancient " fistula, and accordingly to be composed

" jeptem paribus disjuncta cicutis.

" I heartify with a diligent fearch may " be made after the true crepitaculum or " rattle of the ancients, for that (as Ar-" chitus Tarentinus was of opinion) kept " the children from breaking earthen-" ware. The China cups in thefe days are " not at all the fafer for the modern rat-" tlex; which is an evident proof how far " their crepitacula exceeded ours.

"I would not have Martin as yet to " fcourge a top, till I am better informed " whether the trochus, which was recom-" mended by Cato, be really our prefeat " tops, or rather the hoop which the boys " drive with a stick. Neither crofs and " pile, nor ducks and drakes, are quite fo " ancientashandy-daddy, though Macro-" bins and St. Augustine take notice of the " first, and Minutius Fælix deferibes the " latter; but handy-daddy is mentioned " by Aristotle, Plato, and Aristophanes. "The play which the Italians calleingue " and the French mourre, is extremely au-" cient; it was played at by Hymen and " Cupid at the marriage of Pfyche, and " termed by the Latins digitis micare.

"Julius Pollux deferibes the omilla " or chuck-farthing: though fome will " have our modern chuck-farthings to be " nearer the aphetinda of the ancients. " He also mentions the basilinda, or King "I am; and mynda, or hoopers-hide.

" But the chytrindra, deferibed by the " fame author, is certainly not our hot-" cockles; for that was by pinching, and " not by striking; though there are good er authors who affirm the rathapigilmus to " be yet nearer the modern hot-cockles. " My fon Martin may use either of them

" indifferently, they being equally at-" tique.

" Building of houses, and riding upon " sticks, have been ufed by children of all " ages, Edificare ceasus, quitare in arm-" dine longa. Yet I much doubt whether " the riding upon sticks did not come " into the after the age of the centures.

"There is one play which thews the " gravity of ancient education, called the " acinetinda, in which children contend-" ed who could longest stand still. This " we have fufficied to perith entirely; and, if I might be allowed to guess; it " was certainly lost among the French.

" I will permit my fon to play at apo-" didafeinda, which can be no other than

" our puls in a corner.

"Julius Pollux, in his ninth book, fpeaks " of the melolouthe, or the kite; but I " question whether the kite of antiquity " was the same with ours: and though the " Oproyexerie, or quail fighting, is what is " most taken notice of, they had doubtlefs " cock-matches also, as is evident from " certain ancient gems and relievos.

" In a word, let my fon Martin disport " himfelf at any game truly antique, ex-" cept one, which was invented by a peo-" ple among the Thracians, who hong up " one of their companions in a rope, and " gave him a knife, to cut himfelf down; " which if he failed in, he was fuffered to " hang till he was dead; and this was only " reckoned a fort of joke. I am utterly " against this, as barbarous and cruel.

"I cannot conclude, without taking no-" tice of the beauty of the Greek names, " whose etymologies acquaint us with the " nature of the fports; and how infinitely, " both in fenfe and found, they excel our barbarous mames of plays.

Notwithstanding the foregoing injunctions of Dr. Cornelius, he vet condefcended to allow the child the use of some few modern play-things; fuch as might prove of any benefit to his mind, by instilling an early notion of the iciences. For example, he found that marbles taught him percussion, and the laws of motion; nutcrackers, the use of the lever; fwinging on the ends of a board, the balance; bottle-fcrews, the vice; whirligigs, the axis and peritrochia; bird-cages, the pulley; and tops the centrifugal motion.

Othersof his sports were farther carried to improve his tender foul even in virtue and morality. We shall only instance one of the most ufeful and instructive, bobcherry,

cherry, which teaches at once two noble virtues, patience and constancy; the first in adhering to the purfuit of one end, the latter in bearing a disappointment.

Belides all thefe, he taught him, as a divertion, an odd and fecret manner of flealing, according to the custom of the Lacedamonians; wherein he fucceeded fowell, that he practiled it to the day of his death.

MUSIC.

The bare mention of music threw Cornelius into a patijon. "How can you dig-" nify (quoth he) this modern fiddling " with the name of music? Will any of "your best hautboys encounter a wolf " now-a-days with no other arms but " their instruments, as did that ancient " piper Pithocaris? Have ever wild boars, "elephants, deer, delphins, whales, or " turbots, thewed the leaft emotion at the " most elaborate strains of your modern " ferapers; all which have been, as it " were, tamed and humanized by anci-, " ent muficians? Does not Ælian tell us "how the Lybian mares were excited to "horfing by music? (which ought in " truth to be a caution to modest women " against frequenting operas; and consi-"der, brother, you are brought to this " dilemma, either to give up the virtue " of the ladies, or the power of your non-" fic). Whence proceeds the degeneracy " of our morals? Is it not from the lofs " of an ancient music, by which (fays " Aristotle) they taught all the virtues? " elfe might we turn Newgate into a col-" lege of Dorian muficians, who should " teach moral virtues to those people. "Whence comes it that our present ditea-" fer are fo stubborn? whence is it that I " daily deploremy feiatical pains? Alas! " because we have lost their true cure, by " the melody of the pipe. All this was " well known to the ancients, as Theophrastus aftures us (whence Caelius calls "it loca dolentia decenture), only indeed " fome fmall remains of this skill are " preferved in the cure of the tarantula. " Did not Pythagoras stop a company of "drunken bullies from storming a civil " house, by changing the strain of the pipe " to the fober fpondaus? and yet your " modern muficians want art to defend "their windows from common nickers. "It is well known, that when the Lace-" dæmonian mob were up, they common-" ly fent for a Lesbian musician to appeale " them, and they immediately grew calms

" as foon as they heard Terpander fing: yet I don't believe that the pope's whole " band of mutic, though the best of this " age, could keep his holinefs's image " from being burnt on the fifth of No-" vember:"" Norwould Terpander him-" felf (replied Albertus) at Billingfgate, " nor Timothens at Hockley in the Hole, " have any manner of effect; nor both of " them together bring Horneck to con-" mon civility."" That's a grofs mistake's (faid Cornelins very warmly); " and, " to prove it fo, I have here a finall lyra " of my own, framed, strong, and tuner, " after the ancient manner. I can play " fome fragments of Lethian times, and "I with I were to try them upon the " most passionate creatures alive." --"You never had a better opportunity " (fays Albertus), for yonder are two " apple-women feolding, and just ready " to uncoif one another." With that Cornelius, undreffed as he was, jumps out into his balcony, his lyra in hand, in his :flippers, with his breeches hanging down to his ancles, a stocking upon his head, and waistcoat of murrey-coloured fating upon his body : He touched his lyra with a very unufual fort of an harpegiatura, nor were his hopes frustrated. The odd. equipage, the uncouth infirument, the strangenels of the man, and of the mulic, drew the cars and eyes of the whole mob that were got about the two female chanipions, and at last of the combatants themfelves. They all approached the balcony. in as close attention as Orpheus's first andience of cattle, or that of an Italian opera, when fome favourite air is just awakened. This fudden effect of his mutic encouraged him mightily; and it was obferved he never touchedhis lyra in fuch a truly chromatic and epharmonic manner, as upon that occasion. The mob laughed, fung, jumped, danced, and ufed many odd gestures; all which he judged to be caufed by the various strains and modulations. " Mark (quoth he) in this, the power of " the Ionian; in that you lee the effect of " the Addian." But in a little time they began to grow riotous, and threw stones: Cornelius then withdrew, but with the greatestair of triumph in the world. "Bro-"ther (faid he) do you observe I have " mixed, unawares, too much of the Phry-" gian; I might change it to the Lydian, " and fosten their riotous tempers: But it " is enough: learn from this fample to " speak with veneration of ancient music. " If this lyra in my untkilful hands can " perioria 3 H 3

"perform fuch wonders, what must it not "have done in those of a Timotheus or a "Terpander?" Having said this, he retired with the utmost exultation in himfelf, and contempt of his brother; and, it is said, behaved that night with such unusual haughtiness to his family, that they all had reason to wish for some ancient Tibicen to calm his temper.

LOGIC.

Martin's understanding was fo totally. immerfed in fensible objects, that he demanded examples, from material things, of the abstracted ideas of logic: as for Crambe, he contented himself with the words: and when he could but form fome conceit upon them, was fully fatisfied. Thus Crambe would tell his instructor, that all men were not fingular; that individuality could hardly be predicated of any man, for it was commonly faid, that a man is not the fame he was: that madmen are befides themfelves, and drunken men come to themselves; which shews, that few men have that most valuable logical endowment, individuality. Cornelius told Martin, that a shoulder of mutton was an individual, which Crambe denied, for he had feen it cut into commons. That's true (quoth the tutor), but you never faw it cut into shoulders of mutton; If it could (quoth Crambe) it would be the most lovely individual of the univerfity. When he was told, a fubstance was that which was subject to accidents; then foldiers (quoth Crambe) are the most fubstantial people in the world. Neither would he allow it to be a good definition of accident, that it could be prefent or absent without the destruction of the subject; fince there are a great many accidents that destroy the subject, as burning does a house, and death a man. But, as to that, Cornelius informed him, that there was a natural death, and a logical death; that though a man, after his natural death, was not capable of the least parith-office, yet he might still keep his stall amongst the logical predicaments.

Cornelius was forced to give Martin fenfible images, Thus, calling up the coachman, he alk him what he had feen in the bear-garden? The manantwered, he faw two men fight a prize: one-was a fair man, a ferjeant in the guards; the other black, a butcher: the ferjeant had red breeches, the butcher blue: they fought upon a stage about four o'clock, and the ferjeant wounded the butcher in the leg, "Mark (quoth " Cornelius) how the fellow runs through " the predicaments. Men, substantia; " two, quantitus; fair and black, qualitas; " ferjeant and butcher, relatio; wounded " the other, actio et passo; fighting, ntus; " stage, ubi; two o'clock, quando; blue . " and red breeches, habitus." At the fame time be warned Martin, that what he now learned as a logician, he must forget as a natural philosopher; that though he now taught them that accidents inhered in the subject, they would find in time there was no fuch thing; and that colour, taste, fmell, heat, and cold, were not in the things, but only phantaims of our brains. He was forced to let them into this fecret, for Martin could not conceive how a habit of dancing inhered in a dancingmaster, when he did not dance; nay, he would demand the characteristics of relations. Cramboused to help him out by telling him, a cuckold, a lofing gamester, a man that had not denied, a young heir that was kept short by his father, might be all known by their countenance; that, in this last case, the paternity and filiation leave very fensible impressions in the relatum and correlatum. The greatest difficulty was when they came to the tenth predicament; Crambe affirmed that his habitus was more a fubstance than he was; for his clothes could better fublist without him, than he without his clothes.

The Seat of the Soul.

In this defign of Martin to investigate the difeafes of the mind, he thought nothing to necessary as an inquiry after the feat of the foul; in which at first, he laboured under great uncertainties. Sometimes he was of opinion that it lodged in the brain, fometimes in the stomach, and fometimes in the heart. Afterwards he thought it abfurd to confine that fovereign lady to one apartment; which made him infer, that the thifted it according to the feveral functions of life; The brain was her study, the heart her state-room, and the stomach her kitchen. But, as he faw, feveral offices of life went on at the fame time, he was forced to give up this hypothesis also. He now conjectured it was more for the dignity of the foul to perform feveral operations by her little ministers, the animal fpirits; from whence it was natural to conclude, that the refides in different parts, according to different inclinations, fexes, ages, and professions. Thus, in epicureshe feated her in the mouth of the stomach; philosophers have been the brain, soldiers

in their heart, women in their tongues, fiddlers in their fingers, and ropedancers in their toes. At length he grow fond of the glandula pinealis, diffecting many fubjects to find out the different figure of this gland, from whence he might diffeover the cause of the different tempers in mankind. He supported that in factious and restlefsspirited people, he should find it tharp and pointed, allowing no room for the foul to repose herself; that in quiet tempers it was flat, fmooth, and foft, affording to the foul, as it were, an eafy cushion. He was confirmed in this by observing, that calves and philosophers, tygers and statesmen, foxes and fharpers, peacocks and fops, cock-fparrows and coquettes, monkeys and players, courtiers and spaniels, moles and mifers, exactly refemble one another in the conformation of the pineal gland. He did not doubt like wife to find the fame refemblance in highwaymen and conquerors; In order to fatisfy himself in which, it was, that he purchased the body of one of the first species (as liath been before related) at Tyburn, hoping in time to have the happiness of one of the latter too under his anatomical knife.

The Soul a Quality.

This is eafily answered by a familiar in-In every jack there is a meatroasting quality, which neither refides in the fly, nor in the weight, nor in any particular wheel in the jack, but is the refult of the whole composition: lo, in an animal, the felf-confciousness is not a real quality inherent in one being (any more than meat-roasting in a jack) but the refult of feveral modes or qualities in the fame subject. As the fly, the wheels, the chain, theweight, the chords, &c. make one jack, to the feveral parts of the body make one animal. As perception or confciousness is faid to be inherent in this animal, fo is meat-roasting faid to be inherent in the As fensation, reasoning, volition, memory, &c. are the feveral modes of thinking; fo roasting of beef, roasting of mutton, roasting of pullets, geefe, turkeys, &c. are the feveral modes of meat-roasting. And as the general quality of meatroasting, with its feveral modifications, as to beef, mutton, pullets, &c. does not inhere in any one part of the jack; fo neither does consciousness, with its several modes of fensation, intellection, volition, &c. inhere in any one, but is the refult from the mechanical composition of the whole animal. Popc.

§ 34. Diverfity of Geniuses.

I shall rangethese confined and less copious geniuses under proper classes, and (the better to give their pictures to the reader) under the names of animals of some fortor other; whereby he will be enabled at the first sight of such as shall daily come forth, to know to what kind to refer, and with what authors to compare them.

1. The Flying Fifnes: These are writers who now and then rise upon their fins, and fly out of the profound; but their wings are soon dry, and they drop down to the bottom. G.S. A.H. C.G.

2. The Swallows are authors that are eternally skinming and fluttering up and down; but all their agility is employed to eatch flies. L. T. W.P. Lord H.

3. The Ostriches are fuch, whose heaviness rarely permits them to raise themselves from the ground; their wings are of nouseto lift them up, and their motion is between flying and walking; but then they run very fast. D.F. L.E. The Hon. E. H.

4. The Parrots are they that repeat another's words in such a hoarse odd voice, as makes them feem their own. W. B. W. H. C. C. The Reverend D. D.

5. The Didappers are authors that keep themselves long out of fight, under water, and come up now and then where you least expected them. L. W. G.D. Esq. The Hon. Sir W. Y.

6. The Porpoise are unwieldy and big; they put all their numbers into a great turmoil and tempest: but whenever they appear in plain light (which is feldom) they are only shapeless and ugly monsters. 1. D. C. G. I. O.

7. The Frogs are fuch as can neither walk nor fly, but can leap and bound to admiration: they live generally in the bottom of a ditch, and make a great noise whenever they thrust their heads above water. E. W. L. M. Esq. T. D. Gent.

8. The Eels are obscure authors, that wrap themselves up in their own mud, but are mighty nimble and pert. L. W. L.T. P. M. General C.

g. The Tortoifes are flow and chill, and, like pastoral writers, delightmuch in gardens: they have for the most part a fine embroidered shell, and underneath it, a

3 H 4 heavy

heavy lump. A.P. W.B. L.F. The

Right Hon. E. of S.

These are the chief characteristics of the Bathos: and in each of these kinds we have the comfort to be blessed with sundry and manifold choice spirits in this our island.

The Advancement of the Buthos.

Thushave I (my dear countrymen) with incredible pains and diligence, discovered the hidden sources of the Bathos, or, as I may say, broke open the abysses of this great deep. And having now established good and wholesome laws, what remains butthat all true moderns, with their utmost might, do proceed to put the same in execution? In order whereto, I think I shall, in the second place, highly deserve of my country, by proposing such a scheme as may facilitate this great end.

As our number is confessedly far superior to that of the enemy, there feems nothing wanting but unanimity among ourfelves. Itistherefore humbly offered, that all and every individual of the Bathos do enter into a firm affociation, and incorporate into one regular body: whereof every member, even the meanest, will fome-way contribute to the support of the whole; in like manner as the weakest reeds, when . joined in one bundle, become infrangible. To which end our art ought to be put upon the fame foot with other arts of this age. The vast improvement of modern manufactures ariseth from their being divided into feveral branches, and parcelled out to feveral trades: for instance, in clock making one artist makes the balance, another the fpring, another the crown-wheels, a fourth the cafe, and the principle workman putsalltogether: to this economy we owe the perfection of our modern writers; and doubtlefs we also might that of our modern poetry and rhetoric, were the feveral parts branched out in the like manner.

Nothing is more evident, than that divers perfors, no other way remarkable, have each astrong disposition to the formation of some particular trope or sigure. Aristotle saith, that the hyperbole is an ornament fit for young men of quality; accordingly we find in those gentlemen a wonderful propensity towards it, which is marvelously improved by travelling; foldiers also and seamen are very happy in the same figure. The periphrasis or circumlocution is the peculiar talent of country farmers; the proverband apologue of old

men at clubs; the illipfis, or speech by half words, of ministers and politicians; the aposiopess of courtiers; the litotes, and diminution, of ladies, whisperers, and backbiters; and the anadiploss of common criers and hawkers, who, by redoubling the same words, persuade people to buy their oysters, green hastings, or new ballads. Epithets may be found in great plenty at Billingsgate, farcasin and irony learned upon the water, and the epiphonema or exclamation frequently from the bear-garden, and as frequently from the 'Hear him' of the House of Commons.

Now each man applying his whole time and genius upon his particular figure, would doubtlefs attain to perfection: and when each became incorporated and fworn into the fociety (as hath been proposed) a poetororator would have no more to do but to send to the particular traders in each kind; to the metaphorist for his allegories, to the simile-maker for his comparisons, to the ironist for his farcasins, to the apophthegmatist for his farcasins, to the apophthegmatist for his fentences, &c.; whereby a dedication or speech would be composed in a moment, the superior artist having nothing to do but to put together all the materials.

I therefore propose that there be contrived, with all convenient dispatch, at the public expence, a rhetorical chest of drawers, confitting of three stories; the highest for the deliberative, the middle for the demonstrative, and the lowest for the judicial. These shall be subdivided into loci or places, being repolitories for matter and argument in the feveral kinds of oration or writing; and every drawershall again be fubdivided into cells, refembling those of cabinets for rarities. The apartment for peace or war, and that of the liberty of the prefs, may in a very few days be filled with feveral arguments perfectly new; and the vituperative partition wi as easily be replenished with a most choice collection, entirely of the growth and manufacture of the prefent age. Every compofer will foon be taught the use of this cabinet, and how to manage all the regifters of it, which will be drawn out much in the manner of those in an organ.

The keys of it must be kept in honest hands, by fome reverend prelate, or valiant officer, of unquestionable loyalty and affection to every prefent establishment in church and state; which will sofficiently guard against any mischief which might otherwise be apprehended from it.

And

And being lodged in fuch hands, it may be at differentian let out by the day, to reveral great orators in both houses; from whence it is to be hoped much profit and gain will accrue to our fociety.

Dedications and Panegyries.

Now of what necessity the foregoing project may prove, will appear from this flagle confideration, that nothing is of equal confequence to the faccels of our works as speed and dispatch. Great pity it is, that folid brains are not, like other folid bodies, constantly endowed with a velocity in finking proportionable to their heavinefs; for it is with the flowers of the Bathos as with those of nature, which, if the careful gardener brings not hastily to market in the morning, must unprofitably perith and wither before night. And of all our productions none is to thort-lived asthe dedication and panegyric, which are often but the praife of a day, and become by the next atterly useless, improper, indecent, and falfe. This is the more to be lamented, in alinuch as the fetwo are the forts whereon in a manner depends that profit, which must still be remembered to be the main end of our writers and speakers.

We shall therefore employ this chapter in shewing the quickest method of composing them: after which we will teach a short way to epic poetry. And these being confessed to the works of most importance and difficulty, it is prefound we may leave the rest to each author's own learning or practice.

First of panegyric. Every man is honourable, who is fo by law, custom, ortitle. The publicare better judges of what is honourable than private men. The virtues of great men, like those of plants, are inherent in them, whether they are exerted or not; and the more strongly inherent, the lefs they are exerted; as a man is the more rich, the less he spends. All great ministers, without either private or œconomical virtue, are virtuous by their posts, liberal and generous upon the public money, provident upon public supplies, just by paying public interest, courageous and magnanimous by the fleets and armies, magnificent upon the public expences, and prudent by public fuccess. have by their office a right to a share of the public stock of virtues: befides, they are by prefeription immemorial invested in all the celebrated virtues of their pre-

deceffors in the fame stations, especially those of their own ancestors.

As to what are commonly called the colours of honourable and dihonourable, they are various in different countries: in this, they are blue, green, and red.

But, forafinuch as the duty we owe to the public doth often require that we flouid put fome things in a strong light, and throw a fhade over others. I shall explain the method of turning a vicious man into a hero.

The first and chief rule is the golden rule of transformation; which confits in converting vices into their bordering virtues. A man who is a fpendthrift, and will not pay a just debt, may have his injustice transformed into fiberality; cowardice may be metamorphofed into prudence; intemperance into good nature and good-fellowhip; corruption into patriotifu; and lewduck into tenderness and facility.

The fecond is the rule of contraries. It is certain the lefs a man is endued with any virtue, the more need he has to have it plentifully bestowed, efpecially those good qualities of which the world generally believes he has none at all; for who will thank a man for giving him that which he has?

The reverse of these procepts will ferv for fatire; wherein we are ever to remark that whose loseth his place, or become out of favour with the government, hath forfeited his share in public praise and honour. Therefore the truly public-fpirited writer ought in duty to strip him whom the government hath stripped; which is the real poetical justice of this age. For a full collection of topics and epithets to be used in the praise and dispraise of ministerial and unministerial persons, I refer to our rhetorical cabinet; concluding with an earnest exhortation to all my brethren, to obferve the precepts here laid down; the neglect of which has cost tome of them their cars in a pillory.

A Recipe to make an Epic Poem.

An epic poem, the critics agree, is the greatest work human nature is capable of. They have already laid down many mechanical rules for compositions of this fort, but at the same time they cut off almost all undertakers from the possibility of ever performing them; for the first qualification they manimously require in a poet is a genius. I shall here endeavour (for the benefit of my countrymen) to make it manifest,

manifest, that epic poems may be made without a genius, may, without learning or much reading. This must necessarily be of great afe to all those who confess they never read, and of whom the world is convinced they never learn. Moliere observes of making a dinner, that any man can do it with money; and if a professed cook cannot do without it, he has his art for nothing: the fame may be faid of making a poem: it is eafily brought about by him that has a genius, but the skill-lies in doing it without one. In purfuance of this end, I thall prefent the reader with a plain and fure recipe, by which any author in the Bathos may be qualified for this grand performance.

To make an Epic poem.

Forthe Fable. Takeout of any old poem, history-book, romance, or legend (for instance, Geoffry of Monmouth, or Don Belianis of Greece) those parts of story which afford most fcope for long descriptions; put these pieces together, and throw all the adventures you fancy into one tale. Then take a hero, whom you may chuse for the found of his name, and put him in the midst of these adventures; there let him work for twelve books; at the end of which you may take him out, ready prepared to conquer or to marry; it being necessary that the conclusion of an epic poem be fortunate.

To make an Epffode. Take any remaining adventure of your former collection, in which you could no way involve your hero; or any unfortunate accident that was too good to be thrown away; and it will be of use, applied to any other perfon, who may be lost and evaporate in the course of the work, without the least damage to the composition.

For the Moral and Allegory. These you may extract out of the table afterwards, at your leifure: be sure you strain

them fufficiently.

For the Manners. For those of the hero, take all the best qualities you can find in the most celebrated heroes of antiquity: if they will not be reduced to a confiftency, by them all on a heap upon him. But be fine they are qualities which your patron would be thought to have; and to prevent any mistake which the world may be subject to, fester from the alphabet those capital letters that compose his name, and it them at the head of a dedication or poem. However, do not observe the exact quantity of these virtues it not being

determined whether or no it be necessary for the hero of a poem to an be honest man. For the under-characters, gather them from Homer and Virgil, and change the names as occasion ferves.

For the Machines. Take of deities, male and female, as many as you can use: separate them into two equal parts, and keep Jupiter in the middle: let Juno put him in a ferment, and Venus molify him. Remember on all occasions to make use of volatile Mercury. If you have need of devils, draw them out of Milton's Paradife, and extract your fpirits from Taffo. The use of these machines is evident: fince no epic poem can possibly subsit without them, the wifest way is to referve them for your greatest necessities. When you cannot extricate your hero by any human means, or yourfelf by your own wit, feek relief from heaven, and the gods will do your buliness very readily. This is according to the direct prescription of Horace, in his Art of Poetry:

Nec dens interfit, niù dignus vindice nadus Inciderit,-

That is to fay, "A poet should never call "upon the gods for their affalance, but when he is in great perplexity."

For the Descriptions. For a tempest, Take Eurus, Zephyr, Auster, and Boreas, and cost them together in one verse: add to these of rain, lightning, and thunder (the loudest you can) quantum sufficie; mix your clouds and billows well together till they foam, and thicken your description here and there with a quick-sand. Brew your tempest well in your head, before you set it a-blowing.

For a Battic. Pick a large quantity of images and descriptions from Homer's Iliad, with a spice or two of Virgil; and if there remain any overplus, you may lay them by for a skirmish. Season it well with similies, and it will make an

excellent battle.

For a burning Town. If such a description be necessary (because it is certain there is one in Virgil) old Troy is ready burntto your hands: but if you fear that would be thought borrowed, a chapter or two of the Theory of the Consugration, well circumstanced and done into verse, will be a good succedaneum.

As for fimilies and metaphors, they may be found all over the creation; the most ignorant may gather them; but the difficulty is in applying them. For this advise with your bookfeller. Pope.

§ 35. The Duty of a Clerk.

No fooner was I elected into my office, but I said aside the powdered gallantries of my youth, and became a new man. I considered myfelf as in some wife of ecclesiastical dignity; since by wearing a band, which is no finall part of the ornament of our clergy, I might not unworthily be deemed, as it were, a thred of the linen vestment of Aaron.

Thou may'st conceive, O reader, with what concern I perceived the eyes of the congregation fixed upon me, when I first took my place at the feet of the priest. When I raifed the pfalm, how did my voice quaver for fear! and when I arrayed the thoulders of the minister with the furplice, how did my joints tremble under me! I faid within myfelf, " Remember, " Paul, thou standest before men of high " worthip; the wife Mr. Justice Freeman, " the grave Mr. John Tonion, the good " Lady Jones, and the two virtuous gen-" tlewomen her daughters; nay, the great "Sir Thomas Truby, Knight and Baro-" net, and my young master the Efquire, " who shall one day be lord of this ma-" nor." Notwithstanding which, it was my good hap to acquit myfelf to the good liking of the whole congregation; but the Lord forbid I should glory there-

I was determined to reform the manifold corruptions and abutes which had crept into the church.

First, I was especially severe in whipping forth dogs from the temple, all ex-

repting the lap-dog of the good widow Howard, a fober dog which yelped not, nor was there offence in his mouth.

Secondly, I did even proceed to morefenes, though fore against my heart, unto poor babes, in tearing from them the half-eaten apples which they privily munched at church. But verily it pitied me; for I remember the days of my youth.

Thirdly, With the fweat of my own hands I did make plain and fmooth the dogs-ears throughout our great Bible.

Fourthly, The pews and benches which were formerly swept but once in three years, I caused every Saturday to be swept with a besom, and trimmed.

Fifthly, and lastly, I caused the surplice to be neatly darmed, washed, and laid in fresh lavender (yea, and sometimes to be fprinkled with rose-water); and I had great land and praise from all the neighbouring clergy, foralmuch as no parish kept the minister in cleaner linen.

Shoes did I make (and, if entreated, mend) with good approbation. Faces alfo did I shave; and I clipped the hair. Chirurgery also I practited in the worming of dogs; but to bleed adventured I not, except the poor. Upon this my two-fold profellion, there palled among men a merry tale, delectable enough to be rehearfed: How that, being overtaken with liquorone Saturday evening, I shaved the priest with Spanish blacking for shoes instead of a washball, and with lamb-black powdered his perriwig. But these were layings of men delighting in their own conceits more than in the truth : for it is well known, that great was my care and skill in the semy crafts; yea, I once had the honour of trimming Sir Thomas himfelf, without fetching blood. Furthermore, Iwas fought unto to geld the Lady Frances her ipaniel, which was wont to goastray: he was called Toby, that is to fay, Tobias. And, thirdly, I was entrusted with a gorgeous pair of thoes of the faid lady, to let an heel-piece thereon; and I received fuch praise therefore, that it was faid all over the parith. I should be recommended unto the king to mend floes for his majesty; whom God preferve! Amen. Ibid.

§ 36. Cruelty to Animals.

Montaigne thinks it formereflection nyon human nature itfelf, that few people take delight in feeing beasts carefs or play together, but almost every one is pleated to feethem lacerate and worry one another, I am forry this temper is become almost a distinguishing character of our own nation, from the observation which is made by foreigners of our beloved pastimes bearbaiting, cock-fighting, and the like. We should find it hard to vindicate the destroying of any thing that has life, merely out of wantonness: yet in this principle our children are bred up; and one of the first pleafures we allow them, is the licence of inflicting pain upon poor animals: almost as foon as we are fentible what life is ourfelves, we make it our foort to take it from other creatures. I cannot but believe a very good use might be made of the fancy which children have for birds and infects, Mr. Locke takes notice of a mother who

permitted

permitted them to her children, but rewarded or punished them as they treated them well or ill. This was no other than cutering them betimes into a daily exercise of humanity, and improving their

very diversion to a virtue.

I fancy, too, fome advantage might be taken of the common notion, that 'tis omipous or unlucky to destroy fome forts of birds, as swallows and martins. This opinion might possibly arise from the contidence thefe birds feem to put in us, by building under our roofs; to that this is a kind of violation of the laws of hospitality to murder them. As for Kobin red-breasts in particular, it is not improbable they owe their fecurity to the old ballad of "The children in the wood." However it be, I don't know, I fav, why this prejudice, well improved and carried as far as it would go, might not be made to conduce to the prefervation of many innocent creatures, which are now exposed to all the wanton-

ness of an ignorant barbarity.

There are other animals that have the misfortune, for no manner of reason, to be treated as common enemies, wherever The conceit that a cat has nine lives, has cost at least nine lives in ten of the whole race of them: fcarce a boy in the streets but has in this point outdone Hercules himfelf, who was famous for hilling a monster that had but three lives. Whether the unaccountable animotity against this ufeful domestic may be any cause of the general persecution of owls (who are a fort of feathered cats) or whether it be only an unreasonable pique the moderns have taken to a ferious countenance, I shall not determine: though I am inclined to behave the former; unce I obferve the fole reason alledged for the destruction of frogs is because they are like toads Yet, amidst all the misfortunes of shells unfriended creatures, 'tis foure happinels that we have not yet taken a funcy to cat them: for thould our countrymen refine upon the French never fo little, 'tis not to be conceived to what unheard-of torments, owls, cats, and frogs, may be vet referred.

When we grow up to men, we have another fucceilion of fanguinary sports; in particular, hunting. I dare not attack a diversion which has such authority and custom to support it; but must have leave to be of opinion, that the agitation of that exercise, with the example and number of the chaires, not a little contributes to.

refit those checks, which compassion would naturally suggest in behalf of the animal pursued. Nor shall I fuy, with Monsieur Fleury, that this sport is a remain of the Gothic barbarity; but I must animadvert upon a certain custom yet in use with us, and barbarous enough to be derived from the Goths, or even the Scythiaus: I mean that savage compliment our huntsmen pass upon ladies of quality, who are present at the death of a stag, when they put the knife in their hands to cut the throat of a helples, trembling, and weeping creature.

Queffrique cruentus, Atque imploranti finilis.

But if our fports are destructive, our gluttony is more to, and in a more inhumanmanner. Lobsters reasted alive, pigs whipped to death, fowls fewed up, are testimonies of our outrageous luxury. Thote who (as Senera expresses it) divide their lives betwixt an anxious confcience and a natifeated stomach, have a just reward of their gluttony in the difeales it brings with it: for human favages, like other wild beasts, find fnares and poifon in the provisions of life, and are allured by their appetite to their destruction. I know nothing more thocking, or horrid, than the prospect of one of their kitchens covered with blood, and filled with the cries of the creatures expiring in tortures. It gives one an image of a giant's den in a romance, bestrewed with the feattered heads and mangled limbs of thefe who were flain by his cruelty. Pope.

§ 37. Palloral Comedy.

I have not attempted any thing of a pastoral comedy, because I think the taste of our age will not relith a poem of that fort. People feek for what they call wit, on all fubjects, and in all places; not confidering that nature loves truth fo well, that it hardly ever admits of flourithing. Conceit is to nature what paint is to beauty; it is not only needlefs, but impairs what it would improve. There is a certain majesty in timplicity, which is far above all the quaintness of wit: infomuch, that the critics have excluded wit from the loftiest poetry, as well as the lowest, and forbid it to the epic no less than the pastoral. I thould certainly displease all those who are charmed with Guarini and Bonarelli, and imitate l'affo not only in the implicity of his thoughts, but in that of the fable too.

If furprising difcoveries should have place in the story of a pastoral comedy, I believe it would be more agreeable to probability to make them the effects of chance than of defign; intrigue not being very confiftent with that innocence which ought to constitute a thepherd's character. nothing in all the Aminta (as Fremember) but happens by mere accident; unless it be the meeting of Aminta with Sylvia at the fountain, which is the contrivance of Daphue; and even that is the most fimple in the world: the contrary is observable in Pastor Fido, where Corifca is fo perfect a mistrefs of intrigue, that the plot could not have been brought about withouther. I am inclined to think the pastoral comedy has another difadvantage, as to the manners: its general delign is to make us in love with the innocence of a rural life, fo that to introduce thepherds of a vicious character, must in fome meafure debafe it; and hence it may come to pais, that even the virtuous character will not thine fo much for want of being opposed to their contrarieties. Pope.

§ 38. Dogs.
